## GUIDE TO THE MS25 TUAREG FILE

[The MS25 Tuareg file is composed of eight sources, three of which are translated from the French. The sample group is the Hoggar tribe of nomadic herdsmen living in the Ahaggar mountains.

One of the two basic sources is 1: Lhote, translated from the French. This source, by a French ethnologist, covers most aspects of Hoggar life and culture. 2: Briggs is a principal English language source. It is a survey ethnography, based in part on older source material. 3: Holiday and 5: Nicolaisen are specialized treatments of, respectively, music and political organization. 4: Benhazera, translated from the French, is a general account, chiefly valuable because of its relatively early date. 6: Blanguernon, also translated from the French, is a recent work by a French educator. It is highly generalized in many cases, but contains much important information on recent developments in the area, as well as a good section on the natural ecology. 7: Nicolaisen is the second basic work, focusing on ecological adaptations, subsistence ecology and technology, and general material culture. 8: Vinogradov is a cultural summary based on materials already in the Tuareg file. This file contains most of the worth-while literature on the Hoggar. Coverage of Hoggar culture is extensive, if not always as detailed and explicit as could be desired. When using the file, the researcher should be aware of the cultural focus of the information he is using - there are significant variations between various Tuareg groups. In addition, there are differences in the terminology used by the various authors. In 7: Nicolaisen, "tribe" has been marked for Category 614, with various components of the tribe being marked for Category 613. The most significant and permanent political unit, the drum-group (ettebel) has been marked fro Category 634. Political federations have been marked for Category 642. The file was processed between 1961 and 1967.]

## The Tuareg of the Ahaggar

## Social Organization

## The Ahaggar Confederation

---

### Chapter 1

### Social Organization

101 Here we shall speak of the Tuareg of the Ahaggar. But since all of the Tuareg form a quite homogeneous ethnic group, what we [184 177] say about their /Tuareg of the Ahaggar/ social organization will, in general, be valid for the whole, although their social organization remained more sheltered from foreign influences than that of the other groups, because of their isolation in the heart of the Sahara.

The Ihǎggaren /Ahaggaren/ may thus be considered, as a result of that isolation, the witnesses and representatives of Tuareg civilization.

565 Classes and castes. -- Social organization among them /the Tuareg/ shows strong analogies with our ancient feudal system. Indeed, there is a chief whose nominal authority holds sway over all the tribes, a class system (aserkam) which divides tribes into suzerains and vassals, religious elements and serfs, enfeoffed the ones to the others, and an artisan class.

564 565 Classes in so-called primitive societies are born out of private property, wealth, and the authority of the strong who become the protectors of the weak, and have had as a corollary war and slavery. The caste system, which is an accentuated form of the class system,

Scale: 1/5, 000, 000.

631 The amrar of the Ťaitok is named according to matriarchal rules, and his election must be approved by the chiefs of the Imrad tribes. However, it must be pointed out that since Amrar Salah the chiefs have succeeded from father to son upon several occasions.

The Ťaitok sometimes give the name Ar'rerf Ǎhnet to /205/ 101 their group, from the name of the region where they range most of the time and also from their Imrad. (1)

1. "Ar'rerf" corresponds here to "tobol." According to Nicolas, op. cit., "Agref," following his orthography, means small fraction.

631 The Ťaitok live on very good terms with their vassals, and the 565 vassals, proud of being called Ťaitok, espouse all the rivalries of [582] their lords. Marriages between different castes are not uncommon, and many nobles have married Imrad women, which causes their children to lose political rights to the tobol. But the greater and greater extension of this custom will necessarily bring about modifications in the customary law of filiation, or else patriarchy will finally replace matriarchy.

[651] The Imrad pay a lump tioussé which is divided among the different Imochar. There is no longer any individual right /droit/ like that still found among the Kel Rela and the Tégéhé Mellet.

631 Thieves to end all thieves, the Ťaitok have still been able to 648 keep alliances almost everywhere outside their country in the regions [10] they have to cross to carry out their robberies; these alliances are military or protective. Thus, in order to keep from being robbed, the Sékakna and the Mazil, Arab tribes from the environs of Ǎkabli who sometimes nomadized in the Ǎdrar Ǎhnet, paid them a slight due. They were allied with the Fergoumoussen, an Imochar tribe from the Adrǎr, with the Tarat Mellet, the Kel Boujbiha, the Kel Arouan, the Tadjakant, the Arib, and the Kel Taoudeni. These

412 Each mistress of a tent has a little
356 wooden scraper to clean the floor of the tent, which is generally
342 covered with a layer of fine sand taken from the bed of the nearby wadi.

415 Let us add one or two earthen pots, little teapots and tea glasses, and we have an idea of Tuareg furniture, which, as one may realize, is reduced to the simplest terms.

484 When a camp is moved, all these objects are loaded on asses,
492 provided for the occasion with little pack saddles. The women are
[462] left with folding the baggage, loading it, and transporting it on the asses. They themselves ride on the baggage during the moving;
[565] only noblewomen travel on camel back. Camels are used in moving only if it is a long trip.

/230/ Chapter 3

## Food

243 People may have said that the Tuareg, like many herding
262 peoples, lived on the milk from their herds. More precisely, they live on the products of their animals, but milk and meat alone would not be enough. Indeed, the base of their diet is a graminacea, bechena (Sorghum cernuum Host.), a kind of millet cultivated in the Saharian oases and in the Sudan.

The Tuareg eat some wheat, but very rarely. Especially during
[252 their moves and in the caravans, they eat wheat cakes cooked in
484] the sand, for they are easily and quickly made.

It is rather curious to note that the Tuareg, who belong cultural-
[101] ly to the Mediterranean civilization (which may be called the wheat civilization), have not kept wheat as the basic food as other North African peoples have. And yet the question of food is one of the things which most ties man to his native milieu and which

177 In the last few years a number of notables, including the
492 aménokal, travel on horseback, but only when they travel in the
643 Lower Ahaggar which is furrowed by wide valleys, allowing them
133 to avoid rocks.

101 The Ihaggaren never travel on zebus and never use them for
492 transportation. In the Sudan, however, this animal is used as a saddle animal and a beast of burden.

/321/ Chapter 2

## War and Raiding

721 The Tuareg distinguish two kinds of warring expeditions: war declared between fractions or peoples, which they call annemensi or amdjer; and raids, edjen or egen, which aim to pillage a camp or a herd by surprise.

Although war was rather rare, raids were, on the contrary, quite frequent. They were caused by the atavistic taste of the Tuareg for this sort of expedition. For the occasion they gathered together the most disparate elements, all moved by the same spirit of adventure and battle.

182 When an expedition against a camp was decided upon, those
221 present tried to gather the suitable number of men. They were
361 most frequent in summer, for, since the camps were forced to
721 spread out in the pastures, it was easier to surprise them.

War, on the other hand, was waged in winter, when the caravans had returned and the provisions necessary for the life of the tribe had been assured for the long months; this relieved the warriors of any material preoccupation about the lot of their families.

727 Each man had to procure arms for himself, and if he did not
42 own his own mehari, he found someone to lend him one; in case
74

114 closer look and find out just what really does go on in the bosom of such a seemingly impossible community. The best general source on the Ahaggar Tuareg is probably Blanguernon (1955), while Benhazera (1908) gives some valuable demographic data and Lhote (1947 and 1955) supplies a mass of miscellaneous details. But all these works are in French: Rodd (1926), writing in English, gives a fairly good general picture of the Tuareg as a whole although he deals primarily with the Aïr.

●101 The Tuareg of the Sahara proper, as we have defined it, are divided into three confederations, those of the Tassili n Ajjer, the Ahaggar and the Adrar n Ifoghas, distributed in that order from Northeast to Southwest. [161] There are probably only about 10,000 or 11,000 of them in all, for most of the Tuareg, some 140,000 strong, now live outside our area in the Aïr and the northern central Sudan. We will take the Ahaggar confederation as our Tuareg socio-economic sample because this group not only seems to have remained the least affected by foreign influence but has also been the most extensively studied and described, and because it is the only one with which the author is personally familiar.

101 The Tuareg as a whole used to range over
166 an enormous territory extending roughly as far north as Ouargla, eastward to Gatroun,
131 westward to a bit beyond a line running from Aoulef to Timbuctoo, and southward to below the Niger Bend and the northern border of Nigeria. The eastern, northern and western limits of this range have been slowly driven back over the last few centuries, first by ever stronger Arab pressure from the East and North and then by the gradual southward extension of French and, more recently, Italian control. These steadily increasing pressures have produced a steadily increasing though fluctuating flow of the Tuareg population southward from the Desert proper, through the Aïr and the Adrar n Ifoghas and into the Sudan. Under the stimulus of disaster in one form or another, this flow has occasionally become torrential for brief periods, as when, following the suppression of the 1916–18 rebellion, a great wave of Aïr Tuareg moved into British Nigeria (Rodd, 1926, p. 361) and the main body of the Taïtoq tribe left their home range in the western Ahaggar for the

101 country just to the West of Agadès (Lhote,
166 1955, p. 217). These movements were but the
131 latest major episodes in a general southwestward drift of which we have evidence going back at least as far as the 8th century (Rodd, 1926, p. 376) when the weight of the great Arab invasions first began to be felt.

631 The military administrative unit known as the *Amexe du Hoggar* covers roughly the territory that lies between Amguid and In Guezzam, and Djanet and Ouallen, and corresponds fairly closely to the present normal range of [101] the Ahaggar Tuareg. This area is about the size of New York State, Pennsylvania, Virginia and Maryland put together (146,300 square miles, with nearly 31,000,000 inhabitants in 1950), and supports a total native popu- [161] lation of probably about 12,000, roughly the same as that of Athol or Swampscott, Massachusetts, or Gainesville, Georgia. Cambridge, Massachusetts, has more than ten times as many permanent residents. Twice as many people work in the Pentagon Building alone as live in the entire Ahaggar.

162 Accurate population figures for nomadic peoples are always very hard to obtain, and in the Ahaggar it is practically impossible to arrive at anything better than very rough approximations. We are probably safe in assuming, however, that there are about 4,400 Tuareg and 4,000 Negro slaves in the area, plus some 3,500 sedentary Haratin, a few small families of smiths, and a very small handful of Arab shopkeepers from the Northwest who have settled in the largest sedentary centers.

197 The Tuareg speak Tamaheq, which is a form of Senhadjan Berber.

619 **Social Organization.** The Tuareg are divided into confederations as we have seen, and these are divided into tribes which are subdivided 565 into clans and the latter into fractions. The nomadic population is divided socially into

[534] *A hemispherical drum made of half a big gourd with a skin stretched over the opening.

551 *Tuareg tribal and personal names are spelled in as many different ways as are the geographical names
104 of the Sahara. The most common variations are found in the alternative use of *dj* and *g* (or *gu*), *sh* (or *ch*) and *h*, and *gh* (or *r'*) and *r*, all of which sometimes reflect local differences in pronunciation and sometimes the personal preferences of various transliterators.

622 *A chief may be succeeded by his younger brother, as the Amenokal Younès was succeeded by Guémama (commonly written *ag Mama*) in 1820 or

565 theory, to that of ordinary vassals (Lhote,
173 1955, p. 236), but in fact they are looked
614 down upon as greatly inferior to Tuareg vassal clans (Blanguernon, 1955, p. 52). Although the Issoquamaren clans and fractions have been parceled out among various tribes of the Ahaggar confederation, they still seem to retain some remnants of the social structure of a single and united tribe. Since the Issoquamaren have become rich in camels, they have regained in practical power and influence most of what they once lost in hierarchical prestige.

[131] The Irreguenaten are based on the Tamesna region south of the Ahaggar, and nomadize from there northwestward across the Adrar n Ifoghas sometimes even as far as the Erg Chech (pronounced *Sbesh*). They are believed to have sprung from a series of marriages between Gouraran and Kounta Arab men and Tuareg women of the Ibotenaten clan. The descendants of these unions became so numerous and so very rich, in camels and in slaves, that they were finally able to establish a separate clan of their own. Although they are included in the vassal category, they enjoy a nebulous but well-recognized position of precedence in relation to most of the other Tuareg vassal clans.

The Irreguenaten constitute a matri-clan subdivided into two patri-clans, the Haggarenin and the Settafnin, which are based on supposed descent from two ancestral Arab groups, one of them thought to have been of Shorfa stock. And this is very interesting as an example of a matrilineal clan structure that has been effectively split into two patrilineal clans while still remaining basically a unit in the matrilineal terms of Tuareg social and politico-economic organization and, to a great extent, in terms of its own internal economic organization too.

565 It will be noted that the partly Arab clans
614 of the Ahaggar Tuareg confederation live for the most part outside the Ahaggar proper,
●101 and are distributed in an arc that curves around its southwestern, western and northwestern borders. The northwestern extremity
131 of this arc continues curving eastward, then southeastward and finally on southward around the territory of the Ajjer Tuareg confederation. The southern gap in the circum-

565 ference of the resulting oval is closed by the
614 Negro-Tuareg contact zone of the southern
● 101 Aïr. The Ahaggar massif lies at the center of
131 this oval refuge area: it is a Berber island, so to speak, whose broad beaches are continually swept by waves of the surrounding Arab sea and, along the southern and southeastern shores, by the negroid "Gulf Stream" of the Sudan.

565 There have probably never been many
174 Shorfa or Maraboutic families established in
563 the Ahaggar itself, although a few of them have lived there for a long time now. Arab
[797] Shorfa missionaries from Morocco first arrived probably in the 7th or early 8th century. They soon set up a theocratic dynasty, the Imenan, who ruled the Ahaggar and the Ajjer Tuareg as a single confederation until about 1650, when Goma, last of the Imenan "sultans," was murdered by Biska, a noble of the Oraghen tribe of Ajjer Tuareg. There followed a long period of anarchy and civil wars out of which finally arose, about the middle of the 18th century, the main framework of the Tuareg political structure which we now know. Descendants of immigrant Arab holy men are very few and scattered in the Ahaggar today, and their power has been reduced to no more than a faint shadow of what it used to be. People of this kind are much more numerous, united and powerful in the northeastern and southwestern corners of Tuareg territory, among the Ajjer and the Ifoghas of the Adrar, than they are in the region with which we are directly concerned at the moment. It is significant, however, that as recently as 1900 a Shorfa holy man exerted decisive influence in the electoral council of the Ahaggar confederation when that body found itself seriously divided over the choice of a new amenokal (Benhazera, 1908, p. 126).

We know that Arab blood has been seeping very gradually into the topmost level of the Tuareg aristocracy, for at least a century,
[591] through the occasional marriages of noble Tuareg women with Arab men. In all such cases residence is strictly matrilocal. Since
[611] rank is inherited through the mother, a son of this kind of union ranks as a Tuareg noble and can become a chief. Duveyrier (1864, pp. 22–23) describes the case of the Ajjer Tuareg governor of Ghat in 1861, whose father was

3: Holiday J-5 (ca. 1955) 1956 MS25 Tuareg MS25
Hoggar

eyes are probably descended from the Vandals who invaded north Africa some 300 years earlier. Legend, though not springing from the Tuareg themselves, suggests they grew out of a lost band of Crusaders that wandered into the desert after the Holy wars of the middle ages: a legend that draws attention to the Tuareg's use of chain mail and long two-handed swords and to his stature and Aryan features. The language of the Tuareg is called Tamahaq; their speech soft and guttural. In its written form, Tifinar, the alphabet is possibly that of the ancient Libyans. The hieroglyphics are utterly unlike Arabic and the construction of the alphabet is consonantal, a feature which makes the task of translation difficult. For many years now Dr. Wakefield, an Englishwoman, has been living in Tamanrasset making a study of Tamahaq and translating the Bible. It is already 8 years ago that the National Bible Society of Scotland published the Book of Ruth for missionary work among the Tuareg based on Dr. Wakefield's studies.

174 [714] [411] 194 212 174

[539]

**The Bible in Tamahaq**

(*Ruth. Ch. 2, Verse 17*)

*"So she gleaned in the field until evening, and when she beat out what she had gleaned, it was about an ephah of barley."*

Again, the influence of such work is too limited at present to be a cogent factor. From the standpoint of religion the Tuareg reveal a strange mixture of paganism and lip-service to Islam. Literally, the word Tuareg—or, in its purer form Twarek—means "abandoned", i.e., the abandoned of God. To some extent the limits of the Tuareg domain are fixed by his superstitions; which have peopled areas like the Plateau du Tademait, north of In Salah and the mountains of Emmid-Din to the east of the Ahaggar with ghosts and djinns. The Tuareg are, above everything, religious opportunists; in that, like all superstitious people, they believe what suits them best. Unlike most other social groups they do not seem to have synthetised their beliefs or emotions into a set of religious observance that is a collective interest of the community. Marriage and divorce exist but, sexually, the tribe is a-moral and a feature of the social structure of the group is the "ahal", a love-feast at which the men serenade their chosen lovers, praising their beauty in terms of the moon, a flower or with images equally poetic and universal.

771 [10] [932]

Tuareg society is matriarchal: another distinctive feature that sets them apart from the Arab world. Although authority appears to be invested in the male, in so far as tribal groups are administered by the Amenokal, or king, it is through the women that heredity is determined. The child of a Targui begotten by a woman outside the tribe will not be Tuareg; but a Targuia (Tuareg woman) who has a child by a slave, for instance, claims for the offspring direct Tuareg descent, though not necessarily in the same social circle. There are, in fact, several social strata within Tuareg society that have arisen through the centuries as a result of raiding for slaves; and also from the involved relationship between slaves and slaves, and masters and slaves since the children of some are free, while others are not; and the children of the second generation of some are free. These last are called "Hartanis", meaning literally, "free in the second generation (from "Harr"—free, "Thani"—second). The nobility of the tribe are known as "Kel" and the men can be distinguished by the dark blue veil. The serfs, although Tuareg by birth, wear a white veil, while the Hartanis, who are mostly of negroid descent, go unveiled.

567 61 565 567 [291]

Thus it is that a great many influences have combined to build up the tribe and, consequently, it is not surprising to find in their music certain similar incongruities.

MS25 Tuareg MS25

# *Political Systems Of Pastoral Tuareg In Air And Ahaggar.*

By Johannes Nicolaisen

101 The Tuareg are Berber-speaking, nomadic stock-breeders who live in an extensive
131 area of the Western Sahara and adjacent regions of the Sudan. The territory
169 dominated by the Tuareg lies between 14° and 30° North Latitude and between
5° West Longitude and 10° East Longitude. They fall into seven main groups or major political units (fig. 1) comprising 240,000–300,000 individuals, their negro slaves excluded. The two northernmost groups (the Kel Ahaggar and the Kel Ajjer) live in the true desert country and number less than 10,000 or about 3% of all Tuareg. In Ahaggar the number according to statistics of 1950 is 4,611. The Air Tuareg further south are more numerous and seem to comprise more than 20.000 individuals (cf. Lhote 1947, p. 15f. & 1955, p. 157).

114 This study of Tuareg political systems has as its foundation a part of my own field material collected in 1951 (in Ahaggar), 1952 (in Tassili-n-Ajjer), 1953 (in Ahaggar), and 1954–55 (in Ahaggar including Ahnet, and in Air). I have spent about two years in these Tuareg countries living most of the time in Ahaggar and adjacent regions, while my stay further south in Air was limited to six months.

121 It is my intention here to describe the political systems of Air and Ahaggar, but as my final task is concerned with their origin I find it necessary to take up also more general aspects of Tuareg culture and the distribution of certain cultural
[127] traits. I shall make use also of Tuareg oral traditions and of the very comprehensive material on Tuareg history gathered by Arab historians and geographers of the Middle Ages. Thus I do not follow the ordinary lines of any particular anthropological school.

000 I am much indebted to Dr. Birket-Smith (University of Copenhagen) from whom I acquired my general anthropological knowledge together with a keen interest in historical problems, and to Professor Daryll Forde and Dr. Phyllis Kaberry of the London University where I have learnt what I know about social anthropology. Dr. Phyllis Kaberry has taken a profound interest in my studies, and I feel grateful for her kind help and assistance in all matters concerning Tuareg political systems and Tuareg social structure in general.

122 My journeys among the Tuareg were carried out by means of grants from various Danish foundations, notably Statens Almindelige Videnskabsfond, Carlsberg Fondet, Knud Rasmussen Fondet, and Jens Lohmand Rasmussens Rejselegat. During my last journey The University College London assigned me a grant without which I should not have been able to gather the material here presented

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

Fig. 1.–Map of the central parts of the Western Sahara and the adjacent Sudanese zone inhabited by the Tuareg, who fall into eight major political groups or federations. These groups as mentioned in the text are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. – The Tadmekket Tuareg (VIII) from about A.D. 1800 were subjected to the Ioullemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 160 kilometres.

those surviving, although emaciated, will quickly recover as soon as the rainfall starts again. In addition it is often very difficult to take goats through the barren desert country south of Ahaggar without severe loss. With camels, which are also very important domestic animals, things are different. Camels make a great demand on fodder, they are very valuable, can be sold for rather high prices in the oases, and they have a very slow increment compared with goats. For these reasons it is necessary or desirable to keep herds of camels in the south when pastures are dry in Ahaggar, and camels can be taken through the barren desert country without much difficulty. In dry years many Ahaggar Tuareg have their camel-herds in Tamesna, about 500 kilometres from the camps in Ahaggar, and there are even nomads who keep their she-camels constantly in these regions, where the animals are guarded by herdsmen who are frequently slaves.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

114 174 233 valeur d'immenses territoires inutilisés" (Gautier 1942, p. 209f.). 2) "Il est donc légitime d'associer le nom des Zenata à la grande révolution politique et sociale qu'a entraînée au Maghreb l'apparition du chameau. Zénète et chameau apparaissent en même temps, et tout se passe comme s'ils apparaissaient l'un portant l'autre" (Gautier 1942, p. 227). 3) "En effet, quoique Ibn Khaldoun et d'ailleurs tous les historiens arabes nous signalent les Zenata dès le début de la conquête arabe, il semble qu'au VII[e] siècle les Zenata n'aient pas été encore, aussi exclusivement que plus tard, les représentants du grand nomadisme" (Gautier 1942, p. 227)

Gautier says about the Tuareg: "Ces gens-là sont de grands nomades chameliers; dans nulle autre tribu ce caractère n'est aussi marqué et c'est cela même qui fait leur originalité" (Gautier 1942, p. 249). Most Arab historians confirm that the 175 Tuareg are in particular camel-breeders, and the Tuareg do not belong to the ●101 Zenata group. According to Ibn Khaldoun the Berbers fall into two great divisions: 233 1) The *Botr* descending from *Madghis-Ibn-Berr*, and comprising the Zenata group and several other tribes. 2) The *Beranes* descending from *Bernes-Ibn-Berr*. Several Berber tribes and among them most Tuareg belong to this division (Ibn Khaldoun I, p. 168ff.).

It is interesting that Tuareg camels are frequently referred to in Arab literature 175 as being of a particular light and slender breed extremely well fitted for riding 233 (Ibn Khaldoun II, p. 70, 105. – Edrisi p. 11, 67f., 144f. – Leo Africanus p. 940f.). To-day there is a marked distinction between the camels of the north found mainly 171 among Arabs, and the camels of the south among the Tuareg. The Arab camel is 233 heavily built and particularly fitted for luggage, and the Tuareg say it is also superior as a milk-producer. It has a thick covering of wool around the hump and on the forepart of the body. The southern camel as found among the Tuareg is very different. It has a slender built, short hair, and is particularly fitted for riding as mentioned by the ancient Arab authors. These two different camel-breeds apparently exist all over Northern Africa from the Red Sea to the Atlantic, and the heavy and woolly type seems to be characteristic of Arabs (cf. Nachtigal 1879, I, p. 415f. – Murray 1935, p. 92ff. – Cauvet 1925–26, I, p. 79ff.), who are also the [177] true black-tent dwellers. It is possible that the Arabs have introduced the black [342] tent into Northern Africa together with a particular breed of camel, while another breed was introduced before the Arabs.

The cultural position of camel-breeding has never been thoroughly studied. As I have pointed out elsewhere (Nicolaisen 1959a), it is peculiar that so many customs connected with camels are also typical of cow-breeding of the East African cattle complex (cf. Baumann 1940. – Herskovits 1926. – Kroll 1928). The common [462] traits seem to be the following:– 1) All work connected with camels and oxen is [825] done by men. 2) Camels and oxen have important social functions and their [538] breeders take an interest in these animals beyond their practical importance. Both camels and oxen play an important part in poetry, which is frequently characterised by a tendency towards identification between man and beast (cf. Evans Pritchard 1940. – Foucauld 1925-30, I-II).

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

174 mentioned that the word *Ihaggaren (Ahaggar)* is perhaps derived from *Hoouara*,
[192] which was a common term for certain Berber tribes particularly living in Tripoli-
tania in the Middle Ages. According to Edrisi the Hoouara Berbers were originally
Arabs who adopted Berber language (Edrisi p. 66ff.). This is not proved by Ibn
[114] Khaldoun's important work on the history of the Berbers. But Ibn Khaldoun
states that the Hoouara came under Arab influence at a very early date, and some
of the pastoral Hoouara people apparently migrated southwards to the desert at a
later date than the Lemta (Ibn Khaldoun I, p. 275ff.).

I think that the ancestors of the noble Tuareg introduced the camel into the Sahara. I think too that this may have happened before the first Arab invasion of the 7th century. But some of the dominating noble Tuareg have emigrated from Tripolitania after the Arabs have arrived. And it is probable that the political systems of the Tuareg already very early were influenced by the Arabs among whom a class system is found even nowadays as described from Cyrenaica by
171 Evans-Pritchard. In that region there are client tribes known as *Marabtin alsaqan*
565 because they pay *sadaka*, a fee, to a free tribe for protection and for the privilege of using the earth and water. Some fragments of client tribes even to-day have a very inferior social position and are forced to make payments to, and to perform services for, the free tribes among whom they live (Evans-Pritchard 1949, p. 53).

The word *sadaqa*, a fee, is known to the Tuareg, and there are other Arabic
171 words connected with their political systems. Here I shall content myself with
192 reference to the word *khalifa* used among the Northern Tuareg for the deputies of a chief, and the very important word *ettebel* meaning "drum", "drum-group", and in Air also "drum-chief". Ultimately the history of Tuareg political systems should
174 probably be viewed in connection with those of Arabs.

291 /100 cont./ The layers of leather may be a centimeter thick; the sewing of the leather with large stitches permits decoration. A long thong connects the leather buckles sewn on the sole and is tied over the instep. The elegant footwear is the "ighatimen."

293 A description of the Targui's apparel must include all of the objects he wears including weapons.

The "taralabt" is a leather wallet hung from the neck. An ingenious system of grooved closings keeps it from opening; it is always black and artistically decorated with yellow, green, or red stitching. Numerous inside pockets serve to hold the mirror, the "tazolt" (eye blacking, sometimes kept in a special case), the "chemma" (chewing tobacco), the "kelbou" (natron used to make tobacco milder), personal papers, and sometimes money.

Amulets called "tera" hang from the neck by a leather string; these are small leather rectangles containing either papers written by a taleb /public scribe/ or magic products protecting against sickness, the Kel es Souf /genii/, and misfortune in general. Each Targui is abundantly provided with tera, which make his life bearable.

293 /101/ The "iremdan" ("menguech" in Arabic) is an in-
752 dispensable instrument; it consists of a cutting blade, an awl,
296 and small pincers (something like eyebrow tweezers) These blades pivot around an axis; a ring makes it possible for the iremdan to be hung, but it is often carried in a special case. This tool is in turn a surgeon's kit for pulling tahla thorns from the soles of the feet and a cobbler's tool for repairing nalls /sandals/. A Targui never undertakes a trip without his iremdan.

301 We have already mentioned the "abidj," or polished stone bracelet. The "tissak" is a small silver ring without artistic value. The key to the Tuareg padlock, which is often suspended on the chest, is a much prized ornament.

411 No Targui undertakes an important trip without his "takouba," the sword worn at the side which gives that

[For an extensive list of the names of Tuareg political and other social groups or categories, including relevant page references, see category 116, pp. 534-37.]

114 (2) In winter 1950 I visited several *Kabyle* villages in the Djurdjura Mountains, and stayed for some
121 time in the regions which I had already visited in summer 1947. I wanted to gather supplementary material on the consequences of the drought period, and also to acquire some personal knowledge of winter life among nomads. – Part of the material collected 1947 and 1950 has been published (Nicolaisen 1950).

101 On later journeys to Northern Africa I have studied culture and society of pastoral Tuareg:—

114 (3) In summer 1951 I spent about five months (May September) in Ahaggar. I arrived at Algiers
122 from where I travelled southwards by car to make short stops at Djelfa, Laghwat, Ghardaya, El
[124] Golea, and In Salah. Reaching Tamanraset in Ahaggar in the month of May, I hired an interpreter to visit many Tuareg camps of the important vassal tribes *Aguh-en-tehlé* and *Dag Rali* on journeys accomplished by means of camels and donkeys. Part of the time I also lived at Tamanraset where I was visited daily by Tuareg informants. Apart from Tamanraset I visited the following centres of
[12] cultivation:— Tit, Utul, Terhenanet, and I-n-dalag. My investigations concentrated upon economics
[126] and material culture in relation to environment, and about 300 ethnographic specimens were collected. I left Tamanraset for Algiers by plane via Ganet (Djanet), Rat (Ghat), Ft. Flatters, and Wargla.

(4) I returned to North Africa in summer 1952. The length of this visit was about three months and a half. From Algiers I went by train and trucks to Arris in the Aurès Mountains where I stayed for about five weeks among the semi-nomadic Berber-speaking *Chawiya*. I rode through the valleys of this montain massif on a mule, and the journey terminated with my arrival at the oasis of Biskra. From Biskra I went by train to Tuggurt from where I continued by truck to Wargla. I left this oasis by a French military plane for Ganet in Tasilé-n-Ajjer via El Golea, In Salah, and Tamanraset. At Ganet I hired camels and a native guide and went westwards via Ft. Ghardel to Afara, where I had the opportunity to meet the supreme chief of the *Kel Ajjer* living in French territory. From Afara I went up the valley named Aharhar and across the Tasilé Mountains to Éléżi (Ft. Polignac). After a short rest with the French garrison I went northwards to the region of Hassi Issendjel, where I visited various Tuareg camps, notably of the tribes *Kel Terurit* and *Urapen*. I stayed in Tasilé-n-Ajjer for six weeks, and returned by plane to Algiers via Ft. Flatters and Wargla. From Algiers I made a very
[126] short trip to the *Kabyle* of the Djurdjura Mountains. From the Kabyle, the Chawiya, and the Ajjer Tuareg an ethnographical collection of about 70 specimens was made.

(5) From autumn 1952 until summer 1954 I studied social anthropology in University College London under Professor Daryll Forde and Dr. Phyllis Kaberry. My studies in London were interrupted in summer 1953 when I went to North Africa to stay for three months among the Ahaggar Tuareg. I lived most of the time in camps of the vassal tribes *Dag Rali* and *Aguh-en-tehlé*, but I also visited the *Iklan-en-tawsit* and camps of certain *Isekkemaren* tribes, notably the *Iheyawen-Hada*. I also paid a visit to camps of the *Kel Rezzi* Tuareg (*Ahl Azzi*) who descend patrilineally from Arabs, and I spent several days in the camp of the *Amenukal*, that is the supreme chief elected from the dominant noble tribe of *Kel Rela*. Among agricultural settlements visited the most important were Abalessa and Silet –
[12] apart from Tamanraset. My studies concentrated upon social and political organization, but I made
[126] an ethnographical collection of more than a hundred specimens. The journey from Algiers to Tamanraset and return was made by plane via El Golea and In Salah.

(6) My sixth journey to North Africa was undertaken 1954–55 and comprised about 14 months' field-work among Northern and Southern Tuareg. I left Algiers by car via Djelfa, Laghwat, Ghardaya, El Golea to In Salah at the beginning of the autumn 1954. At In Salah I bought four camels and hired an Arab guide of the *Ulad Ba Hammu* tribe. After a short visit to his camp we went southwards to the region of the Ahnet Massif where I visited camps of *Kel-ahem-mellen* (a small noble tribe), *Kel-Immidir* (*Iseḳkemaren*), *Ayt Lowayen* of the *Kel Turha* section, *Kel Rezzl*, and notably the *Kel Ahnet*. Two small camps visited claimed to belong to the noble *Taytoḳ* tribe, but they had no matrilineal relationship to that tribe which is now found in the Tamesna plains west of Ayr. I left Ahnet for Tamanrasset about the middle of December, and in the following months I travelled alone with my camels in Ahaggar as I now knew Tuareg language sufficiently to dispense with an interpreter. Until the beginning of April 1955 I lived in camps of the *Dag Rali* and the *Aguh-en-tehlé* tribes, and passed some days in the *Amenukal*'s camp. I also had a house at Tamanrasset where I could work more peacefully with problems connected with kinship, land tenure, and political organization. In this work I was mainly assisted by two older Tuareg of the *Dag Rali* and the *Aguh-en-tehlé* tribes. Apart from Tamanrasset I visited the following cultivation centres:— Utul, Tahart, Ti-n-amenser, Ennedid, Iglen, Abalessa, Amsel, and Tarhawhawt. – On the 3rd of April, 1955, I left Ahaggar for Ayr together with two Ayr Tuareg who were returning to their camps at Northern Ayr after a caravan journey to Tamanrasset. We travelled south-eastwards via the small cultivation centre Tagnut and thence into the very barren country separating Ahaggar from Ayr. We refilled our six skin-bags with water at the wells of I-n-abeggi and I-n-azawa, and had no water again until we arrived at a fairly large and permanent waterhole (*agelmam*) known as Tamengoyt, situated on the northern outskirts of the Ayr Massif. Close to this place we met the first Tuareg camps of the *Kel Tédalé* who dominate the northern parts of Ayr. The following days we saw several camps of these Tuareg. At last we arrived at the camp of one of my companions who belonged to the *Iḳḳoberen* tribe though his family was very mixed with *Kel Tédalé*. This camp was situated in the Azel valley, where we stayed for about ten days to regain full strength. Thereupon we continued to *Iferwan* which constitutes the northernmost village of the Ayr Massif. I lived in this village for about three weeks and then I continued towards Agadez together with a Tuareg of the *Kel Akerra* tribe. We visited camps of various tribes on our journey southwards (*Kel Rarus*, *Iforas*). The journey was a difficult one as two of my camels were worn out. We left them in a camp of *Ikoljejiten* Tuareg. This was situated at the Afarak valley from where we continued to Agadez via the small agricultural settlements of Tabeydag, Azzal, and Alarses. From Agadez I went by truck down to Zinder, but returned quickly to make a more complete investigation of the Ayr Tuareg. The situation was now very difficult as my two camels left at Afarak died and I was too short of money to buy a new animal. My financial problems were rather acute and were solved only by the very kind and resolute help rendered me by Professor Daryll Forde of University College London. I was thus able to continue my studies for another six months. I hired a house in Agadez where I could work peacefully, and bought a fine riding camel in order to be able to visit Tuareg camps in the vicinity. The most extensive journey made went to the village of Awderas, north-east of Agadez and close to the Begzen Mountains. On this journey I revisited the small settlements of Tabeydag, Azzal, and Alarses, and visited pastoral camps of the *Iforas*, the *Ikoljejiten*, the *Kel Tamat*, the *Igen-*

●101 114 122 *déynen*, and the *Imezzureg*. If not staying in Agadez I lived mainly in camps of the latter tribe, and spent a considerable time in one particular camp. My studies were concluded with a visit to the camp of the *Kel Ferwan* drum-chief north of Aderbissinat. I remained in his camp for about a fortnight and also visited camps of the *Echchikhen* Tuareg and the Fulani who are numerous in this area. I left Agadez by air via Tawa, Niamey, Bamako to Dakar whence I returned to Denmark by ship, and a [126] few days later returned to London to resume my studies at University College. On this comparatively long journey among the Tuareg I did not make any large ethnographical collection, as I could not afford to buy much, but brought back with me about fifty different specimens plus a few archaeological objects.

(7) In 1956 I returned to Copenhagen from London. I was then planning a new journey to North Africa, but for many reasons this had to be postponed until the autumn 1959. The journey was a very short one of only two months. I left Copenhagen by air on the second of August and arrived at Niamey the next day. After a week's stay at Niamey I continued by plane via Maradi and Zinder to Agadez. The day after my arrival at this ancient capital of the Ayr people I was able to join a car expedition organized by Mr. J. Demonceau, who was studying locust migrations, and by Mr. Claude Gardin of the "Pelotom Nomade", who was looking for Tuareg camel thieves. We went first to Ingal and from there continued northwards to the village and salt pits of *Tegidda-n-tésemt*. We went further north but stopped at the well of I-n-abanferit, then going eastwards across the Talak Plains to the western edge of the Ayr Massif. Our journey back to Agadez followed the road through the mountains. Though this journey did not take much more than a week it was of great importance to my studies, as I had for the first time an occasion to see the extensive plains west of Ayr – a region of great economic value to many tribes not only of Ayr Tuareg but also to certain tribes of Ahaggar. On the journey I visited camps of *Idaléyen*, *Kel Tédalé* and *Iforas* (Ayr Tuareg), of [121] *Iregenaten* (Ahaggar Tuareg), and of *Tégehé-n-Efis* (originally Ahaggar Tuareg). In all these camps I collected much valuable material concerning tent structures and economics. – Shortly after my [123] return to Agadez from this brief journey I met a Tuareg of the *Imézzureg* tribe. I knew him well from my visit to Ayr in 1955, and he was in fact my classificatory elder brother. I went immediately to his camp situated not very far from Agadez, and I lived with him and his kinsmen for the rest of the time left at my disposal. During this period the camp was frequently broken and taken to the best possible pastures of annual plants. I left the camp only once for a week when my brother and I made a camel journey westwards to Tegidda-n-tagayt and Tegidda-n-edrar. In these regions we visited several Ayr tribes which I had never been among previously (e.g. *Imezzuren*, *Ijakarkaren*), and we were lucky enough to meet during this journey the supreme chief of the noble *Kel Azel* tribe. We also visited the camp of the drum-chief of the *Kel Geres* Tuareg, who move northwards to Ayr at the end of the rains. I finished my field-work about the sixth of October and was back in Copenhagen by plane via Zinder, Maradi, and Niamey on the tenth. I made a very small ethnographical collection [126] comprising about twenty specimens. My investigations were not concentrated on any particular [121] subject. I acquired valuable supplementary material on such different matters as traditional political systems, kinship, ecology, and technology.

(8) Participating in The First International Congress of Africanists at Accra I had the opportunity

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

to visit Niamey for one week at the beginning of December 1962. Here I studied the very valuable ethnographical collections of The IFAN Museum, and I spent two days in camps of *Bélla* and Tuareg of the *Western Iwllemmeden* east and north-east of Ayoru on the Niger. Of particular value was my visit to a camp of the dominant noble tribe, *Kel Tahabanat*. Its supreme chief *Amder* and his family gave me important information on Tuareg culture in this little known area. My visit to Tuareg and *Bélla* near Ayoru was made possible by the very kind assistance of Mr. and Mrs. Bernus of the IFAN. They put a truck with its driver at my free disposition.

Altogether I have spent almost three years among North African pastoralists – mainly among the Tuareg. This length of time is not so impressive as it may seem, for my investigations have been carried out over an extensive territory ranching from the Mediterranean to the outskirts of the Sudanese savannah. A detailed study of Tuareg ecology and culture necessitates a detailed knowledge of change and variation in environment within and without the country in which the Tuareg live.

The literature which deals with the Tuareg is very comprehensive as can be seen from the bibliography at the end of this book, but most publications are of very little value and many of them are almost inaccessible.

The Tuareg are first mentioned in literature by Arab authors of the Middle Ages, but most of these historians and geographers did not know the Tuareg country and even the few of them who travelled in the Sahara tell us very little about the Tuareg in early Arabic texts generally called *Muletthemin*, that is "the veiled ones". The most important Arab authors who mention the Tuareg are Ibn Hawkal (10th century), El-Bekri (11th century), Edrisi (12th century), Ibn Batutah (14th century), and Ibn Khaldun (14th century). Ibn Khaldun gives the most intimate description of the Tuareg though apparently he never met them. But they played a very important part in his attempt to recount the ancient history of the North African Berbers. After Ibn Khaldun came Leo Africanus (16th century) who published information gathered by himself on journeys in the Sahara. His book was first published in Italian. There are certain later Arab authors who have contributed to our knowledge of North African cultures and the Tuareg, e.g., Es-Sadi who lived in the 17th century. We must also mention in this connection that there are other valuable Arabic manuscripts, notably those generally referred to as the Agadez Chronicle, which contain much historical material on the Ayr Tuareg (cf. Palmer 1910; 1928; 1936; Urvoy 1934).

The first modern description of the Tuareg was given by Hornemann who travelled from Cairo to Murzuk in 1798. Throughout the 19th century many European travellers contributed to our knowledge of the Tuareg, and it is very important now to have their accounts which derive from a time when traditional political systems were unaffected by European colonization. Among these travellers we should mention such outstanding names as Lyon, Caillié, Denham & Clapperton & Oudney, Richardson, Barth, Duveyrier, Rohlfs, Hourst, Foureau, and von Bary. Lyon gives a very valuable description of the Tuareg who live around Tasilé-n-Ajjer, but by far the most important among these authorities are Barth, who wrote about the *Kel Ajjer*, the *Kel Ayr*, and the *Iwllemmeden*, and Duveyrier, who published an excellent monograph on the Northern Tuareg with particular reference to the Tuareg of Tasilé-n-Ajjer. At the beginning of the present century military posts were established in the Sahara, and literature about the Tuareg became more abundant. Thus Benhazera wrote a good book on

# The Tuareg

The Tuareg are Berber-speaking, nomadic stock-breeders who live in an extensive area of Western Sahara and the northern parts of the Western Sudan. The territory dominated by the Tuareg lies between 14° and 30° Northern Latitude and between 5° Western Longitude and 10° Eastern Longitude. 101 131

The Tuareg fall into several main groups which correspond largely to political units. These groups are the following:—

I. *Kel Aijer*, in the mountains named Tasilé-n-Ajjer in the eastern part of the Algerian Sahara and in adjacent parts of Libya. Northwards they reach Tripolitania and the great sandy desert Erg Oriental around Radames.

II. *Kel Ahaggar*, in the Ahaggar Mountains, in the mountains of Ahnet, Immidir, and Téfedest – and in adjacent parts of the lowland. Certain tribes of the Ahaggar group live in the southern plains of Tamesna between the mountain massifs of Adrar-n-Foras and Ayr, particularly around I-n-abanrerit and Tegidda-n-tésemt.

III. *Kel Adrar*, in the mountains of Adrar-n-Foras south-west of Ahaggar.

IV. *Kel Ayr*, in the mountain massif of Ayr and in the plains to the west and south. The Tuareg of Ayr form several semi-independent units of which the more important are the *Kel Ewey*, the *Kel Tamat*, the *Kel Faday*, and the *Kel Ferwan*.

V. *Kel Geres*, south of the Kel Ayr in the plains around Tessawa. Late in summer at the end of the rains they move up to Southern Ayr around the watering places of Tegidda-n-edrar, Tegidda-n-tagayt, and Tafadek.

VI. *Iwllemmeden Kel Dennek*, that is the eastern *Iwllemmeden*, in the plains around Tawa. At the end of the rains they move northwards to the region of Ingal which is within the country of the Ayr Tuareg.

VII. *Iwllemmeden Kel Ataram*, that is the western *Iwllemmeden*, in the plains around Meneka and along the Niger.

VIII. *Kel Tademaket* comprising several tribes and groups of tribes around Timbuktu and Lac Faguibine. Important among these Tuareg are the *Tengerregif* and the *Kel Inteser*. The *Tademaket* Tuareg from about A.D. 1800 were subjected to the *Iwllemmeden Kel Ataram*.

The two former groups, the *Kel Aijer* and the *Kel Ahaggar*, are frequently referred to by the generic term of *Northern Tuareg*, while the six latter groups living on the outskirts of the true desert and in the Sudanese savannah are known as *Southern Tuareg*. In addition to these groups there are certain small Tuareg groups which in recent times have left their original homeland. After the French penetra- 101 167

[p. 7]

Fig. 1. Map of the central parts of the Western Sahara and the adjacent Sudanese zone inhabited by the Tuareg who fall into eight major political groups or federations. These groups, as mentioned in the text, are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. The *Kel Tademaket* Tuareg (VIII) from about A.D. 1800 were subjected to the Iwllemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 125 kilometres.

known and used particularly women. There are slight distinctions in the characters of the alphabet used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld 1918-20, 1920, 1925-30, 1940, 1951-52), but certain alterations have been made in agreement with the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar vocabulary has never been studied.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

565 619 *Imrad* (sing. *Amerid*). People of this class are sometimes called "serfs" in literature, but the word "vassals" is also used. I prefer to use the latter term, but add that the word *Imrad* is most difficult to translate into an European language. The vassal class is represented in all groups with the exception of the *Kel Geres*. Among the Northern Tuareg and also among the *Iwllemmeden* the word *Kel Ulli* (sing. *Agg Ulli*) is used synonymously with *Imrad*. Among south-western Tuareg around Timbuktu the word *Daga* or *Dara* is also used to designate vassals. The *Imrad* class is by far the most numerous in most groups. The relationship between these vassals (*Imrad*) and the noble Tuareg (*Ihaggaren, Imajeren*) forms the basis of most political systems which are described later (p. 393 ff.).

101 565 Members of the above-mentioned classes are true Tuareg, though the word *Ineslemen* is also used for marabuts of other peoples and for marabuts of various black-skinned castes found among the Tuareg. Among the Northern Tuareg all people of the above-mentioned classes with the exception of certain *Ineslemen* or marabuts are called *Imuhar* (sing. *Amahar*). The Ayr Tuareg have no such common term to designate the people known to us as *Tuareg*, but occasionally they use generically the word *Imajeren* though strictly speaking this term should be reserved for Tuareg of the supreme noble class.

101 The word *Tuareg* (sing. *Targi*) is never used by the Tuareg themselves, but by Arabs. Duveyrier claims it to be derived from an Arabic word of the root *terek* meaning "to abandon". The meaning of the word accordingly should be "those abandoned (by God)", and should refer to the fact that many Tuareg do not follow Islamic rules very strictly (Duveyrier 1864, p. 317 f.). The same explanation has also been given to me by an Arab of the *Ulad Ba Hammu* tribe of Tidikelt. However, the origin of the word "*Tuareg*" is perhaps a different one: – It may be related to the word *Targa* (Ayr) or *Targa* (Ahaggar and Tasilé-n-Ajjer), which name is used by the Tuareg to designate the part of the Sahara generally known to us by the Arabic word *Fezzan*. This is very likely, as we know from Arab authors of the Middle Ages that the word *Targa* or *Targa* was then used as a name for a very important Tuareg group living in that area and adjacent regions (cf. Benhazera 1908, p. 83 f.; Foucauld 1951 52, II, p. 534; Rodd 1926a, p. 273 f.).

142 144 The Tuareg are fair-skinned people who in certain regions and particularly in the south have mixed with Negroes. The Northern Tuareg are predominantly fair-skinned, and many of them are as "white" as Europeans though perhaps a little yellowish or brownish. It is difficult to determine their exact skin colour because they are burned and tanned by the sun and the hot wind characteristic of desert climate. In addition, the Tuareg wear clothes dyed with indigo which comes off on the body, and they rarely wash. When I lived among them my own skin-colour and that of the Tuareg were practically identical. Among the Ayr Tuareg there are also many fair-skinned people, but the Ayr Tuareg are more mixed with Negroes than the Northern Tuareg, and most *Kel Ewey* are predominantly negroid. Very mixed also are the *Kel Geres* and the same seems to hold for other Tuareg groups of the south. A few blond individuals have been recorded from the *Kel Ajjer* living around the oases of Rat and Radames, and they may be the offspring of unions between Tuareg women and caravan traders of the north (cf. Lhote 1955a, p. 162 f.). The blond individuals met in Southern Ayr are the offspring of the fairly numerous marriages between Frenchmen and Tuareg women, but it is claimed that a few years ago a very blond girl was born to parents of families which had never contracted marriages

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

291
564

Fig. 12. Blacksmith woman. Ahaggar, Abalessa.

563 they more frequently refer to mulattoes as *Ichardanen* (sing. *Acharda*). Such mulattoes do not form any particular class or caste.

It is stated in almost all writings on the Tuareg that the offspring of mixed marriages will acquire the social status of their mothers, but though this may be theoretically true in some Tuareg groups actual conditions are more complicated. Among *Ineslemen* Tuareg and generally in southern Tuareg [564] groups there is a strong tendency to acknowledge patrilineal affiliation. In Ahaggar classes and castes [565] should ideally be matrilineal organizations. However, this is not always so. A man who descends from a vassal mother and a noble father will not become a true vassal. He will not have to perform any of the obligations characteristic of the vassal class, and to-day he is normally considered noble 563 though he cannot succed to chieftainship in his father's tribe. If a pastoral Tuareg marries a woman 591 of one of the black-skinned castes the children who grow up in the father's camp will frequently remain there as pastoralists and members of their father's tribe. Conversely children descending from a black-skinned father of an agricultural settlement and a fair-skinned pastoral woman will often remain in the settlement to practise agriculture even after their father's death. As to offspring of marriages between Tuareg men and slave women, they will continue to live in the father's tribe as pastoralists, and will frequently acquire the social position of the father as mentioned later in the description of Tuareg slavery. Mixed marriages between fair-skinned Tuareg and people of black-skinned castes constitute a minority. But it seems as if such marriages are on the increase.

101 All the above mentioned peolpe are Tuareg-speaking though part of the sedentary agriculturists of 563 Ahaggar (*Ḥarratin*, or *Izeggaren*) have Arabic as their mother tongue. In Ahaggar there are also many [197] true Arabs – particularly at the administration centre of Tamanraset. There are also Arabs at certain other villages in Ahaggar, and there are Arab pastoralists. They have largely mixed with the Tuareg, and certain Arab pastoralists such as the *Ahl Azzi* (*Kel Ṛezzi*) should be classed rather with Tuareg than with Arabs. There are also some Arabs in Ayr. There are Arab traders at Agadez, Iferwan, and Ingal, and there are a few Arab pastoralists who have mixed with pastoral Tuareg of Northern Ayr.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

But pastoralists of Arab descent are limited to a few scattered individuals or families in the Ayr area in contrast to the extended Sudanese country around the Niger, where whole pastoral tribes claim patrilineal descent from Arabs, while matrilineally most of them are Tuareg. 101 563

There are many other people within the extended country inhabited by the Tuareg. Very important in the south is a numerous population of Hausa-speaking Negroes. The so-called *Imeggedezen* (sing. *Ameggedez*) of Agadez speak Hausa which language is spoken by various other sedentary people of that region and further south. There are also a few Sonray-speaking people at Agadez, and Ingal further west is predominantly inhabited by Sonray-speakers known to the Ayr Tuareg as *Isaweren*. The Sonray, as is well known, are now found almost exclusively along the Niger, but Ayr was once conquered by the Sonray, and Barth describes Agadez as a Sonray-speaking city. [197]

In the south the pastoral Fulani are now invading the grazing grounds formerly reserved to and owned by the Tuareg. Camps of pastoral Fulani are frequently seen nowadays even as far north as the southern outskirts of the Ayr Massif around Agadez and Ingal. When grazing is good the Fulani may even move further north into the Talak plains with their herds of long-horned cattle. Many other people are frequently met in Tuareg country, e.g. the Tebu, and the Kanuri, who frequently come to Agadez. In Ahaggar and in Tasilé-n-Ajjer there are even a few individuals who descend from Tebu women.

# Environment

Tuareg country ranges from comparatively fertile savannah in the south to barren desert in the north, where the nomads live in or near mountainous regions. Four Tuareg groups are named after the dominant mountains of the Western Sahara, namely those of Ahaggar, Tasilé-n-Ajjer, Adɾaɾ-n-Foɾas, and Ayr. 133 [101]

The mountains of Ahaggar are by far the highest. They consist predominantly of archaic and proterozoic rocks, and of basalt and tufa from a relatively recent period. They are generally of a very dark colour and characterized by formations of rugged ranges, craters and isolated peaks which also bear evidence to former volcanic activity. But the rugged contours of the Ahaggar Mountains are also created by a complicated network of river valleys eroded mainly during the pluvial periods contemporary with the European Ice Age.

The Ahaggar Mountains fall into three main massifs of which that named Atakor is the most important and the highest, with peaks up to 3000 metres above sea level (Ilaman, Tahat). To the north is the massif of Téfedest with peaks which surpass an altitude of 2000 metres, and to the east the lower massif named Anahef. In geological structure these three mountain massifs of Ahaggar differ from the mountains of Ahnet, Immidir (Mouydir), and Tasilé-n-Ajjer which surround Ahaggar in the north. These latter massifs consist predominantly of paleozoic sandstone. They are not so high above sea level and form comparatively flat plateaux. The maximum altitude of Ahnet is 1300 metres while the peaks of Immidir rise to 1680 metres. The extensive plateau of Tasilé-n-Ajjer is on average 1200 metres above sea level, but a few peaks in the south exceed 2000 metres. Parts of the Tasilé-n-Ajjer mountains are covered with basalt rocks, and the river valleys of the comparatively level plateau often form true canyons which make traffic much more difficult than in the higher and more rugged mountains of Ahaggar. Between and around the northern mountain massifs the country consists mainly of flat plains covered with gravel and stone. Extensive areas of sandy desert are rare except in parts of the *Kel Ajjer* territory. [137]

Far to the south of Ahaggar are the low mountains of Tasilé-ta-n-Ahaggar, which are structurally related to the *tasilé* mountains in the north. This area is of little importance to the Tuareg and, in contrast to the higher and more extensive massifs of Adɾaɾ-n-Foɾas and Ayr, is not regularly inhabited. [131] While the mountains of Adɾaɾ-n-Foɾas are everywhere below 1000 metres, the peaks of Ayr rise to almost 2000 metres above sea level in the east and the north where the country is covered with basalt rocks. Idukalen in the Begzen Mountains is 1900 metres above sea level, while the Tamgak Mountains in the north have a maximum altitude of about 1800 metres. In its most mountainous parts the Ayr

[p. 25]

temperatures which may be below zero. At a later date the plants of wheat and barley are watered less frequently, and watering ceases completely some time before harvesting in order that the plant may ripen more easily. 243

The agriculturists of Ahaggar do not manure the garden plots used for wheat and barley. Only a new garden plot never previously cultivated is manured, and when such a garden is made the wild vegetation of grasses, herbs, bushes, and trees is often set on fire. Wheat and barley can be grown in the same garden plot for three or four years in succession, and the soil then needs at least one year's rest. In this way, the same garden plot can be kept under cultivation for many years without manuring: this continuous cultivation on the same spot with a one year's rest for each three or four years cultivation is possible partly because there is a certain crop rotation with other plants grown in summer, but mainly because the agriculturists during the period wheat and barley are grown carry fresh soil to their gardens. This is done not only before sowing but also throughout a long period of the winter when the plants are tender and green. When I stayed in the settlements of Abalessa and Amsel in the months of January and February (1955), all agricultural households worked strenuously from morning to night carrying soil to the green garden plots of wheat and barley. The soil was carried in plaited baskets (cf. Fig. 135) on the head, or in bigger baskets carried by donkeys. The soil was left in small heaps (one in every garden bed) to be spread over and between the green plants (cf. Fig. 137). This extremely strenuous work, I was told, would continue until the month of March. [101] [482] [492] [461]

In spite of the fact that cultivation in Ahaggar is done intensively and much work is connected with it, the yield of winter crops is not a very considerable one. In Abalessa it is said that seed-corn of wheat and barley will normally amount to about 50 kgs, and about 500 kgs is to be considered a normal yield, though certain gardens which are extremely well cultivated may yield more and in rare cases up to one thousand kilogrammes. The gardens I saw at Amsel and Taṛhawhawt were smaller than those seen in Abalessa. At Taṛhawhawt the quantity of wheat and barley sown, was said to amount to about 35 kilogrammes.

Irrigation stops and the basin runs full of water when a cotton stopper is put into the round hole in the middle of the flat stone. Ahaggar, *Ahl Azzi* Arabs.

**B.2.b.** ***Skin tents with semi-arches over horizontal cross-bars*** 342*

I have seen such tents among Ahaggar Tuareg of Tamesna, and it is from this area that I describe the following structure:—

B.2.b.1. Three tents of this type were seen in the *Iregenaten* camp which comprised eight tents south of *I-n-abanerit*. One of the tents was very large with a sheet measuring about 7.00×7.00 m, while the two others were comparatively small. The two small tents had a maximum height of about 1.50 m, while the large tent was about 1.70 m high. Structurally the three tents were identical, as follows:— [361]

Three pairs of forked sticks with horizontal cross-bars were placed parallel to one another at right angles to the longitudinal direction. The middle pair of sticks was a good deal higher than the two outer pairs; the two central poles or sticks were called *igetten* (sing. *aget*) and the sticks of the two outer pairs *tigettewin* (sing. *tegettewt*). The three horizontal cross-bars were all known as *iregeraqaten* (sing. *aregaraqa*). The skeleton of these three cross-bars resting upon pairs of sticks had in addition two semi-arches known as *ilellewan* (sing. *alellewa*). Each of these semi-arches consisted of two slender rods, tied together at their thin ends resting upon the central cross-bars to which they were also fastened with cords, while the thick ends of the semi-arches were tied to the two outer cross-bars close to their edges. This structure, we see, is not very different from the B.2.a.2 type. The sole distinction between these two types is that the latter has a central arch instead of a central cross-bar resting upon upright poles. Actually, the types B.2.b.1 and B.2.a.2 were seen in the same camp and constituted five out of the total eight tents found in it. The wooden structure of the B.2.b.1. tents was also made from boughs of the *tamat* acacia (*Acacia flava*). The sheet was attached to a number of poles, both in the front and at the back, while the narrow ends were kept close to the grounds by means of short wooden pegs. The ordinary *afezu* mats belonged to all three tents (Fig. 275).

B.2.b.2. This is a very small tent depicted by Lhote from the *Iwllemmeden* Tuareg around Gao. Its structure appears to be related to that just described (cf. Lhote 1947a, photo 79 p. 113). [131]

B.2.b.3. This is a most interesting type of skin tent which is described by Lhote from the south-western Tuareg – the *Tengerregif* and the *Kel Inteser*. The type is illustrated by excellent photographs which clearly indicate the structure, namely:— There are two long semi-arches each of which is made from two curved sticks lashed together. The semi-arches are attached at their thick ends to two horizontal cross-bars, each of which rests upon a pair of forked sticks. The horizontal cross-bars are very short so that the distance between the two parallel semi-arches which follow the longitudinal direction of the structure is also very short. The semi-arches are further supported by two other short cross-bars each resting upon two sticks. These sticks with their cross-bars are not always erected in the same way. In summer, the sticks are upright, while in winter they are placed obliquely towards the inside. All poles and sticks which make up the structure are buried solidly in the ground, and this is also the case with the very large number of poles placed along the sides for fastening the sheet. According to Lhote, some of these poles are termed *igem* and *ounousen* (*unnusen*), which words are also used in Ahaggar for certain poles. Though the structure is a very narrow one, these tents may nevertheless be very large as the sheet is fastened to many poles placed at some distance from the narrow structure (Lhote 1947a, p. 100, 160 f., photographs nos. 85–93 p. 128–129). [101]

*342 The sheet rested upon the cross-bar frame and upon the outer cross-bars, being fastened to poles at the back and the front; it was kept close to the ground at the narrow ends where it was fastened to small wooden pegs. The tent sheet measured about 6.00×4.00 m and had five *tarda* (cf. p. 362). The whole structure was made of boughs of the *tamat* acacia (*Acacia flava*).

B.2.g.8. The tent to be described under this heading is used among the *Kel Dennek*. It is structurally akin to the ordinary *Kel Dennek* tent mentioned above as B.2.g.6. (p. 379) but it is provided with a cross-bar frame much like that just mentioned from the *Iregenaten* Tuareg. The type is described by Nicolas. The central post is called *tageffut*, and has a prong at its top to support the frame known as *agegu* made from two sticks to which are tied three other sticks, one of which rests in the prong of the central post. The stick which rests in the prong is placed parallel to the longitudinal direction of the tent, and cords are fastened to the cross-bar frame and to four sticks as customary for *Kel Dennek* tents. Nicolas says of this cross-bar frame that it is a cross-bar "de fortune" (cf. Nicolas 1950a, p. 154 Fig. 30 f.). He does not mention this type of cross-bar in his 1938 study of Tuareg tents, and we may perhaps take this as a proof that it is not very common among the *Kel Dennek*.

One might perhaps be tempted to take these two cross-bar frames as primitive types from which other types of cross-bars have developed, the evolution thus passing from the more elaborate to the more simple type. This, however, is hardly possible. It seems difficult to conceive the framelike cross-bars as a true development from a particular type of dwelling. They are most probably a kind of emergency cross-bars used because the more general type, which is made by blacksmiths, is not available for some reason or other. The ordinary type of cross-bar is no doubt the traditional and the oldest type. I revert to this again later in this chapter in my final analysis of Tuareg tents. Here I content myself with the statement that it seems as though the evolution of T-shaped posts followed another direction. They did not originate from the structurally more elaborate cross-bar frames. It may seem remarkable that the term used for a cross-bar frame among the *Kel Dennek* (*agegu* according to Nicolas) among the Northern Tuareg (*agegu*) designates a tent arch (cf. p. 356, 367). This term, however, does not literally refer to "arch". It derives from the verb *gagg* which means to "to load" or "to be loaded" with something (cf. Foucauld 1951–52, I, p. 406 ff.). – I now come to my last [184] structural group of Tuareg skin tents. It is only represented among the Tuareg most to the south-west from where it has been recorded by Lhote:—

B.2.h. *Skin tents with two central oblique posts carrying a short cross-bar*

[101] B.2.h.1. The tent is found among the *Kel Inteser* Tuareg who live in the region of Lac Faguibine. It is supported by two central oblique posts which carry a slightly curved cross-bar of which a specimen collected by Lhote is conserved in the Musée de l'homme. It has a total length of about 0.45 m, and is 0.07 m broad. It has a decorated inner side and close to the edges two thickenings in which holes are carved for the two posts (Musée de l'homme, 41.19.870; cf. Lhote 1947a, Fig. 4 (2) p. 39, p. 117). Lhote has informed me verbally that the two posts are oblique, but that they do not cross each other, and that the cross-bar is also placed at a right angle to the longitudinal direction. – I revert to this type later as it contributes to our knowledge of tent development among the Tuareg.

# Political Systems of Pastoral Tuareg

In the introductory chapter on the Tuareg I mentioned that they fall into a number of main groups. These groups or federations constitute the largest political units and are the following:— the *Kel Ahaggar*, the *Kel Ajjer*, the *Kel Adrar*, the *Kel Ayr*, the *Kel Geres*, the *Iwllemmeden Kel Dennek*, and the *Iwllemmeden Kel Ataram*. The federation of *Kel Tademekket* in the region of Timbuktu was subjected to the *Iwllemmeden Kel Ataram* from about A.D. 1800 (cf. Richer 1924, p. 96). In this chapter I attempt to outline the structure of some of the federations, and to consider certain problems connected with their historical development.

The two groups of Northern Tuareg which are so intimately related to one another, both culturally and linguistically, formed originally one large political group under the command of the very powerful noble tribe, the *Imenan* in the region of Ganet. It was not only considered noble to a very high degree, but it was very highly estimated because of its supposed relationship to the Prophet. Many noble Tuareg to-day, both in Ahaggar and in Ayr, will claim themselves to be *Echcherifen* through relationship to the ancient *Imenan*, whose leader was the supreme chief of all Tuareg of Ahaggar and Tasilé-n-Ajjer until about A.D. 1650 or somewhat later in the 17th century. The *Imenan* about that date lost their power owing to insurrections led by the powerful noble tribe, the *Uraren*. A Tuareg of this tribe killed the supreme chief named *Guma* and the leadership of the *Kel Ajjer* now passed over to the chief of the *Uraren*.

The political system of the Northern Tuareg in the 19th century has been described in some detail by Duveyrier with particular reference to the *Kel Ajjer* among whom he lived in 1859 (cf. Duveyrier 1864). Among the authors who visited the Northern Tuareg in the 19th century Duveyrier is by far the most important, and his brief description of political organization is of particular value.

When the *Imenan* lost their supreme authority owing to the rising of the *Uraren*, they retained their titles of *Imenukalen* (sing. *Amenukal*), which are used for all descendants of the *Imenan*, their women even to-day being known as *Timenukalin* (sing. *Tamenukalt*). The chief of the *Imenan* was still "the *Amenukal*", a title used for supreme and independent chiefs of large political units. It is a word known to all Tuareg, and there have been some discussion about its proper meaning. The meaning according to Duveyrier is "the owner of the land" (Duveyrier 1864, p. 331), and this interpretation is that generally followed by modern authors (e.g., Lhote 1955, p. 189; Blanguernon 1955, p. 47), though Foucauld does not go into the proper meaning of the word *Amenukal* but contents himself with the statement that it is the title of "a chief who is not subjected to any other chief" (Foucauld 1951-52, III, p. 1213 f.). According to Prasse *Amenukal* is very probably a composit of

Fig. 1.–Map of the central parts of the Western Sahara and the adjacent Sudanese zone inhabited by the Tuareg, who fall into eight major political groups or federations. These groups as mentioned in the text are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. – The Tadmekket Tuareg (VIII) from about A.D. 1800 were subjected to the Ioullemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 160 kilometres.

those surviving, although emaciated, will quickly recover as soon as the rainfall starts again. In addition it is often very difficult to take goats through the barren desert country south of Ahaggar without severe loss. With camels, which are also very important domestic animals, things are different. Camels make a great demand on fodder, they are very valuable, can be sold for rather high prices in the oases, and they have a very slow increment compared with goats. For these reasons it is necessary or desirable to keep herds of camels in the south when pastures are dry in Ahaggar, and camels can be taken through the barren desert country without much difficulty. In dry years many Ahaggar Tuareg have their camel-herds in Tamesna, about 500 kilometres from the camps in Ahaggar, and there are even nomads who keep their she-camels constantly in these regions, where the animals are guarded by herdsmen who are frequently slaves.

known and used particularly by women. There are slight distinctions in the characters of the alphabet used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld 1918–20, 1920, 1925–30, 1940, 1951–52), but certain alterations have been made in agreement with the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar vocabulary has never been studied.

Fig. 104. Map showing the sub-areas of the territory of the *Aḡuh-en-tehlé* tribe. The sub-areas have no proper limits towards the south where the country changes into barren and uninhabited desert. The hatched areas are mountainous regions which are not considered parts of sub-areas. West of the *Aḡuh-en-tehlé* territory is the territory of the *Téġehé-n-Efis* tribe where two sections of the *Aḡuh-en-tehlé* have their normal grazing grounds. To the north are the territories of the *Dag Ṛali* and the *Kel Taẓulet* tribes. The *Kel Aẓernen* section frequently camps in the *Dag Ṛali* territory and intermarries with the *Kel Tamanṛaset* section of that tribe. To the east is the territory of the *Ṛelayddin* who are now considered part of the *Aḡuh-en-tehlé*. The *Aḡuh-en-tehlé* territory chiefly belongs to the *Abada* zone, but the northern parts of the two northernmost sub-areas are within the zones of *Tarayin* and *Asakor*.

the proportion of one to four. After several dry years some agricultural centers must be completely abandoned. This was the case of Tit, Aïtoklane, Tâhârt, Dar-Mouli, etc., in the last few years.

In 1940, 555 hectares of land were seeded. This is the figure for a good year, which can occasionally be surpassed but can also be reduced by more than half.

The population of the agricultural centers, which was 1, 310 people in 1916, was 2, 280 in 1938, which denotes a great effort made in favor of agriculture. This could be realized thanks only to the state of peace due to the French occupation.

Here are the figures for each of the principal centers, according to the archives of the Tamanrasset post (1):

1. Florimond report, 1938.

| | 1911 | 1938 | |
|---|---|---|---|
| Tamanrasset | 150 | 686 | |
| Ăbalessa | 272 | 250 | |
| I-n-Amgel | 180 | 206 | |
| Iglen | | 168 | |
| Ideles | 70 | 160 | |
| Tazerouk | 150 | 148 | |
| Tit | 75 | 98 | had to leave for other centers after the summer of 1938. |
| Tărhaouhaout | 140 | 91 | |
| Amsel | 90 | 66 | |
| Tahifet | | 39 | |
| /248/ Tigeneouin | 25 | 23 | |
| Mertoûtek | | 60 | |
| Hirhafok | | 80 | |
| Iâman | 10 | | |

162
103

| | 1911 | 1938 |
|---|---|---|
| T-i-n-Ămenser . . . . . | 36 | temporarily abandoned |
| Tifert . . . . . | 50 | " " |
| Essélésékin . . . . . | 30 | |
| T-i-n-Târâbin . . . . . | 15 | abandoned |

166 621 [648] These figures bring out the weakening of some centers to the advantage of others. Thus, a number of cultivators from Tarahouhaout (where the French post was formerly located) came to settle at Tamanrasset, and the group of little centers in the outskirts of Ăbalessa, Iglen, Tăfarit, etc., has absorbed the groups from other abandoned centers like Tifert, Essélésékin, Ilâman, Tarahananet, etc.

[241 312] Together these centers number about 400 gardens and 80 feggaguir.

262 439 433 The wheat harvested is partly consumed by the cultivators and chiefly intended for export; it is exchanged at the Touat for dates. The total harvests in the Ahaggar corresponds to only one -fifth of the needs of its inhabitants, even in good years.

621 433 There are fifteen agricultural centers exploited in the Ahaggar: Tamanrasset, Tărhaouahout, Tahifet, Tăzerouk, Ideles, Ăbalessa, Hirhafok, Iglen, I-n-Amegel, T-i-n-Ămenser, Amsel, Tigeneouin, Talan-Tedit, Mertoûtek, and Esselésékine.

[166] In addition there are twenty-two other centers which have been abandoned for some years as a result of dryness or lack of manpower: Aïtoklane, Ădenek, Ămrah, Ăbezou, Ăglil, Bloûmet, Déhine, Dar Mouli, Ennedid, Innezal, Ilâman, In Ămertek, Ilafok, Outoul, Ouhet, Souaïka, T-i-n-Târabin, Touakin, Teberbert, Tarahananet, Tahart, and Joraf.

Ahaggar
Air

and giraffes are found in the plains immediately south and west of the massif. I do not wish here to compare in detail the natural history of Air and Ahaggar. But I wish to emphasize the fact that climatically, botanically, and zoologically an important dividing line runs between these two Tuareg countries. This should not be overlooked in an anthropological description of these parts of Northern Africa. 136 [132] [137]

At present both fair-skinned Europids and black-skinned negroid people live all over the Sahara, and are frequently mixed. There seems to be little doubt that in the north most negroes have come in with the slave trade. We cannot entirely exclude the possibility that part of the northern negroes constitutes an ancient population of the Sahara (cf. Capot-Rey 1953, p. 167 ff.), but in Ahaggar the negroes seem to have arrived later than the fair-skinned Berbers. Until a hundred years ago all negroes of Ahaggar where apparently Tuareg slaves bought or captured in the Sudan, but the negroid Haratin then immigrated from Tidikelt to make gardens for the Tuareg. They introduced the irrigation systems known to the Tuareg as *efeli*, to the Arabs as *foggara* (i.e. irrigation by means of subterranean aqueducts), but the solid houses built of mud *(tarahamt)* so characteristic of the northern oases were apparently not introduced by the first immigrants of Haratin, but later. Another immigration of negroid agriculturists came from Tassili-n-Ajjer and in particular from the oasis of Djanet. It is not quite certain whether they came before or after the Haratin. They are said to have introduced irrigation by means of weels *(tanout)* from which water is drawn by zebus (or donkeys), and two particular types of dwellings are also ascribed to them, namely a subterranean or semi-subterranean dwelling *(edamous)* and a square hut *(ekebar)* covered with straw or rushes. Immigrations of predominantly negroid agriculturists from Tidikelt and Djanet take place also in modern times, but all the present agriculturists do not descend from immigrants of these regions. A large part of them are descendants of Tuareg slaves manumitted by their masters. [44] 74 [567] [167] [177] [312] [342] [312] [342] 567

Negro slaves have also been introduced from the Sudan to Air by pastoral Tuareg, but there is no doubt that Air originally was a pure Sudanese country anthropologically, as it is Sudanese with regard to climate, botany, and zoology. In other words, the oldest known inhabitants of Air were negroes while the fair-skinned Berbers have arrived at a later date. It is stated both by Nicolas and Urvoy that Air before the Tuareg was inhabited by negroid Hausa or Proto-Hausa (Nicolas 1950a, p. 45. – Urvoy 1936, p. 138 ff.), and Barth claims the word *Air* to be relatively late and of Tuareg origin, the word *Azben* also used as a name of the massif to be of Hausa origin and older (Barth 1857, I, p. 369). My investigations fully confirm these statements. All Tuareg questioned about the history of Air seem to admit that the negroid agriculturists have lived in the country before the Tuareg, and there are in the Berber dialect spoken by these people a great many Hausa words. It is, I think, of particular interest that the negroid village population of Air is said to have a kinship system quite distinct from that of all true Tuareg while [144] [114] [103] [192] 563 601

133 /18 cont./ increases, for /19/ the tributary basins converge and form an immense flat plain called aciaf by the Tuareg.

Seen from afar the tassilis appear to be impassable barriers whose tops, eaten by water erosion and battered by wind, give the illusion of a fortified city. Eroding wadis have cut through these sandstone plateaus, and their deep valleys with vertical sides constitute savage gorges at the bottom of which a relatively dense vegetation contrasts with the aridity of the plateau, which is wholly bare and raked by the winds. Numerous gueltas, often fringed with tahlis (a kind of reed), are found in these tassilis.

## The Climate

132 Meteorological observations are regularly made only at Tamanrasset and only since 1929. There is a lack, therefore, of exact data for the whole territory. If it is known from Tuareg reports that it has rained in a certain place, the intensity of the precipitation is not known. The information concerning the winds and temperatures is still more vague. However, by taking into account the observations made at Tamanrasset and by examining the vegetation at different places in the Ahaggar annex, as well as the distribution of the fauna, one can distinguish three climatic zones, which correspond almost exactly

/167/ Remarks on the Rainfall

132 M. Dubief of the Algiers Institut de physique du globe has made a very interesting study of the rainfall in the Ahaggar territory, using information furnished by the Tuareg and covering 80 years for the central Ahaggar and 60 years for the Ahnet and the Mouydir.

This research shows that the system of rains in the central Ahaggar is unrelated to that of the northern Sahara.

Moreover, the distribution of the rains in the central Ahaggar has some relation to the distribution in the Tefedest, little to that of the Mouydir, and none to that of the Ahnet; it is completely independent of the Tamesna.

Finally, the dry periods do not seem to exceed seven years (the term "dry" is not used here in its meteorological sense, but relatively speaking, indicating for the nomads a lack of pastures).

Some Tuareg claim to have observed a cycle of seven years in the duration of the ground-water level.

The observations made at Tamanrasset record as years of heavy precipitation: 1924, 1933, 1943, and 1951, which would give a cycle of about nine years.

/169/ IV

Wells or Water Points on the Caravan Trails

From Tamanrasset to Tin-Zaouaten

103 Amsel: Tiggert /natural outflow of water/ and tanout
312 /well for irrigating gardens/. Permanent agricultural center.

Tin-Tounatine: Tigget /sic/ and abankor /water hole/ in the Tamanrasset wadi.

103
312

/169 cont./ Amselka: Permanent well in the Tamanrasset wadi.

Tinef: Permanent, plentifully filled well, 1.20 meters deep, in the Tamanrasset wadi.

In-Abalesse: Permanent abankor, 0.50 meters deep, in the Tamanrasset wadi.

Tidjenaouine: Agricultural center in the Tamanrasset wadi.

In-Amelloutine: Plentifully filled abankor, 0.60 meters deep, in the Tamanrasset wadi.

Timdjaouine: Ten kilometers south of the Tamanrasset wadi, Mount Debla, fairly plentiful water, ten meters deep.

Abankor ouan Mellouline: In the Immazarène Tin-Reroh wadi, east of the tassili. Not very plentiful.

Tin-Reroh: In the tassili, plentiful, permanent, 40 kilometers from the automobile road.

In el Tobol: In the Adrar In el Tobol, not very plentiful, 15 kilometers from the automobile road.

In-Tedeini: Six kilometers north of Tin-Zaouaten, permanent, ten meters deep, shored up with gasoline drums, three kilometers from the automobile road.

/170/ Tin-Elhaoua: In the Tin-Elhaoua wadi, ten kilometers north of Tin-Zaouaten. Lined shaft, with stone drain, never dry.

Tin-Zaouaten: Three wells, a temporary guelta /natural pool/.

From Tamanrasset in the direction of Tessalit (Sudan)

Up to Silet, various agricultural centers.

Timissao: Well in the wadi, north of the tassili, shored up with stones. Very plentiful water, nevery dar. Depth: six meters.

Tamada: Temporary guelta, rarely dry, east of the tassili, surface about five meters square; very deep.

•103 312 /170 cont./ In-Azaoua: Southwest edge of the tassili. Well, 1.50 meters, never dry.

Tiggueurt: Copious spring, in a tassili valley, three hours' march southeast of In-Azaoua, two hours to the west of Tamada. Site unusual because of verdure.

Aguelman de l'oued En-Nefis: Temporary guelta two hours' march from In-Azaoua.

Ameg: Permanent guelta in an outlier of the tassili, south of Tirek, at the head of the In-Allarène wadi.

Tirek: Permanent guelta, plentiful water, in the northern part of the Tirek ta Settefet tassili.

In-Ouzzal: In the In-Ouzzal wadi, near the confluence of the Ighelian wadi. Plentiful. Depth: eight meters.

In-Djezzal: Plentifully filled well, never dry, 23 meters deep.

Timiaouine: Permanent lined well, never dry, eight meters deep.

## From the Adrar des Iforas (Timiaouine) toward the Tidikelt

The wells of Ilafok and Guernen are filled in; in winter the caravans go straight to In-Ziza, in summer they pass by Timissao.

In-Ziza: Very large guelta, about 20 meters square, varying from five to ten meters in depth, never dry. There are 17 others.

/171/ Aït el Kra: Very copious tiggert in the tassili sandstone near Foum-Ezgag.

Tin-Senasset: Fairly copious spring.

Tin-Eddi: Poorly filled well, sometimes dry.

Tin-Akhenfous: Permanent well.

Tikebetatine: Four or five springs, fairly copious flow.

In-Rhellal: Poorly filled well, 150 kilometers from the first wells of the Tidikelt.

/171 cont./ From Tamanrasset toward In-Salah

•103
312

By the automobile road:
Outoul: Agricultural center.
Tit: Agricultural center.
Tilok: Well.
In-Amguel: Agricultural center.
Iniker: Plentifully filled well.
Tesnou: Plentifully filled well.
Amsir: Well.
Meniet: Well.
Arak: Tiggert and guelta.
Tadjmout: Agricultural center, spring.
In-Takoula: Well.
Tiguelguemine: Guelta.
Djoraf: Hot spring.
Hassi el Khenig: Brackish water.

By the camel trail, west of the automobile road.
From Tamanrasset to Abalessa: Various agricultural centers.
Tin-Felki: Large well, never dry, in the Tekouiat wadi.
Tinn-Maroka: Very plentifully filled well in the Afesfes wadi.
Amsir or Arak.
Hassi Takoumbaret: Permanent.
Hassi Belrem: Plentiful, last well before the Tidikelt.

/172/ List of Selected Wadis

Atakor region:
Northern slope, whose waters are collected by the In-Amguel wadi, which flows toward the Tekouiat and which loses itself in the Tanezrouft to the south of In-Zize.

/177/ V

Flora

| 137 824 Tamahaq Name | Arabic Name | Miscellaneous Observations |
|---|---|---|
| Ahtès | | Acacia albida. Rare. |
| Aliou | | Olea laperrini. In the high mountains. |
| Adjiar | El Iatim | Argan tree (?). Hardwood, pasturage for camels, edible berries. |

301 /183 cont./ Tisabatin: The tisabatin are ear pendants, simple rings of silver whose diameter is about ten centimeters; two tisabatin weigh 120 grams.

Teraout: large silver triangle worn on the chest; the hidden side is made of iron.

Ahbedj (plural: ihebdjen): The women always wear two. They are bracelets, the most popular type of which has the form of a simple ring with an opening. The two ends are polyhedral and are decorated with geometrical designs.

Tissegouar: silver pendants for the temples.

The Tuareg do not use gold; silver alone is used to make jewelry and the amulet cases called teraout.

The men wear smaller rings than the women.

/185/ VII

## List of Agricultural Centers

•103 Abalessa (altitude: 850 meters).
361 This was the largest agricultural center before our arrival
621 in the Ahaggar; since then, Tamanrasset has surpassed Abalessa.

Abalessa is located 100 kilometers west of Tamanrasset in the Ibarras wadi at the confluence of the Abalessa wadi, which receives the waters of the Tit, Outoul, Tiffert, and Iglène wadis.

The population consists of more than a thousand harratin.

The cultivable surface is 150 hectares during favorable years; generally, the crops cover 80 hectares.

The owners of the gardens are some Kel Rela, Ta'ltok, Dag Rali, and Iklan Taoussit.

There are 11 foggara, the longest and deepest in the Ahaggar; some reach six kilometers in length, and the head wells are eight to ten meters deep.

•103 /185 cont. / Approximately 300 palms grow freely or
361 nearly so; almost all have grown from nuts, and half are
621 dokkar (males)

Abalessa has a bordj /a small fort or solidly constructed house/ and an infirmary.

The tumulus of Tin-Hinan is located two kilometers from the bordj in the Tiffert wadi.

Centers of the Tiffert wadi.

Tounin Akourin.

A small center seven kilometers upstream from Abalessa. Two foggara and a tanout.

/186/ The amenokal has his permanent camp near gardens that he owns.

Tiffert Foulani.

Five kilometers upstream from Abalessa. Three foggara. There are about 30 palms. An active center, it is owned by the local harratin. Here is the residence of Si Ahmed Foulani, a well-known taleb /scribe/, who plays the role of cadi for the Tuareg.

Tiffert Tahtani.

Three kilometers upstream from Abalessa. Three foggara. Active and permanent center. Small village constructed of toub, overlooking some 40 palms.

Tin-Tazarouk.

One kilometer from Abalessa on the trail to Silet. One foggara. Zériba. Large quantity of diss (a large grass).

Centers of the Outoul wadi.

Outoul.

A long-abandoned center which is being revived; located between the old and new trails to In-Salah, 20 kilometers from Tamanrasset. Five foggara, two of them upstream. Several fruit trees.

Tahart.

Eighteen kilometers downstream from Outoul. Three foggara and one tanout. Owners: Taltok and Tédjéhé n'Néfi.

103 /186 cont. / About 100 palms, numerous fig trees and
361 vines. A tiggert with abundant tahli. Very picturesque site.
621 Assileskine (altitude: 960 meters).

Center located six kilometers downstream from Tahart. Often abandoned. Owners: Ta'ltok. Three foggara, about 30 residents. Vines and several young palms. Rock drawings near the zéribas.

Ennedid (altitude: 914 meters).

Four kilometers downstream from Assileskine in a gorge at the confluence of the Outoul wadi. About 60 residents, nearly 100 palsm. Owners: Kel Rela, Dag Rali, and Iklan Taoussit. Very pretty site.

/187/ Centers of the Tit wadi.

Tit (altitude: 1, 127 meters).

Located in the Tit wadi, 50 kilometers from Tamanrasset. Fairly important center, more than 100 residents, houses of toub and zeribas. About 30 palms, numerous fig trees, and enormous vines. At this time, four foggara. Very important site for rock drawings.

Tin-Emensar.

Ten kilometers downstream from Tit. Abandoned center.

Dar Mouli.

Three kilometers downstream from Tin-Emensar, a small garden is cultivated. Site of an annual celebration where the Tuareg gather for the ziara of Moulay Abderrahmane.

Centers of the Tamanrasset wadi.

Tamanrasset (altitude: 1, 470 meters).

Fort Laperrine, administrative headquarters of the Ahaggar.

The military bordj was constructed in 1919 and used in 1920 after the abandoning of Tarahouaout.

In 1920, Tamanrasset had 40 residents. It was a small, unimportant center with three foggara; a few rare éthel and fersig lined the wadi.

103 361 621 /187 cont. / The French occupation created out of nothing the built-up area which became a road center after the creation of automobile roads from Tamanrasset toward In-Salah and Algiers;

from Tamanrasset toward Agadès and Fort Lamy;

from Tamanrasset toward Tin-Zaouaten and Gao.

Secondary roads of local or tourist interest were later opened:

from Tamanrasset to Djanet by way of Idelès and Serouanout;

from Tamanrasset to Idelès by way of Tarahouaout, Tahifet;

from Tamanrasset to In-Azaoua (not completed);

from Tamanrasset to the Asekrem massif by way of the Illamane peak (tourist);

from Tamanrasset to the Asekrem massif by way of the [491] Imalaoulaouen guelta and the Akarakar. This road, finished in 1952, makes it possible to circle around the high peaks of the Atakor; it /188/ completes the one mentioned just before. Its route, laid out by the head of the Tamanrasset annex, provides maximum protection against the rains; it discloses a succession of splendid panoramas and ends at the foot of the Asekrem plateau after having crossed the strangest assortment of peaks imaginable. This road is prolonged in the direction of the Issakarassen guelta, then will continue toward the Hirafok agricultural center to end in the Tefedest.

[439] Arab and Mozabite merchants very quickly installed themselves at Tamanrasset, offering merchandise coming from Tell and buying wheat, millet, and butter from the Tuareg, making usurious loans, in a word, draining away the Tuareg's small supply of cash to direct it toward the Mzab.

The houses are built for the most part on the right bank of the wadi in the nonirrigable areas. Tamanrasset has no local color whatsoever, but the red tint of the exterior plastering, the cleanliness and charm of the streets shaded by éthel and adorned by geraniums, produce a pleasing over-all

103 /188 cont./ effect. An admirable and almost unique thing
361 in the Ahaggar is the circle of mountains which surrounds the
621 village; from the south bank of the wadi the view at sunrise or sunset is sensational.

At the present time Tamanrasset has some 20 foggara and a dozen tanout. The owners of the foggara are: the commune, some Adjouh n'Téhélé, some Tédjéhé n'Néfis, some harratin, and some merchants. The foggara are from four to five kilometers long. The gardens extend nearly six kilometers from the ksar /former fortified village/ of the Adriane to the ksar of Teggert. The cultivated area is about 70 hectares, counting the gardens of the small center of Tihegouine three kilometers downstream, watered by a foggara.

The commune owns a magnificent garden where all sorts of fruit trees are tried; it sets an example for the local gardeners. Many European houses have a small garden irrigated by foggara or by well.

The present population is about 2,000 residents. This enormous growth in population presents a terrible /189/ water problem. It appears that an agricultural center in the Ahaggar cannot grow indefinitely without considering hydraulic works.

103 Tamanrasset, although favored from the point of view of
361 water resources, is a proof of what could be attempted in the
621 other agricultural centers if the French could advise the
648 harratin and furnish them examples.

The French population is divided in the following way:

A captain, annex head, administrator of the commune.

Two or three officer assistants.

Secretaries.

A school. Seven teachers, three of them nomads.

An observatory of global physics. Three physicists.

A telecommunications service. Four radio operators, two weather men.

103
361
621
648

/189 cont. / A branch of the Company of Tropical Transportation.

An auxiliary postal receipts office.

A hotel.

A few retired persons at Tamanrasset without occupation.

From the military point of view, Tamanrasset is generally the base for a company of the camel corps. Units of the Saharan Engineer corps maintain the road from In-Salah to Tamanrasset and Agadez.

The French population totals about 120 persons; this number is subject to frequent fluctuations.

The number of Mozabite and Arab merchants, including their families, comes to about 100 individuals.

There are about 1, 900 harratin, an approximate figure, for many gardeners come and go from one agricultural center to another.

It is impossible to speak of Tamanrasset without thinking of General Laperrine and Father de Foucauld. The body of the general rests at Tamanrasset near the tomb where the priest was buried after his tragic death. The bordj where Father de Foucauld lived during the last years of his life is a tourist attraction; it is also possible to visit the hermitage built by the Father on the wadi's left bank.

/190/ Near the village of Adriane are found the tombs of Moussa ag Amastane, the Laperrine's amenokal friend, and of Dassine, the famous poetess.

In the house which was Moussa ag Amastane's, the maalmines, artisans of the Tuareg tribes, work.

Tamanrasset, administrative center, a necessary stop on the road from French West Africa and from French East Africa, is also an airplane stop destined to become more and more important.

Tourism tends to conquer the Ahaggar; the Touring Club of France has organized excursion caravans for several years. Scientists from all fields, enlightened travelers,

103 /190 cont./ mountain climbers in quest of virgin peaks, are
361 attracted to the still little-known country. For all of them
62 Tamanrasset is a departure base but not a place to linger.
[648]

Tissenaouine

In the Tissenaouine wadi at its confluence with the Tamanrasset wadi. One foggara belonging to a hartani. Very well-cultivated garden.

Tagrambaït

In the Tamanrasset wadi, 15 kilometers south of Tamanrasset. Three foggara, well-cultivated gardens. Little possibility for growth.

Amsel (altitude: 1, 180 meters)

Located in the Amsel wadi a little before its confluence with the Tamanrasset wadi, about 30 kilometers south of Tamanrasset.

The owners of the gardens are the Adjouh n'Téhélé and the Tédjéhé n'Néfis. The gardens are located upstream and downstream from the tiggert, a veritable stream of running water where abundant tahli grow. Six foggara and three tanout. There are about 60 residents. The cultivable surface totals 30 hectares; there would be possibilities for extending the center downstream. Several fruit trees.

Intnérin

In the Tamanrasset wadi seven kilometers south of Amsel. Tiggert and numerous tahli. Two foggara. Unimportant /191/ center, with no possibility for growth. Boxed-in, very hot valley.

Idikel

In the Tamanrasset wadi 15 kilometers south of Amsel. Difficult to reach by auto. Three foggara and two tanout. Large amount of cultivable land but endangered by the big floods of the Tamanrasset wadi.

Tiguenouine

In the Tamanrasset wadi seven kilometers south of Tamanrasset. A large amount of tahli at the Amelalouline tiggert. Three foggara, abundant water.

103
361
621

/191 cont. / Centers located on the In-Azaoua road

Izerzi

Fifteen kilometers south of Tamanrasset in the Izerzi wadi. A long-abandoned center revived in 1952.

Talan Téhédit

A long-abandoned center 20 kilometers south of Tamanrasset. Cultivated since 1951. Abundant water. Tiggert, tahli. Garden owners: Adjouh n'Téhéle and Tédjéhé n'Néfis. Three foggara and two tanout. Possibility for growth.

Ifok

Thirty kilometers south of Tamanrasset. Running water, tiggert, tahli. The gardens are upstream and downstream from the tiggert. Two foggara and three tanout. A frequently abandoned center.

Region of the Atakor

Ilaman (altitude: 2, 000 meters).

Highest center in the Ahaggar. Abandoned for a long time, traces of nine former foggara.

At the present time the village of Ilaman has a dozen residents. One foggara and two tanout are in operation. The Dag Rali own the gardens; their millet silos give the village a curious appearance.

Terhénanet (altitude: 1, 950 meters)

Located in the Terhénanet wadi on the edge of the Taessa massif. /192/ Like the village of Ilaman the village of Terhenanet is at the side of the road leading to the Asekrem. A small guelta is found downstream from the gardens. An unimportant center: about ten residents, two living foggara, four dead ones.

Centers of the southeastern Atakor

Tarahouaout (altitude: 1, 317 meters) -- (Fort Motylinski)

Located in the Tarahouaout wadi 80 kilometers from Tamanrasset by the automobile road. It was the administrative

103 361 621

/192 cont. / capital of the Ahaggar from 1908 to 1921. One may see the old bordj overlooking the wadi, as well as old houses at the foot of the cliff.

An important center, it is the fief of the Adjouh n'Téhélé tribe. Fifty-two hectares are cultivable, irrigated by ten foggara. There are numerous tanout. Fruit trees are in decline but there are still fig trees, apricot trees, and vines.

Numerous pre-Islamic tombs are evidence of a very ancient occupation of this water point. Three rock-drawing sites exist on ridges downstream from the bordj.

Six kilometers downstream from the gardens, an enormous stand of tahli announces the entrance to very narrow gorges, in which one may follow over a distance of ten kilometers a veritable stream connecting a string of guelta. This is perhaps the most important permanent flow of water in the Ahaggar.

In-Dalag (altitude: 1,450 meters)

Located in the In-Dalag wadi, this very important center extends over a length of 15 kilometers. The water table is fed by waters running from the southeast of the Atakor and from the Ahéléheg djebel. The Adjouh n'Téhélé own the gardens. In dry periods this center is partly abandoned, as well as the small villages downstream: Tehi n'Oudi, Tin-Tsoumar, Tabarakaten, In-Tinsi, In-Tolouline.

There are five foggara at In-Dalag. Downstream from the cultivated centers gorges are found where great numbers of tahli grow.

/193/ Tahifet

An important center located in the wadi of the same name 50 kilometers north of Tarhaouaout. The Adjouh n'Téhélé are owners of the gardens. The cultivable surface comes to 22 hectares; there are eight foggara. Six kilometers downstream from the gardens is a tiggert surrounded by a large amount of spontaneous vegetation. The site is very picturesque.

/193 cont. / Centers of the northern Atakor

Ideles

Very important center in the Tarouda wadi, overlooked by the Adrar Taderaz. The village is located on the automobile road from Tamanrasset to Djanet 265 kilometers from Tamanrasset. The village consists of a bordj and an infirmary, as well as numerous stone houses. The residents, who number about 300, were originally from the Tidikelt. The ruins of an old ksar may be seen.

The gardens belong to the Kel Rela, the Dag Rali, the Kel Tazolé, and the Kel Amguid. The cultivable area amounts to about 40 hectares, irrigated by eight foggara and about ten tanout. About 300 palm trees are fairly well cared for; there are also numerous fig trees and vines.

Amenselane

Very small center six kilometers from Ideles. One foggara. Numerous tahli near the tiggert.

Tazerouk

A center which used to be very important but whose cultivable land is often carried off in pieces during big floods. Located 188 kilometers from Tamanrasset by the Ideles automobile road. The population is made up of freed Negroes who own the gardens but whose laziness has jeopardized this favored oasis. The altitude is 1, 896 meters; two wheat harvests per year are possible. The cultivable area amounts to 45 hectares, with hardly half of it sown. Enormous, untended fig trees grow, /194/ as well as very many peach trees and apricot trees. The summer climate at Tazerouk is the most pleasant in the Ahaggar.

In the wadis which end at Tazerouk, agricultural centers are established during the rainy years; these are: Sellemal, Ihebert, Teberbert, Taouakim, Tin-Ezzar.

Tizzeit

Unimportant center, long abandoned, now cultivated, located on the camel trail from Ideles to Tazerouk. Land

103 361 621 /194 cont./ belongs to the Ibardjien, an ancient tribe on the way to extinction, redoubtable mountaineers and clever hunters of wild sheep. Alkaline spring, tanout. Vines, fig trees, and numerous palms.

Tin-Founès

Abandoned center located on the Amadror road; numerous untended palms.

Hirafok (altitude: 1, 510 meters)

Located in the Hirafok wadi, on the automobile road from Tamanrasset to Ideles. The gardens run lengthwise and are well tended. Twenty-four hectares of cultivable land irrigated by five foggara and five tanout. A few fig trees. A bordj is constructed by the side of the road. The wadi valley is fairly well wooded; there is a tiggert downstream.

Im-Amguel (altitude: 1, 037 meters)

Large agricultural center located in the In-Amguel wadi on the road from Tamanrasset to In-Salah, 144 kilometers from Tamanrasset. A bordj and an infirmary. Four hundred residents. Ten foggara water well-tended gardens. There are some 100 palm trees, half of which are dokkar. Vines, fig trees, apricot trees, peach trees. Poultry.

Ifrok

Upstream from In-Amguel on the automobile road from Ideles. A center long abandoned, now cultivated. One foggara. The wadi is very well wooded.

Tasakimt

An abandoned center located between Ideles and Tazerouk. One tiggert upstream from which existed a foggara and four /195/ tanout. Abundant vegetation consisting of fersig and oleander.

Centers of the Tefedest

Mertoutek

A center in decline. There now exist two living foggara compared to ten before. Altitude: 1, 450 meters. Located in

103 361 621

/195 cont./ the Mertoutek wadi, to the east of the Tefedest, 260 kilometers from Tamanrasset. A few fruit trees. Important rock-drawing sites (Coche-Chasseloup-Laubat, Lelubre and M. Cousin sites).

In-Amertek

Abandoned center downstream from Mertoutek.

Ohet

Abandoned center to the northwest of the Tefedest. Two dead foggara. Land belonging to the Tédjéhé Mellet.

Adenek

Abandoned center in the Adenek wadi at the confluence of the Dehine wadi. Land belonging to the Kel Tefedest. There still remain a few fig trees and vines.

Abezzou

Abandoned center, land belonging to the Kel In-Rhar and Eouen n'Hada. Only a few zéribas and traces of guemoun are evidence of former cultivation.

Dehine

Center located six kilometers north of Mertoutek. Abandoned. There remain a few palms and fig trees as reminders of a former prosperity.

Other agricultural centers

Silet (altitude: 775 meters)

Located 151 kilometers from Tamanrasset on the road to Tin-Zaouaten. The Silet wadi forms a large basin which receives the waters of the Tahelra. There is a very shallow water table, which makes it possible for palms to grow without irrigation. There are about 6,000 palms which receive practically /196/ no care. Artificial fecundation is rarely practiced. This palm grove was created about 200 years ago by Arabs from the Tidikelt. The owners of the palms are some Kel Rela, Iklan Taoussit, and Dag Rali. An attempt to establish a palm grove has been made by the Annex with djebars of Téguezza.

103
361
621

/196 cont./ Some ten residents live at Silet and cultivate small gardens irrigated by three foggara. A bordj. Ruins of an old Arab fort. Numerous pre-Islamic tombs.

Tibeghim

Five kilometers from Silet. Small palm grove in a semi-wild state, which gives it a very picturesque appearance. The palms belong to the Kel Rela and the Iklan Taoussit.

Aïtoklane

Center located in the Sersouf wadi 40 kilometers south of Tazerouk. Long abandoned, now cultivated. Far from the automobile roads, this center is rarely visited. The cultivable area is great.

Tin-Tarabin

In the Tin-Tarabin wadi, away from the automobile roads, this center is rarely visited. Abandoned, then revived a short time ago. This center could prosper, for the cultivable area is large.

Tadjmout

Located on the road from Tamanrasset to In-Salah in the intra-tassili depression of the Mouydir tassili. A few gardens belonging to the Kel Immidir. Palm trees (about 100 grow freely in the gorge one kilometer from the road).

Izghan -- Izeghaf -- Djoraf

Abaondoned centers in the interior of the tassili massif. Numerous palms belonging to the Kel Immidir and the Kel Ahnet. These sites are never visited and remain unknown to all.

Tin-Teredjine

Upstream in the Teredjine wadi (In-Guezzam road). Tiggert, abundant water, abandoned garden. Tomatoes /197/ grow without being cared for. An Adjouh n'Téhélé family gathers them from time to time.

Inroudiden

In the Tahelra massif (south of Tiffert), in the Inozzorou wadi, a tributary of the Tinef. Owners: Iklan Taoussit. Unimportant.

Isernan and Sédéouen

During rainy years, gardens are established upstream from the tiggert in these two wadis, tributaries of the In-Dalag wadi.

Fig. 1. Map of the central parts of the Western Sahara and the adjacent Sudanese [illegible] inhabited by the Tuareg who fall into eight major political groups or federations. These groups, as mentioned in the text, are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. The *Kel Tademaket* Tuareg (VIII) from about A.D. 1800 were subjected to the Iwllemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 125 kilometres.

known and used particularly by women. There are slight distinctions in the characters of the alphabet 212
used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-
Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the [104]
system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld
1918–20, 1920, 1925–30, 1940, 1951–52), but certain alterations have been made in agreement with
the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar [114]
vocabulary has never been studied.

Fig. 104. Map showing the sub-areas of the territory of the *Aǵuh-en-tehlé* tribe. The sub-areas have no proper limits towards the south where the country changes into barren and uninhabited desert. The hatched areas are mountainous regions which are not considered parts of sub-areas. West of the *Aǵuh-en-tehlé* territory is the territory of the *Téǵehé-n-Efis* tribe where two sections of the *Aǵuh-en-tehlé* have their normal grazing grounds. To the north are the territories of the *Dag Ṛali* and the *Kel Taẓulet* tribes. The *Kel Azernen* section frequently camps in the *Dag Ṛali* territory and intermarries with the *Kel Tamaiwaset* section of that tribe. To the east is the territory of the *Ṛelayddin* who are now considered part of the *Aǵuh-en-tehlé*. The *Aǵuh-en-tehlé* territory chiefly belongs to the *Abada* zone, but the northern parts of the two northernmost sub-areas are within the zones of *Tarayin* and *Atakor*.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*342

[352]

Fig. 257. A square *téjira* hut (left) and a beehive hut of the *taṭṛamt* type (right). To the left is also seen a bed of palm fronds lashed together with hide. These beds are used by sedentary agriculturists. Ayr, Awderas.

palm leaves. The upper part of the hut is generally covered with palm leaves kept together by means of outer circular rods, but, before the roof is laid on, a small plaited mat attached to a wooden frame and known as *tégelengelt* (pl. *tigelengelin*) is placed over the top of the structure as a protection against rain. Seen from the outside beehive huts of this type bear a resemblance to cylindrical huts with conical roofs. Beehive huts of the structure just described vary much in size. A normal hut is about 1.75–2.00 metres high with a diameter of about 2.50–3.00 metres.

Beehive huts possibly different from those mentioned above are described by Rodd. They are said to have a frame made of palm-frond ribs planted in the ground and tied together at the top, and according to illustrations they are covered exclusively with straw. Rodd's illustrations of beehive huts are taken from the villages of Towar and Timia (Rodd 1926a, p. 184, pl. 20). Huts akin to those mentioned by Rodd have also been depicted by Buchanan (Buchanan 1926, p. 140).

[103]

Beehive huts are extremely common in Southern Tuareg countries and adjacent regions. In Ayr I have seen beehive huts of the *taṭṛamt* type in all villages visited from Iferwan to Agadez, and they also occur in Damergu together with cylindrical huts with conical roofs. I have not seen beehive huts at Zinder, but they are found among the sedentary Hausa of the Birni – N'Koni region – according to the excellent exhibition of the IFAN Museum at Niamey. Hausa beehive huts differ as to construction. Some huts have a cylindrical wall built of mud and supporting the roof, which may also be plastered with mud at the inner side, while other huts have a cylindrical mud wall inside the lower part of the structure and a pronged central post to support the roof. There are also very simple beehive huts which serve for sleeping huts; they are sometimes placed upon high platforms where mosquitoes are less embarrassing. Beehive huts are extremely common along the Niger where I have seen them

*342
171

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

these regions and are now extremely rich in stock, though they are said to have had very few domestic animals when they left Ayr for the southlands in the 18th century. 174 175

The *Kel Ewey* Tuareg who probably came to Ayr in the 14th century took up grazing grounds in Central and Eastern Ayr. There were originally seven tribes of *Kel Ewey* Tuareg, and five of these still exist. Like the *Itésen* and most other Tuareg, these tribes claim descent from a common ancestress. But the *Kel Ewey* Tuareg have largely mixed with the negroid village population which is also now known as *Kel Ewey*, and there are very few fair-skinned pastoralists among them nowadays. Barth mentions that the true *Kel Ewey* tribes are related to the very powerful tribe of *Uraṛen* of Tasilé-n-Ajjer (Barth 1857–58, I, p. 372).

As to the origin of the noble nuclei of the two important drum-groups of *Kel Ferwan* and *Kel Faday*, the date of their arrival is most difficult to determine. The name of the *Kel Ferwan* is derived from the village of Iferwan in the north (*Kel Ferwan* = "the people of Iferwan") but they were nevertheless true nomads who originally lived in Northern Ayr. Urvoy thinks that they came to Ayr at the same time as the *Kel Ewey* or somewhat later, and that they lived in Northern Ayr around Iferwan until the 17th century when they moved southwards to the region of Agadez. But this statement is not in agreement with traditions I have collected in Ayr. It is perhaps not to be taken very seriously that all *Kel Ferwan* Tuareg claim that they came to Ayr before other Tuareg groups, but the present Sultan *Umar* of Agadez says that all Tuareg groups now living in Ayr had arrived in the country when the sultanry was established in the year 1405 A.D., at which time the noble *Kel Ferwan* Tuareg lived at Tafadek north of Agadez. There are different traditions about the origin of the noble *Kel Ferwan* Tuareg. One mentioned by Urvoy claims Egypt as their homeland; this probably implies immigration from or via the Fezzan (Urvoy 1936, p. 150). Barth says they are related to the *Uraṛen* (Barth 1857–58, I, p. 385). According to my own investigations they came from a country situated towards the east or northeast, or from Awjila, but there are also many Tuareg of this group who claim that the noble *Kel Ferwan* Tuareg originally lived in Ahaggar as close kinsmen to the dominating *Kel Ṛela* tribe of that region. Some *Kel Ferwan* Tuareg will even go so far as to hold that even after their arrival in Ayr they continued to intermarry with the *Kel Ṛela* of Ahaggar. According to Nicolas their ancestress is named *Tadawelt* (Nicolas 1950b, p. 474), while I have been told her name was *Sabenas*. [103]

As to the origin of the *Kel Faday*, their name is derived from a mountainous part of Northern Ayr. According to Urvoy they migrated southwards towards the south-west to the region of Ingal, where they took up grazing grounds at the end of the 18th century (Urvoy 1936, p. 150). The *Kel Faday* Tuareg are said to be related to the *Taytok* of Ahaggar (Duveyrier 1864, p. 322; Urvoy 1936, p. 150; Nicolas 1950b, p. 472). Barth however is of the opinion that they came from different regions but in particular from Tasilé-n-Ajjer (Barth 1857–58, I, p. 384).

Among the latest Tuareg immigrants are to be mentioned the *Kel Tamat* who came possibly three or four centuries ago. Urvoy mentions Ahaggar as their homeland (Urvoy 1936, p. 150), while Nicolas says they are related to the *Uraṛen* of Tasilé-n-Ajjer (Nicolas 1950b, p. 471). Even later came the *Ikezkezen* Tuareg who in Ayr attached themselves to the *Kel Tamat*. According to Urvoy they came from Ahaggar (Urvoy 1936, p. 151), according to Nicolas they descend partly from the *Taytok* of Ahaggar, partly from the *Imanṛasaten* and the *Uraṛen* of Tasilé-n-Ajjer (Nicolas 1950b, p. 472). Tuareg of the *Ikezkezen* told me that they are related to the *Uraṛen*.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

According to the *Agadez Chronicle* five tribes of the *Itésen* went out to discover a Sultan. They found him in a country written in translations *Arim Sotafan* (Palmer 1936, p. 55) or *A'arem-Cattafane* (Urvoy 1934, p. 154). The meaning of this word – correctly written *Arrem Settefen* – is "black town". This seems to indicate that the first Sultan came from a Sudanese state, and it is stated by all Tuareg that all known Sultans of Agadez have been black-skinned. Even to-day it is claimed that although the Sultan can take a fair-skinned Tuareg woman as one of his wives, the descendants of such a marriage are never elected Sultans. Individuals who have ties of kinship with a particular Tuareg group are never chosen for that office. 175 643

The fact that the Sultan of Agadez has four ministers like most kings of Sudanese states (cf. Frobenius, Atlas Africanus, H.3; Baumann 1940, p. 58) may perhaps point to a connection between the establishment of the Ayr Sultanry and the Sudan, and this seems also to be intimated in the *Agadez Chronicle*. Nevertheless, the popular tradition about the origin of the Ayr Sultanry goes against this assumption. For it is told all over Ayr, both among Tuareg and the so-called *Imeggedezen*, that the first Sultan of Agadez came from Constantinople. This tradition, which is not mentioned in the *Agadez Chronicle*, is also claimed to be true by the present Sultan of Agadez. He says that the *Itésen* tribes, or representatives from these tribes, went to Constantinople to ask the Sultan to give them one of his sons as the first Sultan over Ayr. The Sultan of Constantinople had three fair-skinned wives who all refused to let their sons go to Ayr with the deputation. But he also had four black-skinned wives or concubines and the first of them who was asked to let her son become the Sultan over Ayr agreed. So it happened that the deputation of *Itésen* Tuareg returned to Agadez with their first Sultan who patrilineally is descended from the Sultan of Constantinople, matrilineally from a slave woman. There are some people who claim this tradition to be spurious, but it is admitted by most people as a true account of the origin of the Ayr Sultanry. Among the *Kel Ferwan* Tuareg it is claimed that the Sultan was fetched by people of the *Kel Ferwan* group, or that the *Itésen* deputation was sent out to fetch the Sultan on the initiative of the *Kel Ferwan* group. This variation of the tradition is also recognized by the present Sultan. [645] 173 643

In the *Agadez Chronicle* we are told that the Sultan at first had no permanent residence but led a nomadic life in the region of Tadeliza. It did not take long before he became permanently settled at Ti-n-Chaman from where he moved to Agadez which seem to have been founded as a city at the middle of the 15th century A.D., a centre of the then extremely flourishing trade through Ayr (cf. Rodd 1926a, p. 102, 364 f., 409; Urvoy 1936, p. 164). 175 643 [103]

The present Sultan *Umar*, who has reigned since 1919, says that the first Sultan who came to Ayr had the great task to learn the Ayr Tuareg good manners of living. Before the establishment of the Sultanry the whole country of Ayr had been dominated by the *Izran* (of the Lake Tchad region) who had claimed as their annual tribute a young girl from all Tuareg tribes of Ayr. When the first Sultan arrived the Tuareg lived like donkeys in the rocks. They had extremely bad manners, and there were even people who married with their sisters. The Sultan taught them good manners and brought justice and order to the country. He was the true owner of the land from the northern outskirts of Ayr to the region of Madawa where the *Kel Geres* Tuareg now live. He divided the land between the main groups of Tuareg, and allotted to the *Kel Ferwan* Tuareg who lived around Tafadek a large part of Ayr up to 173 643

Meslar, Amenukal of Ahaggar 1941-1950 397
Mokhammed, late drum-chief of the Kel Ferwan 426
Mokhammed ag-Kerku, Ah. a descendant of the Isebeten tribe 408
Mokhammed ag Mokhammed, drum-chief of the Taytoḳ of Ahaggar 399
Mokhammed Aman, son of the ancestress of the noble Kel Ferwan, Sabenas 426

country just to the West of Agadès (Lhote, 1955, p. 217). These movements were but the latest major episodes in a general southwestward drift of which we have evidence going back at least as far as the 8th century (Rodd, 1926, p. 376) when the weight of the great Arab invasions first began to be felt.

The military administrative unit known as the *Amexe du Hoggar* covers roughly the territory that lies between Amguid and In Guezzam, and Djanet and Ouallen, and corresponds fairly closely to the present normal range of the Ahaggar Tuareg. This area is about the size of New York State, Pennsylvania, Virginia and Maryland put together (146,300 square miles, with nearly 31,000,000 inhabitants in 1950), and supports a total native population of probably about 12,000, roughly the same as that of Athol or Swampscott, Massachusetts, or Gainesville, Georgia. Cambridge, Massachusetts, has more than ten times as many permanent residents. Twice as many people work in the Pentagon Building alone as live in the entire Ahaggar.

Accurate population figures for nomadic peoples are always very hard to obtain, and in the Ahaggar it is practically impossible to arrive at anything better than very rough approximations. We are probably safe in assuming, however, that there are about 4,400 Tuareg and 4,000 Negro slaves in the area, plus some 3,500 sedentary Haratin, a few small families of smiths, and a very small handful of Arab shopkeepers from the Northwest who have settled in the largest sedentary centers.

The Tuareg speak Tamaheq, which is a form of Senhadjan Berber.

**Social Organization.** The Tuareg are divided into confederations as we have seen, and these are divided into tribes which are subdivided into clans and the latter into fractions. The nomadic population is divided socially into

[534] [6] A hemispherical drum made of half a big gourd with a skin stretched over the opening.

[7] Tuareg tribal and personal names are spelled in as many different ways as are the geographical names of the Sahara. The most common variations are found in the alternative use of *dj* and *g* (or *gu*), *sh* (or *ch*) and *h*, and *gh* (or *r'*) and *r*, all of which sometimes reflect local differences in pronunciation and sometimes the personal preferences of various transliterators.

[8] A chief may be succeeded by his younger brother, as the Amenokal Younès was succeeded by Guémama (commonly written *ag Mama*) in 1820 or

| ⵖ | iegue | Gu (before e, i); G (before a, o, u) | ق | |
| ⵜ | iedj | Dj | between ج and ق | Special pronunciation |

Radamès and Rardaïa, than to write Ghadamès and Ghardaïa and pronounce Gadamès and Gardaïa. The first transcription is closer to the true pronunciation.

Note: The Arab ح (H') has no equivalent in Tamashek. The Tuareg always pronounce it KH ( خ ). Thus they say Mokhammed for Mohammed; El Khadj for El Hadj.

The Arabic ع (âa) no longer has an equivalent in Tamashek. The Tuareg always pronounce it R' ( غ ). Thus they say R'ali for Ali; br'ir for bâïr. /xix/

For certain geographical names the mode of spelling is in accordance with that of the maps edited by Institut Géographique National. The pronunciation of vowels is not indicated. At the end of words the Tuareg sometimes indicate vowels with a dot, which may stand for any vowel.

*Pastoral Ecology in Ahaggar and Air.*

The Tuareg of the true desert country have their camps in or close to mountain massifs of which the more important are Ahaggar and Tassili-n-Ajjer. Geographically these two regions have many traits in common. In Ahaggar, which rises to 3000 metres above sea level, the annual precipitation according to official statistics is between 20 mm and 40 mm. These figures are extremely low, but more characteristic of the desert country is the irregularity of the rainfalls. In some years there may fall no rain at all, while in others precipitation is much bigger than appears from the figures above. Several dry years may follow each other alternating with periods of abundant rainfall. According to investigations by Dubiéf four years out of ten are so dry that rainfall is of no importance for the regeneration of pastures (Dubiéf 1947, p. 7–23). Owing to the scarcity and the fluctuations of precipitation in Ahaggar a persistent vegetation cannot generally exist outside river valleys and depressions which are flooded during heavy rain. In the valleys perennial plants comprise not only grasses and herbs but also tall trees among which tamarisk and acacia are prominent. In dry years the perennial plants have little value as fodder for the domestic animals of the Tuareg. A great many goats may then die from hunger, and to avoid such a disaster some Tuareg take their flocks to the plains of Tamesna or to the Adrar-n-Iforas Mountains where rain is normally more plentiful and grazing better than in Ahaggar. However, even in dry years the majority of Ahaggar Tuareg will remain in their native country with their goat-flocks. For although they run the risk of losing a great many goats during a drought in Ahaggar

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Fig. 1. Map of the central parts of the Western Sahara and the adjacent Sudanese [illegible] inhabited by the Tuareg who fall into eight major political groups or federations. These groups, as mentioned in the text, are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. The *Kel Tademaket* Tuareg (VIII) from about A.D. 1800 were subjected to the Iwllemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 125 kilometres.

known and used particularly by women. There are slight distinctions in the characters of the alphabet used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld 1918–20, 1920, 1925–30, 1940, 1951–52), but certain alterations have been made in agreement with the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar vocabulary has never been studied.

565 619 The true Tuareg in most groups fall into several classes as follows:—

*Ihaggaren* (sing. *Ahaggar*), or *Imajeren* (sing. *Amajer*). These two words designate the supreme Tuareg class which is generally referred to in literature as "nobility". The term *Ihaggaren* is used only among the Northern Tuareg, while *Imajeren* is employed in Ayr and also among Sudanese Tuareg. The two terms are synonymous, and so-called noble Tuareg are found in most Tuareg groups. However, the *Kel Geres* employ the term *Imajeren* for all true Tuareg. Among the *Kel Adrar* certain tribes claim to be noble, but though these tribes have very much the same position as noble tribes in Ahaggar and in Ayr, they are not recognized as true noble Tuareg by people of other groups.

*Ineslemen* (sing. *Aneslem*). This class is that of *Mrabetin* or marabuts, the religious class established after the introduction of Islam. In most Tuareg groups there are whole tribes of *Ineslemen* under the leadership of their own chiefs, but in Ahaggar there are only a few scattered families. The political position of the *Ineslemen* varies greatly from one group to another. Certain tribes in Ayr which are *Ineslemen* by origin have the same status as the true vassals to be mentioned below, while other *Ineslemen* tribes like the *Iforas* of the *Kel Aïïer* have much the same status as noble Tuareg with the exception that they have no vassals. The *Ineslemen* perform religious duties connected with certain [793] rites of passage. Any Tuareg can acquire the position of *Aneslem* after training in reading the Koran and education in the divine laws under the tutorship of another *Aneslem* or marabut.

*Echchikhen* (sing. *Echchikh*). This word also refers to people of religious status, and is used almost synonymously with *Ineslemen*. Certain tribes of Ayr (Damergu) have a kind of noble status and possess vassals. The word does not have the meaning of *Echcherifen* (sing. *Echcherif*), which refers to descendants of the Prophet. Individual Tuareg families – particularly in noble tribes – often claim relationship with the Prophet.

*Isekkemaren* (sing. *Asekkemar*). A class which is found only in the two northern groups – particularly among the *Kel Ahaggar*. The *Isekkemaren* Tuareg descend from Arabs, or from unions between Arab men and Tuareg women. They are vassals who have a somewhat different status from that of true vassals, who are mentioned below.

*Iregenaten* (sing. *Aregenat*). This name is not always applied to people of a particular class. It is used as a proper name for one Ahaggar tribe which has its origin from mixed marriages between (noble) Tuareg women and Arabs. In most groups the term *Iregenaten* (*Iregenaten*) is applied to Tuareg descending from unions between noble Tuareg men and vassal women.

212 104 184 Fig. 2. The Tuareg alphabet (*tifinar*). The distinctions between Tuareg alphabets of Ahaggar and Ayr are less essential than appears from this list, for some differences are due to the fact that the Ahaggar Tuareg for certain letters prefer an edged form, the Ayr Tuareg a curved one. But both forms are known to all Tuareg. The Ahaggar Tuareg normally write from the right to the left like the Arabs, while the Ayr Tuareg consider it correct to write the letters in vertical rows from bottom to top. It can be seen from the list that the Ahaggar Tuareg have an alphabet of 25 consonants while the Ayr Tuareg have only 21. At the end of words the Tuareg sometimes indicate vowels with a dot, which may stand for any vowel. This simple vowel letter is known to the Ahaggar Tuareg as *tagrelit*, to the Ayr Tuareg as *tetrmelit*. The dialect of the Ayr Tuareg is very little known and most Ayr words mentioned in this study have never been published previously. Even my collection of Ahaggar words seems to contain terms lacking in Foucauld's dictionaries. For certain geographical names the mode of spelling is in accordance with that generally used for geographical maps.

# Glossary of Tuareg Words

*Normalization advised by K.-G. Prasse*

## GENERAL VOCABULARY

abubah, pl. ibubah (Ah.), cross-cousin 449, 450
abakar (Ah.), ceramic drum 257, 259
abakhul (Ah.), pack-camel 99
abangor (Ah.), dish of untanned skin 233
abatul (Ah.), roasting under the ashes 232, 233, 240, 325
abaun (Ah.), skin bag 93
abayor, water bag 271-274
- (Ayr), the membrane of the placenta (of a she-camel) 57
- (Ayr), camel's neck vein close to the animal's head 122, 123
abba (Ah.), father 449, 450, 453
abegu (Iwl.f, pouch to prevent the sucking of camel calves 311
abegü (Ah.), pouch to prevent the sucking of camel calves 61, 62, 67
abekni (Ah.), hare (*Lepus harterii*) 160
abelbod (Ah.), skin bag 163, 228, 277, 280, 285
abellag (Ah.), a tribute to the Amenukal from his vassals 400, 403, 404
abellengad (Ah.), *Reseda villosa* Coss. 177
aberhoh (Ah.), long-haired dog 114
abernuh (Ah.), burnus 304
aberog (Ayr), greyish camel 64, 96
abezber (Ah.), dish of tender plants of wheat and barley 250
abezey (Ayr), *Cassia tora* L. 181, 243
abhaw (Ah.), reddish-brown camel 96
abiyawi (Ah.), he-goat having no horns 35
abora, sorghum 192, 193, 202
abora maser (Ayr), "Egyptian sorghum", *Zea mays* L. 202
aborak (Ayr), *Balanites aegyptiaca* Del. 121
aboryal (Ah.), *Tribulus alatus* Del. & *T. macropterus* Boiss. 495
abrof (Ah.), cotton blanket 176
abser (Ah.), *Acacia Raddiana* Savi 29, 129, 132, 159, 177, 230, 241, 248, 262, 273, 494
abubaz, pl. ibubazen (Ayr), cross-cousin 429, 451, 452
abuheg (Ah.), type of skin-stockings 303
abuleg (Ah.), he-goat not yet fully grown 34, 35
abunkelu (Ah.), weaned kid 34
aburi, wooden prong attached to a cow's foreleg 51
wooden club 168, 170
- threshing stick 205
abûzag, pl. ibuzagen (Iwl.), a type of skin-stockings 303
abzaw (Ayr), whitish camel 96
abzaw (Ah.), whitish camel 96
achchebket (Ah.), transportation bag of date palm bast 79
acheku (Ayr), *Glossonema Boveanum* Decne 181
achellewen (Ayr, Kel Ewey), *Cistanche* sp. 181
achenkod (Ayr), *Gazella dorcas sp.* 164
acheror (Ayr), *Sorghum virgatum* Stapf 181
achwal (Ayr), locusts 167
adabar (Ayr), cord around the mouth of kids, lambs, etc. to prevent suckling 51
adabun (Ah.), skin bag 279
- (Ah.), basket 266
adalil (Ayr), woman's head-cloth 14, 293, 462
adamam (Ah.), *Ozyris alba* L. 174, 176, 178
adawal (Ah.), he-goat not yet fully grown 34, 35
adda (Ayr), father 451-453, 475
adder (Ah.), a bunion of camels 121
adebara (Ah.), greyish donkey 106
adebel (Ah.), ceremonial sand-hill 471-473
adeggal, pl. idulan (Ayr), father-in-law 444, 453
adegnas (Ah.), camel of dirty white colour 96
adélen (Ayr), joking relationship 429, 454, 455
adermag (Ah.), he-goat having very small ears 35
adreylal (Ayr), *Astragalus Vogelii* (Webb.) Bornm 133, 216
adyaw (Ah.), large herd of camels 101
adeggal, pl. idulan (Ah.), father-in-law 453
adreylal (Ah.) *Astragalus sp.* 128, 129, 494
afagag (Ayr), *Acacia Raddiana* Savi 30, 31, 38, 63, 84, 86, 104, 127, 132, 180, 262, 273, 351
afarag (Ayr), enclosure for kids and calves, garden 36, 51, 202
afarag (Ah.), enclosure for kids and calves, garden 36, 198

[p.520]

104

afaras (Ayr), tortoise 167
afarfar (Ah.), *Crotularia Saharae* Coss. 494
afawa (Ah.), greyish donkey with white stomach 106
aferegak (Ah.), *Chrozophora Brocchiana* (Vis.) Schweinf. 121
aferhalaɣ (Ah.), *Crambe Kralikii* Coss. 493
afessur (Ah.), *Fagonia Bruguieri* D.C. 494
afezu (Ayr), *Panicum turgidum* Forsk. 30, 31, 127, 132, 180, 225, 234, 268, 269, 308, 333, 341-343, 349, 362, 364, 366, 367
afeẓu (Ah.), *Panicum turgidum* Forsk. 31, 128, 129, 140, 155, 159, 175, 179, 284, 362, 363, 365, 367, 371, 378, 380, 385, 460, 491, 496
aflek (Ayr), woman's shirt 293, 295, 462
afleẓẓen (Ah.), *Zilla spinosa* (L.) Prantl 493
afus, hand 140
agar (Ayr), *Maerua crassifolia* Forsk. 30, 132, 255
agayis (Ayr), a bustard, *Choriotis arabs stieberi* 164
agazagi (Ayr), edible seeds of a grass 181
agedagodu (Ayr), edible seeds of an annual plant 181
agedelchit (Ayr), the period of the day when the sun is getting high in the heavens 490
agegu (Iwl.), a cross-bar frame of a skin tent 384
agelgali (Ah.), pack-camel 99
agemmun, pl. igemmunen (Ah.), garden bed 190
agera, a leather bag 20
agerengefa (Ah.), mixture of fresh milk and buttermilk 221
ageruf (Ayr), *Tribulus terrester* L. 132, 180
aggasit (Ah.), *Farsetia Hamiltonii* Royle 176, 493
aggawit (Ah), *Chenopodium murale* L. 492
agg elet ma (Ah.), sister's son 450, 452, 454
aggezzeram (Ah.), a lizzard, *Uromastix acanthinurus* 162, 233
aggwr (Ah.), jackal, *Thos aureus sp.* 160
aginest (Ah.), *Malikia callosa* (Vahl) 495
agusrer (Ayr), camel with greyish back and neck, the remainder of the animal being white 96, 98
agzir (Ayr), a hot wind 30
aga (Ah.), a leather bucket 133, 134, 273
agar (Ah.), *Maerua crassifolia* Forsk. 176, 255
agedetsit semmiḍet (Ah.), the period from sunrise until 1½-2 hours later 490
agedetsit tekkuset (Ah.), the period of the day when the sun is getting high in the heavens 490
aḡegu, pl. igegan (Ah.), a tent arch 356, 367, 368, 384
agelhim (Ah.), a hoe 204
agelmam (Ah.), a waterhole 3, 165
agenesnes (Ah.), *Glaucium corniculatum* (L.) 493
agera (Ah.), a skin bag 176
agerwa (Ah.), *Antirrhinum ramosissimum* Coss. & Dur. 496
aget, pl. igetten (Ah.), central pole (poles) of a tent or fixed dwelling 371, 375, 380, 383
agiwir (Ah.), churning bag 221, 222, 227
aglim (Ah.), sheep-skin worn as a mantel 296, 298
agror (Ah.), stone enclosure for kids 36, 38
agula (Ah.), a little stick 74, 159, 160
agum (Ah.), material of date palm leaves 192, 247, 266, 267, 269, 286
ahaggar (Ah.), camel of red colour 96
ahaga (Ah.), tanning receptacle of camel hide 175, 270, 271, 460
ahahel, pl. ihahelewen (Ah.), *Cistanche Phelypaea* (L.) P. Cout. 174, 178, 179, 237, 497
ahammal (Ah.), a herd of male camels 101
aharagen (Ah.), camp far from wells or water pools 149
aharay (Ah.), *Danthonia Forskahlei* (Vahl) Trin. and/or *Aristida sp.* 492, 497
aharet (Ah.), *Brassica Rapa* L. & *B. oleracea* L. 193
ahay, ahay (Ayr), signal to call donkeys 135
ahaya, pl. iheyawen (Ah.), grandchildren, descendants 452
ahayif (Ah.), saddle-girth 75, 84, 91, 110
ahayoy (Ah.), the dummy-calf 57
ahbeḡ, pl. ihebgan (Ah.), arm-ring 256, 460
ahellum, pl. ihellumen (Ah.), rope of goat's hair 263, 264
ahenderremma (Ah.), camel which has the habit of neighing with joy 98
ahenkoḍ (Ah.), *Gazella dorcas sp.* 157
ahennaka (Ah.), the roof of a woman's saddle 89
aher (Ah.), to raid, to plunder 409
aheṛeṛa (Ah.), *Alyssum libycum* 176
aheyi (Ayr), signal to drive away donkeys 135
ahni (Ah.), congestion due to heat-apoplexy of camels 121, 122
ahokhak (Ah.), the early morning before sunrise 490
ahoyyar (Ah.), *Cleome arabica* (L.) 121, 493
ahrey (Ah.), black he-goat with white colour on the ears 35
ahres (Ah.), *Acacia albida* Del. 177, 494
ahu (Ah.), an annual plant 496
ahular (Ah.), fully grown he-goat 34
ahulil (Ah.), wild donkey 107
ahwar (Ah.), carpet, blanket 461, 471
ahyas (Ayr), type of riding saddle 81, 313
ajako (Ah.), an annual plant 179, 496
ajawad (Ayr), *Sarcoptes scabiei var. Cameli* 121
ajmilal (Ayr), camel with numerous small circular spots 97, 98
akabar, milking bowl 51, 58, 59
– (Ah.), mortar without a foot 235, 240
akaber (Iwl. acc. to Nicolas), cylindrical strawhut 340
akabur (Ah.), a type of camel trotting 99
akaba (Ah.), oil derived from teḡellet, *Colocynthis vulgaris* 121
akahami (Ah.), black he-goat with a red belly 35
akal, land, country 108, 394, 416
akala, rope noosed around the lower jaw of a camel 68, 72, 77

104

akammar (Ah.), rennet, the abomasum of kids 225
akara (Ah.), stick placed in the mouth of kids to prevent suckling 37, 39–41
akarab (Ayr), cord around the hind legs of a cow during milking 51
akarben (Iwl. ac. to Nicolas), cylindrical strawhut 340
akasa (Ah.), vegetation of annual plants 29, 128
– (Ayr), vegetation of annual plants, the rainy season 29, 30, 38, 39, 56, 72, 112, 118, 127, 132, 134, 154, 184, 213, 216, 225
akekkemaẓ (Ah.), wild pigeon, *Columbia livia turgia* 160
akemhur (Ah.), a very fine camel 105
akeroga (Ayr), type of sandals 301, 302
akeskabbu, headgear for riding camels 70, 71, 73, 314
akeywoḍ (Ah.), *Typha australis* Schum. & Thonn. 175, 497
akh, milk 221
akh imsayen (Ah.), mixture of fresh milk and buttermilk 221
akh kefayen (Ah.), fresh milk 221
akh n aǧiwir (Ah.), buttermilk 221
akh n ezenu (Ayr), sour milk 221
akhami (Ah.), short-haired slender dog 114
akhamil (Ah.), rope 76, 271
akhawi (Ah.), large woman's saddle 89, 96, 308
– (Iwl.), a woman's saddle 437
akhelkhali (Ah.), pack-camel 99
akhorhi (Ah.), fennec, *Fennecus zerda* 160
akimbab, a muzzle 52, 53, 63
aknar n amis (Ah.), a toy camel 100
akrafal (Ah.), a ceramic drum 257, 259
akru (Ah.), a curdled mass of milk
akum (Ayr), the sheet of a skin tent 364
akundaḥ (Ah.), *Musonjiera sp.* 160
akus (Ah.), milk-bowl 39, 43, 257, 461
akker (Ah.), untanned hide of most animals 270
ala, leaves of tamat acacias used for tannin 277
alaway (Ayr), pack-camel walking in a caravan 101
alechchu, pl. ilechchan, Sudanese indigo cotton for veil and head-cloth 14, 287, 462
alegges, pl. ilusan, a camel 2–3 years old 101, 460
brother-in-law 101, 453
alegutgut, pl. alegutguten (Ah.), plaited basket 267, 269
– (Ah.), skin bag with coiled bowl for bottom 280, 281
alekkin (Ah.), earthen cooking pot 231, 248
alekkoḍ (Ah.), camel whip 84
alellewa, pl. ilellewan (ilellewasen) (Ayr), semi-arches of a hut or tent 348, 351, 356, 367, 371
aleln (Ayr), skin bag which also serves for donkey saddle 111
alem, pl. imnas (Ayr), male camel 93
alem n akabur (Ayr), camel walking with quick steps 99
alem n emehal (Ayr), camel taking very long steps 99
alemdeyyas (Ah.), camel taking very long steps 98
alemlaṛ (Ah.), grey camel
alew, *Olea Lapperrini* Batt. & Trab. 31
aliwa (Ah.), thin porridge, or thick gruel 244
alkah (Ah.), *Trichodesma africanum* (L.) R.Br. 495
alkeḍ (Ah.), *Cucumis pustulatus* Hook. 178, 497
allaṛ, iron lance 138, 167
almarsor (Ah.), payment for repairs of a foggara system 197
almez (Ayr), dusk 490
almeẓ (Ah.), dusk 490
aloṛa (Ah.), *Pegnum Harmala* L. 177
alullam, a hawk 171
alwat, *Schouwia purpurea ssp. Schimperi* 30, 128, 133, 176, 216, 493
amadel (Ah.), part of the *akeskabbu* head-gear 70, 73
amaḍal (Ah.), soil, land 144
amaǧin (Ah.), evening meal 251
amahus (Ah.), longitudinal hobble-rope 46, 107, 108
aman, water 20
amanun (Ah.), fully-trained riding camel 99
amarseros (Ah.), *Tephrosia leptostachya* D.C. 494
amarwa (Ah.), new-born kid 34
amaytal, pl. imaytalen (Ayr), stuffed skin bags used for saddle 74
amdeṛ, Giraffa camelopardalis 164
amedray, pl. imedrayen (Ayr), younger brother 451, 452
ameḍray, pl. imeḍrayen (Ah.), younger brother 449, 450
amekkalu (Ah.), pack-camel walking in a caravan 101
amekkawi (Ah.), type of wheat 190
amekli (Ah.), meal eaten at midday 251
amekkar, elder brother 449, 450, 451, 452
amellul, *Addax nasomaculatus* 157, 164
ameni (Iwl.), council 434
amensi (Ah.), evening meal 251
amenu (Ah.), probably the now extinct sing. of Imenan – according to Prasse 394
amenukal, pl. imenukalen, supreme chief 2, 3, 18, 34, 102, 138, 144, 148–151, 185, 187, 194, 200, 338, 340, 369, 379, 393–404, 416–418, 430, 433–435, 442, 458, 463, 477, 489
amenukal n akal (Iwl.), supreme chief of the Kel Dennek 433–435
amerar, halter 53, 69, 73, 77
ameru (Ayr), device to wean kids and camel calves 37, 61
ameṛwan (Ah.), stone amulet 257, 258
ameṛwas (Ah.), swelling of the feet of camels 121
amesahar (Ah.), kid brought forth between the seasons amewan and tafsit 39
ameslag (Ah.), name of a camel brand 141
ameslak (Ah.), saddle cloth 84, 89
amewan (Ah.), autumn 29, 30, 39, 216
amezzaṛ (Ah.), large camp 149
amezzaṛ n heregen (Ah.), two camps close to each other 149
ami, mouth 106
amis, pl. imnas (Ah.), male camel 93

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

104

amor, pl. imurren (Ah.), arrow 167
amreh (Ah.), sickle 179, 204, 205
amṛar, pl. imṛaren, father, kinsman of asc. generations, father-in-law, husband, old man 453, 475
- chief of a tribe, or a group of tribes 395, 396, 401, 422, 432, 434

792 the power that is entrusted to him; and the man of the sword pays. It is indeed his turn."
000 As a typical example of a nomad warrior buying the benediction of a holy man, Monod cites the transaction between Abram and Melchizedek, "the priest of the most high God" (Genesis, *14:* 18–20), and he reconstructs the scene in imaginative but wholly convincing detail drawn from his long experience among desert nomad tribes. After Melchizedek had invoked the blessing of God on Abram, the latter said: "How much will that be?" "Nay, my lord is joking," replied Melchizedek, "It's free, I *give* my blessing; I *give* it to him." And Abram bowed down and said (thinking that after all if the blessing wasn't paid for it might not work, and knowing only too well moreover what his interlocutor meant by "gift"): "Harken unto me: I give the price of the blessing and of the amulets for my camels; accept it of me." And Melchizedek answered him: "Let not my lord be vexed, and may he harken unto me: I do not sell him power, I give it to him. But if in return he chooses to bring me the tenth part of all that is his, what is that between us?" And Abram understood, "And he gave him tithes of all" (Genesis, *14:* 20).[14] Nothing could be more characteristic of desert nomads and revealing of the basic relationship between them and holy men in the Sahara Desert and elsewhere.

●105 Summary. The Tuareg of the Ahaggar are a diversified pastoral nomadic group who live in a very arid mountainous massif, an environment that requires extreme mobility.

Their social organization seems to be based on essentially matrilineal and patriarchal extended and joint family clans which are grouped into tribes that form a confederation. There are two main social classes, commonly referred to as "nobles" and "vassals," and rank, which embodies the right of succession to authority, is inherited in the female line, but a new chief can take and hold office only by consent of a general council of all male heads of families or clans who come under his control. This is doubtless because the clans that are strongest in terms of material wealth and fighting manpower as well are in the

[14] The King James Version of the Old Testament does not make quite clear just who gave tithes to whom, but Knox (1948, p. 18), in his translation of

105 "vassal" class. Thus the government is in effect a republic of basically Berber type which is kept from turning into either a democracy or an hereditary autocracy by the presence of a double descent system whose origin is unknown.

The economy is now based on the conservational domestication of camels, goats and hairy sheep, and on crop sharing with sedentary Haratin tenant gardeners. The flourishing caravan trade of the Tuareg has been largely destroyed by mechanized competition, while the exaction of toll charges from passing caravans of other groups and the practice of systematic raiding have been suppressed altogether by the French authorities. Thus the whole economic structure has been thrown seriously out of balance and is now disintegrating fast.

Manual labor and domestic services are performed by Negro slaves of Sudanese origin, who are usually present in numbers roughly equal to those of their masters. Manufactured goods are obtained mainly from outside the area in exchange for salt that is mined locally. Equipment maintenance and the occasional manufacture and decoration of articles of metal, wood and leather, are in the hands of a few small and scattered families of semi-sedentary smiths about whom almost nothing is known.

Shelter takes the form of small lightweight tents of leather or sometimes grass huts. Clothing is loose, voluminous and light in weight, and men wear a combination veil and turban which protects their eyes from glare and their faces from wind and sunburn. Tuareg costume is an ideal mechanism for the purposes of insulation, ventilation and sweat-loss control in the climate of the Ahaggar, although the Tuareg themselves claim to have no knowledge of or interest in its very great practical value.

Thus we see that the Tuareg of the Ahaggar had achieved an adaptation to their chosen environment that was about as perfect as could be, in terms of social, political and economic organization and of material culture, until the forces of European culture contact

the Vulgate as interpreted in the light of earlier Greek and Hebrew texts, leaves no room for doubt on this point.

105 began to destroy the economic base and so to undermine the entire structure.

3: Holiday J-5 (ca. 1955) 1956 MS25 Tuareg MS25
Hoggar

533 The melody of this attractive little song is more advanced than the two preceding examples, but the accompanying rhythm is now restricted to a straight beat that never varies:

Voices in Unison

Rhythm

535 Dancing among the Tuareg seems to be restricted to the men; a kind of war dance, nowadays no more than a remembrance of things past, in which they stamp and whoop and brandish their weapons in time to the chanting of the women. It is possible, though not likely, that Tuareg women do dance at the "ahals"; but in the absence of actual corroboration the supposition may be discounted: the role of women would appear to be predominantly passive, the initiative being the prerogative of the men. It must be remembered that the Tuareg has not the settled village existence of the African tribe and as a result his life is marked less by organised ceremony, less by religious observance, however primitive. Aloof and alone the Targui remains the "last of the desert". Within two days' journey of his territory his name becomes legendary: little is known of his customs and his music is unheard. He is the Abandoned of God.

105

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

585 602 laws do not change to a very great extent. There will then already be a relationship of respect between husband and wife, a respect relationship to brothers-in-law and sisters-in-law which continues unchanged, and in Ayr the relationship to the mother-in-law does not switch from joking into avoidance. Tuareg wedding ceremonies correspond functionally with the traditional preferential marriage with [84] cross-cousins. But the wedding ceremonies described are strictly followed at all Tuareg marriages except in the case of important marabuts, who dispense with most ceremonial traits, allowing no public gathering with camel-riding and music, and the groom and the bride enter the wedding tent without formalities.

105 Kinship systems, rules of kinship behaviour, the payment of bride-wealth, and wedding rites seem to be functionally adapted to cross-cousin marriage. All this seems to hold for the Tuareg of Ahaggar and also for those of the *Kel Ferwan* drum-group in Ayr. However, we have also observed that there are certain differences in social organization in Ahaggar and Ayr. In both regions Koranic law is valid for inheritance. The rules of succession in Ayr have become predominantly patrilineal, but is matrilineal in Ahaggar. There is also little doubt that most *Kel Ferwan* Tuareg to-day follow patrilocal rules of residence. The Ayr Tuareg are predominantly patrilineal but have remnants of matri- [58] lineal traits. I note in this connection that some Ayr Tuareg also claim that it is preferable to practise the levirate and the sororate in the way that a widow can marry her deceased husband's younger brother, a widower his deceased wife's younger sister. They hold that this is adopted from Islamic rules.

[60] In Ahaggar matrilineal rules still play a very great rôle as kinship terminology evinces for the term for "mother's brother" is used exclusively for people of the mother's family and mainly for such people of ascending generations who are matrilineally related to Ego – including very distant matrilineal kinsmen. We have also seen that tribal membership is ultimately matrilineally determined, and that matrilineal rules are valid for succession to territorial rights, for relations between noble Tuareg and vassals, and ultimately for residence.

105 177 Tuareg social organization has been submitted to change. Islamic influence has produced a predominantly patrilineal system among the Southern Tuareg, including the *Kel Geres* and the *Kel Ayr*, while among the Northern Tuareg matrilineal rules of succession and residence are still acknowledged.

105 177 178 184 It may perhaps seem rather odd that the Ayr Tuareg, like many Sudanese Tuareg, have been much influenced by the patrilineal rules of Islam in their social organization, while the Ahaggar Tuareg have been far less impressed by these rules in spite of having lived in intimate contact with Arabs for generations, adopting many Arab cultural traits which are unknown among the Ayr Tuareg. What is the reason for these distinctions in cultural change among the Tuareg of Ahaggar and Ayr? I believe that the answer may lie in the differences in political systems. In pre-European times there was in Ahaggar an intimate relationship between noble Tuareg and vassals within the drum-groups, several small noble families being linked with their individual groups of vassals. This relationship (*temazlayt*) was, as we have seen, predominantly an economic one, advantageous to both classes and not least to the noble Tuareg, who were much dependent upon their goat-breeding and caravan-trading vassals. There seem to be little doubt that, before the introduction of Islam, this relationship was organized on the basis of matrilineal rules. And it may perhaps have been very difficult to adopt patrilineal rules and to re-organize relations between noble Tuareg and vassals accordingly. When the first French

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

administrators settled in Ahaggar, the noble Tuareg under the leadership of the *Amenukal* are said to have claimed that the French should respect their ancient matrilineal organization. It seems as though such an intimate relationship between noble Tuareg and vassals was unknown in Ayr in pre-European times. Subsistence in Ayr is easier than in Ahaggar, and the noble Tuareg there were not so dependent upon their vassals for food as was the case in Ahaggar.

The fact that the Ahaggar Tuareg have conserved matrilineal rules in their social organization though influenced by Islam and the patrilineal Arabs for centuries, may perhaps explain why they have come to consider marriage with a mother's sister's daughter (or her daughter) as a better type of mating than cross-cousin marriage. Marriages with a classificatory sister (or sister's daughter) are, according to the Ahaggar Tuareg, not to be considered a recent phenomena, but have been practised for generations. The Ahaggar Tuareg claim that these marriages are most suitable because they do not give rise to changes of residence for the children. It is very probable that such marriages, which do not harmonize with traditional kinship rules, indicate the transition towards fully-fledged patrilineal rules among the Northern Tuareg.

We have no knowledge about Tuareg social organization in pre-Islamic times, but there can be little doubt that matrilineal traits are very ancient, for they are mentioned by Ibn Batutah (cf. p. 457), and most Tuareg have traditions of their descent from an ancestress. Bates thinks that the Libyans of antiquity possessed a type of social organization which was partly or fully matrilineal, though he admits that indications of the existence of the matriarchate are strong, but not conclusive (Bates 1914, p. 111 f.). Gsell, on the contrary, thinks that the ancient Libyans did not have a social organization of a matrilineal type. They were patrilineal like most Northern Berbers of to-day (Gsell 1920-28, V, p. 37 f.).

Baumann states that Tuareg matrilineal organization derives from the so-called Old Mediterranean Culture (Baumann 1940, p. 66). This is perhaps not the true explanation, for Frobenius is probably right in his statement that the Syrtic Culture was a high one which gained little influence among pastoralists, but became very important to sedentary people of North Africa and the Western Sudan (Atlas Africanus, H. 1, Bl. 11). On the other hand the theory advanced by Frobenius that the Tuareg matriarchate is an old Hamitic custom does not constitute a satisfactory explanation (cf. Frobenius 1933, p. 238 f.; Atlas Africanus, H. 1, Bl. 5).

The history of Tuareg matriarchate has been analysed very recently by Murdock, who states that its origin can be explained in three distinct ways:— (1) The Tuareg may have preserved the matrilineate from a very early period of Berber culture, perhaps also reflected among the extinct Guanche of the Canary Islands. This, however, is not considered very probable, because matrilineal traits do not exist among the many other North African Berber tribes, and also because the present relative isolation of the Tuareg is historically recent, dating from the Hilalian Arab invasion. (2) The indigenous *Bélla* were characterized by avunculocal residence and matrilineal descent, and they transmitted these rules to the conquering Tuareg. This second theoretical possibility is discarded by Murdock on the ground that the *Bélla* were presumably akin to the Hausa peoples on the southern border of the Tuareg country, and the Hausa are strictly patrilineal. (3) The ancestral Tuareg, while still resident in Tripolitania, were patrilineal, like all other mainland Berbers, and the matrilineate was developed as an

# TUAREG CULTURAL SUMMARY

105

The Tuareg are Berber-speaking nomadic stockbreeders who live in the Western Sahara and adjacent regions of the Sudan. They fall into seven main groups or political units, comprising around 240,000-300,000 individuals (excluding Negro slaves). The Tuareg speak various dialects of Tamahaq, which is a form of Senhadjan Berber. The peculiarity of Tamahaq as a Berber language is that it can be written with its own characters, which are called tifinagh.

The Tuareg of the Sahara proper are grouped into three confederations: the Tassili-n-Ajjer, the Ahaggar, and the Adrar-n-Ifighas, distributed in that order from northeast to southwest. The Ahaggar confederacy, isolated in the heart of the Sahara desert and the most extensively studied to date, will serve as the sample for the following summary of Tuareg culture. The Ahaggar Tuareg number around 4,400 and comprise twenty-six clans. Approximately 4,000 Negro slaves are attached to the Ahaggars.

The question of the origin and early history of the Tuaregs is still unresolved. Aside from certain somatic traits such as tall stature, an arm span often greater than their height, smooth or

105 wavy black hair and a lack of hirsuteness, the chief distinguishing characteristics of the Tuaregs are the unity of their language, their use of tifinagh characters, and their complex social organization, with its matrilineal and matriarchal elements. Their history, going back to their first contact with Moslem Arabs (probably Shorfa missionaries from Morocco) in the seventh or early eighth century, is one of incessant conflict between Negro kingdoms and Tuareg, between Arabs and Tuareg, and between different Tuareg tribes. They were more or less united under a noble tribe, the Imenanes, until the middle of the seventeenth century, when the Imenanes, following defeat in battle, were obliged to divide their lands and authority. The partition into the present groups dates from that time.

The Tuareg possess a highly stratified and complicated social system. In general they are divided into three main classes: the Tuareg nobles, imochar, the Tuareg vassals, imrad, and a third lower class comprised of Negroid and mixed people grouped into three castes based on occupation (gardeners, harratin, domestics and slaves, iklan, and artisans, inaden). Rank is a quality of the clan rather than the individual, for the Tuareg speak of "noble clans" and "vassal clans." The Ahaggar confederacy is made up of three tribes: the Kel Bela, the Tegehe Mellet, and the Taitoq, each headed by a noble clan which gives its name to the tribe as a whole. Noble clans

●105 and their dependent vassal clans are arranged in order of precedence, and the chief of the premier clan (the Kel Bela) is also chief of the Kel Bela tribe and ipso facto the paramount chief, amenokal, of the Ahaggar confederacy. Vassal clans are the traditional pastoralists, camel and goat breeders. They hold exclusive pasturage rights to a definite territory upon which no one may encroach without permission excepting the noble clans, who are always free to use the pasture of their vassal clans. Many Tuareg also own garden plots in agricultural centers which are leased to harratin share croppers or are worked by slaves.

All vassal clans pay tribute to their tribal chiefs, who in turn pay it to the paramount chief, the amenokal. Tribute is normally in grain and/or livestock. In return, the noble clans pledge to supply the warriors and protect their vassals in case of external aggression. Chieftainship is hereditary in the female line, but within fairly broad and seemingly rather indefinite limits of degree of relationship, so that an undesirable heir apparent can easily be passed over in favor of a less direct but more acceptable heir. The chief is chosen from the premier clan of the tribe by a council made up of male heads of households and is confirmed in his office by male representatives of all the component clans of his tribe.

105 Tribal chiefs act as judges, and the amenokal is chief justice of his confederation. The amenokal's symbol of leadership is an enormous war drum called a tobol. This instrument is so representative of command to the Tuareg that they often refer to the amenokal and his whole clan as tobol. The original role of the paramount chief was that of a war leader, and in normal times he still arbitrates conflicts. In principle, he has the power of life and death; on the other hand, in his national role, vis-à-vis neighboring or foreign tribes, the amenokal's decisions do not have full authority unless they have been approved by an assembly of notables called the arollan. This assembly is composed of the principal chiefs of all the factions, plus the nobility. It should be emphasized at this point that the position of a Tuareg clan is not firmly fixed within the framework of the confederation. Component clans may break away from the tribe and attach themselves to a more powerful tribe. At least one clan, the Ibotenaten, was reduced from noble to vassal status by a crushing defeat suffered in the course of a blood feud. In all the Tuareg confederations, the vassals, or imrad, outnumber the nobles in the ration of five to one.

Both manual labor and domestic service are performed by the third class in the Tuareg society. This class is composed of

105 heterogeneous and ethnically mixed peoples living in symbiotic relationship with their masters, the Tuareg. The iklan are the Negro slaves or descendents of former slaves who are attached to Tuareg families and take care of herding, cooking, and all other domestic chores. The artisans and smiths of the Tuareg are the inaden of mixed racial origin, who manufacture all that the nomadic Tuareg needs and in addition act as barber-surgeons. These form a closed caste and are found in single families or small numbers at agricultural centers or attached periodically to Tuareg encampments. The third group are the harratin, Negroid sedentary tenant farmers who rent land from the Tuareg and work it on share cropping basis. The Tuareg hold the three groups in low social esteem.

The economy of the nomadic Tuareg is based on conservational domestication of camels, goats, and hairy sheep, and on crop sharing with the harratin tenant gardeners. The once flourishing caravan trade of the Tuareg has been largely destroyed by mechanized competition, while the exaction of toll charges from passing caravans of other groups and the practice of systematic raiding has been suppressed by French authorities. The Tuareg pitch their camps in or close to mountain massifs, of which the most important are Ahaggar and Tassili-n-Ajjer. Rainfall is

105 irregular, and a persistent vegetation cannot generally exist outside river valleys and depressions. Pasturage is either very sparse or very scattered, with the result that the people are continually breaking up into small and highly mobile camp units moving at intervals of between a week to a month, always within the territorial limits of the tribe. Herds of camels and flocks of goats and hairy sheep constitute the bulk of the capital investment and the primary basis of the economy. Trade used to be very important, with salt the chief article of export. In July, salt from local mines, camels, donkeys, and dates (from oases in the north) were taken south to markets in Nigeria and exchanged for millet, cotton cloth, tea, sugar, and tobacco. This trade is still practiced, but on a very limited scale.

The Tuareg live on the products of their animals, but meat and milk are not enough, especially in dry years. The basic elements of their diet are milk, millet, and dates. Millet, enelè, is cultivated both in the Saharian oases and the Sudan. It is usually crushed with pestles and winnowed to keep only the white flour, which is used in many dishes. Asink is the national dish: coarse millet flour is boiled into thick porridge to which fine sifted flour is later added. This is served with milk and/or butter. Milk, another basic food, is drunk fresh, sour, or curdled, and is also

105 made into butter and cheese. Meat is highly preferred, but is eaten irregularly. The meat most used is that of goats. Mutton is eaten less often, and camel only in exceptional circumstances, since camels are very rarely slaughtered for food. Meat of gazelles and wild sheep is highly esteemed but is not frequently available. Practically speaking, the Tuareg never eat fresh vegetables, but they do use dried onions and tomatoes. Chicken, eggs, and fish are never eaten by the Tuareg. They drink water, milk, and tea. Green tea is very popular and is served aromatized with mint or other local herbs. Coffee is rarely used and then only medicinally.

Shelter takes the form of small lightweight tents of leather or sometimes grass huts. Clothing is loose, voluminous, and light in weight. Men wear a dark blue or black combination veil and turban that covers all of the head and face except for the eyes. These veils are not removed, even for eating. Women go barefaced but with a head kerchief.

Although the Tuareg still retain many of their pre-Islamic magico-religious beliefs and practices, they are all nominally Moslems. They are known to be lukewarm as to religion, and even the important annual Moslem fast of Ramadhan is not generally observed. Occasionally some fanatic North African Moslem sect

105 (such as the Sanussi of Libya) may rally one clan or another of the Tuareg to its cause. But these conversions do not last long, and the Tuareg revert to a passive, vague form of Islam which is permeated by local superstition and magic. Amulets are very common, and belief in jinns and spirits is not confined to women. Several Marabout and Shorfa families (all claiming some descent from the prophet Mohammad or his Arab clan) are found in the area, and some run Koranic schools in the garden centers. These Marabouts may be called upon by the Tuareg to write amulets or to say prayers at funerals, but in no way are they as active or powerful as they are in the rest of North and West Africa.

Marriage is usually, though not always, within the clan. Cross-cousin marriage is said to be the preferred pattern. Statistically, however, the most common type is for a man to marry a maternal cousin or her daughter. In this way a man and his father may belong to the same matrilineage. The question of Tuareg matriarchy is debatable. The Tuareg practice a system of double descent, following matrilineal principles in specific cases and patrilineal in others, while for rules of residence both principles are acknowledged. Traditionally, the matrilineal principle is valid for (1) succession to chieftainship (since a Tuareg child

105 always inherits rank and position through his mother) (2) succession to land rights, and (3) succession to property considered indivisible. Islamic rules of inheritance, on the other hand, are valid for inheritance of individually owned property. Children inherit in such a way that a son gets twice the amount allotted to a daughter. Authority is vested in the father, never the maternal uncle or the mother. A newly married couple live in the camp of the bride's parents for about a year, then usually move over to the camp of the husband. Tuareg camps are known by the name of the highest ranking male member of the community. A widowed woman and her unmarried children are usually taken into the family circle of her brother. It is a peculiarity of the Tuareg social organization, which seems to be based on essentially matrilineal and patriarchal extended and joint family clans, in that it resembles groups in West Africa rather than their immediate neighbors, the Arabs or the Berbers.

The usual age for marriage is twenty to twenty-five for women and close to thirty for men. Monogamy is the universal rule, and divorce is both unusual and generally frowned upon. A bride price is given to the parents of the bride, part of which is turned over to the bride as her personal property. She retains full title to this and to any other wealth she has, and is under no obligation

105 to contribute to the household expenses. Women are treated with respect and deference, but they can hold no office nor exercise any command beyond the limits of their tents. Premarital relations between the sexes are conducted at social gatherings, the chief function of which seems to be getting the young people to know each other. These gatherings or "open houses" are of two main types: tendi and ahal. Tendi are held on the afternoon, and ahal at night. At both types, young men and women, dressed in their best, gather in open areas around one or more young women who play musical instruments, sing, or recite poetry. Often the group participates in singing, storytelling, or improvising poetry. Such a gathering is a perfect occasion for young people to show their wit and musical abilities and to arrange secret rendezvous.

Marriage always involves a bride price, which varies according to the beauty and social standing of the bride and the wealth of the husband. Wedding festivities take place in the bride's camp. Children are highly desired in the community, and the sterility of one of the partners is one of the few valid causes for divorce. Nursing lasts from two to two and one half years, with boys being nursed a little longer than girls. All boys are circumcised collectively when they are three or four years old. The occasion is a

105 simple one, and there are no special festivities. Children hang around the camp, the boys helping their fathers with the herding while the girls assist their mothers. At the age of fifteen or sixteen, "when the hair on the face begins to show," the father gives his son a blue veil called a tidjelmoust. This is usually done at the annual Moslem feast. Along with the veil, the boy is given some good advice by his father and gifts of tobacco from his mother and sisters. With the wearing of the veil, the boy has entered the class of men.

The men's veil, or tidjelmoust, is the most distinctive and arresting article of clothing among the Tuareg. Self-respecting Tuareg think it shockingly indecent for a man to let his mouth be seen by anyone to whom he owes formal respect; nor will he show his face to anyone whose social standing he considers superior to his own. The veil is always arranged so that the eyeslit is as narrow as possible. The standard variations in ways of wearing the veil are indicative of the social status, tribal and clan affiliations, and even the moods of the wearer. The most preferred veils are dyed indigo, though many make do with black ones.

Death is not feared by the Tuareg. The deceased are washed, draped in new clothes, and buried in a nearby high spot. If a

105 Marabout is available, he reads the Moslem prayers. There is no wailing nor any public display of sentiment. The camp is immediately broken and the place is not used again. Condolences often include the following formula: "You are fortunate, for the one you love is now in the paradise of God."

Identification

The Ahaggar (Ahaggaren, Ihaggaren, Hoggar, Kel Ahaggar) are a tribe of Tuareg belonging to the Berber branch of the Hamito-Semitic linguistic stock. They number just under 5, 000 (Demoulin), 4, 250 (Lhote), 4, 400 including 1, 150 sedentary Harratin (Foley). All are Moslems, and, despite numerous theories to the contrary, it is extremely doubtful whether they (or any other Tuareg) were Christian before their conversion to Islam. There is general literacy, especially among women, in an old Berber system of writing with an alphabet of 24 characters, mainly consonants. This is derived from a Libyan Berber alphabet of about the 4th century B. C. The Ahaggar country has yielded Chellean-Aucheulian and Levalloisian artifacts.

Basic Economy

Primarily pastoral and nomadic, though a very moderate amount of agriculture is done with irrigation and hoe cultivation. The chief crop is wheat (Triticum durum). Also grown are barley (Hordeum vulgare), bulrish millet (Pennicillaria spicata), "bechena" (Sorghum cernuum), and a little sorghum (Andropogon sorghum). Some dates (Phoenix dactylifera) are raised, but only one-fourth of the local consumption. Other fruits are figs (Ficus carica), peaches (Amygdalus persicus), apricots (Prunus armeniaca), and grapes (Vitis vinifera). Vegetables grown are carrots, beans, lentils, peas, onions, rape, eggplant, tomatoes, squash, cucumbers, melons, watermelons, peppers, and garlic. A very little cotton and tobacco are raised.

Numerous camels, donkeys, sheep (with hair), and goats are kept, and a very few zebu cattle, horses, and chickens, but no cats or pigs. The flesh of dogs, horses, and donkeys is not eaten; chickens and eggs are eaten only by Negroes. Meat is consumed only for feasts. Milk, drunk both fresh and sour, is the principal food, and both butter and cheese are made. Camels, sheep, and goats are milked, but not donkeys (though Demoulin disagrees with other authorities on this point). Some hunting (with dogs) and trapping are done, and ostriches were formerly hunted for their plumes. The meat of antelope and gazelles is dried or salted; it is stored and also exported. Fishing is done only by Negroes; nobles and Imrad do not eat fish. Plants gathered for food include Aristida pungens, Cenchrus echinatus, Eragrostis cynosuroides, Panicum turgidum, Phelipaea violacea, and jujube (Zizyphus lotus); the foods thus secured are a fairly important supplement to the diet. There is considerable caravan trade with In Salah in Tuat to the N and with Air and Gamergu to the S, and a little with Fezzan and Tripolitania to the NE. Salt (mined in Amadror) and livestock are traded to

the S in exchange for grain, cloth, and articles of apparel. Livestock, butter and cheese, dried and salted meat, and formerly captured slaves and ostrich plumes are traded to the N in exchange for dates, cotton goods, and firearms.

Sex Division of Labor

Men alone hunt and herd. Agriculture is done only by Negro slaves and Harratin, gathering by slave and Imrad women. In general, women do not engage in primary food production.

Property

The chief wealth is in livestock, of which a large proportion is owned by women. Each tribe has collective property rights in special grazing grounds. Subject to the eminent domain of the paramount chief, all classes except slaves and Harratin can acquire usufruct rights in unused land by bringing it under cultivation.

Bissuel reports patrilineal inheritance--one sixth by widow, the remainder by children with sons taking double shares, in default of children by siblings in same manner. Duveyrier, however, reports patrilineal inheritance only of movable property, by children equally regardless of sex, and states that all customary privileges and rights to real property are inherited matrilineally without partition, by ElSiElSo; Lhote seems to confirm this in his data on succession.

Social Stratification

There is an elaborate social stratification, with the following divisions:

a. Nobles, called Imochar or Ihaggaren, who handle all political affairs, engage in warfare and raids, and provide protection for the other classes. They lead a parasitic life, engaging in no manual labor except to maintain riding and transport camels and a few goats to provide a daily milk supply. Their herds are tended mainly by their vassals.
b. Marabouts, called Inislimen. They eschew war and politics for a life of piety and scholarship, and are exempt from taxation.
c. Semi-nobles, called Iradjenaten, mentioned only by Bissuel. They are the offspring of

noble fathers and Imrad mothers. Demoulin, however, says there are tribes of mixed blood, or who, being weak, have forfeited their independent position for security in return for tribute.

d. Vassals, called Imrad. They outnumber the higher classes 5 to 1 (Lhote), 8 to 1 (Duveyrier). They bear arms and fight, but are mainly engaged in herding flocks, operating caravans, and occasionally doing agriculture. They are organized in tribes of their own, which are tributary to particular noble tribes, to whose chiefs they pay an annual tribute in livestock, butter, tanned hides, and grain. They must also feed nobles whenever visited by them. Some as pure Caucasian, but many are somewhat mixed with Negro blood.

e. Artisans, called Enaden. They are few in number, are endogamous, pay no tribute, and make jewelry and knives or work in wood.

f. Tenant serfs, called Harratin. They are freed slaves and the descendants thereof, and are overwhelmingly Negroid. They come mainly from Tuat and engage in agriculture on a share-crop basis. Comparable to them are the Merabtin, sedentary Arabs from Tuat also working as share-croppers.

g. Slaves or hereditary serfs, called Iklan. They are Negroes, the descendants of Negroes captured in war or raids. They are extremely numerous; there are few upper-class or Imrad families which do not own slaves. Some do house work, but the majority herd the flocks or till the land of their masters.

Marriage

Individuals select their own marriage partners. Arrangements are made through an intermediary, often a marabout. A bride-price of at least six camels is customary among nobles, less among vassals. It is paid to the bride's parents, who may contribute it toward the dowry which they provide their daughter.

The almost universal prevalence of monogamy is stressed by all sources. Lhote states that a few marabouts, versed in Koranic law, are polygynous, and both he and Demoulin report occasional concubinage with slave women.

Family

The independent nuclear family is apparently the residential unit, though bands may have some of the characteristics of extended families.

Residence

Residence is initially matrilocal for one year, thereafter patrilocal with the band of the groom's father. The ultimate rule is often if not usually avunculocal, for on the death of their father children (with their widowed mother) are reported to remove to the group of their maternal kinsmen (though they remain with their Fa if their Mo is divorced).

Kin Groups and Exogamy

Islamic marriage restrictions are in force, involving the prohibition of marriage between any primary or secondary consanguineal relatives but allowing marriages between first cousins.

Descent is matrilineal. Children are affiliated with the social class of their mother and also with her kin group. There is inferentially a segmentary matri-lineage organization.

Kinship Terminology

A man shows respect toward his parents-in-law.

Settlement Pattern

The Ahaggar live mainly in small nomadic bands. Their temporary camps consist of 5-6 dismountable tents arranged in a rough circle to form a corral. Tents are made of 30-40 tanned sheep or goat skins sewn together, dyed red, supported on a framework of wooden poles, and pegged to the ground. There are two principal types of framework, one composed of arches, the other of forked posts with crossbars. The walls are commonly surrounded with woven grass mats. In cold weather, beehive huts of straw (mats?) are often used instead of tents. The sedentary Harratin live in rectangular flat-roofed houses of sun-dried bricks, usually isolated and surrounded by a fence. Transhumance occurs, but it is irregular rather than seasonal.

105

Community Organization

Lhote and Duveyrier report that a band is composed of close relatives. Boys are circumcised at the age of 3-5, but clitoridectomy is not practiced.

Local Government

Each tribe (tausit) has a chief (amrar) and an assembly of adult males. Succession to the headship is matrilineal--by YoBr, then MoElSiElSo, then ElSiElSo. (This strongly suggests avuncu-clans).

State

Tribes are aggregated into three confederations (tobol), each headed by one of the three most important tribes (Kel Rela, Tidjehen, and Taitoq); each has a sheikh (amrar) and council. The three confederations recognize a single paramount chief (amenokal) and a council of notables (arollan) composed of tribal chiefs and nobles. The paramount chief is elective within a single matri-lineage, and can be deposed. Succession is normally by a YoBr, MoSiSo, or SiSo. The paramount chief receives fees from passing caravans, the product of particular lands and herds, and annual tribute in livestock, hides, butter, grain, and slaves. He arbitrates disputes, but is primarily a war leader, and his actions are subject to approval by the council. Bissuel also reports that the Ahaggar have a single judge (alem), normally a marabout, who is chosen by the council and travels about dispensing justice.

Warfare

The Ahaggar are warlike raiders and pillagers of caravans. Raids for slaves and livestock have been particularly common against the Aulliminden, Chaamba, and Berabish.

●105

Identification

The Asben (Air, Kel Air) are a Tuareg tribe numbering about 20, 000, all Moslems. They speak a language of the Berber branch of the Hamito-Semitic linguistic stock. They have their own ancient system of writing, and there is widespread literacy, especially among women. They include numerous sub-tribes, of whom the Gress (Kel Gress) Oui (Kel Oui), and Tadele (Kel Tadele) are among the most important. Urvoy (1936) gives the population of the Asben as 18, 500. Lhote (1944) reports a population of 28, 000. Urvoy says that the country was originally inhabited by Hausa-speaking Negroes, and that the Tuareg arrived between the 11th and 16th centuries (allegedly from the Maghreb and Tripolitania. The Negro indigenes were progressively evicted, mainly to Gobir. A period of anarchy was ended by the establishment of the sultanate in 1405. The Air were conquered by the Songhai in 1515; a century of prosperity followed, then a decline. Even before, Air, as an important center in the caravan trade, had been fought over and sometimes conquered by the rulers of Bornu, Mali, and Katsena. Shortly before 1700 Air was conquered by the Hausa state of Ader. During and following the 18th century there were many severe raids on Bilma, and in the 19th century there were bloody wars with the Soliman. The French occupied Agades permanently in 1906.

Basic Economy

Primarily pastoral, with transhumance, with important auxiliary agriculture, using irrigation and animal manure. The staple crop is millet, followed by sorghum. A little wheat is grown, and some vegetables, including carrots, onions, pumpkins, and squash. Dates are a staple food (whether grown or imported is not reported). Jean gives a census of livestock for all tribes except the Kel Gress, as follows (with numbers in parentheses including estimates for the Kel Gress): 20, 250 (23, 000) camels, 544 (600) horses, 2, 520 (3, 000) donkeys, 2, 490 (3, 000) cattle, and 32, 400 (37, 000) sheep and goats. Rodd says chickens are common and are eaten. Mutton and beef are eaten at religious feasts and family reunions, but the flesh of camels horses, and donkeys is consumed only in times of famine. Dogs and a few cats are kept as pets . Milk products are the principal article of diet; milk is drunk fresh or sour, and both butter and cheese are made. Cattle, both humpless and humped, are sometimes used for pack and riding animals, as well as camels, horses, and donkeys.

105

Sex Division of Labor

Herding and all other labor in food production (except food preparation and making of butter and cheese) are done exclusively by men. Fatness is admired in women. Agriculture was formerly done by slaves.

Property

Cowries were formerly used as currency. Each extended family or tribe has its own grazing territory and water sources.

Rodd states that inheritance is matrilineal--by SiSo. Jean reports only the strict Koranic rule of an eighth to widows and the remainder divided equally among the children with sons receiving double shares. For the Tadele Joubert reports that children share equally in four fifths of an estate, with sons receiving 4 times as much as daughters, and with one fifth going to other heirs.

Social Stratification

Air society is stratified into nobles (Imajeghan), marabouts (religious and learned men who do not engage in commerce), vassals (Imrad), and slaves (divided into house slaves and field slaves). The status of vassals is relatively high; they are attached, not to individual nobles, but to groups of nobles (lineages?). Nobles can marry Imrad women and take slave-concubines, but Imrad men cannot marry noble women. Jean reports, however, that the children of a noble man and an Imrad wife are semi-nobles (Iradjenaten) and if males,can marry noble womentand produce noble offspring. Slaves are Negroes purchased or captured in the Soudan and their descendants; ordinary slaves can be sold, but not house slaves.

Marriage

A groom pays a variable but substantial bride-price, consisting of several camels or the equivalent in money or other livestock. The bride receives a dowry of livestock and often slaves; it is in part provided by her mother, in part contributed by the groom.

Polygyny, exclusively of the non-sororal type, and concubinage are permitted by Koranic law. Rodd reports that monogamy is the norm and that polygyny is rare. Joubert similarly states that the great majority of men are monogamous, though a fair number have 2-3 wives, and adds that concubines are never taken. Jean indicates that polygyny with a chief wife is common and that nobles often keep slave concubines (mistresses?) in the slave sections of the towns. Secondary

105

unions are allowed with WiSo after death of Wi, forbidden with BrWi, SoWi, and WiMo (Joubert on Tadele).

Family

The residential unit is a nuclear (or polygynous) family with their house slaves. The band, however, seems to be normally an extended family.

Residence

Residence is normally initially patrilocal. Children live with their parents until they marry, when daughters join their husbands and sons establish independent households commonly (but not always) adjacent to that of their parents. Ultimate residence, however, appears to be avunculocal. When their father dies, children return with their mother to their maternal kinsmen; if the mother dies before the father, they may remain with the latter for a time but eventually join their maternal relatives.

Kin Groups and Exogamy

Marriage is forbidden with primary and secondary consanguineal relatives, but is permitted between first cousins.

Matrilineal descent prevails for social class status and for kin-group membership. Tribes or "clans" (Rodd) show a marked fissive tendency, and there is almost certainly a segmentary matri-lineage organization.

Settlement Pattern

The Air are for the most part organized in nomadic bands, but there are four permanent villages (and other ruined ones) and one sizable town, the capital, Agades, with a population of about 1, 000 (formerly several times as many). Agades was formerly surrounded by a mud wall. Here and in the permanent villages there are rectangular houses with flat roofs and walls of stones laid in mud. The usual semi-permanent house is round and consists of a framework of flexible poles set in the ground and joined at the top; it is of beehive shape and is covered with grass mats. In nomadic camps the Air use dismountable tents of approximately rectangular shape made of flexible arched poles set in the ground, covered with tanned hides with mats around the sides; the roof is a low dome. In a camp each family often pitches its tents (1 for family head, 1 for his Wi, and 1-2 for his children and servants) as much as several hundred yards distant from other families.

105

Community Organization

Jean intimates that a band is essentially an extended family or localized lineage, but Joubert reports for the Tadele that a band is based on friendship rather than on kinship. Boys are circumcised. Age-grades are apparently lacking.

Local Government

Each band has a headman. Succession is either non-hereditary by election or matrilineal, by a SiSo (Rodd); succession is normally elective within a particular matri-lineage--by YoBr or SiSo (Jean).

State

The Air are politically organized into a loose confederation under a paramount chief, the sultan of Air. However, the Kel Gress in the W have an independent chief, and the tribes on the caravan routes in the N acknowledge the authority of a chief called Anastafilet. The sultan of Air is elected from the lineage of the founder by the Itessen sub-tribe of the Kel Gress--an old prerogative. The candidate most liberal with gifts is normally selected. The sultan can be deposed by a special council of seven representing several tribes. His authority is extremely limited. He levies no direct taxes and derives his income largely from caravan fees, estates without heirs, and fines.

Warfare

The Air are warlike and much given to raids for booty in livestock and slaves. They are particularly hostile toward Arabs.

105

Identification

The Antessar (Kel Antessar), with whom are included the Tengeredief (Tengeregif) and other tribes descended from the Aulliminden and Tadmekket (Kel Tademeket) in the general region of Timbuctoo N of the Niger River, are a Tuareg nation belonging to the Berber branch of the Hamito-Semitic linguistic stock. They are Moslems. They are sprung from the Iforas of Adrar. The Tadmekket, defeated by the Aulliminden in 1653, sought refuge with the Moroccan pashas in the Timbuctoo region and westward. The Aulliminden pressed behind them, waged frequent wars with the pashas, and finally conquered Timbuctoo in 1787, dominating it until the arrival of the French about 1900. Lhote (1944) gives the population of this group of tribes as about 40,000.

Basic Economy

Primarily pastoral and nomadic, although considerable agriculture is practiced by the Bella serfs. The chief crops are rice, millet, and sorghum, but some wheat, maize, onions, watermelons, peppers, radishes, and even cotton are grown. Numerous camels, horses, donkeys, cattle (chiefly zebu but some humpless), sheep, and goats are kept, as well as dogs, chickens, and pigeons. Milk (drunk both fresh and sour), butter, and cheese are basic items in the diet. Some hunting and gathering of wild seeds are done, but only Sorko Songhai fish. Hides, meat, and milk products are exchanged at the markets for grain and various necessities, but trade is left mainly to the Songhai and Berabich.

Sex Division of Labor

Men hunt and herd. Women make butter and cheese and trade in the markets. Only the Bella serfs engage in agriculture.

Property

The chief wealth is in livestock.

Both Aymard and Miner report that inheritance is patrilineal--contrasting with the matrilineal rule of most Tuareg.

Social Stratification

There is a complex stratification into largely endogamous social classes or castes:

a. Nobles, called Imochar or Surgu (Songhai), who do not work except herding and are prone to war

and pillage. They include a sub-class of marabouts, who bear no arms, are literate, and engage in animal husbandry and religious activities.

b. Vassals, called Imrad or Daga (Songhai), who live by by herding and pay regular tribute to the dominant nobles.

c. Serfs, called Iklan or Bella (Songhai), who are Negroes descended from former slaves and captives and engage in agriculture. Some are house slaves.

d. Outcastes, called Inadan, who include smiths and woodworkers, leather workers, and griots (musicians and bards). The smiths, who are Negroid, occupy an ambivalent position, both despised and esteemed.

Marriage

Marriage is arranged by a youth's father or ElBr. It involves a substantial bride-price, ranging in amount from a dozen sheep to a dozen camels. The bride brings a dowry into marriage. Premarital sex freedom is general, and virginity is not demanded.

The upper classes are exclusively monogamous, but polygyny with a chief wife is common among the Bella serfs. The levirate and sororate (but not sororal polygyny) are allowed, but are not common.

Residence

Patrilocality prevails, but avunculocal residence is not uncommon.

Kin Groups and Exogamy

Local agamy is inferential.

Marriage is forbidden with primary and secondary consanguineal relatives but is permitted with any first cousin. Cross-cousin marriage, despite a verbal preference, for it, is actually not common.

Descent is matrilineal, and Miner speaks of "lineages." There is, however, no unilinear exogamy. Marriages across caste lines do occur, though they are rare, but a man is strictly forbidden to marry a woman of a caste higher than himself. It is in consequence of this prohibition, coupled with matrilineal inheritance of class status, that the Tuareg have succeeded (far better than the Arab) in maintaining their racial purity.

105

Kinship Terminology

Fa--abba. Mo--anna. So--rurer. Da--eller. Br--angar. ElBr--amakar. YoBr--amadrai. Si--teceqqaq. ElSi--tamakart. YoSi--tamadrait. Hu--ahales. Wi--hanner.

FaBr--angasnabba. MoBr--angasnanna, angatmar. FaSi--wuletmasnabba. MoSi--wuletmasnanna. For other terms see special kinship sheets.

FaBrCh--aramedden. MoSiCh--tangaten. FaSiSo, MoBrSo--ababash. FaSiDa, MoBrDa--tababasht.

Settlement Pattern

The Antessar live in nomadic bands and camp in portable tents of tanned sheep or goat skins, commonly dyed red. Their slaves live in mat shelters at the edge of the camps; those who are sedentary, however, occupy beehive huts of grass thatch over a wooden framework with the huts of a family enclosed in a fenced compound. Zeltner describes the tent as a vast rectangle of about 60 tanned goat or sheep skins sustained by a tall pole in the middle and shorter ones on either side with the edges fastened to stakes. He says that E of 2° W the dwelling type changes to a mat tent, and that at the border of Air this changes to camel-hair tents of Hoggar type.

Community Organization

Aymard reports that those who camp together constitute a "family" (possibly a lineage). Circumcision is practiced at about the age of 8. The Bella of Timbuctoo have true age-grades, with a span of about 10 years, possibly in acculturation to the Songhai.

Local Government

Each band elects a headman.

State

Tribes are organized under paramount chiefs (amenokal), elected by an assembly of headmen.

Warfare

The Antessar, like all Tuareg, are confirmed warriors and raiders.

Zeltner, F. de. Les Touareg du sud. Journal of the Royal Anthropological Institute, XLIV, 351-375. 1914. (A modest amount of information).

105

Identification

The Aulliminden (Awellimiden, Illemmeden, Oulimminden, Oulliminden) are a tribe of Tuareg, belonging to the Berber branch of the Hamito-Semitic linguistic stock. Their population is not reported. Urvoy (1942) states that there are about 300,000 Tuareg in the French Soudan, including their Bella (Ifrauellen) slaves, but the same author (1936) estimates the total population of pure-blood Tuareg (including Imrad) at no more than 50,000. Temple (1922) reports 45,000 Tuareg (presumably Aulliminden) in NW Nigeria, including their Hausa serfs. Jean gives the population of the Aulliminden in 1909 as about 7,000. Zeltner (1914) reports 87,000 Tuareg in the French Soudan. Lhote (1944) gives the population of the Aulliminden group of tribes (including the Igwadaren and Udalen) as about 162,000, of whom 94,000 are Negro slaves; he gives the total Tuareg population (all groups) as about 240,000. Urvoy (1936) states that the present country of the Aulliminden was originally occupied by Negroes, mainly Hausa, and that the Aulliminden are derived from the Iforas of Adrar. When Adrar was liberated from Songhai rule by the Moroccan conquest, the Aulliminden first defeated and expelled the Tadmeket, who sought refuge in the Timbuctoo region. After 1690 the Aulliminden pressed S from Adrar to the Gao region, where they became increasingly turbulent, warring against the Kunta, Tadmeket, and the pashas of Timbuctoo. Offshoots occupied much of the country within the Niger bend. In 1787, the Aulliminden conquered Timbuctoo, which they continued to dominate, with brief interruptions, until the advent of French rule. Delafosse (1912) says that the Aulliminden were attracted to the Gao region during the rule of the Songhai in the early 16th century, and embraced Islam at that time.

Basic Economy

Primarily pastoral. Camels, horses, cattle, sheep, and goats, are kept. Milk, butter, and cheese are a mainstay of the diet.

Sex Division of Labor

Women are fattened and do little productive work. They are, however, said to milk cows.

Property

The chief wealth is in livestock.

Inheritance is reported by Hourst to be patrilineal, inheritance by SiSo having been repudiated.

105

Social Stratification

The society is stratified into noble tribes, vassal tribes (Imrad), and Negro slaves.

Marriage

A bride-price in livestock is inferential.
Monogamy prevails. Cicisbeism is said to be common.

Kin Groups and Exogamy

Hourst reports that matrilineal descent for class status has been shifted to patrilineal descent with the result that the Aulliminden are more Negroid than other Tuareg tribes. Nicolas reports patrilineal descent.

Settlement Pattern

The Aulliminden wander in nomadic bands and live in tents. Hourst describes the tent as made of skins which are upheld by a central pole with the edges fastened to pegs. Urvoy (1942) describes the typical Tuareg (apparently characteristic of the Aulliminden area) as made of tanned sheep or goat skins stretched over a framework. He also reports that Bella slaves often occupy hemispherical mat shelters.

Community Organization

The Aulliminden are aggregated into camps (amezzar), groups of these into tribes (tausi).

State

Each tribe (tausi) has a chief (amrar). The Aulliminden are a confederation of three tribes (the Kel Ahar, Kel Tedjucan, and Kel Kumeden) headed by a paramount chief belonging to the Kel Kumeden; he is succeeded by his next younger Br, then ElBrElSo.

Warfare

The Aulliminden are a warlike tribe of raiders.

105

Urvoy, Y. Petis atlas ethno-démographique du Soudan. Paris, 1942. (A very few items).

105

Identification

The Azjer (Adjeur, Ajjer, Ashar, Azger, Azguer, Kel Azdjer) are the northeastern-most principal group of Tuareg. They speak a language of the Berber branch of the Hamito-Semitic linguistic stock, and have preserved a very old system of writing; nearly all the women and a third of the men are literate. The Azjer are composed of the Imanan, Oraghen, and four other noble tribes, two maraboutic tribes, and a number of vassal or serf tribes. Lhote (1944) reports a population of 1, 500 exclusive of Azjer in Italian territory. All are Moslems.

Basic Economy

Primarily pastoral and nomadic, but considerable agriculture is done in the oases and on the borders of Fezzan. The staple crop is dates (Phoenix dactylifera), followed by "blé" or wheat (Triticum durum) and "orge" or barley (Hordeum). Negroes cultivate considerable bulrush millet (Penicillaria spicata), and a little sorghum (Sorghum vulgare) and broom-corn millet (Panicum miliaceum) are also grown. Important fruits, other than dates, are figs (Ficus carica), olives (Olea europaea), pomegranates (Punica granatum), apricots (Prunus armeniaca), "coignassier" or quinces (Cydonia vulgaris), and grapes (Vitis finifera) for raisins; some apples (Malus communis), peaches (Amygdalus persicus), plums (Prunus domesticus), and oranges (Citrus aurantium) are also grown. Important vegetables are broad beans (Faba vulgaris), hyacinth beans (Dolichos lubia), peas, (Pisum sativum), chick peas (Cicer arietinum), okra (Hibiscus esculentus), purslane (Portulaca oleracea), "aubergine" or eggplant (Solanum melogena), onions (Allium cepa), "navet" or rape (Brassica napus), beets (Beta vulgaris), tomatoes (Lycopersicum esculentum), "citrouille" or pumpkins (Cucurbita pepo), "potiron" or squash (C. maxima), cucumbers (Cucumis sativa), muskmelons (Cucumis melo), and watermelons or "pastèque (Citrullus citrullus); some carrots (Daucus carota), and cabbage (Brassica oleracea) are also grown. As condiments, considerable cumin (Cuminum cyminum), coriander (Coriandrum sativum), and peppers (Capsicum annuum) are grown, as well as a little garlic (Allium sativa) and fennel (Nigella sativa). Crops grown for other purposes than food are henna (Lawsonia inermis), tobacco (Nicotiana rustica), gourds (Lagenaria vulgaris), Lygeum spartum (a fiber plant), and a little indigo (Indigofera argentea), hemp (Cannabinus sativa) for hashish, and cotton (Gossypium herbaceum).

Numerous camels, donkeys, sheep (with hair), and goats are kept, some zebu cattle, a few horses, dogs, and (in permanent settlements only) cats, chickens, and pigeons, but no pigs. Camels, sheep, and goats are milked, and cheese and butter are made; milk products form an important constituent of the diet. Fowl and eggs are not eaten by nobles. The flesh of camels, sheep, and goats is eaten. Some hunting is done, and the dried meat of antelopes and gazelles, used on caravan journeys, is marketed at Ghadames. There is a little fishing, by serfs and Negro slaves only, in the lakes on the Tavili plateau. Dog flesh is not eaten. There is considerable gathering--of sorrel (Rumex vesicarius), the fruits of the Nitraria tridentata, Salvadora persica (toothbrush tree), and Zizyphus spina-christi (jujube) and mushrooms (Cheiromyces leonis) as food, of rosemary (Rosmarinus officinalis) and thyme (Thymus hirtus), of the seeds of Aithatherum pungens and the stalks of Phelipaea violacea which are dried and made into flour as famine foods, and of gum arabic (Acacia aribica), the seeds of colocynth (Citrullus colocynthus) as a gout remedy, and the grains (for oil) of African rue (Peganum harmalia) for export. Trade is done at the caravan centers of Ghadames and Ghat. Salt is obtained in Amadghor in the W or by trade from Fezzan.

Sex Division of Labor

Women do not engage in food-producing activities.

Property

Property is divided into two categories: (1) personal property, including everything acquired by the individual's own efforts, including money, weapons, livestock, purchased slaves, and agricultural produce, and (2) "illegitimate" property, owned only by nobles, and including all rights based upon force, i.e., rhefer (customary rights to exact dues from caravans and travelers), gharama (protection paid by other peoples to avoid raids), melak (title to agricultural land, pasturage, and water sources), imhrad (personal and property privileges with respect to Imrad or vassals), and soltna (authority to command and to exact obedience). Most personal property, especially in livestock, is owned by women. So-called "illegitimate" property is apparently associated with headship of a family.

Personal property is patrilineally inherited--by children, who receive equal shares regardless of sex. So-called "illegitimate" property is matrilineally inherited--by ElSiElSo, without partition.

●105

Social Stratification

There is a complex social stratification, composed of the following elements:

a. Nobles (Ihaggaren), the members of five noble tribes. They alone exercise political authority; they do no productive labor except camel herding; they refuse to eat fish, fowl, or eggs, which other classes except marabouts eat; they police the tribal territory, protect caravan routes, wage war if necessary, and engage in raids on other groups. They are fed and supported by the sedentary oasis dwellers around the harvest season, by caravan merchants during the caravan season, and by the serfs at other times.

b. Marabouts, the members of two maraboutic tribes, noble in origin, but who have eschewed political for religious activities; they are literate and educated, and act as teachers, judges, and arbiters of disputes.

c. Serfs (Imrad), who outnumber the nobles and marabouts about 4 to 1. Some are nomadic herders, others sedentary tillers. They are organized into tribes, which are tributary to noble (or marabout) tribes, their annual tribute being reported as a camel a year and the milk from 12 ewes or goats. Some are clearly of Caucasian blood, but the majority are strongly mixed with Negro blood because freed slaves and their descendants become Imrad; it is considered a pious act to free slaves at the death of their master, and a slave woman married to a free man becomes free. Serfs bear arms and fight.

d. Slaves (Ikelan). All are Negroes purchased or captured from other tribes. They are owned mainly by nobles and are employed as house servants, to tend herds, and to conduct convoys. Women are sometimes taken as concubines or even wives. The transmission of slave status, indeed all status, is matrilineal.

105

Marriage

A bride-price in livestock is customary. There is considerable elaboration of the ideal of romantic love, and women enjoy a very high status.

Strict monogamy prevails, and even the taking of slave concubines is apparently rare.

Family

The system of property suggests an extended family (or possibly lineage) organization.

Kin Groups and Exogamy

Matrilineal descent prevails with respect to social class status, and there is inferentially a segmentary matri-lineage organization.

Settlement Pattern

The nobles and other pastoral groups live in migratory bands. A camp consists of tents pitched in a circle around a corral for livestock. The tents are made of tanned skins sewn together and dyed red, and/or of mats, supported by posts and pegged to the ground. Sedentary serfs live in villages of huts with thatched roofs and walls of branches, each hut being surrounded by a fence.

Community Organization

A sedentary settlement is said to be occupied by 6-12 families forming a "famille consanguine."

Local Government

Each "tribe" (tausit) is governed by an assembly (mia'ad) of adult males, over whom one presides by right of seniority.

State

In the 17th century the Azjer and the Ahaggar were united under a single paramount chief (amanokal) of the noble Amanan tribe, but since then they have been split into two independent confederations. The Azjer confederation is headed by a hereditary sheik (amghar), who is succeeded by a SiSo. The Azjer are protectors of the commercial towns of Ghat and Ghadames, and the effectiveness of this protection is largely responsible for their economic prosperity.

105

Warfare

Though warlike, the Azjer are characterized by a greater degree of order and less anarchy than any other Tuareg tribe.

Bibliography

Duveyrier, H. Les Touareg du nord. Paris, 1864. (Has a substantial amount of information).

105

Identification

The Ifora are a Tuareg tribe, especially closely related to the Aulliminden. They belong to the Berber branch of the Hamito-Semitic linguistic stock, and are Moslems. Lhote (1944) gives their total population as about 4,200. They are divided into four divisions --the Kel Tassile, Igedad, Dag-Elemtei, and Ouqqiren. They use an old Berber system of writing.

Basic Economy

Primarily pastoral and nomadic. Very little agriculture is done. Dates are the chief crop, but some onions, peppers, tobacco, and a very little barley, wheat, and millet are cultivated in irrigated gardens. Numerous camels, donkeys, cattle, sheep, and goats are kept, as well as dogs and a few horses, but no chickens. The sheep have hair, rarely wool. Cattle are of the zebu breed, and there are some pack oxen. Women ride donkeys. The staple food is milk, drunk sweet or sour, and cheese (butter is not made). Camels, goats, and sheep are milked (no mention of cows in this connection). There is a fair amount of hunting, but no fishing. Collecting produces the principal supplement to the milk diet. Many wild grains are collected, including the seeds of Pennisetum distichum. A modest amount of trade is done. Luxury objects and rugs are obtained from Ghat or Ghadames via the Ahaggar. Small caravans are conducted to Bourem on the Niger, where rice and sorghum are obtained in exchange for livestock. Salt and leather goods are obtained from Air. Caravans from Tuat bring dates, cloth, tobacco, and pottery to exchange for camels, sheep, and captured slaves.

Sex Division of Labor

Men do all herding, hunting, and milking. Agriculture is done only by slaves and Haratin. Women do not engage in food production.

Property

Each tribe has collective ownership in particular grazing grounds.

Inheritance is said to follow the Koranic law, one seventh (sic) going to the widow and the rest being divided equally among the children with sons taking double shares.

Social Stratification

There is a complex structure of social classes, composed of the following elements:

105

a. Nobles (Ihaggaren), who live mainly by warfare and raiding.
b. Marabouts (Zaouia), members of one tribe with sub-tribes. They engage in herding and often in caravan trade, do not bear arms, are literate in Arabic and Tuareg, and act as teachers.
c. Vassals (Imrad), who are organized in tribes but are attached to individual nobles, for whom they herd and whom they accompany in raids. The nobles never intermarry with them.
d. Serfs (Harratin), owned by the families of chiefs, for whom they do agricultural work.
e. Slaves, who are Negroes obtained in raids or by purchase. Their status is hereditary, though manumission is common and is considered a pious act. Children born to slaves are never sold.
f. Artisans of Negro blood form a strictly endogamous caste. They manufacture tools, weapons, utensils, jewelry, and wooden objects.
g. Irreganaten, a special group descended from Arab nobles of Tidikelt who married Tuareg women and lived matrilocally with them in Ifora country.

Marriage

Marriages are arranged through an intermediary. A bride-price is required, consisting of two camels. The bride receives from her parents a dowry of 2-3 camels, a set of clothing, a new mat tent, and a female slave.

Absolute monogamy prevails. Unlike the Ahaggar, the Ifora do not even take Negro slaves as concubines.

Residence

A newly married couple set up their tent near that of the bride's parents, but there is no indication that such matrilocal residence is permanent.

Kin Groups and Exogamy

Descent is patrilineal. An Ifora is stated specifically to belong to the tribe of his father, not that of his mother. "Les Ifor as ne cherchent pas à se marier dans leur propre famille."

Settlement Pattern

The ruined town of Es-Souk has remains of rectangular houses with courts which imply a population of 2, 000 or more. Today, however, the Ifora live exclusively in tents of tanned goat or sheep hides dyed red, sewn together, supported on a wooden framework, and fixed to the ground by ropes and pegs. There are two shapes. The most common is round, with a central post, peripheral posts, a slightly domed roof, and walls covered with mats. Less common are smaller tents with a framework of 4-6 vertical poles with crossbars and an open veranda at one side.

Local Government

Each noble and vassal tribe has a sheik (amrar).

State

All the Ifora tribes acknowledge one paramount chief (amenukal), whose authority is nominal, who receives no tribute and is supported only by his own Imrad, and whose decisions must all be ratified by a council of 5-10 members, all representative of noble tribes. Succession is by election of the council from within one patri-lineage, with the order of preference a younger brother, then the eldest among the sons and brothers' sons. The Ifora have normally paid regular tribute to the Aulliminden.

Warfare

The Ifora are warlike raiders. Captured booty is divided equally among noble and Imrad members of the raiding party, with a special share to the chief. The hereditary enemies of the Ifora are the Air, Berabish, and Kunta.

105

Identification

The Ihajenen (Ihadjenen, Ihadshenen), with the associated Ibakammazen, Rhafsa (Kel Rhafsa), Tarat (Kel Tarat), and Telaq) (Kel Telaq) of less noble origin, are the basic Berber inhabitants of Ghat, an important oasis city with a population in 1864 of 4, 500, including outlying villages. They speak a language akin to but dialectically different from Tuareg, and thus belong to the Berber branch of the Hamito-Semitic linguistic stock. The town is essentially an outpost of Fezzan. Unlike Ghadames, it has no known ancient history. It was founded, according to local tradition, about five centuries ago by the Berber groups listed above. They have received large accretions from elsewhere, especially merchants from Ghadames, Touat, Sokna, and Djalo who have married local women and left descendents of heterogeneous composition.

Basic Economy

Primarily commercial, with agriculture by irrigation and animal husbandry. There are extensive groves of date palms and many cultivated gardens. There is considerable handicraft industry, but trade is all-important. Ghat lies at the cross-roads of major caravan routes to Ghadames in the N, Murzuk in the E, and Agades in the S.

Property

Most of the dwellings, gardens, and springs are owned by the Ihajenen women.

Inheritance is inferentially matrilineal.

Social Stratification

There are Negro slaves, serfs, and free Berbers and Arabs.

Settlement Pattern

Ghat is an oasis town surrounded by a circular wall and includes a number of surrounding villages. The houses are small apartments built around the edges of a rectangular court.

Community Organization

The town is divided into six quarters.

Local Government

The town is ruled by a hereditary sheik or sultan (amghar). Succession to this office is matrilineal--by SiSo. There is also an assembly.

105

State

The town of Ghat has maintained political independence, but is under the protection of the Ajjer Tuareg. Turkish rule was established in 1874 with a qaimakam and a garrison of 200, ending the previous period of Tuareg "protection."

105

Identification

The Udalan (Oudalen, Wadalen), with whom are included the Logomaten, Kel Gossi, Tingeregedech, and a series of lesser tribes tributary to the last, are a Tuareg nation, speaking a language of the Berber branch of the Hamito-Semitic stock. The tribes of this group are more closely akin to the Aulliminden than to the Antessar and Iguadaren. They are offshoots of the Iforas of Adrar. The Tingeregedech and Logomaten entered their present location as a branch of the expanding Aulliminden about 1825, but the Udalan arrived much earlier. The French occupied the country in 1899 and 1900. All the tribes of the group are Moslems. The Udalan proper number about 11, 600, including their Bella serfs, according to Gaalon (1939), but Coutouly (1923) reports 3, 500 Tuareg and 10, 700 Bella in the same region.

Basic Economy

Primarily pastoral, with transhumance. Only the Bella slaves do a little "millet" agriculture. Cattle, sheep, goats, horses, donkeys, and camels are kept. Milk, together with butter and cheese, constitutes the principal element in the diet. Wild seeds, especially of Cenchrus catharticus, are gathered to tide over the food shortage just before the harvest.

Sex Division of Labor

Milking is done by men.

Property

Livestock are the chief form of wealth and movable property. Each tribe has its definite grazing territory, which all members are free to use. Eminent domain over all land is vested in district chiefs, from whom permission to clear must be obtained in return for 10% of the harvest. Tuareg (except Bella) who use a piece of land for a number of years acquire heritable usufruct therein, but without power of sale.

Inheritance is matrilineal--by sisters' sons, then nearest matrilineal kinsman.

Social Stratification

There are sharp caste distinctions. Each caste (or class) is largely endogamous, and membership is determined by matrilineal descent. The several castes are:

105

a. Imochar or nobles, who are pure Caucasian in race and disdain all work except herding as degrading. There are very few of them (Coutouly says only 92 in the Dori district).
b. Imrad or vassals, who are mixed Caucasians and Negroes descended from former subjugated peoples. They are much more numerous than the nobles, to whom they pay tribute in grain or livestock. Many of the Imrad of the region are now independent and rank, in fact, as nobles. The Imrad are organized in distinct tribes from the Imochar.
c. Marabouts, a pious and literate class, whose status in this region is inferior to that of the Imrad.
d. Bella or serfs, descendants of Negroes captured in wars and raids. They own no heritable property, could formerly be sold by their owners, and can still be given as part of a dowry. Bella are not organized into tribes of their own, but groups of them are attached to each Imochar or Imrad tribe--some as house servants, most settled in separate villages, where they conduct agriculture and pay annual tribute in grain and livestock to their owners. They greatly outnumber the Tuareg proper in this region.
e. A special caste of free Bella coppersmiths who are not liable to taxation.

Marriage

Marriage involves a substantial bride-price, paid by the groom's father to the parents of the bride. It consists normally of two camels, 8-10 cattle, or 40 sheep. A bride is also endowed with a dowry of livestock or even Bella. Virginity is not demanded, and its lack is never a reason for annulment.

Monogamy is overwhelmingly preponderant, and even concubinage is forbidden. Secondary unions are permitted with BrWi and WiSi.

Residence

Children live with their father only as long as their mother lives or

resides with him. On her death or divorce they go to live with their MoBr, only remaining with their Fa if his wealth in livestock assures them an easy existence. A MoBr, if he thinks his SiCh is being mistreated, can take him away from the Fa at any time.

Kin Groups and Exogamy

Marriage is forbidden with any aunt, niece, or granddaughter, but is allowed with first cousins.

Descent is matrilineal. Membership in tribal groups and social classes follows that of the mother. There is a suggestion of segmentary matri-lineage organization.

Settlement Pattern

The Tuareg proper (Imochar and Imrad) live in nomadic bands, many of the Bella in settled villages. Dwellings are of several types. The Tuareg proper normally live in tents of tanned cowhide stretched over a simple framework of four upright forked poles with two crossbars (the skins are often dyed red), but frequently they live in elliptical mat tents, and sometimes in temporary straw shelters; in all cases the dwellings are dismountable and transported on camels or donkeys. The sedentary Bella often live in round huts with conical thatched roofs and cylindrical walls of mats or sorghum stalks.

Community Organization

The Tuareg are organized in tribal groups, said to correspond with the villages of the neighboring sedentary tribes. To each is attached one or two villages of sedentary Bella. Circumcision is practiced, but not clitoridectomy.

Local Government

Each nomadic band has a chief.

State

The Udalan proper are organized under twelve district chiefs (amenokal) of noble blood. Succession is matrilineal--by SiSo. The Tingeregedech, Logomaten, and a series of vassal and tributary tribes have been organized since 1900 into a unified confederation under a Tingeregedech paramount chief. All were at one time at least nominally tributary to the Aulliminden.

105

Warfare

Warfare and raids were formerly endemic.

[This article deals with the political system of two Tuareg groups, the Air and Ahaggar. It offers a description of the relations between noble and vassal tribes, and the role of the central authority and thelimitations on his powers. Functionalist interpretations are given for these relationships and these are couched largely in economic terms. In addition there is a brief but clear discussion of environmental differences in the areas inhabited by these two Tuareg groups and the variations in the cycle of economic activities are described. Occasional references to other Tuareg groups are also included. There is also a rather lengthy discussion of Tuareg history and the authors' hypotheses about the introduction of the camel into North Africa. The source has been sub-headed for the Air and Ahaggar divisions. References to other Tuareg groups have been marked for the appropriate

Yale: Bk14 Y Ah12 955B [HRAF ms. pp. 1-246]

Translated from the French for the Human Relations Area Files by Thomas Turner.

[This source, by a French teacher living among the Tuareg, deals generally with the life and habitat of the Hoggar. The coverage of climate, geography, flora, etc. is particularly thorough, both in the text and through the use of appendices. The coverage of the Tuareg's life is somewhat less thorough and exact. Social organization and the life cycle are dealt with in some detail, but the author apparently was not able to obtain material in any depth on the religion of the group. Material culture is covered in some detail. --Analyst]

An eight page resumé in Danish has not been processed for the Files.

[ This is the most complete and up-to-date study available of pastoral Tuareg ethnography. The author, a Danish ethnologist, spent nearly 2 1/2 years among the Tuareg during the course of 6 field trips spread over a ten-year period. His most concentrated period of field work was for 14 months in 1954-55. From 8 to 10 months was spent among the Southern Tuareg, mainly with the Kel Ayr, while the remainder of the time was spent among the Northern Tuareg, mainly with the Kel Ahaggar. The monograph focuses upon ecological adaptations, subsistence economy and technology, and general material culture, while a shorter but very interesting section is devoted to sociopolitical organization and kinship. Throughout, the author combines historical and functional approaches in an attempt to analyze Tuareg culture in historical perspective, and especially to trace the impact of Arab Islamic influences upon the traditional culture. Some of these data have already been reported in previous articles (cf. this file, source no. 5).

The researcher should be especially cautious when reading the section on political organization, because some of the terminology used by Nicolaisen may be quite misleading, and required special marking decisions.

7: Nicolaisen, Johannes.

This is particularly true of the social units which he calls "tribes": according to his description of these units they seem to match most closely the OCM definition of sibs, and have thus been marked for category 614. In fact, in Nicolaisen's previous article referred to above, he uses the term "clans" rather than "tribes" for these units, and also gives the pertinent Tuareg term taousit, which seems to be omitted from this book Correlatively, the subdivisions of "tribes" which Nicolaisen calls "sections" have been marked for category 613, as have the subdivisions of these "sections" which he does call lineages.

There are two other special marking decisions of particular importance. The most significant and permanent political unit among the Tuareg, namely the drum-group (ettebel: pl. ettebelen), has been marked for category 634. Usually, several drum-groups are allied to compose a larger political federation such as that of the Kel Ahaggar and the Kel Ayr. These represent the highest level of political integration among the Tuareg, although their significance is relatively minor, and they have been marked for category 642. However, when the drum-group is a politically independent unit, as is the case with the Kel Geres and the Kel Adrar, it has been marked for category 642.

For further information and commentary on this source, the researcher may consult the highly commendatory review by Robert F. Murphy in the American Anthropologist 68: 554-56 (1966), and especially the detailed review article by Gast in Libyca 12: 335-341 (1964).]

MS25 Tuareg MS25

174 mentioned that the word *Ihaggaren (Ahaggar)* is perhaps derived from *Hoouara*, [192] which was a common term for certain Berber tribes particularly living in Tripolitania in the Middle Ages. According to Edrisi the Hoouara Berbers were originally Arabs who adopted Berber language (Edrisi p. 66ff.). This is not proved by Ibn [114] Khaldoun's important work on the history of the Berbers. But Ibn Khaldoun states that the Hoouara came under Arab influence at a very early date, and some of the pastoral Hoouara people apparently migrated southwards to the desert at a later date than the Lemta (Ibn Khaldoun I, p. 275ff.).

I think that the ancestors of the noble Tuareg introduced the camel into the Sahara. I think too that this may have happened before the first Arab invasion of the 7th century. But some of the dominating noble Tuareg have emigrated from Tripolitania after the Arabs have arrived. And it is probable that the political systems of the Tuareg already very early were influenced by the Arabs among whom a class system is found even nowadays as described from Cyrenaica by Evans-Pritchard. In that region there are client tribes known as *Marabtin alsaqan* 171 565 because they pay *sadaka*, a fee, to a free tribe for protection and for the privilege of using the earth and water. Some fragments of client tribes even to-day have a very inferior social position and are forced to make payments to, and to perform services for, the free tribes among whom they live (Evans-Pritchard 1949, p. 53).

The word *sadaqa*, a fee, is known to the Tuareg, and there are other Arabic 171 words connected with their political systems. Here I shall content myself with 192 reference to the word *khalifa* used among the Northern Tuareg for the deputies of a chief, and the very important word *ettebel* meaning "drum", "drum-group", and in Air also "drum-chief". Ultimately the history of Tuareg political systems should 174 10 probably be viewed in connection with those of Arabs.

*492

Fig. 60. Riding saddle of *tekokeyt* type (*térik*). Bought in Ahaggar by Olufsen, manufactured in Ayr. Dimension: 0.70 m high, 0.50 m long, 0.35 m broad. (N.M. G. 1.124).

[284] *Hammu* obtain their riding saddles from Ayr. All three sub-types of the *térik*-saddle are construc-
[237] tionally identical, being made from pieces of wood lashed together with raw hide and then covered
[113] with coloured leather. The structure of this *térik*-saddle is described and depicted in literature (cf. notably Gabus 1949, pl. XII; 1957, p. 176 & Nicolas 1950a, Fig. 48, p. 179).

*492
531

Fig. 62. Riding saddle of *bersekes* type (*ṭérik*). This saddle was brought to the Musée de l'homme by Duveyrier. From Tasilé-n-Ajjer, probably manufactured in Ayr.

*492 mainly by blacksmiths of Aḍraṛ-n-Foṛas, which region is considered its original homeland, but it is
564 also made at Agadez in Ayr where the wooden skeleton is often covered with hairy ox hide. The wooden
237 structure of this saddle type is described in literature (Gabus 1949, pl. XII; 1957, p. 176).
113 In Ayr and further south in Damergu I have often seen a very simple riding saddle which has never been mentioned in literature. It is known as *kantarki* or *delobi* (Figs. 64–65), and it is very interesting

[Text continues on p. 84]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

saddle known as *tebeyut* or *tkhawit* and described above p. 76 (Fig. 57). The Ahaggar Tuareg have four sub-types of women's saddles:— (1) *akhawi*, that is a very large saddle at each side provided with a wooden arch; (2) *tkhawit* (*ta-n-tkéwin*), a lighter saddle provided with similar wooden arches; (3) *aregen*, a large and heavy saddle without side-arches; (4) *tkhawit* (*ta-n-tehḍaḍ*), a light saddle without side-arches. These saddle types, particularly the former type known as *akhawi*, are exhaustively described by Foucauld in his dictionary (Foucauld 1951-52, II, p. 723), and a very beautiful specimen is here depicted from the collection of the Musée de l'homme (Fig. 75). Very elaborate saddles as that depicted are always made by the blacksmiths, but light saddles of the *tkhawit* types may also be manufactured by Tuareg women. Thus women of the *Ireḡenaten* tribe south of the Ahaggar Massif make saddles of the lighter type themselves. Women's saddles may sometimes be provided with a roof made from curved and bent boughs covered with cotton or blankets. This peculiar construction is known to the Ahaggar Tuareg as *ahennaka*.

492* 562 [113] [564] [462]

492* 248 531

**Fig. 67. Saddle cloth (*amesluḳ*) of cotton and embroidered with coloured thread. Ahaggar, the *Aguh-en-tehlé* tribe. Dimension: 0.771 × 0.620 m. (N. M. G. 5190).**

*492

Fig. 88. Riding saddle of the type manufactured at Agadez and used by horse-riding Tuareg and Negroes in Ayr and further south. Note the very narrow stirrups which are often used for the insertion of only one or two toes. (Musée de l'homme, Collection Henri Lhote, 38/617).

231 there are perhaps less than ten horses which are all owned by sedentary people (blacksmiths and
[563] Arabs). Conditions for horse-breeding are better in Ayr, but even there pastoral Tuareg do not generally breed horses which for a large part of the year must be fed on barley, millet, or on milk. In Ayr,
[563] horses are mainly bred by sedentary Tuareg of the *Kel Ewey* group and by the negroid citizens of Agadez who hold horses in very great esteem. There are perhaps 100–200 horses in and around Agadez, where the animals are kept in or at the houses most of the year to be fed on cereals and on hay of annual grasses cut with a sickle (cf. Fig. 143 f). During the period of *akasa* it is common to let the
*492 animals graze on annual pasture, and they are then very tightly hobbled. The Ayr peoples use a bit
[171] (*araba*) (Fig. 89) similar to the type used by Arabs in the North, but their saddles are not of the general Arab type (cf. Fig. 88). The very broad Arab stirrups also seem to be unknown to the *Kel Ayr* and to the *Kel Geres*, who have many horses. The stirrups used by horse-riding Tuareg are generally very thin and slender, and they are frequently used for the insertion of only one or two toes.
[113] The riding-gear used by the *Kel Ayr* (including the *Imeggedezen*) and the *Kel Geres* is described in detail in literature (cf. Foureau 1905, III, p. 879 ff. & 921 ff.). This is very complete, and was, perhaps,
[175] introduced fairly recently, for we know that the Libyans of Antiquity rode without a saddle and governed their horses mainly by means of a stick (Bates 1941, p. 96 f.), and we are informed by Ibn Batutah that in the Middles Ages the people of Ayr rode without saddles (Ibn Batutah IV, p. 442).
231 The history of the horse in Africa constitutes a very important problem. It is generally admitted
174

232 [1/4] killed. This does not agree with Nicolas' statement that selective breeding is unknown among the *Iwillemmeden Kel Dennek* for all types of domestic animals (cf. Nicolas 1950a, p. 133).

Superfluous bull-camels are generally castrated very late – rarely before they are six or seven years old, and frequently much later. But this is not to say that all bull-camels are used in breeding, as those used for riding and transportation are generally hobled during grazing and copulation is thus effectively prevented. Bull-camels used in breeding are not always used for riding and pack animals, as they may be very savage and dangerous. In the rutting season they are left unhobled among the she-camels.

The Tuareg consider it best to castrate bull-camels late, and say that bull-camels if castrated at a very early age will not develop fully, or become such good riding and pack animals. Bull-camels which have not been allowed to mate are not so difficult to control during the periods when she-camels are on heat. Nevertheless, when bull-camels are castrated they become more docile. But to the Tuareg it is more important that gelded animals easily grow fat and thus acquire the strengh and endurance to enable them to perform the long and arduous expeditions connected with caravan trading and, in the past, also with raiding. In brief, castration of bull-camels is done as follows:— The legs of the animal to be operated are tied tightly with strong cords, and it is kept firmly to the ground by the weight of people sitting upon it. The operator thereupon cuts two slices in the animals scrotum and pulls out the testicles together with the spermatic cords. This must be done with great care because, it is said, the animal may die if one of the spermatic cords breaks. This method of castration by extraction is the only method used foı camels, and it may also be applied to other domestic animals such as bulls, rams, he-goats, and in Ahaggar also to donkey stallions. In the north this extraction method is known as *aselbi* while the *Kel Ferwan* Tuareg of Ayr use the word *azam*. The latter people claim that castration by means of cutting and extraction should be performed in spring (*tabsit*) or during the early rains (*akasa*), as the wounds will heal properly at these seasons. The other important castration method used among the Tuareg is that of chrushing the spermatic cords, it is known to the Ayr Tuareg as *áddar*, and is never used for camels but is frequently applied to he-goats, rams, and bulls. Chrushing of the spermatic cords is done by means of stones or pieces of wood – frequently by [4/2] beating with the heavy wooden pestle of the large millet mortar (cf. Fig. 177). I believe that this method is that most commonly applied to he-goats and rams, and Tuareg of Ayr claim that they can use this method all the year round as it leaves no wounds to be healed. Rams and he-goats may be castrated at any age and even very old animals are castrated to make them fat for slaughtering. It is claimed that it is best to castrate superfluous lambs and kids very early, preferably as soon as they are weaned.

I believe that the examples given above confirm my statement that the Tuareg are mainly rationalists in their stock-breeding methods. To elucidate this in more detail I shall now present my material on Tuareg veterinary knowledge. This material is unfortunately not very precise because the Tuareg distinguish between very many stock-diseases, and the treatments applied can be studied scientifically only by a veterinary surgeon. A description of stock-diseases is available for the northern parts of the [1/3] Sahara ("Notice sur l'Institut Pasteur d'Algérie", I–II, 1934–1949), but there seems to be no particular study of Tuareg stock-diseases, which I know only by their Tuareg names. As I have not studied this [1/4] rather special subject in great detail, I supplement my own material with informations gathered from literature.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

When Tuareg get lost in the desert and lack water, they bleed their camels and 261
drink the blood (cf. p. 235). In situations of great distress they may also kill their camels in order to obtain the water supply conserved in the animal's stomach.

(3) Treatment by burning. Wounds are cauterized by means of a redhot iron known as *tamak* 232
(Ayr), or *taterkemt* (Ahaggar). Burning with a redhot iron is also practised for camels with swollen feet as already described (p. 121). It is also common to burn a line around wounds or other sites of disease in order that it shall not spread, and burning is even practised for internal diseases, as is the case with the *tozo*-disease of camels (p. 121). Redhot irons are, on the whole, used particularly for camels. Wounds of sheep and goats, e.g., wounds from jackal bites, are cauterized by means of glowing camel dung. Certain stomach diseases, such as types of tympanites, are cured by a bunch of flaming grass swept under the animal's belly. I have seen this practised with donkeys which, like horses, may suffer from a kind of tympanites known in Ahaggar as *tahagd*.

(4) Instruments and bandages. Enema should be mentioned under this heading. It is known in 232
Ahaggar as *sebegiwen*, and is applied to humans and to animals by means of a funnel or by a special 757
apparatus made from a piece of hollow cane connected with a skin-bag. I never had the opportunity [13]
to see this apparatus, which is depicted by Lhote who also gives some information about the use of enemas with human beings (Lhote 1955a, p. 303, Fig. 36). He mentions that an enema is also given by a mother to her little children by blowing water into the anus with her mouth. I have seen this done to children in Ahaggar, but I do not know whether this method is practised with animals also. Both in Ahaggar and in Ayr the Tuareg apply wooden splints to their domestic animals with broken 232
legs. I have seen this device only in Ahaggar where wooden splints are known as *tifesasin* (sing. *tafasast*). They are used for sheep and goats (Fig. 92), and, by the sedentary agriculturists, also for cows. The wooden splints applied to goats are sometimes replaced by a leather bandage solidly tied [237]
around the broken leg. I mention under this heading that camels bred and born in stony or mountainous 492
countries cannot always stand the long journeys through plain and sandy deserts. Their feet suffer

232

Fig. 93. Tuareg bleeding a camel at the place of the neck vein known as *abayor*. Ayr, the *Imezzureg* tribe.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

232

Fig. 94. Tuareg operating a camel's foreleg with a knife. Northern Ayr, the *Kel Tédalé*.

492 from the constant friction against the sand, and it may become necessary to provide the animals with leather shoes, that is pieces of ox-skin sewn around the hoofs. These leather shoes are known to [113] the Ahaggar Tuareg as *tissal* (sing. *tasselt*). Their appearance is excellently depicted by Lhote (Lhote 1951 b, photographs p. 224).

232 824 (5) Medical treatment which forms an important part of Tuareg veterinary knowledge. I have mentioned in the description of camel diseases the use of certain plants for the external treatment of scabies. The Tuareg also use various plants for drugs. Seeds of certain annual plants are mixed with milk and given to goats and sheep which suffer from stomach-diseases. Leaves of various plants are also considered laxatives. The Tuareg know many drugs made from wild plants, and they are aware that there are several wild plants that are dangerous to domestic animals. A very dangerous venomous plant is *élel* (*Nerium oleander*) which is extremely common in the higher parts of Ahaggar. It contains a kind of strychnine, and camels which eat *Nerium* leaves will die from this poison. The Tuareg say that camels bred and born in Ahaggar know the plant to be dangerous. These camels do not eat the *Nerium* leaves but others introduced to Ahaggar from the south may do so. To prevent camels from eating *Nerium* leaves the Tuareg put a leaf of the plant into their nostrils, or burn *Nerium* leaves so that the smoke and the scent of the plant enter the animal's nostrils. In this way camels come to loathe it. There are, according to Foucauld, other venomous plants in Ahaggar, e.g. *awrhed* (*Perralderia coronopifolia*), *arenked* (*Leptadenia heterophylla*, and/or *Cocculus pendulus*) which are fatal to goats and sheep (cf. Foucauld 1951–52, III, p. 1524 & IV, p. 1647; Maire 1933, p. 230, 236). The species [682] known to the Ahaggar Tuareg as *éfelehleh* (*Hyoscyamus muticus* ssp. *falezlez*) is very venomous for human beings, and in the past was used by the Tuareg to poison their enemies.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

human beings, and in the past was used by the Tuareg to poision their enemies. However, this plant does not seem to be venomous for domestic animals which grow fat from eating it (cf. Maire 1933, p. 192). One plant (*iéhereggelé*) (*Artemisia judaica*) is said to have an intermediate position: When camels eat its green shoots they may contract entrail diseases, but the plant is also considered a remedy for entrail worms. Domestic animals which have eaten venomous plants are generally treated with liquid butter which is poured into their mouths. Venomous animals are also very dangerous for domestic animals, notably scorpions and snakes which abound everywhere. The treatment of swollen limbs caused by snake bites or scorpion stings is sometimes bleeding, but the Northern Tuareg also consider it effective to give the affected animal fat from a female barbary sheep and to place a little fat over the place where the animal has been bitten or stung. Under this heading of veterinary medicine mention must finally be made of the fact that tobacco is considered to possess curative qualities in the case of certain diseases. When camels get tired and slow owing to congestion during the hot summer season the Tuareg consider it an excellent remedy to put, as mentioned above, powdered tobacco leaves in the animals' eyes. This was frequently practised with my own camels, and it seems to me that the method is efficacious.

It is evident that many veterinary methods among those mentioned above are effective, and I believe that Tuareg veterinary methods are largely to be considered rational. It is a true that it is most difficult for an anthropologist without any veterinary training to judge objectively the value of all treatments of stock-diseases. But French veterinary surgeons I consulted at Agadez held the view that the Tuareg methods they knew of were effective, though in specific cases of disease they could do better than the Tuareg, and one veterinary surgeon admitted that the Tuareg knew far more about camel-diseases than did modern veterinaries. It can be added that the Tuareg possess an anatomical knowledge of their animals which is no less than astonishing. Apoggi has noted 43 terms used by the Tuareg of Tasilé-n-Ajjer to describe the exterior parts of a camel (Apoggi 1933), and this list is not complete. It goes without saying that the Tuareg also have a large vocabulary for internal organs which they know in detail from slaughtering. And I believe they have a fairly good knowledge of physiology.

I have elsewhere given some information of Tuareg medical methods applied to human beings (Nicolaisen 1961; cf. also Humann 1933), and I have stated that Tuareg medicine cannot be understood entirely without reference to religious and magic beliefs. This is to some extent also true of their veterinary methods. But as far as I know there are many medical methods based on magic and religious ideas which are applied solely to human beings. This may seem quite natural.

Domestic animals may run the risk of being attacked by evil forces such as the evil eye and the evil mouth (*tehoj* in Ahaggar; *tugarchet* in Ayr), the *Kel Asuf* spirits, and the mystic power known as *eltama* or *tezma* in Ayr (cf. p. 21), and valuable animals may carry Islamic amulets as a protection against these evils. I have seen such amulets carried by a few rams and he-goats, but they are used particularly for camels, and I believe that most camel amulets are meant to protect the animals from the evil eye (the evil mouth). Against this malignant force camels may also be provided with a donkey's hoof hung around the neck as an amulet. Another non-Islamic amulette is used for riding camels in Ayr:— Some Tuareg of this region hang the foot of a turtle around the camel's neck in order that their riding animal may not stumble.

361

Fig. 108. A camp of two related goat-herding units with their straw-huts (*ikebren*, of the cylindrical type) placed at a certain distance from each other in order that the two flocks shall not mix. Tasilé-n-Ajjer, the *Kel Uhet* tribe (*Isekkemaren*).

423
422
224 the head, and half the meat (Lhote 1955a, p. 284), but for certain hunting grounds there are different rules (cf. list p. 148).

423
241 (4) The tenants have the right to dues from the crops of every garden in their sub-areas, but for sub-areas of the *Dag Ṛali* tribe these payments are now given to the *Amenukal* because, it is said, the *Dag Ṛali* Tuareg consider such dues incompatible with Islamic law. In the *Aguh-en-tehlé* tribe the tenants receive 10 kg per garden from a crop of wheat and barley (grown in winter), 10 kg from a crop of millet (grown in summer), and 4 kg from a crop of tomatoes.

685
643 Should the rights of tenants be violated, the offenders will be fined by the *Amenukal*, the indemnity falling to him and not to the tenant. In the past there was a fixed indemnity of three goats for the
423 violation of protected pastures. Nowadays the price is determined by the *Amenukal*. When a tenant
[428] dies his rights and obligations should preferably be taken over by a maternal kinsman. Traditionally
[613] the usufructs of a sub-area are reserved to people of the same section as the tenant, but should the tenant be identical with the chief of the whole tribe they belong to all tribal members. These traditional rules, however, do not seem to be observed very strictly nowadays except for the hunting of barbary
[114] sheep in certain areas. Lhote seems to be wrong in stating that the chief of the tribe has the right to forbid grazing and protect pastures in the whole tribal territory (Lhote 1955a, p. 279). In the two tribes here described this right is invariably vested in the tenants of sub-areas.

## AYR

422
* 233 The Ayr Tuareg follow the Islamic rules of inheritance described from Ahaggar p. 137 f., and property marks as in Ahaggar are patrilineally inherited in the way that people take over their father's mark.
[428] However, property marks play a less important role in Ayr, where the Tuareg with the exception of the *Igdalen* Tuareg (vassals) do not mark goats, sheep, and cattle. Other tribes of Ayr mark only camels and donkeys, and branding with a redhot iron as well as earmarks cut with a knife are used for these animals. Both types of marks are known as *éjwel*. Some Ayr Tuareg and all Tuareg of the *Kel Geres* group use brands for camels and donkeys, and this seems also to be the case with the *Iwllemmeden Kel Dennek*. Some of the brands used among the *Kel Ayr* are published by Rodd and
● [113] Nicolas (Rodd 1926a, pl. 21 p. 195; Nicolas 1950a, p. 268 f.). The earmarks used for camels and

172
412

Fig. 200. Neolithic stone pestle. From Olufsen's collection. The Tuareg of Ahaggar say that these pestles were made by the ancient *Isebeten* people. Dimension: 0.81 m long, 0.045–0.050 m in diameter. (N.M. G. 1.46).

301
751

Fig. 201. A stone amulet (*ameywan*) made by a Tuareg woman of a brown and white stone like that depicted. Ahaggar, the *Aguh-en-tehlé* tribe. Dimension of the amulet: 0.025 m in diameter. (F.M. 176).

The pottery made in

323 Ahaggar is plain and usually without any kind of ornamentation. But I have brought home from
[531] Abalessa a piece of a pot decorated with pricks in much the same way as are the prehistoric potsherds frequently found in caves in the Ahaggar Mountains. The pot in question was made by a woman from Abalessa. The pots to be burned are covered with wood, and small pieces of wood are also placed within them. Burning takes place in the evening when there is not too much wind, and the pots are removed next morning. After burning, the pots assume a red colour, but all pots that have
[114] been used over the fire for some time become black. I have myself never attended the manufacturing
[113] of pottery in Ahaggar, and readers are referred to a study by Lhote for more detailed information
[437] (Lhote 1947b, p. 145–154). Pastoral Tuareg of Ahaggar acquire most of their earthen pots from sedentary agriculturists of their own country, but they also buy some pots of superior quality during trading expeditions to the Sudan (Fig. 192).

[462] In Ayr, pottery is manufactured by sedentary women of Agadez and probably also by women of the sedentary *Kel Ewey* of certain Ayr villages. No true pastoralists seem to make pots, which in Ayr are manufactured according to techniques related to those from Ahaggar (cf. Lhote 1950c, p. 507–512).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

/2/ viewpoints in a particular book on the subject (Graebner 1911). A later contribution was made by Wilhelm Schmidt who classified all cultures into world-embracing culture complexes based mainly upon social characteristics, therein differing from the culture complexes established by Graebner (cf. Schmidt & Koppers 1924, p. 75 ff.; Schmidt 1937).

The establishment of world wide culture complexes has been of some value for our knowledge of cultural evolution in Africa. But scholars who have adhered to this particular method of historical reconstruction have committed many fallacies, not only because they recognized no other scientific approach but the study of distributions, but also because they were so convinced about a relationship between all cultures that they did not take the trouble to produce evidence of their theories about historical connections.

The methodological approach concerned with the establishment of culture complexes within the African continent was also founded by Leo Frobenius. In 1904, when Graebner and Ankermann established their culture complexes for Oceania and Afrika, Frobenius claimed that he now dissociated himself from this method which he had himself created. From then on he was concerned almost exclusively with the study of African cultures. He firmly believed that most African cultures had been introduced from outside, and he tried to show how these foreign influences had penetrated into the continent. He did this not only by means of distributional studies, but tried to demonstrate how certain trait-distributions should be explained in the light of archaeological finds in African coastal regions. By this method Frobenius established certain culture complexes to which he added two particular cultures which could not be explained in this way. The cultures that could not be explained in the light of archaeological finds he termed "Urkulturen", and he named them the "Ethiopian Culture" and the "Hamitic Culture". Frobenius has written on African cultural developments in numerous books and articles. His method and his culture complexes are best described in "Atlas Africanus" I–VIII, 1920 ff., and in "Kulturgeschichte Afrikas", 1933. His culture complexes are the following:—

[/3]

(1) *The Ethiopian Culture*. A primitive culture ("Urkultur") which constitutes the foundation of many cultures of tropical Africa.

(2) *The Hamitic Culture*. A primitive culture ("Urkultur") mainly represented among pastoralists of North and East Africa.

(3) *The Atlantic Culture*. A high culture which came from the Mediterranean, through the Straits of Gibraltar, along the North-west African coast, and settled around the Guinea Coast where there are numerous ruins and archaeological finds.

(4) *The Syrtic Culture*. A high culture which influenced a large part of North-western Africa. It came from the Mediterranean and reached as far south as Senegal – Niger – Tchad – Benue. The Garamantes played an important part in the spreading of this culture.

(5) *The North Erytrean Culture*. A high culture connected with certain North-east African states, notably Axum and the old Kuchitic states in and around Ethiopia. From these regions the culture spread over the Sudan and adjacent regions. But the traits of this culture complex are not limited to any definite period.

(6) *The South Erytrean Culture*. A high culture which like its northern counterpart came from the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Near East. It was brought across the sea and along the East African coast by a foreign people who /21/ settled in the region between Limpopo and Zambezi. It is connected with ancient ruins, notably with those of Zimbabwe.

There are many extremely weak points in these culture complexes.

The so-called Ethiopian and Hamitic cultures are nothing more than accidental groupings of cultural traits, and the Atlantic culture seems to be a compilation of traits, which did not come to West Africa from the sea in the way Frobenius thought. When all this has been said, it must be admitted that he started a valuable work. For his *Syrtic Culture* and the two *Erytrean Cultures* were founded upon a realistic methodological principle entirely new to African historical anthropology, namely the combination of distributional studies with archaeology.

Frobenius had many followers, who have contributed much to advance his theories (cf. Lagercrantz 1950, p. 7 f.), but since Frobenius no scholar has been of such importance for the establishment of African culture complexes as has Hermann Baumann. He acknowledges the value of some cultures established by Frobenius, and in an early paper he states that the culture complexes of Africa should be elucidated mainly by studies within the continent. Culture complexes should be intra-continental, and not inter-continental (Baumann 1934). As early as 1927 Baumann outlined some of his culture complexes in a study of the Azande and the Mangbetu (Baumann 1927), and the year after he published an important paper on the division of work in African hoe culture, in which paper he stressed the importance of social organization for the establishment of culture complexes (Baumann 1928). Bau- [113] mann has published other significant papers on various aspects of African cultures, but his main work is "Völkerkunde von Afrika" (1940), in which book he has outlined his view on the historical development of African cultures. They are divided into the following culture complexes:—

(1) *The Pygmy Culture*. This is limited to the parts of Central Africa, where the Pygmies live. The culture is founded upon hunting and collecting and is very poor in material objects.

(2) *The Eurafrican Steppe-hunting Culture*. A primitive hunting culture which is represented mainly among the Bushmen though it can be traced over a large part of the African continent in the steppe and savannah regions.

The so-called "Mahalbi" Culture established by Frobenius at the outskirts of the Sahara (cf. Frobenius 1933, p. 70 ff.) is incorporated in the Eurafrican Steppe-hunting Culture, which is not limited to any particular ethnic group. It is found among khoisanid and negroid peoples alike, and in part it is represented among ethiopid and even europid tribal groups. However, it is considered likely that this particular culture in its origin was linked with people of the khoisanid race, which seems to have existed over most of the African continent in the remote past. This hunting culture seems to have been of great importance to people of the Sahara which appears from rock engravings representing hunting scenes, and traits of the Eurafrican Steppe-hunting Culture were found among the Ancient Libyans of Northern Africa. The Eurafrican Steppe-hunting Culture, and also the khoisanid race, seem to be connected prehistorically with the Wilton- and Smithfield Cultures of South Africa, the Elementeita Culture in Kenya, the Capsian Culture of North Africa, and perhaps also with the well-known rock engravings of Eastern Spain. Characteristic of the Eurafrican hunting culture are particular hunting rites and hunting methods (hunting in disguise by means of animal masks, poi-

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by means of a tongue inserted in the wooden handle, but the digging stick is also known. The typical type of dwelling is the cylindrical house with a conical roof. /21/

(6) *The Young Sudanese Culture*. This is largely identical with the *North Erytrean Culture* established by Frobenius. Its main area of distribution lies between the Senegal River and the Red Sea around Ethiopia, and its culture elements derive from Arabia, Syria, Mesopotamia, and above all from India. It is attached to state organization characterized by divine kingship, and many traits of highly-developed techniques in crafts are particularly attached to the royal court. It is a most refined culture in comparison with the above mentioned *Old Sudanese Culture*. Its original foundation was perhaps a developed agricultural technique based on artificial irrigation, manuring, and the terracing of fields. Certain agricultural implements are also characteristic of this culture complex, notably the socket-shafted hoe and other implements hafted in this way, the sickle, particular knives for rice-harvesting, and crescent-shaped spades. Megalithic monuments are perhaps also peculiar to this culture.

(7) *The Rhodesian Culture*. This is largely identical with the *South Erytrean Culture* established by Frobenius, and has many traits in common with the *Young Sudanese Culture*, notably state organizations characterized by divine kingship. Many other cultural traits are common to the two cultures.

(8) *The Old Mediterranean Culture*. This is largely identical with the *Syrtic Culture* established by Frobenius. It is a high culture, which has been introduced from the Mediterranean into a large part of the Western Sudan between the Senegal River and Lake Tchad. It is less prominent in other parts of the Sudan. It is characterized by the mother-right of the Berbers, and this social trait derives from the old Aegean-Iberian culture of the Mediterranean. Mother-right was introduced into the Western Sudan together with the invasion of fair-skinned Berbers whose racial traits can be traced in numerous chief-families of West Sudanese states. The ancient mother-right of the Berbers even reached the Gold and Ivory Coasts. In the north it disappeared in most places, but was conserved among the isolated Tuareg and the Beja. Many developed cultural traits are considered part of the Old Mediterranean Culture, but as this culture in the Sudan has mixed with the Young Sudanese Culture it is often difficult to determine whether cultural elements of the Western Sudan have been introduced from the east or from the north. An important characteristic of the Old Mediterranean culture is clay or mud architecture, including huts and store rooms of cylindrical form with a conical roof, dome-shaped dwellings, drums made from clay, large earthen jars for storing cereals, painted pottery, refined leather work, stone-carving, the manufacture of beads and glass, etc.

Many scholars other than those mentioned have contributed to our understanding of African cultural development, but none has made so systematic a study as has Baumann. More recently, however, a most important work on the distribution of African cultural traits has been published by Sture Lagercrantz. This deepens our knowledge of African cultures by its distribution maps, founded [/13] upon an enormous knowledge of African literature (Lagercrantz 1950). Lagercrantz follows Baumann in the establishment of culture complexes, stating that the results achieved by Baumann are likely on the whole to prove of permanent value (Lagercrantz 1950, p. 8). In what follows I attempt to elucidate certain aspects of Tuareg culture in the light of Baumann's African culture complexes.

There can be no doubt that in the past an *Old Mediterranean Culture*, or a *Syrtic Culture*, has greatly /74 influenced North Africa with related regions. I think that the influence from such a high culture in

643 According to the rules cited above, the political succession of an aménokal goes in the first degree to his brother; in the second degree, that is, if he has no brother, to his first cousin, the eldest son of his maternal aunt; and in the third degree, to the eldest son of his eldest sister. In fact, this is what comes out of the genealogical [114] study of the Ahaggar chiefs made by Mr. Benhazéra, (1) modifying

1. Six mois dans l'Ahaggar /Six Months in the Ahaggar/.

the order indicated by Duveyrier who attributed the succession to the eldest son of the eldest sister. (2)

2. Les Touareg du Nord /The Northern Tuareg/, p. 397.

For reasons we do not know, these rules have not always been followed. Thus, Aménokal Younès succeeded his /155/ father Mohamed el Khir, and Aménokal Ăitarel /succeeded/ his cousin El Khadj Akhmed, even though the latter had closer relatives. More recently, upon the death of Aménokal Akhamouk, his second cousin Meslah was named to replace him, although he had a first cousin, son of the sister of the former Aménokal Moussa ag Ămâstan, who was removed from command because of incompetence.

184 643 Among the Tenguériguif /Tehgeredief/, chiefs are chosen alternately from two lateral lines descended from the same chief, Ikhmed. Thus the deceased aménokal can never be succeeded by his brother, but by a second or third cousin, who is not necessarily taken from the uterine branch. The nomination of the aménokal is submitted to an assembly of notables for their approval, just as among the Ihăggaren.

Among the Ioullimmiden, since Aménokal Our Ilmet (1650-1715), out of fourteen chiefs who succeeded one another, we note six successions from father to son, two from brother to brother, two

565 Unions, or more exactly concubinage, between Imrad and
[595] Negresses are very common.

Imrad have the right to possess black slaves who are employed
[567] in household work and in keeping the herds.

Schirmer has said that the Ahaggar Imrad were sedentary peoples
114 entrusted with keeping the gardens; (1) he has committed an error,
241
565

1. Le Sahara, p. 298.

certainly because of erroneous information. This is all the more curious since Duveyrier had already defined exactly the position of the Imrad. (2)

2. Les Touareg du Nord, p. 334.

114 Duveyrier translated the word amrid by the word "serf," which
565 corresponds exactly to the Arab expression ra'aya, and also because
566 the ra'aya are subjects liable to forced labor and taxes, whom the marabouts are not allowed to possess by Moslem law. Duveyrier believed he was confirmed in his opinion because of the fact that the Inislimen of the Ajjer did not have the right to have Imrad. This is an error of interpretation. This Arabic term cannot be suitable under the circumstances, for the social class of the Tuareg Imrad has no equivalent among the Arabs.

We have preferred the term "vassals" which is more suitable in our minds, because the Imrad are not unconditionally subject to
[651] forced labor, they pay a perfectly defined vassalage fee, their
[643] chiefs participate in the election of the amenokal, and they them-
[657] selves own slaves.

/167/ Moreover, the term "vassals" has been adopted by Richer, Deniker, Verneau, etc.

563 and may be owners of slaves and herds. They sometimes seek
[582] matrimonial alliances with the Imrad, but the latter, who hold
them in rather great contempt, most often refuse.

According to Nicolas, the Iborelliten might be captives of a
114 higher origin. (2) For de Foucauld, (3) Aborelli (plural, Ibourelliten)
563
[192]

2. Loc. cit., pp. 579-586.

3. Dictionnaire touareg-français
/Tuareg-French Dictionary/,
vol. I, p. 79.

designates a mulatto of a white man and a Negress, or inversely. In our opinion, it should be added that one of the parents is of Taureg origin; and we are all the more convinced that this trait is
[192] indispensable since de Foucauld elsewhere refers to the ordinary mulatto by the name of Achardan (plural, Ichardanen). (3)

3. Dictionnaire touareg-français
/Tuareg-French Dictionary/,
vol. I, p. 79.

We have gathered information in the regions of Tahoua and Gao, where éborelli refers to a child born of an Amajer and a non-captive Negress, or of a foreign woman. The Iborelliten are therefore mulattos born of mixed parentage, Tuareg and Negro.

563 As groups of Iborelliten we shall cite the Igdâlen of /169/ the Aïr and the Aboghelitè spoken of by Barth, (1) who were born of

1. Op. cit., vol. I, p. 204.

Tuareg mothers (Imochar, according to Barth) and Negro fathers. Another Iborelliten tribe, of Tuareg and Peul stock, said to have

567 have been freed as a group as a reward for some outstanding action. Nicolas mentions the present Tamjert fraction in the center of Tahoua who were freed after the battle of Izerwan where they had courageously resisted the Kel Ahaggar (1898). Many Iderfan go back to cultivation. They often live with the sedentary groups, with whom they join forces. They do small services for the latter, such as tending their flocks.

114 563 567 Nicolas likens them to the Harratines of the Kel Ahaggar. This is only partially justified, for, although it is true that a few former slaves work in the centers of cultivation of the Ahaggar, the majority of the Harratin are Negroes from the Tidikelt who freely came to get jobs among the Tuareg. Thus, we must not confuse the Harratin with the Iderfan.

567 As in the case of the Iklan-n-Egef, there are no Iderfan in the Ahaggar except in isolated cases.

564 The Enaden. -- The Enaden (singular, Enad) form the artisan class of the Tuareg. In the Sudan they are called /174/ garassa or gargassa, which is very probably of Sonrhaï origin.

[192] The word Enadan probably comes from enad, meaning "the other," extended to mean "those we don't talk about." (1) This is

1. Nicolas, op. cit., pp. 579-586.

because the Enaden form a closed caste, scorned and cursed by the Tuareg whose repulsion for manual labor is well known.

463 564 Their role is to manufacture anything the Tuareg may have need of: weapons, wooden table utensils, tent pegs, mehari saddles, and harnessing articles.

In addition, they also willingly engage in the business of barber-[757] surgeon, and with the little instruments they make they adroitly do 752] bloodletting, cupping, scarification, and other little operations of the same order, including tooth extraction. They are remunerated [465] for their work when they work for tribes, or, if they are attached to a master, he has them entirely at his disposal.

## Tobol of the Tăitok

631 565 The Tăitok are the high-born nobles of the Ahaggar along with the Kel Rela and the Tégéhé Mellet.

They are related to the Kel Rela by Kella's female cousin, [602] Sakina, who was married to Amer el Khadj, amrar of the Tăitok.

According to Duveyrier, part of this tribe is of the same origin [173] ~~as~~ the Imenân sultans, that is, descendants of Idris, and the other part is originally from the Kel Fadei in Aïr where the stock /souche/ still exists. (1)

1. Les Touareg du Nord, p. 322.

114 631 565 The Tăitok captured by the Mouadi Chaamba at Hassi Inifel in 1887 reported to Captain Bissuel that they rejected any fraternity with the Ihăggaren: "We are natives of the country where we live; our fathers were born there, also our ancestors, as far back as the beginning of the world. Our ancestors did not come from a foreign country. At no time were we the brothers of the Hoggar or the Ăjjer or any other tribe." (2) This version does not seem to be of

2. Les Touareg de l'Ouest
/The Western Tuareg/, p. 18
(Algiers, 1888).

any great value, and Captain Bissuel gives it with reservations, by setting forth the probable ignorance of his informants.

579 631 643 [181] 175 They are very independent in spirit and can never bear without balking the predominance, even in name only, of the Kel Rela and the suzerainty of the aménokal of the Ahaggar. After the division of the Imrad, they still endeavored to seize the aménokalat, which gave rise to fratricidal struggles with the Kel Rela. These battles are even more deserving of the name of fratricide /203/ by the fact that the Kel Rela and the Tăitok are bound by numerous marriages and are all more or less cousins.

631 It will be noted that there are no marabout tribes in the divers
793 Ahaggar tobol. The Ifôra who nomadize in the Témaçinine (Fort Flatters) region are completely independent. They maintain amicable relations with the Ihaggaren and the Kel Ajjer, but these relations are very few and far between and have no political or religious character. They do not send any chaplains among the Ihaggaren. Their chief has settled at the little zāwiyah of Témaçinine, near which his ancestors are buried, and where he enjoys great /213/
[D78 repute. All the Tuareg, Ihaggaren or Ajjer, who pass near this
788] place never fail to stop and pay a visit to the sheik and go pray on the tomb of Si Othman, a famous saint of this marabout lineage.

This zāwiyah is affiliated with the Tijaniyyah brotherhood.

There are several marabouts who live in the midst of the Ihaggaren camps, but all of them are of Arab origin and none of them are Ifôras.

631 The Ifôras are under the administrative control of the Ajjer annex, and politically they are much more a part of the Kel Ajjer than of the Ihaggaren.

They are subdivided into three fractions:

Ifôras-oui-n-Oukkîren

Ifôras-oui-n-Egdad

Ifôras-oui-n-Ettebel

The first two, who are of sherif descent, were in the habit of espousing the cause of the Ouraren, while the third was attached to the Imenân sultans.

• 114 Duveyrier said that the Ifôras-oui-n-Ettebel were provided with
533 drums and continued to constitute the court and the music corps
631 of the fallen sultans; he concludes by saying that their role is limited to making noise. (1) Now the Ifôras-oui-n-Ettebel have never been

1. Les Touareg du Nord, p. 361.

musicians, but their name, which can be confusing, means "those who are attached to the amenokal," just as Iklân-en-Tâousit (of the Ahaggar) means "servant of the tribe or of the group of tribes

114 forming the tobol" and, by extension, "servant of the tobol."
533 At the present time these three fractions number about 150
631 people.
[162] We call attention to them here only as a reminder.

Book V

Material Life

Chapter 1

Living Conditions Among the Ahaggar Tuareg

133 The Ahaggar, as we have already said, is a mountain refuge. We do not know why the Tuareg have continued to live there when they could have found much better countries to the south where they could have had a much easier life. Perhaps we should attribute this to attachment to the country or, quite simply, to an ancient state of things which forced them to take refuge against their will in the middle of the rocks.

13 A superficial examination shows that the Ahaggar is a very poor
[511] country with negligible resources, which imposes a living standard lower than the average. The pasture reserves are calculated, as
[312] are the water reserves. The subsoil possesses nothing, or almost nothing, which is marketable, except a little salt. Consequently, the possibilities for life there are quite limited. For the inhabitants to live, then, they must have recourse to outside resources.

264 The Tuareg use spoons. The use of this implement is peculiar
[415] to them, for their Arab or Negro neighbors eat with their hands.
The custom must be related to the wearing of the veil, which they
[182 do not take off to eat and which prevents them from putting their
291] hands full of food to their mouths. They carry food to their mouths
while slightly holding up the ends of their veils.

[271] For beverages they drink only water, whether it is clean or
272 polluted, and milk.

For half a century they have had the habit of drinking green tea in the Arab manner: they aromatize it with mint or some perfumed plants of the Ahaggar, /238/ chih (Artemisia herba alba) in particular. Coffee, which was formerly much used by them, is now
[757 taken mainly as a medication to calm violent coughs or stomach
178] aches.

276 If we now seek consumer goods taken as stimulants or narcotics, we see that the Tuareg know only tobacco, which they chew or take as snuff.

Smoking is not one of their customs. The young men who are
[177] in contact with the French like to beg a cigarette, but it is simply in the spirit of imitation.

Duveyrier, however, has said that the Tuareg smoke. Was this,
● 114 perhaps, the fashion among the Tuareg who visited Ghat? Before
276 him Barth wrote that all riverain people living along the Niger loved to smoke. "It is very seldom that they leave their pretty little clay pipes, and all the Rouma, like the Tuareg, cover their mouths when smoking, so that all one sees is a pipe bowl coming out of the shawl which covers the face." (1)

1. Voyage en Afrique, vol. IV, p. 137.

[114] 276 For his part, Commander Cauvet, in describing Tuareg clothing, said that men kept their pipes and tobacco in the pocket of their big blouses.

Thus all these testimonies coming from such trustworthy travelers tried to make us believe that the Tuareg are pipe smokers. For our part, we have never seen any.

On the other hand, they are very fond of chewing tobacco, and their wives also practice this custom, so that they finally have a deformation of the lower lip caused by the craze they have of stowing the quid between the gum and lower lip.

[439] Tobacco is not cultivated in the Ahaggar; it is imported from the Touat by the Arabs. The Sudanese Tuareg get it from the sedentary peoples of the Niger or through caravaneers from Upper Dahomey. They generally add a few natron crystals to it to take away the acridity, or else the ashes of graminaceae which play the same role as natron.

177 276 Many Nigerian Tuareg have formed the habit of chewing kola nuts; this is a powerful stimulant which the Negroes use a good deal. A few Ihaggaren /239/ indulge in this practice when they go to the Sudan, but they have not introduced it into their everyday mores and never use kola when they are in their own country.

262 The Tuareg are subject to a rather large number of dietary interdicts. First, like Moslems, they may eat only meats from ritually butchered animals. They must abstain from eating the [273] meat of pigs and wart hogs and from drinking fermented drinks which are harīm. The meat of fowls--except the ostrich -- and fish is also forbidden and considered impure. But these are customs which go back before Islam. They also may not eat the [825] meat of the uran, because this lizard is considered to be the descendant of their maternal uncle.

301 [114] This stone ring (ahbeg) has been described by the explorer Duveyrier as a weapon. Actually it is only ornamental in nature, for it is so fragile that it could not withstand strong pressure without shattering, which might seriously wound the man wearing it.

Fig. 41. Types of bracelets worn above the elbow by the Tuareg. 1, 2, and 3 are in soft schist from Aïr, and 4 is made of marble from the Hombori region.

[171] At the present time the Tuareg are the only African people who wear this stone ring, except for some groups of people who live in contact with them and have adopted it in a spirit of imitation.
172 It was, however, in very common use among Neolithic peoples,
301 and it is not rare to find fragments of them in the middle of ancient

551 not bring about any substitution of names for either sex. If the father's name is Mohamed, one would say Anaba ag (son of) Mohamed, or Chékou oult (daughter of) Mohamed. Nominal filiation is therefore patrilinear.

Nicknames are numerous in the Ahaggar. Father de Foucauld tells us that "they are sometimes proper-names of persons different from the one already received, sometimes names recalling a physical peculiarity or an event, sometimes meaningless names. A great many people have no nicknames. Among those who do have them, some accept them and others are insulted by them. Sometimes nicknames are temporary, known only to a few intimate friends and quickly forgotten. Sometimes they become so attached to the person that he is never referred to in any other way and his real name falls into oblivion." (2)

2. Dictionnaire abrégé Touareg-Français des noms propres /Short Tuareg-French Dictionary of Proper Names/, p. xv.

842 Conception and nursing. -- As for conception, the Tuareg see in it nothing but the will of God. However, they also establish the causal relationship of sexual intercourse and do not discuss the possibility that a woman can conceive without contact with a man. The existence and role of spermatozoa are unknown, but the Tuareg /285/ recognize the action of the seminal liquid and women practice spraying as a contraceptive measure. Professor [114] Gautier has even spoken of a primitive douche. This apparatus is not known by Tuareg women, and Gautier surely must have confused it with the enema.

841 Menstruation (iba-n-amoud) begins between the ages of thirteen [145] and fifteen years for Tuareg girls and causes them great fright. While they are indisposed they make no intimate toilet and often take no precautions to absorb the flow, which spots their clothing. [783] They also abstain from making prayers as if they were in a state of impurity.

000 In the third century B. C., the Massyles, a Numidian nation, worshipped Cronus, it is said, and offered him human victims. (1)

1. Gsell, Histoire ancienne de l'Afrique du Nord /Ancient History of North Africa/, vol. IV, p. 289.

The Byzantine author Corripus tells us, on the other hand, that the /301/ Louata and the Hoouara professed paganism. They pictured divinity in the shape of a bull who was the source of other native gods also having the shape of young bulls. One bore the name of Gurzil. They had holy idols whose names they shouted during battles, and these idols were watered with the blood of sacrifices on the eve of the battles.

114 175 Christianization. -- Much has been said about an early Christianization of the Tuareg. Duveyrier in particular attributed the high place of women in Tuareg society to Christian influence. He wanted to see the same influence in the existence of a certain number of Latin words of religious origin in Tamashek, as well as in the decorative motifs of some objects where the cross is often represented (on warriors' bucklers, in saddle pommels, on the handles of daggers and swords, in a little pendant worn around the neck by women).

Furthermore, Duveyrier is not the only one of this opinion. One has only to look at the drawing given by Barth (vol. I-II, no. 12), picturing a Tuareg meharist, where the crosses on the saddle and the buckler are clearly Christian. Such a document, which has no connection with reality, is well calculated to propagate a belief based on imagination rather than on the facts.

First we must examine what the true position of Christianity was in North Africa, where it took root in the first years of the Christian era. From the very first the new religion made great progress; many bishops were created who took the new faith from Caesarean Mauritania to Byzacène /Byzacium? Tr./ reaching the High Plateaus

114 175 and even the Chott Djerid. According to Tertullian, not only was all of proconsular Africa Christian, but also all the Syrta /Syrtis Minor? Ed./ region and some Getulian tribes as well. However, Father Mesnage, to whom we owe important works on Christianization in Africa, has asked with justification whether the ministers of the gospel were sufficiently careful of the quality of the new converts. The spectacle given in particular by the community of Carthage in 250, at the time of the persecution of Decius, was really lamentable, and the apostates numbered thousands. The Numidians, by converting to Christianity, /302/ adopted the religion of their conquerors, or at least they seemed to be converted, for the masses remained pagan. What, then, are we to think of the nomadic tribes who still escaped the masters of North Africa? In a letter written to Hesychius, Bishop of Salone in Dalmatia, Saint Augustine said "that the gospel had not been preached among the barbarians, and as for the more remote nations who did not in any way recognize Roman power, they did not belong to the Christian religion through any of those who make it up." (Letter no. 199)

Speaking of the Berbers to whom the gospel had been preached, Saint Gregory said, in another connection, that many had remained pagan and continued to worship stones and trees. (1)

1. Saint Gregory, IV, 23, 27; VIII, loc. cit, Mésnage, Le Christianisme en Afrique /Christianity in Africa/, vol. I, p. 75.

On the other hand, Procopius tells us that about 548, under Emperor Justinian, the Nasamonians from Ghadames were converted and that in 569 the Garamantians from Fezzan concluded a peace treaty with the empire and were also converted. "Never was the faith so widespread in Africa," says Father Mesnage.

114 175 "The conversion of these new peoples spread the influence of the church or the empire quite deeply into the interior of Africa. But was it solid? Religious propaganda was for a long time one of the favorite forms of Byzantine expansion. It follows from this that the conversions which it caused were especially political and were made without previous instruction in the catechism, consequently without conviction on the part of the converts. It lasted, alas, only as long as political interest remained in agreement with personal interests." (2)

2. Le Christianisme en Afrique, vol. II., p. 72.

The Arab author Ibn Khaldoun said in the fourteenth century, while speaking of the Islamization of the Sanhadja Berbers, that this pagan people had never adopted the Christian religion.

Thus it seems probable that the Tuareg were never Christians. [531] Nothing in their present mores betrays the least trace of it. The cross found on the bucklers, weapons, saddle articles, and jewelry has no typically Christian character; it is a decorative motif to be found in ornamentation used among peoples who have nothing to do with Christianity. Only the Latin words introduced into the Tamashek language may indicate /303/ that the Tuareg must have [192 1714] been in more or less distant relations with the Christian peoples, but they cannot vouch for the early Christianization of the Tuareg by themselves alone.

175 Judaism. -- Although Christianity certainly no more than 797 grazed the North African Berbers and by repercussion the Saharian nomads, it is perhaps quite different with Judaism. Indeed, the Jews settled early in North Africa, where paganism was then professed, and they made many adepts among the Berber peoples. Entire tribes were converted, and when Christianity came to take root in its turn, it found before it numerous groups, both Judaic and Judaized. The position of the followers of Israel was

411 and, if it is of good quality, it is liable to split a buckler in two.
714 The hand is protected by a little rectangular iron guard which gives the shape of a cross to the upper part of the sword.

114 Duveyrier, the explorer, noted that the Tuareg used the bow.
411 We have not found this weapon among them, nor any evidence as to what it used to be used for.

[714
281]

Fig. 58. Tuareg buckler made of oryx antelope skin.

411 All of these weapons have become very archaic in view of the arrival of rapid-firing weapons. The Ahaggar Imochar still
[554] hold to their sword, which they always wear over their shoulders, and which seems to be used more to indicate their social rank than for warring action. In the Sudan almost all the Tuareg still carry lances, and some of them carry forearm daggers. In Aïr one may still see a buckler hung from the saddle of a mehari. But in a few years all these objects will be good for filling trophy cases.

# THE TUAREG

114 Most of what has been written about the Tuareg is of very little value for the purposes of modern ethnological study. Much of it is merely superficial and more is the result of serious but amateurish work by men who were often enough sincerely dedicated students of mankind, but whose great enthusiasm could not make up for their lack of that broad yet specialized professional grounding without which no one is fully equipped to analyze socio-economic patterns of human communities, however simple they may be.

This may sound like an unjustly harsh and pretentiously stuffy statement, but it is not. What fever-stricken soldier in his right mind would go to the colonel's office for medical attention? What farmer would take a broken-down tractor to the village minister to be repaired? It is an inconvenient fact that highly specialized work can be well done only by people with sound professional training or great experience, preferably both; but this simple fact has been ignored all too often in ethnological research where there is no compelling force like commercial competition to make it obvious. Ethnological research in the Sahara Desert has suffered grievously as a re-

114 sult, and the Tuareg have been among the most spectacular victims.

The famous veil of these great desert warriors (figs. 25, 26, and 51) has cast its shadow of romantic mystery not only over the faces of its wearers but over their whole culture, and so both opportunity and temptation to romanticize have overcome to some extent many of those who have written about the Tuareg tribes. In the summer of 1956 the author heard a well-known public lecturer and traveler, who had even been to Tamanrasset for a few days, declare to his unsuspecting audience of honest New England farmers that the Tuareg are probably descended from a little band of crusaders who got cut off in the rock-walled valley of Petra (in what is now the Kingdom of Jordan), whence they finally escaped and found their way (heaven knows how) clear across Africa to the mountains of the Ahaggar. He added that Tuareg men are [141] about 7 feet tall—and he was speaking in a church—although the tallest one so far recorded measured just over 6 feet 5½ inches, while the average Targui stands only about 5 feet 8 in his sandal-feet (*see* table A-2).

114 515 Tuareg morality and personal hygiene have been the subjects of hardly less exaggeration. Several generations of frustrated readers have by now found vicarious satisfaction in titillating tales of the great ladies of the Ahaggar, beautiful of face and graceful, gracious and unclean, skilled in the arts of love, poetry and music, fascinating and refined and evil-smelling. These unattractively attractive custodians of a spuriously antique chivalrous tradition have been said to welcome to their bosoms and their beds nearly all socially presentable admirers, while their docile husbands stand modestly aside and show their good breeding by 114 concealing their emotions. Few authors seem to have been bothered by the glaring contrast between this rather pitiful picture of long-suffering patience and the very different one that they usually present only a few pages earlier, in which we see the fire-breathing knights of the Ahaggar, those seven-foot sons of the flower of Christian chivalry, busily chasing each other up and down the rocky mountain slopes when there doesn't happen to be anyone else around to kill. But this contrast bothers us—surely there must be something wrong somewhere. So let us take a

114 closer look and find out just what really does go on in the bosom of such a seemingly impossible community. The best general source on the Ahaggar Tuareg is probably Blanguernon (1955), while Benhazera (1908) gives some valuable demographic data and Lhote (1947 and 1955) supplies a mass of miscellaneous details. But all these works are in French: Rodd (1926), writing in English, gives a fairly good general picture of the Tuareg as a whole although he deals primarily with the Aïr.

101 The Tuareg of the Sahara proper, as we have defined it, are divided into three confederations, those of the Tassili n Ajjer, the Ahaggar and the Adrar n Ifoghas, distributed in that order from Northeast to Southwest. [161] There are probably only about 10,000 or 11,000 of them in all, for most of the Tuareg, some 140,000 strong, now live outside our area in the Aïr and the northern central Sudan. We will take the Ahaggar confederation as our Tuareg socio-economic sample because this group not only seems to have remained the least affected by foreign influence but has also been the most extensively studied and described, and because it is the only one with which the author is personally familiar.

101 The Tuareg as a whole used to range over an enormous territory extending roughly as 166 far north as Ouargla, eastward to Gatroun, westward to a bit beyond a line running from 131 Aoulef to Timbuctoo, and southward to below the Niger Bend and the northern border of Nigeria. The eastern, northern and western limits of this range have been slowly driven back over the last few centuries, first by ever stronger Arab pressure from the East and North and then by the gradual southward extension of French and, more recently, Italian control. These steadily increasing pressures have produced a steadily increasing though fluctuating flow of the Tuareg population southward from the Desert proper, through the Aïr and the Adrar n Ifoghas and into the Sudan. Under the stimulus of disaster in one form or another, this flow has occasionally become torrential for brief periods, as when, following the suppression of the 1916–18 rebellion, a great wave of Aïr Tuareg moved into British Nigeria (Rodd, 1926, p. 361) and the main body of the Taïtoq tribe left their home range in the western Ahaggar for the

326 grubbing gardeners alike. They have turned their status as "untouchables" to their own advantage and so remain untouched.

326 Physically the smiths of the Ahaggar cover
142 the whole range of human variation between the Bush Negro type on the one hand and the Berber variety of Mediterranean on the other, but they seem to fall mostly within a highly variable category characterized in general by "European" features combined with a yellowish brown or occasionally coppery skin, thickish lips, and curly or frizzled hair. They are lean in build as a rule, but seem softer and less wiry than the more active Tuareg (fig. 57, *a*).

326 And this brings us to another exasperating
174 blank in our picture of Saharan peoples. The smiths of the Ahaggar claim to have come from the Adrar n Ifoghas and to be related to the families of smiths who live there now, and Benhazera (1908, pp. 221 and 223) reproduced an old Arabic text which states that "the smiths and the Fulani have the same mother." Cline (1937, p. 141) maintained that the art of smelting iron was introduced into the western Sudan by "camel-riding Berbers" from the North, across the Sahara. But no one really has any idea where the smiths of the Ahaggar actually did come from or when, where and from whom they first learned their trade. No one, so far as the present writer knows, has ever published measurements or blood group classifications of a single one of them, and no one seems to have found out anything to speak of about their social organization or even their kinship terminology. Not a dozen photographs of their faces are available to students. Why? Simply because the Tuareg are spectacularly romantic while the smiths are not.[18] The smiths of the Ahaggar and of the Sahara as a whole have suffered the same fate that the Spanish gypsies might have suffered had George Borrow not been born, and, like the Spanish gypsies, they are
614 disappearing fast.

565 A number of vassal clans of the Ahaggar
173 confederation are said to be of Arab or mixed

[18] Here the author has laid himself wide open to a very embarrassing question. "Why," he seems to hear the frustrated reader ask, "haven't you done something to fill this aching void yourself since you find it so distressing?" The author's time in the field has been severely limited by the exigencies of writing this preliminary survey, and recently by political

[114]

565 173 614 Arab and Tuareg ancestry. Benhazera (1908, pp. 90, 102 and 222–23), Lhote (1955, pp. 234–36) and Blanguernon (1955, pp. 52–55) all agree in lumping most of them together in a special almost tribelike class known as the Issoquamaren, but they do not agree entirely on just which clans should be included in this group. According to Benhazera the Issoquamaren once claimed descent from a woman purchased in the Adrar n Ifoghas country by Arab invaders who came there straight from Mecca about the middle of the 7th century A.D., and he adds that they are thought to have moved northward to the Touat early in the 12th century. The first part of this tale is very characteristic of the marginal Arab schools of historical fiction, or fictional history if you prefer, which are often no more reliable than is the modern school of lecturers who tell us, for example, that the Tuareg are descendants of veteran crusaders who came to the Ahaggar from the Levant. This parallel that spans the centuries is funny, to be sure, but there is much more in it than just an amusing concidence. It is a striking illustration of the fact that uncritical minds, Moslem and Christian alike, are always deeply moved by thoughts of the past glories of their race and of "that old time religion." We must never forget the dangers of grotesque misinterpretation that result from the action of this powerful subconscious force. Most of the Saharan peoples who have been converted to Islam stubbornly insist against all sense and reason that they are of Arabian Moslem origin.

According to Lhote (1955, p. 236) the Issoquamaren are believed to be the descendants of Arab fathers and Tuareg mothers of the Tademaït region, whence they were recruited as mercenaries by the Tuareg of the Ahaggar, but Blanguernon (1955, p. 52) holds that they are descended from a group of Arab tribes of the Tidikelt and the Touat who were defeated and then assimilated by the Ahaggar Tuareg in the 18th century or possibly before. The Issoquamaren have been thought by some to enjoy a social status superior, at least in

[114] unrest as well, and so he has had to resign himself to filling in small but important gaps in relatively complete pictures rather than run a serious risk of getting bogged down for months or doing only a superficial job in attempting to reconstruct pictures whose main outlines even are as yet unknown.

143 curiously enough, seem to be slightly less "pure" in this respect. The latter group, however, has a very low incidence of *B*, which is another typically Berber character and suggests, moreover, a relatively low degree of negroid admixture.

The Ajjer Tuareg are the only people of the Sahara who have been examined for blood group factors other than those of the *ABO* series, and they have been tested in addition only for gross *Rh* positive and negative reactions. The results of these tests indicate that the Saharan Tuareg have an extremely high incidence of *Rh* —, comparable to what one finds among Moroccan Berbers. Kabyles too have moderately high *Rh* — percentages, which, however, do not appear to exceed those of Arabic-speaking groups of Morocco and northern Algeria (Briggs, 1955b, p. 112). This latter situation is due probably to the fact that speakers of Berber and Arabic have intermingled extensively over the last 900 years in most of Barbary, excepting the more remote mountain districts of Morocco. Tuareg of the Aïr, which lies south of the Ahaggar and outside of the Sahara proper, have a very low incidence of *Rh* —, indicating extensive negroid admixture which has, nevertheless, had surprisingly little effect on their outward appearance.

In closing our discussion of Tuareg serology, we may add that the typically Berber combination of very high *O*, low *B* and very high *Rh* — finds a striking parallel among the Basques, who live in the mountainous frontier country that lies between France and Spain. We are still in no position, however, even to make a guess as to what this extremely curious coincidence may mean.

174 The possible origins of the Tuareg have been discussed far more extensively and by more authors than those of any other Saharan
● [114] people. Barth (1857–58), Duveyrier (1864), Rodd (1926), Lhote (1955) and Blanguernon (1955), to mention only a few, have devoted dozens of pages to the subject. But their original sources consisted only of the writings of Classical and Mediæval Arab historians and travelers, whose verbose, obscure and contradictory statements hardly allow of any broad deductions above the level of rough guesswork, and of the traditions of the Tuareg

144 The question of the racial origin of the Tuareg, as a branch of the Berber stock, is so intimately bound up with the problem of their origin in the broader sense which we have just been discussing that there is not much left for us to say about it separately. The learned 144 authors cited earlier in this section have all had 174 their say, but we have seen that their conclusions rest on evidence which is unavoidably [114] fragmentary and usually equivocal as well, since there is no other kind available at present. As for ourselves, we shrink as did Leblanc (1928–29, vol. 39, p. 44) from the temptingly spectacular but risky sport of skating over such thin ice in pursuit of a dream, no matter who the dreamer may have been. We are already in substantial agreement with the opinion of Vallois (1948, p. 40) that the Tuareg came into the Sahara probably from the North and possibly about the beginning of the Chris-

11. "Djer mouhaden, " that is, "between prayers, " because it comes between the feasts. It corresponds to Zu'lkadah. 805

12. "Tafaski, " that is, "the sacrifice. " It corresponds to Zu'lhijjah, in which the feast called "Aïd el Kebir, " also called by the Arabs "Aïd el Adha" عيد الأضحى , or "feast of sacrifices, " takes place. [177]

There is no book in Tamashek, at least that is what was told me. However, the secretary of the amenokal Moussa /46/ ag Amastane informed me that there was, at the Ahaggar, a book written in the Tamashek language, but with Arabic characters, which was the translation of a work on law of which Ibn Achir was the author (1). 177 213

1. This book is at present in the possession of someone called Salakh ag Meguemmed of the Isoqqamaren. /47/

Part Two

The Tuareg in their Public Life

Chapter I

Nobles and Imr'ad

Duveyrier has described so well the characteristics which distinguish a noble from an amr'id (1) that I think it 114 565

1. Les Touareg du Nord /The Northern Tuareg/, pages 331 to 335.

unnecessary to review this matter after him. I want to limit [114] myself simply to noting some observations which I was able 565 to make in the course of my stay among the Tuareg of the Ahaggar confederation.

First of all, the striking thing is that at the end of a short period of contact, one can easily guess if one is in the presence of a noble or of an amr'id. His look, his walk, his carriage, his features (if the veil is lifted to the forehead), an indefinable something, all lead correctly to the conclusion that the Tuareg before you is really a noble. However, in the course of palavers im'rad, many of whom are rich, often come as well dressed as the nobles. But their features are less fine, their bearing less easy, their look less assured, and one thinks, "This is an amr'id."

Furthermore, the Tuareg will tell you, "An amr'id may /48/ act well, dress in fine clothes, and bear fine arms, but he is still 'iamir'ed, '" that is to say, "he lacks something," [196] and it is from this verb that they have derived the name amr'id, plural imr'ad.

Should it be thought that the imr'ad are a less pure race 173 than the nobles because of long-ago crossings with the Negro 174 race? The sheik Ben Djellas states that the mother of the 565 Issoqqamaren (an imr'ad tribe of the Ahaggar) was bought by the first inhabitants of Es-Souk. On the other hand, we will see how the Adjouh-n-Taheli and the Tedjehé-n-Efis came from Aïr to place themselves under the protection of the noble Kel R'ela and Taïtoq.

Should the admitted differences be attributed to the state of subjection and dependence in which the imr'ad have been for a long time in relation to the nobles? I would be tempted to accept this second hypothesis as more in line with the facts of history.

And from what I have seen and ascertained, I cannot 565 bring myself to translate the word "amr'id" as "serf," a word 631

Concerning inheritance. We have seen that private in- [428]
heritance is passed on to the natural heirs, according to the 611
rules of Mohammedan law. As for political inheritance, that 631
is to say, the right to the title of chief of a tobol and to the collection of the "tioussé," or tribute from the imr'ad, this is handed down according to special rules.

Duveyrier has told us that these rights are handed down [114]
"to the oldest son of the oldest sister." I would never have dared to go on record as disagreeing with a statement from such an authority if I did not have complete assurance that the order of inheritance is not exactly that which Duveyrier indicated, and I will furnish proofs of this assurance in the chapter entitled "Genealogy" in the second book of this study /not translated/.

I would therefore say that with the Tuareg when a tobol chief dies there are to succeed him: /51/

1. His brother (the oldest of those living, if there are several)
2. The oldest son of his maternal aunt
3. The oldest son of his oldest sister

This last one is only the third in line.

It is the ancestress, it is her daughters who hand down
to their children the right to the "tobol." At present the Kel [173]
R'ela trace back their laws of inheritance and of access to the tobol to Kella, their ancestress, and the Taïtoq to Sakina, a contemporary of Kella and a collateral relative.

The son follows the tobol of his mother. Thus, if the father belongs to the tobol of the Kel R'ela, for example, and the mother to the tobol of the Taïtoq, the son would belong to the tobol of his mother. This is what happened to Sidi ag Keradji, the present amenokal of the Taïtoq and the Kel Ahnet, whose father was of the tobol of the Kel R'ela and whose mother was of the tobol of the Taïtoq. The same applies to Attici ag Amellal and his brother Anaba, whose father belonged to the tobol of the Tedjehé Mellet, and who /themselves/ at present belong to the tobol of the Kel R'ela.

As a rule, an amicable solution is finally reached, but the 728
part of the loot which is returned to the deputation is always
far less than that which was taken. The Tuareg say, "Alaï
ouala," that is, "the restitution is never complete."

It may also happen that the raiders refuse to return anything. 721
The raided tribe, if it [701]
considers itself too weak, 728
solicits the support of
another tribe with which
it has good relations, and
then there is fighting. /56/

[411]

Dautheville
Tuareg Shield

When caravans of 484
traders have been raided, 486
since these caravans have 721
usually placed themselves
under the protection of
noble tribes to which they
pay dues, the controversy
is settled between the pro-
tecting tribe and the
raiders' tribe.

In the Ahaggar it seems that the old amenokal, Aïtar'el, 728
established the restitution of loot taken from caravans protected
by the Azdjer in the following manner:

1. Complete restitution of the pack camels taken from the caravans

2. For each load of merchandise taken, one "amadjour" camel for each man who took part in the raid and rode a mehari of his own

3. One "aleggues" (a young camel of three years) or a half-grown camel for each man who borrowed or hired the mehari which he rode in the raid.

The arms of a Tuareg and the harness for his mount have 114
been described in detail by Duveyrier, and there is no need to
review them here. /57/

Should one see here some agreement with what we have 114
read in Dozy, or might the uran have been a "totem" among 825
the Tuareg, as among the Redskins of America?

Nobles do not eat the "dobb" (star lizard) either, which 262
is called "aguezzeram" in Tamashek. As a reason for this 565
abstinence, they quoted me these two lines of nine syllables: 825

Our ekcher' aguezzeram idit [539]
Iladhou ichchaden ilir'it.

This means:

"I do not eat the aguezzeram because it smells bad and has a rough skin" (1).

1. Iladhou is put instead of "ili adhou." Similarly, ilir'it is put for "ili ir'it." Ir'it, plural ir'ten, means hide (of beef, camel, etc.).

Finally, they firmly refuse to eat chickens and eggs, and chickens are found nowhere among the Tuareg, except among [231]
some "harratine" /Haratin/ Arabs of the Ahaggar villages. They claim that this abstinence dates back for a long time. Aziouel ag Ser'ada when pressed ended by telling me that it was because chickens seek their food in manure. In the Niger, according to a study by officer-interpreter Merle, the French are called egg eaters. But I believe that the following is the 262
real reason for this abstention: The Tuareg, like all the 565
Berbers, had embraced Kharijism. Among the chiefs who took 825
part in the insurrection of the Kharwarij /plural of Kharijite. 773
Ed./ was Tarif, who made the first invasion into Spain (the city of Tarifa still bears his name). His son Salih, or Salah, claimed to be a prophet and composed a new Koran. Elijah, or Elias, son of /62/ the latter, openly remained Moslem, and it was only Salih's grandson, Jonah, or Younes, (end of the eighth century), who spread the new doctrine, which was a much modified Islamism. According to one of the precepts of

MS25 Tuareg MS25

# *Political Systems Of Pastoral Tuareg In Air And Ahaggar.*

By Johannes Nicolaisen

101 The Tuareg are Berber-speaking, nomadic stock-breeders who live in an extensive
131 area of the Western Sahara and adjacent regions of the Sudan. The territory
162 dominated by the Tuareg [redacted] n 14° and 30° North Latitude and between
5° West Longitude and 10° East [redacted] ngitude. They fall into seven main groups or major political units (fig. 1) comprising 240,000–300,000 individuals, their negro slaves excluded. The two northernmost groups (the Kel Ahaggar and the Kel Ajjer) live in the true desert country and number less than 10,000 or about 3% of all Tuareg. In Ahaggar the number according to statistics of 1950 is 4,611. The Air Tuareg further south are more numerous and seem to comprise more than 20.000 individuals (cf. Lhote 1947, p. 15f. & 1955, p. 157).

•114 This study of Tuareg political systems has as its foundation a part of my own field material collected in 1951 (in Ahaggar), 1952 (in Tassili-n-Ajjer), 1953 (in Ahaggar), and 1954–55 (in Ahaggar including Ahnet, and in Air). I have spent about two years in these Tuareg countries living most of the time in Ahaggar and adjacent regions, while my stay further south in Air was limited to six months.

121 It is my intention here to describe the political systems of Air and Ahaggar, but as my final task is concerned with their origin I find it necessary to take up also more general aspects of Tuareg culture and the distribution of certain cultural
[12] traits. I shall make use also of Tuareg oral traditions and of the very comprehensive material on Tuareg history gathered by Arab historians and geographers of the Middle Ages. Thus I do not follow the ordinary lines of any particular anthropological school.

000 I am much indebted to Dr. Birket-Smith (University of Copenhagen) from whom I acquired my general anthropological knowledge together with a keen interest in historical problems, and to Professor Daryll Forde and Dr. Phyllis Kaberry of the London University where I have learnt what I know about social anthropology. Dr. Phyllis Kaberry has taken a profound interest in my studies, and I feel grateful for her kind help and assistance in all matters concerning Tuareg political systems and Tuareg social structure in general.

122 My journeys among the Tuareg were carried out by means of grants from various Danish foundations, notably Statens Almindelige Videnskabsfond, Carlsberg Fondet, Knud Rasmussen Fondet, and Jens Lohmand Rasmussens Rejselegat. During my last journey The University College London assigned me a grant without which I should not have been able to gather the material here presented

S: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

on the Air Tuareg. I wish to express my sincere thanks to the above mentioned foundations and their directors. 122

For the transcription of Tuareg letters I have on the whole adopted Foucauld's system (cf. Foucauld 1920 & 1951–52):- 104 212

| Tuareg Letters (Tifinag) | Transcription And Value In Arabic Letters | | Notes |
|---|---|---|---|
| ⵓ | b | ب | |
| ⵛ | ch | ش | |
| ⵔ | d | د | |
| ⵇ | ḍ | ض | Emphatic |
| ⵖ | f | ف | |
| ⵗ | g | | Hard |
| ⵜ | ǧ | | A peculiar soft pronunciation something between g, d, j, and l |
| ⵀ | h | ه | Aspirated |
| ⵉ | i | ي | Used both as consonant and vowel at the end of a word. At the beginning and in the middle of a word only as consonant. |
| ⵊ | j | | |
| ⵅ | k | ك | |
| ⵍ | l | ل | |
| ⵃ | ḥ | ح | Foucauld 1951–52 has the transcription ḫ [114] |
| ⵍ | l | ل | |
| ⵎ | m | م | |
| ⵏ | n | ن | |
| ⵄ | ʕ | | Foucauld 1920 does not mention this letter [114] |

Ahaggar
Air

and giraffes are found in the plains immediately south and west of the massif. I do not wish here to compare in detail the natural history of Air and Ahaggar. But I wish to emphasize the fact that climatically, botanically, and zoologically an important dividing line runs between these two Tuareg countries. This should not be overlooked in an anthropological description of these parts of Northern Africa.

At present both fair-skinned Europids and black-skinned negroid people live all over the Sahara, and are frequently mixed. There seems to be little doubt that in the north most negroes have come in with the slave trade. We cannot entirely exclude the possibility that part of the northern negroes constitutes an ancient population of the Sahara (cf. Capot-Rey 1953, p. 167ff.), but in Ahaggar the negroes seem to have arrived later than the fair-skinned Berbers. Until a hundred years ago all negroes of Ahaggar where apparently Tuareg slaves bought or captured in the Sudan, but the negroid Haratin then immigrated from Tidikelt to make gardens for the Tuareg. They introduced the irrigation systems known to the Tuareg as *efeli*, to the Arabs as *foggara* (i.e. irrigation by means of subterranean aqueducts), but the solid houses built of mud *(tarahamt)* so characteristic of the northern oases were apparently not introduced by the first immigrants of Haratin, but later. Another immigration of negroid agriculturists came from Tassili-n-Ajjer and in particular from the oasis of Djanet. It is not quite certain whether they came before or after the Haratin. They are said to have introduced irrigation by means of weels *(tanout)* from which water is drawn by zebus (or donkeys), and two particular types of dwellings are also ascribed to them, namely a subterranean or semi-subterranean dwelling *(edamous)* and a square hut *(ekeber)* covered with straw or rushes. Immigrations of predominantly negroid agriculturists from Tidikelt and Djanet take place also in modern times, but all the present agriculturists do not descend from immigrants of these regions. A large part of them are descendants of Tuareg slaves manumitted by their masters.

Negro slaves have also been introduced from the Sudan to Air by pastoral Tuareg, but there is no doubt that Air originally was a pure Sudanese country anthropologically, as it is Sudanese with regard to climate, botany, and zoology. In other words, the oldest known inhabitants of Air were negroes while the fair-skinned Berbers have arrived at a later date. It is stated both by Nicolas and Urvoy that Air before the Tuareg was inhabited by negroid Hausa or Proto-Hausa (Nicolas 1950a, p. 45 – Urvoy 1936, p. 138ff.), and Barth claims the word *Air* to be relatively late and of Tuareg origin, the word *Azben* also used as a name of the massif to be of Hausa origin and older (Barth 1857, I, p. 369). My investigations fully confirm these statements. All Tuareg questioned about the history of Air seem to admit that the negroid agriculturists have lived in the country before the Tuareg, and there are in the Berber dialect spoken by these people a great many Hausa words. It is, I think, of particular interest that the negroid village population of Air is said to have a kinship system quite distinct from that of all true Tuareg while

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

24/ culture is never practised without irrigation. Rodd thinks that the Air agriculturists
[114] gave up shifting cultivation because they are too poor to-day to risk losing their
[174] seed in the event of inadequate or irregular rainfall (Rodd 1926a, p. 133). I rather think the reasons are that the agriculturists of the massif nowadays grow very little millet and have a better irrigation system than in the past. In summer maize forms by far the most important crop, and it needs irrigation which is comparatively easy when using zebus for drawing water. However this may be we can assume that a type of agriculture related to Sudanese shifting cultivation was formerly important to the Air agriculturists, and although irrigation is nowadays used everywhere agriculture in certain places of Air is still a kind of shifting cultivation. Many agriculturists do not resort to manuring nor do they carry fresh soil to the gardens as in Ahaggar. With crop rotation they utilize one and the same plot for a few years but then have to cut trees and brush-wood somewhere else to make a new
[312] garden. A new well must then also be dug, but as irrigation wells are rather shallow this work is comparatively easy.

171 There are in Air certain agricultural implements related to those of Sudanese
412 farming cultures. We must mention in particular a small hoe hafted by means of a thong *(tagoumit)*. It is unknown both in Ahaggar and Tassili-n-Ajjer as well as further north in the desert while extremely common among Sudanese shifting cultivators. Feilberg has classed it with the so-called Old Sudanese Culture es-
[114] tablished by Baumann (Feilberg 1934, p. 260ff. – Baumann 1940, p. 50ff.; 1944, p. 213ff.). Baumann claims that this culture did not know the sickle, considered by him an implement of the so-called Young Sudanese Culture (Baumann 1940, p. 56ff.; 1944, p. 283ff.). The sickle (Air: *elegesouar*, Ahaggar: *amreh*) is in fact unknown in many Air villages, and is according to my investigations not generally used for the harvesting of crops but for cutting annual grasses to be stored for
241 fodder. In Air the harvesting methods are as follows:– millet is cut with a knife,
171 maize is cut at the root by means of the above-mentioned hoe, while wheat and barley are pulled up with the hands. Similar harvesting methods seem to be known in the Sudan (Baumann 1944, p. 295ff.). As a Sudanese trait we can
[415] perhaps also recognize the large clay amphoræ used for the storage of cereals (Rodd 1926, p. 317. – Nicolas 1950a, p. 146).

We can conclude this section as follows:– While the negroes of Ahaggar ap-
174 parently have arrived in that country later than the fair-skinned Berbers the oldest
144 known population in Air were Hausa-speaking negroes subsisting predominantly
563 as agriculturists. Their original culture apparently was closely related to that of Sudanese shifting cultivators. Contacts with the north and in particular invasions of fair-skinned Tuareg have changed their cultural position. Mixing with the Tuareg they have also changed their physical type, but they are still predominantly negroid. They have adopted a Tuareg dialect but have retained part of their old vocabulary.

Air

*Tuareg Invasions into Air.*

174 The connection between the Mediterranean and the Sudan by means of caravans through the Sahara is of very great but unknown age. Caravans have crossed the Sahara as far back as historical knowledge reaches (cf. Bates 1914, p. 101 ff. – Gsell 1920–28, I–VIII – Bovill 1958, p. 24). At the beginning donkeys and oxen were probably used as beasts of burden and the latter animals were employed also as draught animals for carriages as were horses at a later date (cf. Lhote 1953, p. 1138–1228). With the introduction of the camel, caravan trading through the desert was no doubt highly intensified. For although donkeys and also oxen can cross the Sahara in winter without much difficulty camels are better suited to desert journeys.

The first Tuareg who came to Air may have been caravan traders attracted by the excellent grazing grounds of this country. When they arrived we do not know but it seems possible to follow in broad outline the history of the Air Tuareg a thousand years back in time and to distinguish between several invasions. It must be admitted that these cannot be precisely dated and that our historical knowledge is on the whole very fragmentary. It is derived partly from oral traditions, partly [127] from written historical sources among which the so-called Agadez Chronicle is of particular value. It consists of various Arabic manuscripts in the care of the Sultan [114] of Agadez. They have been published in translation and abstracts (Palmer 1910; 1928; 1936. – Urvoy 1934). Several authors have made valuable contributions to the history of the Air Tuareg (Barth 1857, I. – Rodd 1926a, 1926b, 1938. – Palmer 1936. – Urvoy 1936. – Nicolas 1950a; 1950b), but to my mind the best general account is given by Urvoy whom I follow in outline.

As early as the 7th century A.D. extensive migrations of pastoral Berbers including the two important tribal groups of Lemta and Zaraoua passed through the desert. The Lemta settled around the Niger and gave rise to the Sonrai Empire, while the Zaraoua reached the Lake Tchad country where the state of Kanem-Bornou was created. At this time pastoral Berbers also arrived in Air where new states were created. The name of one of them is known, namely the Hausa state of Gober or Gobir which existed in Air up to the 12th century A.D.

New invasions took place in the following centuries. The ancestors of the clans of Igdalen (now in Tegama and Damergou south of the massif) and Iberkhoreen (now in Azaoua north of Tahoua) have probably immigrated before the year 1000 A.D. as may also be the case of the Kel Tamgak clan in Northern Air.

As mentioned the excellent grazing grounds of Air were probably the reason for the first Tuareg invasions. From the 11th century A.D. another factor seems to have been responsible, namely the arrival in North Africa of the Arab bedouins of Beni Hilal and Beni Soleim. Nomads of the latter group invaded the Tuareg countries of Tripolitania and Fezzan (Ibn Khaldoun, I, p. 134 ff.) with the result [614] that Tuareg clans migrated southwards to Air. Among them was a group of seven clans (Itesen, Ijadaranein, Ifadalen, Tamakou'at, Tamaga'azellet, Iza'aran, and

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Ibrazouen) descending from daughters of one and the same mother. The Itesen clan had as its particular ancestress the oldest daughter. The clans were united into a federation also named the Itesen, as its supreme chief known as the *Aremboleu* was elected from this clan. The Itesen group settled in Central Air, where for a long time it held an extremely powerful position. At a certain date a group named Immikitan was separated from the Itesen federation to form an independent or semi-independent political unit with its own chief by the title of *Emekki*. Tuareg of the Itesen-stock including the Immikitan are nowadays very few in number and mainly live in the savannah south of the massif where most of them took refuge owing to wars with later immigrants. Two of the oldest clans mentioned still exist, namely the Ifadalen in Damergou, and the Iza'aran partly in Damergou, partly in Air. 174 [614]

According to tradition the Itesen Tuareg came from the oasis of Aouidjila (Aujila) in Libya, and we may assume that they have immigrated from Tassili-n-Ajjer, the Fezzan or adjacent parts of the northern desert. The group of Tuareg known as the Kel Geres is said to have come also from Aouidjila. They invaded Air at a time between the 12th and the 14th century.

At the end of the 14th century both the Kel Geres and the Itesen came under the pressure of Tuareg invaders known as the Kel Ooui who are said to have had Aouidjila as their original homeland like the Itesen and the Kel Geres. They fought these two groups and in particular the Kel Geres who left Air finally in the 18th century to take up grazing grounds in the region of Madoua of the Nigerian borderlands. There were originally seven clans of Kel Ooui Tuareg, and five of them still exist. Like the Itesen and other Tuareg they claim descent from a common ancestress. The Kel Ooui pastoralists have largely mixed with the negroid village population also now known as Kel Ooui. Barth mentions that the true Kel Ooui clans are related to the very powerful clan of Oraren of Tassili-n-Ajjer (Barth 1857, I, p. 372).

At the same time as the Kel Ooui, or somewhat later, a clan or a group of clans known as the Kel Ferouan came to Air from the north. Their name is derived from the village of Iferouan (Kel Ferouan = "the people of Iferouan") but they were nevertheless true nomads roaming the northern parts of Air until the 17th century when they moved southwards to live around the city of Agadez. There are different traditions about their origin. One mentioned by Urvoy claims Egypt as their home-land; this probably implies immigration from or via Tripolitania (Urvoy 1936, p. 150). Barth says they are related to the Oraren clan (Barth 1857, I, p. 385). According to my own investigations they claim to have lived originally in Ahaggar as close kinsmen to the dominating Kel Rela clan of that region. Some Kel Ferouan Tuareg will even go so far as to hold that even after their arrival in Air they continued to intermarry with the Kel Rela of Ahaggar. According to Nicolas their ancestress in named Tadaouelt (Tadawelt) (Nicolas 1950b, p. 474), while I have been told her name was Sabenas. 114 174

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

Later than the Kel Ferouan other clans or groups arrived in Air from the north. Prominent were the Kel Fadei who are said to be related to the Taitoḳ clan of Ahaggar (Duveyrier 1864, p. 322. – Urvoy 1936, p. 150. – Nicolas 1950b, p. 472). Barth however is of the opinion that they came from different regions but in particular from Tassili-n-Ajjer (Barth 1857, I, p. 384). The Kel Fadei Tuareg first lived in Northern Air and their name is derived from the mountains of Fadei in these regions. At the end of the 18th century they migrated towards the south-west to the region of In Gall where they still have grazing grounds.

Still later immigrants are the Kel Tamat who came possibly three or four centuries ago. Urvoy mentions Ahaggar as their homeland (Urvoy 1936, p. 150), while Nicolas says they are related to the Oraṛen clan of Tassili-n-Ajjer (Nicolas 1950b, p. 471). Even later came the Ikaskazan Tuareg who in Air attached themselves to the Kel Tamat. According to Urvoy they came from Ahaggar (Urvoy 1936, p. 151), according to Nicolas they descend partly from the Taitoḳ of Ahaggar, partly from the Imenṛasaten and the Oraṛen of Tassili-n-Ajjer (Nicolas 1950b, p. 472). Tuareg of the Ikaskazan told me that they are related to the Oraṛen.

It is well known that all over Northern Africa numerous Arabs and Berbers claim relationship with the Prophet and his family. Most of these traditions seem to be mere fake. We may, to mention an extreme example, take the negroid blacksmiths of Ahaggar who firmly hold that their ancestor lived in Mekka as the blacksmith of the Prophet. All traditions relating clans to Islam have been omitted in this brief account of Tuareg history in Air. This does not mean, of course, that we can rely on the above traditions which are very often contradictory. An obvious case is that of the Kel Ferouan. In literature there are traditions of Tripolitania or Tassili-n-Ajjer as their homeland, while I have been constantly told that they came from Ahaggar as close kinsmen of the Kel Ṛela. I think this latter tradition gathered by myself does not contain much historical truth but perhaps reflects political relations of the past. The Kel Ferouan apparently were on quite good terms with the Kel Ṛela of Ahaggar whom they admired because of their power. The Kel Ṛela had many quarrels with the Taitoḳ and also with the Kel Fadei, and the latter Tuareg again were enemies of the Kel Ferouan. As the Kel Fadei claimed themselves related to the Taitoḳ it may have been quite natural for the Kel Ferouan (the most important clan in Air) to claim relationship to the Kel Ṛela (the most important clan of Ahaggar).

We can never rely on oral traditions of origin, but they may contain some historical truth. All traditions mentioned point to a northern origin of the Air Tuareg and in particular to Tassili-n-Ajjer, the Fezzan, and adjacent regions. In support of these traditions we can refer to the fact that the most important northern trade road from Air leads to the oasis of Ghat, Tripolitania, and the Fezzan.

MS25 Tuareg MS25
Air

*The Sultanry of Air.*

The Agadez Chronicle referred to above gives an interesting description of the establishment of the Air Sultanry in 1405 A.D. Before that time, it is said, a growing anarchy reigned all over the country, and the Arombolou, supreme chief of the Itesen, therefore took the initiative to elect a Sultan to act as an arbitrator among the various groups of Tuareg. 175

According to tradition representatives of the Itesen clans were sent to the Sultan of Constantinople to persuade one of his sons to become the first Sultan of Air. After eight years' absence the deputation returned with a slave who became the ruler over the Air people. This peculiar story as stated by Urvoy is not mentioned in the Agadez Chronicle nor in any other written account (Urvoy 1936, p. 162), and I shall add to this that although even nowadays it is told all over Air, there are many Tuareg who consider it spurious. Actually we do not know from which country the Sultan came nor can we know if he was in fact a slave. But according to the Tuareg all known Sultans have been black-skinned. Even to-day it is claimed that although the Sultan can take a fair-skinned Tuareg woman as one of his wives the descendants of such a marriage are never elected Sultans. Individuals who have ties of kinship with a particular Tuareg group are never chosen for that office. 173 643

Although the Sultanry was created by the initiative of the Itesen, the Sultan was also recognized by the Kel Geres who then lived in Air, by the Kel Ooui, and later by other Tuareg groups. At first he had no permanent residence but led a nomadic life in the region of Tadeliza. It did not take long before he became permanently settled at Ti-n-Chamane from where he moved to Agadez which was founded at *the middle of the 15th century A.D.* as a *centre* of the then extremely flourishing trade through Air (cf. Rodd 1926a, p. 102, 364f., 409. – Urvoy 1936, p. 164). To the Tuareg the Sultan is known by the title *Amenokal* – a word used for supreme chiefs by most Tuareg. The meaning of this word is not exactly clear. Foucauld does not discuss its origin but only identifies its meaning as "a chief who is not subjected to any other chief" (Foucauld 1951–52, III, p. 1213f.). According to Duveyrier *Amenokal* means literally "the owner of the land" (Duveyrier 1864, p. 331), and this meaning is also ascribed to the word by Lhote (Lhote 1955, p. 189) and Blanguernon (Blanguernon 1955, p. 47). It is my own view that although there can be no doubt that *Amenokal* is connected with *akal* meaning "land", it may perhaps be doubted whether it contains the meaning of "ownership". 643 114

In practise the Sultan had little power. The Agadez Chronicle refers to Sultans who acted as war leaders of all Air Tuareg against foreign Tuareg groups or the forces of Sudanese states; but within Air it was difficult for a Sultan to maintain his power over certain warlike groups of Tuareg. Leo Africanus writes that the inhabitants of the desert depose and elect Sultans whenever they like (Leo Africanus III, 175 643

[533] Fig. 4.–The palace of the Sultan of Air at Agadez. – The Sultan has just returned from a short journey out of town and musicians including three drummers mounted on camels (left) are playing in his honour. The drummers beating two drums each and musicians blowing [534] various wind-instruments accompany the Sultan when he leaves his palace. The drums of the Sultan are different from that of the Kel Ferouan drum-chief (fig. 6). They are larger and deeper, have their skin fastened in a different manner, and are beaten with sticks.

175 of noble Tuareg from whom the supreme chief of the group was elected. The chief
565 had as his sole insignia a drum named *ettebel*, or *arazou*. The name of the drum
631 *ettebel* was and is still used as the name and title of the chief who is adressed by this very word, and *ettebel* is also used as a name of the group under his command. I therefore use the word "drum-group" for such groups of Tuareg as the Kel Tamat, the Kel Fadei, and the Kel Ferouan, and the word "drum-chief" for their chiefs. There were also in the past smaller drum-groups as for instance the Echchikhen of Damergou to whom I shall refer below.

175 The Sultan was elected by the leaders of the Tuareg groups mentioned but
643 they did not all take part in his official instalment. The instalment ceremony is described by Barth as follows:– From his private room in the palace (fig. 4) the Sultan was led to the public hall. Here the chiefs of the Itesen and the Kel Geres asked him to sit down upon a bed made from ribs of palm leaves covered with mats, but he was not allowed to lift his feet and sit in Oriental fashion until permission was given by the Kel Ooui (Barth 1857, I, p. 461f.). Jean who gives a more [114] detailed account says that the Kel Geres did not participate, and had no voice of election (Jean 1909, p. 159ff.). It is noteworthy that the chiefs of such important drum-groups as the Kel Fadei and the Kel Ferouan did not participate in the ceremony, which dates from the time when the Itesen, the Kel Geres, and the

Fig. 5.–Mat-covered tent typical of the pastoral Air Tuareg. The tent in this photograph is inhabited by the Kel Ferouan drum-chief. It is a very simple dwelling compared with the Sultan's palace containing two storeys and several rooms. Nevertheless the Kel Ferouan drum-chief in the time preceding the French occupation was politically more important than the Sultan. The photograph is taken in the plains north of Aderbissinat at the end of the rains. Annual grasses of a high value for fodder are growing between the scattered trees and bushes of thorny acacias, which are also valuable fodder-plants for camels and goats. [643] [137]

Kel Ooui formed the important political units of Air. The Kel Fadei and the Kel Ferouan at the establishment of the Sultanry had not yet arrived or lived at the northern outskirts of the massif. 175 643

In the 19th century the Kel Fadei and the Kel Ferouan paid very little respect to the Sultan. At the time of the French occupation the Kel Fadei even had the impertinence to collect the Sultan's dues from the village of In Gall (Jean 1909, p. 162), and Barth mentions that the Sultan was afraid that the Kel Fadei would detach themselves from him to make an alliance with the Ioullemmeden (Barth 1857, I, p. 478). As for the Kel Ferouan their chief was the most prominent leader of all Air. This is clearly documented by Jean (Jean 1909, p. 103f.) and it is told over and over again by all Air Tuareg to-day. Barth states that the Sultan when away from Agadez on journeys was replaced by the Kel Ferouan drum-chief, and he thinks that the Kel Ferouan originally formed the noble family from which the Sultan or Amenokal was chosen (Barth 1857, I, p. 385). This agrees with informations I have gathered among the noble Kel Ferouan, who will also claim that their clan came to Air before all other Tuareg. The truth however seems to be that they had originally nothing to do with the Sultanry. They took up grazing [114]

175 grounds round Agadez in the 17th century, and were probably called to this
642 region by a Sultan who needed them to keep order in the country. The actual
643 power then passed into the hands of the Kel Ferouan drum-chief.

### *The Kel Ferouan Tuareg.*

114 Lists of clans which belong to the Kel Ferouan drum-group have already been
614 published. Jean has fourteen clans in his list (Jean 1909, p. 104), Rodd and Abadie have fifteen (Rodd 1926a, p. 427f. – Abadie 1927, p. 391f.), while Nicolas refers twenty-two clans to the group (Nicolas 1950b, p. 474f., 480). My own list comes
614 close to that of Nicolas but contains a few additional names which however may
127 refer to sections of the other clans. In my list I have indicated the relationship
162 between the clans and their traditional grazing grounds. I have not been able to
[631] get precise particulars about the size of clans, and I therefore quote the figures

MS25 Tuareg MS25
Air
Ahaggar

sister's son is first in the line of succession. Already Ibn Batutah mentions that among a southern Tuareg people known as the Mesoufa a man was inherited by his sister's son, and he also states that the Sultan of Tecadda (possibly Tegguida-n-Adrar immediately south of the Air massif) was succeeded by his sister's son (Ibn Batutah IV, p. 388, 443). According to Barth a sister's son was preferred as chief in Air and in Tassili-n-Ajjer (Barth 1857, I, p. 374f.). For the Tuareg of Ghat (Rat) (Tassili-n-Ajjer) Richardson states that chiefs and Sultans are succeeded by their sister's sons (Richardson 1848, II, p. 65f.), and for the Northern Tuareg in general we have the statement of Duveyrier that this principle was valid not only for succession to chieftainship but also for rights to blood-wealth, which should be given to a slain man's sister's son. It is very remarkable that Duveyrier also relates in detail a Tuareg myth about the origin of the sister's son's right to succession (Duveyrier 1864, p. 356, 397ff.). Again, we find that among the Tuareg of Ahnet (the Ahaggar Tuareg) a chief should be succeeded by his full brother or a maternal half-brother, and then by his sister's son (Bissuel 1888, p. 23). From the Ioullemmeden Tuareg who long ago have adopted patrilineal succession (Nicolas 1950a, p. 213; 1950c, p. 492f. – Richer 1924, p. 3, 52) an interesting matrilineal custom has been described by Feral. He states that in certain Tuareg clans round Gao property considered indivisible is still inherited by the sister's son (Feral 1955, p. 21f.). Thus Rodd's statement about the sister's son's right of succession is confirmed by many authors, but there is also in literature information to confirm the statement of Nicolas, that a sister's son comes next to a maternal cousin in the line of succession. This is claimed for the Ahaggar Tuareg by Benhazera (Benhazera 1908, p. 51, 97f.), Foucauld (Foucauld 1951–52, I, p. 152f., II, p. 916f.), and by Lhote, who refers to the statement of Benhazera (Lhote 1955, p. 189). Dubief has further explicitly stated that the priority of maternal cousins is acknowledged by the Tuareg of Tassili-n-Ajjer (Dubief 1956, p. 89).

In Ahaggar I have been told by many Tuareg that a maternal cousin is the proper successor next to a brother of the deceased chief, and genealogies prove that a maternal cousin has more frequently been elected chief than has a sister's son. Nevertheless, Tuareg whom I consider extremely versed in traditional custom claim the priority of a sister's son. In connection with Duveyrier's statements this makes me believe that the Northern Tuareg originally preferred sister's sons to succeed as chiefs, while preference to maternal cousins is a custom more recently adopted.

The Kel Ferouan Tuareg have not followed any particular rule of succession in recent times. For in most clans there is now very little prestige attached to chieftainship, and chiefs are said to have much trouble with the collecting of taxes. In many vassal clans chiefs are changed very frequently as qualified people often refuse election or retire after a few years. Many Air Tuareg whom I asked about the rule of succession in the past all agreed that the sister's son had the right to succeed; they never referred to rights of maternal cousins, and claimed that in the

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

607 of his parallel cousins and cross-cousins as his brothers-in-law *(alegges*, pl. *ilousan)*,
[601] or sisters-in-law *(taleggest*, pl. *tilousin)*, while the spouses of descendants of all
brothers, sisters, and cousins will be his sons-in-law *(aḍeggal*, pl. *iḍoulan)*, or
[606] daughters-in-law *(taḍeggalt*, pl. *teḍoulin)*. These terms are always used reciprocally, and parents-in-law and children-in-law will avoid each other accordingly.

Apparently most vassal clans were faithful to their drum-chief and recognized
634 his authority. But Tuareg pastoralists led a turbulent and warlike life, and the
614 members of certain noble clans, or clans listed as vassals but probably of noble
565 origin, would not accept the leadership of the drum-chief although they belonged to his group. Thus there were many quarrels with the noble Kel Azel Tuareg. It is
[687] said that in the past the drum-chief more than once punished them very severely not only taking all their livestock but also burning down their camps.

The three clans of Kel Tedale in Northern Air were only nominally part of the
634 Kel Ferouan drum-group. My information confirms Joubert's statement that the
614 Kel Tedale paid no tribute to the Kel Ferouan drum-chief or to chiefs of other
565 drum-groups in Air (Joubert 1939, p. 246). The political independence of the Kel
114 Tedale is also stated by Jean (Jean 1909, p. 104). The noble Kel Ferouan Tuareg claim the Kel Tedale to be true vassals of their drum-chief, and both Jean and Nicolas list them as vassals (Jean 1909, p. 104. – Nicolas 1950b, p. 475). Rodd thinks that both noble and vassal Tuareg were originally found in the three clans the homeland of which was probably Ahaggar (Rodd 1926a, p. 427) The Kel Tedale Tuareg I met all emphasized their noble origin, but Rodd's explanation was verified by Kel Ferouan vassals who said that both noble and vassal Tuareg are found among the Kel Tedale. That some of them are noble by origin seems to appear from the statement of Nicolas that the Kel Tedale in part are related to the Ihaḍanaren clan of Tassili-n-Ajjer (Nicolas 1950b, p. 475). For the latter clan is considered noble by all Northern Tuareg.

The Kel Tedale were so numerous, so rich in camels, and lived so remote from
634 the rest of the Kel Ferouan clans that the drum-chief could not maintain his power
614 over them. The drum-chief also had trouble with another clan of his group, the
565 Kel Akarra. This clan is said to have been originally of noble status and to have had as its particular vassals the clan of Ibararochchiten. The drum-chief assisted by
[558] vassals of the whole group in the past imposed vassalship upon the Kel Akarra, who however refused to give him part of their bride-wealth. It is said that the drum-chief three times made war against the Kel Akarra to bring them to submission and each time they were severely beaten. Nevertheless they refused to pay bride-wealth to the chief, who then ceased to claim it. As a result of these wars the Kel Akarra clan became small and insignificant.

A certain discord reigned within the Kel Ferouan group, but the drum-chief
[669] had the support of most clans of vassals who at his order would fight not only foreign Tuareg groups but also quell internal insurrections.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Air

634 vassal clan as its particular vassals. A few vassal clans were also attached to the
565 noble clan Kel Azel. I must admit however that I have not been able to gather very precise information about the relations between the Kel Azel and their vassal clans which were the following: Ijakarkaren, Imezzouren, Ikaoukan, Iforas, and Ikochechiten (a section of the Immezzilalen). The noble Kel Ferouan Tuareg say that these clans lived close to the Kel Azel to protect the latter clan, but they may also have had other obligations. For the noble Kel Ferouan Tuareg also had con-
[463] stantly a few clans of vassals living close to them, and two of these (Iberdianen and Irobouren) are said to have carried out such work which could not be done properly
[701] by black-skinned slaves, while one clan (Igendianen) acted as permanent soldiers and protectors.

Rodd has some very interesting remarks on the position of the vassals *(Imghad)*
114 as camel-herdsmen of the noble Tuareg. He says as follows:– "One of the functions
565 of the Imghad is to take complete charge of and use the camels of their lords for
614 long periods or to trade with them on their behalf. In such cases the Imghad act as the agents of the nobles, each one of whom has a right to ask the servile tribe as a whole to undertake these duties. But such obligations are imposed collectively on the tribe and not on any one Imghad. It is the custom to share the offspring of the
[422] camels thus herded in equal shares, though in the event of any of the animals dying whilst under the charge of the Imghad, the latter are collectively responsible
[672] for making good the loss, save in extenuating circumstances." (Rodd 1926a, p. 141f.). Rodd however also refers to the importance of slaves as camel-herdsmen
[562] both among noble and vassal Tuareg (Rodd 1926a, p. 136). As far as my own information goes, camel-herding and caravan trading were in the past attended to by slaves, and the noble Tuareg in particular were slave-owners. I have not been able to confirm Rodd's statement that the vassals were formerly the camel-herdsmen of the noble Tuareg, nor have I found any tradition of original cultural distinctions between noble Tuareg and vassals, although I have inquired much about this.

Rodd divides the vassal clan into three groups according to their origin.
174 1) Vassals who were attached to noble clans already before the immigration to Air
565 from the north; 2) Vassals whose ancestors lived in Air before the immigration of
614 noble clans; 3) Vassals who have been subdued in fairly recent wars (Rodd 1926a, p. 138). The vassal clans of Air unfortunately have very little traditional knowledge about their origin, but at least some of them will claim that they came from the north as did all noble Tuareg. It is very probable that the noble Tuareg already before their immigration had vassal clans attached to them as it is claimed by the noble Kel Ferouan Tuareg. In other words: the political system of the Kel Ferouan Tuareg cannot be understood in complete isolation from political systems of the Northern Tuareg groups of Ahaggar and Tassili-n-Ajjer from where the Air Tuareg have emigrated.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

The Ahaggar Tuareg cannot generally trace the exact genealogical relationship between all members of a clan termed *taousit* as it is in Air. The noble Kel Ṛela (275 individuals) claim descent from a common ancestress named Kella, who lived seven generations ago. The Dag Ṛali (386), one of the vassal clans, seems to consist of two matrilineages of seven generations each. The two matrilineages are said to be related to each other, but their exact relationship is unknown. The very numerous vassal clan Agouh-en-Tehele (585) falls into three sub-clans claiming common matrilineal descent. One of these sub-clans, the Isandan, is identical with a matrilineage of six generations, whereto is grafted a smaller matrilineage of four generations related to the Ibettenaten clan.

Briggs has recently stated that previous authors have attached too much importance to Tuareg matriarchy (Briggs 1958, p. 87), and I agree with his statement. The fact that the Tuareg in important cases acknowledge the matrilineal principle has veiled the other fact that they have patrilineal rules, which are probably genuine to Tuareg social structure. But it must be admitted that influence from Islam and the Arabs makes the study of traditional social structure difficult.

The Tuareg of Ahaggar – like those of Air – have terms which in meaning are identical with matrilineage (*tesa* = "the stomach") and patrilineage (*arouri* = "the back"). They follow the matrilineal principle in specific cases, the patrilineal in others, while for rules of residence both principles are acknowledged as will be described below. Traditionally the matrilineal principle is valid for:– 1) succession to chieftainship, 2) succession to land rights, 3) succession to property considered indivisible, 4) in noble clans it is valid for succession to rights and obligations towards vassals, and in vassal clans for rights and obligations towards noble Tuareg.

Islamic rules are valid for inheritance of individually owned property. Children inherit what is left by their parents in such a way that a son gets a portion twice as big as that allotted to a daughter. A man cannot inherit the property individually owned by his mother's brother, whom he can succeed in the above mentioned respects, whereas he can inherit from more distant patrilineal kinsmen. The acknowledgement of the paternal line for inheritance is expressed in the general rule that any person adopts his father's camel-brand and earmarks for other domestic animals. This rule may be pre-Islamic. It may also be a pre-Islamic trait that most Tuareg have much better knowledge of their patrilineage than of their matrilineage.

Clans are predominantly endogamous, but there are marriages between people of different clans, and we can adequately use such unions to illustrate the rather complicated rule of residence:– A man will live together with his father in the territory of his clan as long as his father is alive, while after his father's death he will take up residence in the territory of his mother's clan, to which he himself belongs, and camp there together with his matrilineal kinsmen. A single death may in fact give rise to the change of territory and camp of a great many people, as is illustrated in fig. 10.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

It is stated in literature that clan territories are grazing grounds reserved exclusively for clan members. Lhote says that nobody has the right to graze flocks and herds in the territories of foreign clans without permission from their chiefs or from the Amenokal (Lhote 1955, p. 279). Killian also mentions that clan territories are grazing grounds (Killian 1925, p. 132), and in a study by Malaurie there is a sketch-map of some of the more important territories (Malaurie 1953, p. 339). Nowadays foreign camps are very frequently found in the territory of a clan, and it is said that this might also happen in the past. Possibly the territory of a clan was once reserved as grazing grounds for its members, but clan territories were and are divided into sub-areas the rights to which generally are vested in individual tenants. These sub-areas may be valuable grazing grounds, but most of them have an economic value in other respects also. Some are important hunting grounds for barbary sheep or for the catching of wild donkeys for domestication, others have a value for collecting wild seeds, or they have soil and water suitable for irrigation agriculture. A few areas have all these qualities. I shall briefly mention the sub-areas of the two vassal clans Agouh-en-Tehele and Dag Ṛali. In the lists (p. 108 f.) are indicated the tenants, the value of their sub-areas, and the annual land-rent paid to the Amenokal, who is the true master of the land inhabited by clans of his drum-group.

For the land-rent *(ehars-n-amerdal)* paid to the Amenokal the tenants obtain the following rights over their sub-areas:–

1) They can forbid grazing within their area or in part of it in order that plants may germinate and become fully developed. For plants valuable exclusively for grazing domestic animals the period of protection will be up to two months, but certain plants which have seeds valuable for collecting are protected for three months.

2) They have the right to half of all wild donkeys caught in their areas.

3) They have the right to part of all barbary sheep killed. Foucauld says that in certain hunting grounds the hide and the meat of a slain animal must be given to the tenant while the hunter can keep only the head, the paunch, and the intestines (Foucauld 1922, p. 81. – Foley 1930, p. 43 f.). My own information agrees with Lhote's statement that the tenants in general have the right to the hide, the head, and half the meat (Lhote 1955, p. 284), but for certain hunting grounds there are different rules (cf. list p. 109).

4) The tenants have the right to dues from the crops of every garden, but for sub-areas of the Dag Ṛali clan they are now given to the Amenokal. In the Agouh-en-Tehele clan the tenants receive 10 kg per garden from a crop of wheat and barley (grown in winter), 10 kg from a crop of millet (grown in summer), and 4 kg from a crop of tomatos.

Should the rights of tenants be violated, the offenders will be fined by the Amenokal, and the indemnity belongs to him and not to the tenant. In the past there was a fixed indemnity of three goats for violation of protected pastures.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

[685] Nowadays the price is determined by the Amenokal. When a tenant dies his rights
428 and obligations should ideally be taken over by a maternal kinsmen. Traditionally
614 the usufructs of a sub-area are reserved for people of the same matrilineage or section as the tenant, but should the tenant be identical with the chief of the whole clan they belong to all clan members. These traditional rules, however, do not
[178] seem to be observed very strictly nowadays except for hunting of barbary sheep in certain areas. Lhote is wrong in stating that the chief of the clan has the right
●114 to forbid grazing and protect pastures in the whole clan territory (Lhote 1955, p.
423 279). In the two clans here described this right is invariably vested in the tenants of sub-areas.

As the supreme judge of his drum-group the Amenokal can claim various
643 indemnities *(ediet)* among which have just been mentioned those paid for violation
692 of the rights of his land-tenants. In case of adultery, for instance, the Amenokal can
[684] claim three camels from the seducer and one camel from the unfaithful wife. If a man catches his wife committing adultery he has the right to kill her as well as the seducer on the spot, and formerly the families of persons thus killed had no right
682 to revenge or blood-wealth. Neither was blood-wealth paid in case of murder
628 within the clan, but the Amenokal might then claim an indemnity from the murder-
692 er. When the murderer and the person killed were from different clans, blood-wealth had to be paid to the family of the slain man by the kinsmen of the murderer.
643 The Amenokal could not deny his subjects the right of revenge if they refused to accept blood-wealth, and if blood-wealth was paid he had no right to any part from it. Blood-wealth was fixed at one hundred she-camels for a slain man and fifty she-camels for a woman, but it may be doubted whether so many camels were
[648] ever paid. Revenge and blood-wealth have been abolished by the French admin-
692 istration which has given the Amenokal more power over his subjects than he had
178 in the past. To-day the authority of the Amenokal is almost unlimited. If, for instance, a man will not allow his son to marry the woman he likes, the son may go
643 to the Amenokal and ask him whether he considers the marriage suitable, and if
[584] the Amenokal agrees the father will have to yield to his son. If a man descending from parents of different clans continues to live together with people of his father's
[59[] clan after his father's death, the chief of his mother's clan may complain to the Amenokal, who will then order the man to take up residence with his maternal kinsmen. Nowadays the Amenokal can decide on the most personal problems of his subjects, and he is constantly visited by many Tuareg desirous of obtaining his advice.

643 In the past the Tuareg of the Kel Rela drum-group are said frequently to have shown disobedient to the Amenokal. But the vassals would generally support him
[701] when he organized raids against other Tuareg as the war-leader of the Kel Rela
[727] group. The Amenokal had the right to a tribute named *abellag* comprising half of all booty taken by vassals of his drum-group. The vassals were allowed to engage
[721] in raiding without his consent, but he was the one who decided on war and large-
Scale raiding.

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar

for the manufacture of a few insignificant objects. To most Ahaggar Tuareg the camels have little direct economic value. But in raids of the past camels were very valuable riding animals, and they were then as now extremely important for caravan trading, which provides the Tuareg with most of their vegetable food. 233 511 [492] [439]

The economic role of goat-breeding is very different. Goat-products play a very comprehensive part in Tuareg nourishment. Goat's milk is not only drunk, but is also made into butter and cheese which can easily be stored. Goat's meat is superior to camel's meat, and one goat does not contain more meat than can be eaten quickly by the members of a normal household. Furthermore goats are very important in Tuareg craft; tents, waterbags, and containers for different sorts of liquid and solid food are made predominantly from their skin, which was formerly also employed for whole garments. Goat's hair is extremely useful as material for ropes with which domestic animals are tethered, camel-loads are fastened, and the like. [234] [262] [281] [291] [283]

Pastoral Tuareg could not survive in Ahaggar without goats. They might be able to subsist without camels, which can be replaced by donkeys as beasts of burden. But camels make life much easier to the Ahaggar Tuareg, who nowadays as in the past base their economy mainly on camels and goats. I think it is fairly correct to say that most Ahaggar Tuareg get their milk-food from goats, their vegetable food from caravan trading by camels.

Formerly the true vassal Tuareg of Ahaggar were not allowed to possess camels, which were owned exclusively by noble Tuareg. Foucauld says that 100–150 years ago the vassals had no camels, but he does not mention his source of information (Foucauld 1951–52, II, p. 534). But it is confirmed by many Tuareg that throughout the 19th century the vassals had not many camels, while they were rich in goats of which the noble Tuareg had very few. Goat products were given to noble Tuareg by vassals. As mentioned, goats and butter form part of the tiouse payments to the Amenokal, and were also an important part of the tiouse paid to other noble Tuareg of the Kel Rela. But the noble Tuareg who were masters of the small temaẓlait-units within the drum-group could apparently claim practically whatever they wanted from their vassals. The noble Tuareg, Duveyrier says, in reality had all rights over their vassals' property. But they were themselves interested in having rich vassals, and would not discourage them by claiming too much. When in need of riding camels the noble Tuareg could freely take animals from their vassals. The vassals had also an obligation to feed their noble lords, who at certain times would camp among them (Duveyrier 1864, p. 334 ff.). This is also stated by Benhazera, but he claims that the vassals would not necessarily give everything demanded by noble Tuareg (Benhazera 1908, p. 54). The noble Tuareg of to-day have not ceased to claim food products and the like from their vassals. Poor noble Tuareg frequently ask gifts from their vassals, and there are even noble Tuareg who temporarily camp close to rich vassals from whom they acquire part of their food. Vassals may also lend their she-camels to noble Tuareg, who will return the animals when milk-yielding stops, and this is considered an old privilege of the nobility. Ahaggar
Air

dominating an extensive area of North Africa and particularly in Cyrenaica, Tripolitania, and adjacent regions before the Arab invasion of the 11th century A.D. This theory was set forth already by Ibn Khaldoun, who says that *Hoouara* has changed into *Heggar* (Ibn Khaldoun I, p. 275f.). Nicolas has stated as his opinion that this theory has no other foundation but mere speculation (Nicolas 1953, p. 14). This, however, is not correct as the relationship between the words can be explained on linguistic grounds as claimed by Foucauld. For the letter *ou* when redoubled will as a rule change into *gg*, and *ou* very frequently permutes with *g* (Foucauld 1951–52, II, p. 533). 565 192 [114] [194]

The term used in Air for vassal Tuareg is *Imrad* (sing. *Amrid*), a word which seems to be known to all Tuareg. Foucauld gives no particular explanation of its meaning (Foucauld 1951–52, III, p. 1933f.). Nicolas claims the word related to *ereid*, literally meaning "a kid" (Nicolas 1950a, p. 189). If this explanation given by Nicolas is correct, *Imrad* refers to goat-breeding. So does another term for vassals used more frequently among the Northern Tuareg and the Ioullemmeden, namely *Kel Oulli* (sing. *Agg Oulli*), which means literally "the goat people". In Air this word is never used as a term for the vassal class, but only as a proper name for one particular vassal clan attached to the Ikaskazan.

One of the terms for vassals and maybe both terms are thus connected with goat-breeding, while one of the terms for noble Tuareg seems to refer to raiding, which among the Tuareg was intimately connected with camel-breeding. Camels were not only the means by which raiding was carried out, but they were also the main object of raiding expeditions as they could be abducted very quickly from foreign camps. So we may perhaps see from some of the terms used for vassal and noble Tuareg that the two classes originated from the meeting of two distinct cultures, a goat-breeding and a camel-breeding culture. And we have already seen that in the past the noble Tuareg of Ahaggar were in particular camel-breeders, the vassals breeders of goats and donkeys. [233] [721] [174] [233]

The Ahaggar Tuareg – in contrast to the Tuareg of Air – have traditions about the origin of the class system. References to these traditions are common in literature (Benhazera 1908, p. 89ff. – Reygasse 1950, p. 88. – Foucauld 1951 – 52, II, p. 533ff. – Lhote 1955, p. 213ff. – Nicolaisen 1954, p. 99f.). There are in fact two conflicting traditions, but some Tuareg will nevertheless acknowledge both. It seems, however, as if one tradition had its origin among the nobility, the other among vassals. The tradition which originated in the noble class says that the dominant noble clans of Ahaggar had a woman named Ti-n-Hinan as their ancestress. She immigrated to Ahaggar from Tafilelt in Morocco together with her servant girl named Takama, who became the ancestress of the oldest vassal clans (the Dag Rali and the Ait Loaien). The two women were both Islamic and belonged to the Beraber tribes. They found the country uninhabited except for the higher parts of the massif, where a pagan people named the Isebeten lived. This tradition 173 565

5:Nicolaisen E-4,5 (1951-1955) 1959
MS25 Tuareg MS25
Aggar

173 is recognized by many vassal Tuareg, but they claim their ancestress Takama to
565 be Ti-n-Hinan's younger sister and not her servant.

The other tradition, told mainly among vassals, claims that the oldest inhabitants of Ahaggar were the Isebeten just mentioned. They were goat-breeders and hunters in the mountains, and also bred donkeys. Some Tuareg say that the Isebeten had no tents, but lived in mountain caves. From these pagan Berber-speaking people descend the oldest vassal clans (the Dag Ṛali and the Ait Loaien). The noble clans came to the country at a much later date. They introduced the camel which made them masters of the country. They conquered the Isebeten, and made them their vassals.

[114] I agree with Foucauld, quoted above, that the latter tradition may contain an important element of historical truth. It explains the origin of vassalship in a logical way, and is in agreement with our linguistic analysis and the fact that vassals in the past were mainly goat-breeders who had no right to possess camels.

Even to-day there is a certain cultural distinction between noble Tuareg and
184 vassals of Ahaggar. Rich noble Tuareg will whenever possible subsist on camel's
565 milk, while vassals although they may be rich in camels will ascribe much import-
492 ance to the breeding of goats and the manufacture of butter and cheese. The noble
[234] Tuareg will use camels for the transportation of tents during nomadic migrations, while even rich vassals will generally use donkeys. Noble women possess special riding saddles for camels, while such saddles are unknown in the class of true vassals. Vassal women will not generally mount camels but donkeys which are never mounted by noble women.

184 Noble Tuareg and vassals of Ahaggar are culturally different in other respects,
565 and I attach a particular importance to the following distinctions:– 1) In noble
[583] clans bride-wealth is seven camels, in vassal clans one to three camels which may be substituted with goats. Among vassals of Tassili-n-Ajjer bride-wealth is 25–30 goats. 2) The noble Tuareg brand camels and donkeys with a red-hot iron, whereas
[422] true vassals use earmarks for donkeys as for goats. Though in one vassal clan, the Dag Ṛali, donkeys are marked in both ways. 3) Among noble Tuareg the tent belongs to the husband, among vassals it is owned by the wife. 4) The noble
[342] Tuareg frequently use a tent with a central T-shaped post – that is a post on the top of which is placed a very short crossbar to support the sheet of skins sewn together. Although such posts may occasionally be used in vassal tents, they are said to be specific to the tents used by noble Tuareg.

These characteristics of noble Tuareg in Ahaggar are found also in the camel-
[614] breeding clan Iregenaten of Tamesna. This clan is said to descend from mixed
[173] marriages between Tuareg women of the Ibettenaten clan, said to be of noble origin, and Arab men. This is stated in literature (Lhote 1955, p. 238f. – Briggs 1958, p. 100) and confirmed to me by Iregenaten Tuareg met in Air.

342 Various sub-types of Tuareg skin tents with T-shaped posts are frequently
184 referred to in literature on the Northern Tuareg (Feilberg 1944, p. 139ff. – Lhote

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25
Ahaggar
Air

1947, p. 38f., phot. 15, p. 33, p. 117. – Foucauld 1951–52, I, p. 247ff. – Moberg 1927, photographs p. 229 & 257). Among the Southern Tuareg T-shaped posts are used in Air, where, according to my inquiries, they are found notably among the Kel Tedale, the Ikaskazan, and the Kel Fadei – Tuareg who have immigrated fairly recently from the North and are noble or predominantly noble by origin. Air tents with T-shaped posts are published by Lhote and Chudeau (Lhote 1947, fig. 4 p. 39, photo 50 p. 81. – Chudeau 1909, pl. VIII p. 62). T-shaped posts are also said to occur among the Kel Geres, and they are common in skin tents of the Kel Dinnik (Eastern Kullemmeden) from where detailed descriptions are given by Nicolas (Nicolas 1938, p. 34ff.; 1950a, p. 133ff., p. VIII.). For other Southern Tuareg there seem to be no reliable information on the use of T-shaped posts in skin tents. 342 184

The central T-shaped posts in Tuareg skin tents may probably be considered as related to similar posts in certain black tents (cf. Feilberg 1944, p. 143). This is interesting particularly when viewed in connection with Feilberg's theory that there may perhaps be a certain connection between the black tent and the one-humped camel or dromedary because of approximately similar distributions, and because camels and black tents seem to have arrived in North-Western Africa about the beginning of the Christian era (Feilberg 1944, p. 117, 225ff.) – a view which has also been accepted by Hatt (Hatt 1944–45, p. 260). Obviously a theory connecting camels and black tents in Northern Africa fits very well with our assumption that the camel was introduced to Ahaggar by noble Tuareg among whom we also find the use of central T-shaped posts characteristic of certain black tents. Accordingly we have to test two theories:– 1) The theory that T-shaped posts of Tuareg skin-tents are in fact derived from similar constructions of black tents, and 2) the theory that camels and black tents are historically connected in Northern Africa. 171 342 233 [174]

I think it can be proved that T-shaped posts of Tuareg skin tents are derived from similar elements in black tents, and my arguments are the following:– 171 342

1) The Tuareg live in contact with Arab pastoralists who have black tents. It is stated in literature that black tents are common among the Northern Tuareg (Zeltner 1914, p. 364. – Campbell 1928, p. 247), but this is not correct. It is true, however, as already mentioned by Duveyrier, that black tents are used by some Northern Tuareg (Duveyrier 1864, p. 403f.). But as far as my knowledge goes they occur only among the northernmost Kel Ajjer, the Iforas clans, who belong to the religious Ineslemen class and by some Tuareg are claimed to be noble. Black tents seem to be used occasionally in the south by Tuareg who live in close contact with Arabs. But these Tuareg apparently use black tents only when travelling, and not in ordinary camps (Delafosse 1912, I, p. 334). Black tents are thus adopted by a few Tuareg, and many Tuareg of the north and the south-west have contact with Arab and Moorish black tent dwellers. [648] [114]

2) The Iforas Tuareg just mentioned use T-shaped posts both in black tents

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

Berbers and particularly those of Central Morocco use for their black tents and for important parts of their tents terms derived from Arabic (Laoust 1930, p. 168f., 227f.). [171 342 [192]]

We cannot disregard the possibility that black tents were known in Northern Africa before the first Arab invasion. But there can be little doubt that outside of the Atlas black tents are characteristic of Arabic-speaking people, and we seem to be on safe ground if we state that the Arabs are responsible for the present fairly large distribution of black tents in the desert regions between the Red Sea and the Atlantic. And the black tent may have been unknown to the Berbers before the Arab invasion. In connection with this I wish to quote the very eminent scholar Stéphane Gsell who states his opinion on the age of the black tent in Northern Africa as follows:– "Cependant elle s'est répandue tardivement chez les Berbères. Ce fut surtout après la conquête musulmane qu'ils l'adoptèrent, à l'exemple de leurs noveaux maîtres: au VIIIe siècle, un grand nombre d'entre eux avaient des tentes, semblables à celles des Arabes" (Gsell 1920–28, V, p. 216. – cf. El Bekri p. 139). [174]

In discussing the theory of a connection between camels and black tents, our next task is concerned with the history of the camel. For although camels and black tents have different distributions they may nevertheless be historically connected and introduced together. [171 233 342]

Much has already been written on the history of the camel. René Basset's theory that the camel was introduced by Arabs of the first invasion (Basset 1905) is contrary to all historical information. For we know with certainty that the camel was known to the Berbers before the Arabs arrived, though it does not seem to be of very great age, contrary to Cauvet's statement (Cauvet 1925–26). Already Barth suggested that the camel came to North-Western Africa about the beginning of the Christian era (Barth 1849, I, p. 3ff.), and this theory seems to be valid (cf. Gautier 1942, p. 190ff. – Walz 1951). [114 174 233]

Gautier claims that there is a certain connection between the introduction of the camel and the immigration to North-Western Africa of Berber tribes known as the Zenata, who lived in the northern steppes and desert regions from Tripolitania to Western Algeria. According to Ibn Khaldoun quoted by Gautier the Zenata had many traits in common with the Arabs: they lived in tents, they were camel-breeders, and they rode on horseback (Gautier 1942, p. 217 ff., 227. – cf. Ibn Khaldoun III, p. 179). The theory that the camel was introduced by the Zenata is accepted by Feilberg, who thinks that these people may have introduced the black tent together with the camel (Feilberg 1944, p. 119f., 226).

A connection between the Zenata and the camel is extremely difficult to prove. Gautier's theories on North African history are frequently very hazardous and very contradictory. Thus in his book *Le Passé de l'Afrique du Nord* we find the following statements about the introduction of the camel:– 1) "A tant de bienfaits Rome en a ajouté un dernier: elle a introduit le chameau, permettant ainsi la mise en

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

114 174 233 valeur d'immenses territoires inutilisés" (Gautier 1942, p. 209f.). 2) "Il est donc légitime d'associer le nom des Zenata à la grande révolution politique et sociale qu'a entraînée au Maghreb l'apparition du chameau. Zénète et chameau apparaissent en même temps, et tout se passe comme s'ils apparaissaient l'un portant l'autre" (Gautier 1942, p. 227). 3) "En effet, quoique Ibn Khaldoun et d'ailleurs tous les historiens arabes nous signalent les Zenata dès le début de la conquête arabe, il semble qu'au VII^e siècle les Zenata n'aient pas été encore, aussi exclusivement que plus tard, les représentants du grand nomadisme" (Gautier 1942, p. 227)

Gautier says about the Tuareg: "Ces gens-là sont de grands nomades chameliers; dans nulle autre tribu ce caractère n'est aussi marqué et c'est cela même qui fait leur originalité" (Gautier 1942, p. 240). Most Arab historians confirm that the 175 Tuareg are in particular camel-breeders, and the Tuareg do not belong to the 101 Zenata group. According to Ibn Khaldoun the Berbers fall into two great divisions: 233 1) The *Botr* descending from *Madghis-Ibn-Berr*, and comprising the Zenata group and several other tribes. 2) The *Beranes* descending from *Bernes-Ibn-Berr*. Several Berber tribes and among them most Tuareg belong to this division (Ibn Khaldoun I, p. 168ff.).

It is interesting that Tuareg camels are frequently referred to in Arab literature 175 as being of a particular light and slender breed extremely well fitted for riding 233 (Ibn Khaldoun II, p. 70, 105. – Edrisi p. 11, 67f., 144f. – Leo Africanus p. 940f.). To-day there is a marked distinction between the camels of the north found mainly 171 among Arabs, and the camels of the south among the Tuareg. The Arab camel is 233 heavily built and particularly fitted for luggage, and the Tuareg say it is also superior as a milk-producer. It has a thick covering of wool around the hump and on the forepart of the body. The southern camel as found among the Tuareg is very different. It has a slender built, short hair, and is particularly fitted for riding as mentioned by the ancient Arab authors. These two different camel-breeds apparently exist all over Northern Africa from the Red Sea to the Atlantic, and the heavy and woolly type seems to be characteristic of Arabs (cf. Nachtigal 1879, I, p. 415f. – Murray 1935, p. 92ff. – Cauvet 1925–26, I, p. 79ff.), who are also the [177] true black-tent dwellers. It is possible that the Arabs have introduced the black [342] tent into Northern Africa together with a particular breed of camel, while another breed was introduced before the Arabs.

The cultural position of camel-breeding has never been thoroughly studied. As I have pointed out elsewhere (Nicolaisen 1959a), it is peculiar that so many customs connected with camels are also typical of cow-breeding of the East African cattle complex (cf. Baumann 1940. – Herskovits 1926. – Kroll 1928). The common [462] traits seem to be the following:– 1) All work connected with camels and oxen is [825] done by men. 2) Camels and oxen have important social functions and their breeders take an interest in these animals beyond their practical importance. Both [538] camels and oxen play an important part in poetry, which is frequently characterised by a tendency towards identification between man and beast (cf. Evans Pritchard 1940. – Foucauld 1925-30, 1-11).

5: Nicolaisen E-4, 5 (1951-1955) 1959
MS25 Tuareg MS25

174 mentioned that the word *Ihaggaren (Ahaggar)* is perhaps derived from *Hoouara*,
[192] which was a common term for certain Berber tribes particularly living in Tripoli-
tania in the Middle Ages. According to Edrisi the Hoouara Berbers were originally
Arabs who adopted Berber language (Edrisi p. 66ff.). This is not proved by Ibn
[114] Khaldoun's important work on the history of the Berbers. But Ibn Khaldoun
states that the Hoouara came under Arab influence at a very early date, and some
of the pastoral Hoouara people apparently migrated southwards to the desert at a
later date than the Lemta (Ibn Khaldoun I, p. 275ff.).

I think that the ancestors of the noble Tuareg introduced the camel into the Sahara. I think too that this may have happened before the first Arab invasion of the 7th century. But some of the dominating noble Tuareg have emigrated from Tripolitania after the Arabs have arrived. And it is probable that the political systems of the Tuareg already very early were influenced by the Arabs among whom a class system is found even nowadays as described from Cyrenaica by
171 Evans-Pritchard. In that region there are client tribes known as *Marabtin alsaqan*
565 because they pay *sadaka*, a fee, to a free tribe for protection and for the privilege of using the earth and water. Some fragments of client tribes even to-day have a very inferior social position and are forced to make payments to, and to perform services for, the free tribes among whom they live (Evans-Pritchard 1949, p. 53).

The word *sadaqa*, a fee, is known to the Tuareg, and there are other Arabic
171 words connected with their political systems. Here I shall content myself with
192 reference to the word *khalifa* used among the Northern Tuareg for the deputies of a chief, and the very important word *effebel* meaning "drum", "drum-group", and in Air also "drum-chief". Ultimately the history of Tuareg political systems should
174 probably be viewed in connection with those of Arabs.
10

133 /12 cont./ Beyond any doubt the country was destined to fire the imagination. This mass of mountains, rising below the northern Sahara, appears closed and hostile.

The deep gorges which traverse the tassilis /mountains/ are the doors to a region that seems to isolate itself from the world.

Leaving these somber gorges, one enters a domain of stone. Rocks are encountered in the strangest forms imaginable; there are immense domes of granite surging from a sand plain, or monoliths standing like a forest of dolmens; there are curious fissile schist formations, which seem like the leaves of some monstrous book. This landscape continues over hundreds of kilometers, unveiling a desert nature which adorns itself with the most extraordinary rock forms.

But the strangest is yet to be seen, the heart of the country: each valley there is an enigma; the volcanic crags which border the ravines seem to menace the intruder who dares to violate this domain.

The soil shows hues going from a delicate yellow to black, streaked with violet, green, blue, or pink veins. Jagged and smooth boulders pile up in indescribable chaos, and immense stretches of black and swollen stones seem to come from some devil's caldron.

114 The inhabitants once seemed to be as mysterious as the country which sheltered them. Their tall stature, their proud and disdainful bearing, and their faces veiled by the blue taguelmoust /veil/ were so many factors to stimulate the imagination. Stories circulated throughout the Sahara vaunting the warrior virtues of the Tuareg, their courage, their cruelty joined to a /13/ chivalrous sense of honor. They were, for some, the last of the Atlantes, for others, ancient Francs, whose sword in the form of a cross symbolized the lost faith.

However, little by little, explorers, administrative officers, scholars were to bring things into focus and to show the Ahaggar as it really is.

•114 /13 cont. / The first clarification in the general knowledge of the region came from the reports of Barth and Duveyrier. Then followed the scientific works of Flamand, Maire, Reygasse, Kilian, Monod, Lelubre, Bordet, Follot, Dubief -- who laid the solid foundations for as exact a knowledge as possible of the country and its people.

The linguistic work of Father Foucauld portrayed in remarkable fashion the Tuareg and their language at the time he knew them.

Many explorers, notably M. Lhote, have left precise observations joined to personal impressions of the country.

Finally, the novel has spotlighted the Ahaggar, and for many of the French, L'Atlantide, that delightful fabrication by Pierre Benoît, furnishes the picture they have of the country. The last books of Frison-Roche also deserve a great deal of credit for the tourist movement which has begun to the Ahaggar.

## Morphology and Relief

133 The mountain system which constitutes the Ahaggar seems, at first view, to lack coherence as an entity; its form is better seen upon closer examination. In order to have a schematic idea of the system, one can divide it into three large concentric zones: a central core, a peripheral trench, and the outside belt of tassilis.

In the center of the Ahaggar is an almost circular massif, a sort of plateau with an average altitude of 2, 000 meters, spiked with peaks reaching nearly 3, 000 meters: this is known to the Tuareg as the Atakor (skullcap). A rocky spur projects toward the north: this is the Tefedest, which reaches /15/ 2, 327 meters with the Garet el Djenoun at its northern extremity.

Around the central core, a sort of circular depression, varying in altitude from 500 to 800 meters, forms an almost perfect crown in which rise, here and there, granite crags of volcanic remains.

312 /29 cont./ shallow wells are found in agricultural centers; generally, they are upstream from the rock shelves. The water is drawn by men or, most often, by an ox, in which case a rudimentary scaffolding supports a pulley by which a goatskin full of water may be drawn up and dumped into a basin by an ingenious system.

The last method used to tap underground water is the foggara, called by the natives the "efeli" (plural: "ifelan"). The foggara is used only to irrigate gardens; we shall see how it works when we study agriculture.

## Flora and Fauna

137 [114] The flora of the Ahaggar is more varied than that of the northern Sahara. The work of M. Maire constitutes the basic study one should refer to for information on the spontaneous vegetation. The list of plants given in the appendix was established by questioning the Tuareg in order to learn the varieties most often encountered. Very incomplete as far as herbaceous vegetation is concerned, this enumeration includes the vast majority of trees growing naturally.

There is no forest in the Ahaggar. However, information from the Kel Immidir Tuareg makes it possible to suppose the existence of a wooded stretch in the Ifetessen massif, a region still not thoroughly explored in its entirety. Perhaps it may merely be a case of wadis covered with a particularly luxuriant vegetation. In the Ahaggar almost all the flora grows in wadis. A few plants also grow on the most watered high summits, and, at the time of particularly propitious rains, the regs are covered with patches of acheb /pasturage/, which resemble a thick, sprouting beard.

The distribution of the spontaneous flora in the Ahaggar obviously /30/ is related to the climatic zones we have already discussed. There are some plants which are peculiar to a specific zone, while there is an interpenetration of most of the other vegetation.

565 /59 cont./ to possess few intellectual or moral qualities, they
241 are perhaps nonetheless readily adaptable.

## The Language

197 The Tuareg speak a Berber language. This language is certainly the strongest link which unites the scattered populations from the regs of the Tidikelt to the banks of the Niger; it is, more than the ethnic type, the element characteristic of these peoples. It is through the language that is maintained what may still be called "Tuareg culture," which survives in the traditions, mores, and superstitions.

This language, which is called "Tamahaq" in the Ahaggar and "Tamacheq" in the Sudan, has several dialects: that spoken by the Kel Ahaggar is called "Tahaggart," thus designated by the Kel Ajjers and the Taïtoks; in the Aïr it is called "Taïrt"; in the Adrar des Iforas, "Tadrak," and the dialect of the Aoullimiden is called "Taoullemmet."

These dialects are very similar to each other; a few local differences in pronunciation distinguish them, as well as certain idioms.

Tahaggart, the language of the Tuareg of the Ahaggar, has been studied the most, chiefly in the noble tribes because, Father de Foucauld said, "the language is pure only as spoken by the nobles."

114 It is a complex language, rich and full of nuances, with a precise and difficult syntax. General Hanoteau succeeded, with the help of Tuareg captured during a battle, in writing a /60/ Tuareg grammar; this was the first formal study of Tamashek.

Dictionaries were compiled by Cid Kaoui and M. Masqueray, but the most remarkable work, which constitutes a summary, is the dictionary of Father de Foucauld. Father de Foucauld's grammar and the texts he has collected afford the best material for studying Tamashek.

114 /60 cont./ It would be impossible to praise too highly the work of the "hermit of the Ahaggar," for it has in a sense illuminated a civilization for history.

212 194 /61/ The peculiarity of Tamashek as a Berber language is that it can be written with its own characters, which are called "tifinagh."

There are 25 tifinagh characters, to which must be added compound letters formed by the combination of two simple elements.

| | | | | | |
|---|---|---|---|---|---|
| | | B | | | Q |
| | | CH | | | KH |
| | | D | | | L |
| | | D(strong) (ar) | | | M |

Table of tifinagh letters.

164 /110 cont. / The country then is sufficiently free of serious
114 diseases; one scourge, however, must be noted: malnutrition, described and well studied by the doctor, Captain Galan, in a publication of the Pasteur Institute of Algeria: Contribution à l'étude du problème alimentaire au Hoggar /Contribution to the Study of the Nutrition Problem in the Ahaggar/.

757 The Tuareg and the Negroes are beginning to like
278 European medication and are coming more frequently to the infirmary; they value above all aspirin, quinine (which is becoming a generic term for all pills), and penicillin. They remain faithful to their pharmacopoeia, chiefly based on plants, of which here are several examples:

Pulmonary diseases: strong pimento and rellachem /see Appendix, Flora/ are specifics; for pleurisy, one must melt camel fat with the ta'noust (fruit of the acacia), eat it as hot as possible, and constrict one's chest with a rope.

For the stomach, butter mixed with tahist.

In cases of diarrhea, takamezout is the sovereign remedy, taken in tea or eaten in leaf form. This takamezout has a great reputation among the Tuareg: it comprises, they say, 40 remedies, but will not heal broken legs.

Constipation is vanquished by adjardjar and taharadjellé. Headaches have no remedy, yet tea is /111/ to be taken in preference to anything else. The liver is treated with ihemhad taken in milk. The victim of ganglions at the groin or under the armpit may easily make them disappear by rubbing them lightly with saliva very early in the morning; another method, more efficient, consists of heating goat dung and placing it on the nails of the affected member.

[752] For an open wound, make a plaster with milk and powdered tassa.

Rheumatism is easily treated; a sort of well is dug, one meter in diameter and 1.50 meters deep, the patient gets in it, a cover is put on the well, and the patient is given an infusion of otaq to make him sleep. A spring called In-Ahadja exists which is supposed to be equally as good in treating rheumatism.

# Preface

In this book I aim at the combination of historical and functional methods of anthropology to analyse the development of Tuareg culture with particular reference to food-producing activities. I do not, therefore, present all my Tuareg material. 121

My general anthropological outlook is doubtless largely due to my training under influential scholars of historical and functional methods. I was introduced to historical methods at the University of Copenhagen by Dr. Kaj Birket-Smith, who taught with that caution and sense which must be the foundation of all anthropological science. His strict demand that anthropology must proceed on the basis of knowledge forms the most valuable part of my whole anthropological training, and for this I express to him my sincere gratitude. 114

I freely admit that I am much attached to the traditional methods of Danish anthropology. Among its scholars I am greatly indebted also to Professor C. G. Feilberg with whom I have a large field of interests in common. From the very day I began my studies in Copenhagen he offered me all possible help in discussing with me the major problems of cultural history in the Near and Middle East, and in Africa, and using much of his spare time to teach me Arabic. His detailed study on the black tent and its history forms an important cornerstone for my chapter on Tuareg tent development.

When I began my studies in Copenhagen Professor Feilberg acted as curator in the Danish National Museum where, like other students of these days, I was generously helped by the curator, Jens Yde – my closest friend. Though his main field of interest is the Indians of the Americas, he has also a surprisingly comprehensive knowledge of African cultures. I hold in very high esteem Mr. Jens Yde's scholarly realistic outlook which has been extremely stimulating to my own work. I express my gratitude also to Dr. Helge Larsen, leader of The Ethnographical Collection of The Danish National Museum, and to the curator Mr. Werner Jacobsen.

My interest in functional anthropology dates right back to my University years in Copenhagen. For though Danish anthropology is in the main historical, it was Dr. Birket-Smith's demand that students should read the important works of such functional or social anthropologists as Malinowski, Radcliffe-Brown, Firth, Evans-Pritchard, and others. But most knowledge I have of functional anthropology came to me under a two years' study, granted me by The British Council, at The University College London with Professor C. Daryll Forde as my principal teacher. I wish to acknowledge my sincere gratitude for his unusual kindness and valuable help during my stay in London, and for his readiness to consider any problem in the light of his very deep and versatile knowledge. In this book I acknowledge his clear view of the problems connected with the development of food-producing activities advanced in 1934 when many scholars were shooting in the dark.

[p. vii]

[p. vi is blank]

114 My gratitude to Dr. Phyllis Kaberry, who acted as my supervisor during my London studies, is not easily expressed in words. Nobody has taken so profound an interest in my studies as Dr. Kaberry, and if my descriptions of economics and political systems contain views of any value this is due largely to her extreme interest in my Tuareg material. Much of my later field-work among the Tuareg has also been carried out along lines suggested by Dr. Kaberry.

My stay in London was indeed a fruitful one as I was also able to attend lectures and seminars by Professor Raymond Firth and Professor I. Schapera, and to benefit from the rich knowledge of East African cultures possessed by Mr. G. W. B. Huntingford of The School of Oriental and African Studies.

121 I try to reconstruct history within the limited area of Northern Africa occupied by the Tuareg. In
[122] doing so I use methodologies of different anthropological schools, and also include material available from written sources, from Tuareg traditions, and from archaeology. I feel confident that my procedure is justified, but present it to the reader's judgement with a quotation from the great anthropologist E. E. Evans-Pritchard, who speaks about the rejection of the reconstruction of history by functional anthropologists as follows: "A case can be made out for this rejection, though not in my opinion so strong a case as is usually supposed, for all history is of necessity a reconstruction, the degree of probability attending a particular reconstruction depending on the evidence available" (Evans-Pritchard 1962, p. 21).

114 The real foundation of my book is the field-material I have been able to gather during eight journeys
122 to Northern Africa. I made the first two short trips on my own account, while later journeys were paid by Danish foundations, notably by *Statens Almindelige Videnskabsfond*, *Carlsbergfondet*, *Rask-Ørsted Fondet*, *Knud Rasmussen Fondet*, and by grants from the University of Copenhagen. I have also been supported economically by The Danish National Museum and by The Museum of Prehistory in Aarhus, which museums now contain my collections of ethnographical sepcimens. My first Tuareg journey carried out in 1951 owes its beginning to economic and moral support from the former leader of the Aarhus Museum, Professor P. V. Glob, now Director-General of the Central Office and of the Museum of National Antiquities in Denmark. My journey to the Tuareg of Ahaggar and Ayr 1954-55 was partly paid by The University College London on the very kind initiative of Professor Daryll Forde.

122 I express my sincere thanks to the above-mentioned institutions and their directors.

The results achieved on my journeys are due largely to friendly help rendered me by the Algerian administration and the administration of the Niger Republic in Niamey and at Agadez. In Algeria I met at an early date Mr. Pierre Bataillon and Mr. Josef Kniebihly of the Civil Administration at Djelfa. They willingly offered me their friendship and did everything to help me during the three weeks of 1947 when I suffered very greatly from malaria. On my journeys to the Ayr Tuareg I have been very kindly assisted by all governmental offices, and I thank heartily Mr. G. Feral, formerly civil governor of the Cercle d'Agadez, Mr. J. Demonceau, Mr. Claude Gardin, and Mr. and Mrs. Bernus of the IFAN at Niamey.

My two Danish friends, Niels Wismer, Norwegian Vice-Consul in Algeria, and Clas Wismer have been of outstanding importance for all my journeys among North African pastoralists. They supported me morally and practically every time I came to Algiers, and they gave me their friendship which I treasure most highly.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

I also acknowledge with grateful thanks the valuable help of the Danish Consulate of Algeria under the leadership of the Vice-Consul, Mr. E. Hartvig. 122

The valuable North African collections preserved in the Musée de l'homme, Paris, Musée d'Ethnographie et de Préhistoire du Bardo, Algiers, and in the Musée de la ville de Neuchâtel have been of extreme importance to my studies, and I wish to thank sincerely the directors of these museums for their kindness in allowing me free admission to all interesting objects. I thank the Musée de l'homme for its courtesy in permitting me to reproduce the illustrations Figs. 62, 75 & 88. For the photograph Fig. 254 I am indebted to the courtesy of Dr. Erik Smidt, Copenhagen. 127

Anthropology necessitates co-operation with many other sciences, and this I have often experienced when working on my book. I wish to thank sincerly my friend Mr. K.-G. Prasse for his readiness to let me benefit from his profound knowledge of all structural problems connected with Tuareg language and other Berber dialects. He has kindly undertaken the work of checking the spelling of Tuareg words used in this book, and I owe him much for discussions about the meanings of such Tuareg words that may be important from a culture-historical viewpoint. I also thank my friend Dr. Hans Helback of The Danish National Museum for his assistance on problems connected with cultivated plants, and the veterinary surgeon Mr. Niels Grunnet for his comments on Tuareg stock-diseases. 114

I wrote this book in English which was kindly corrected by Major C. L. Bayliss of The British Embassy in Denmark. As to the drawing of diagrams, maps, etc., they are made by Mr. Arne Morell Nielsen whose readiness to help a friend is unrivalled.

The book was written mainly during eight months of 1961 and nobody has rendered me so much real help as my wife Ida.

I cannot in this way convey my heart-felt thanks to Tuareg friends, but my thoughts are among them with my brothers of the Aguh-en-tehlé and the Imezzureg tribes.

*Copenhagen, June 1963*

JOHANNES NICOLAISEN

[p. ix]

# Introduction

This book is the result of several years' study of North African pastoralism. My interest in this subject began under climatic conditions rather different from those of North Africa. In the winter 1945–46 I journied on skis through Northern Sweden, Finland, and the Norwegian Finmark. For about three months I lived among the Lapps, and, watching the techniques of reindeer-breeding, I became very interested in the problems connected with the history and evolution of stock-breeding. Shortly after my return from this trip I began to study anthropology in the University of Copenhagen under Dr. Kaj Birket-Smith, and as the main subject of the degree of M.Sc. acquired in summer 1950, I chose pastoral cultures of the Near and Middle East. I had already then made two short journeys to North Africa. 114 121

(1) In summer 1947 I spent about three months in Central Algeria to investigate Arab nomads in the steppes of the High Plateau and the adjacent parts of the Sahara. I travelled around the towns of Djelfa, Zenina, Aflu, Laghwat, and Ghardaya. I had little money at my disposal and could never afford to engage native assistants or to have a horse or a mule for riding and transportation. I walked through the barren steppes and deserts carrying as my main luggage several bottles filled with water. This journey was certainly not easy, and at its end I suffered very badly from malaria. Nevertheless, I managed to get into contact with camps of nomadic tribes such as the *Ulad Naïl*, the *Larba*, and the *Suit Otba*, and for shorter periods I followed them during their migrations towards the south. I also contacted certain semi-nomadic tribes living around Aflu in Djebel Amour of the Sahara Atlas. I did not, however, understand Arabic, and the nomads, who were rather shy and suspicious of Europeans, generally had no knowledge of French. It is evidently most difficult to collect ethnographical material under such circumstances. And if I had not received the very kind assistance of French administrators and officers, of native Arab caids, and of Arabs who had formerly served in the French Army, I should indeed have acquired nothing. The year 1947 followed upon a long period of drought which had caused severe losses to all nomads. Many of them had lost all their livestock, and famine occurred all over pastoral Algeria. The consequences of the drought when at its worst can be illustrated by the following example:— Arriving at Aflu in the Djebel Amour, I discovered a small camp the tents of which apparently belonged to a type constructionally different from those used among Central Algerian nomads. I went to the camp where I was told that it belonged to semi-nomads of the *Adjaletes* and *Ulad Sidi Brahim* tribes. They all suffered extremely from famine, and entering the first tent I found three dying children under filthy rugs. I now concentrated upon the problems connected with this dreadful disaster which seemed to prove the insufficiency of pure pastoralism in the barren countries of North Africa. 114 122 73 [121]

114 (2) In winter 1950 I visited several *Kabyle* villages in the Djurdjura Mountains, and stayed for some
121 time in the regions which I had already visited in summer 1947. I wanted to gather supplementary material on the consequences of the drought period, and also to acquire some personal knowledge of winter life among nomads. – Part of the material collected 1947 and 1950 has been published (Nicolaisen 1950).

101 On later journeys to Northern Africa I have studied culture and society of pastoral Tuareg:—

114 (3) In summer 1951 I spent about five months (May September) in Ahaggar. I arrived at Algiers
122 from where I travelled southwards by car to make short stops at Djelfa, Laghwat, Ghardaya, El
[124] Golea, and In Salah. Reaching Tamanrasset in Ahaggar in the month of May, I hired an interpreter to visit many Tuareg camps of the important vassal tribes *Aguh-en-tehlé* and *Dag Rali* on journeys accomplished by means of camels and donkeys. Part of the time I also lived at Tamanrasset where I was visited daily by Tuareg informants. Apart from Tamanrasset I visited the following centres of
[12] cultivation:— Tit, Utul, Terhenanet, and I-n-dalag. My investigations concentrated upon economics
[126] and material culture in relation to environment, and about 300 ethnographic specimens were collected. I left Tamanrasset for Algiers by plane via Ganet (Djanet), Rat (Ghat), Ft. Flatters, and Wargla.

(4) I returned to North Africa in summer 1952. The length of this visit was about three months and a half. From Algiers I went by train and trucks to Arris in the Aurès Mountains where I stayed for about five weeks among the semi-nomadic Berber-speaking *Chawiya*. I rode through the valleys of this montain massif on a mule, and the journey terminated with my arrival at the oasis of Biskra. From Biskra I went by train to Tuggurt from where I continued by truck to Wargla. I left this oasis by a French military plane for Ganet in Tasilé-n-Ajjer via El Golea, In Salah, and Tamanrasset. At Ganet I hired camels and a native guide and went westwards via Ft. Ghardel to Afara, where I had the opportunity to meet the supreme chief of the *Kel Ajjer* living in French territory. From Afara I went up the valley named Aharhar and across the Tasilé Mountains to Éléżi (Ft. Polignac). After a short rest with the French garrison I went northwards to the region of Hassi Issendjel, where I visited various Tuareg camps, notably of the tribes *Kel Terurit* and *Urarren*. I stayed in Tasilé-n-Ajjer for six weeks, and returned by plane to Algiers via Ft. Flatters and Wargla. From Algiers I made a very
[126] short trip to the *Kabyle* of the Djurdjura Mountains. From the Kabyle, the Chawiya, and the Ajjer Tuareg an ethnographical collection of about 70 specimens was made.

(5) From autumn 1952 until summer 1954 I studied social anthropology in University College London under Professor Daryll Forde and Dr. Phyllis Kaberry. My studies in London were interrupted in summer 1953 when I went to North Africa to stay for three months among the Ahaggar Tuareg. I lived most of the time in camps of the vassal tribes *Dag Rali* and *Aguh-en-tehlé*, but I also visited the *Iklan-en-tawsit* and camps of certain *Isekkemaren* tribes, notably the *Iheyawen-Hada*. I also paid a visit to camps of the *Kel Rezzi* Tuareg (*Ahl Azzi*) who descend patrilineally from Arabs, and I spent several days in the camp of the *Amenukal*, that is the supreme chief elected from the dominant noble tribe of *Kel Rela*. Among agricultural settlements visited the most important were Abalessa and Silet –
[12] apart from Tamanrasset. My studies concentrated upon social and political organization, but I made
[126] an ethnographical collection of more than a hundred specimens. The journey from Algiers to Tamanrasset and return was made by plane via El Golea and In Salah.

7:Nicolaisen E-5 (1951-1962) 1963 .MS25 Tuareg MS25

(6) My sixth journey to North Africa was undertaken 1954–55 and comprised about 14 months' field-work among Northern and Southern Tuareg. I left Algiers by car via Djelfa, Laghwat, Ghardaya, El Golea to In Salah at the beginning of the autumn 1954. At In Salah I bought four camels and hired an Arab guide of the *Ulad Ba Hammu* tribe. After a short visit to his camp we went southwards to the region of the Ahnet Massif where I visited camps of *Kel-ahem-mellen* (a small noble tribe), *Kel-Immidir* (*Isekkemaren*), *Ayt Lowayen* of the *Kel Turha* section, *Kel Rezzi*, and notably the *Kel Ahnet*. Two small camps visited claimed to belong to the noble *Taytok* tribe, but they had no matrilineal relationship to that tribe which is now found in the Tamesna plains west of Ayr. I left Ahnet for Tamanraset about the middle of December, and in the following months I travelled alone with my camels in Ahaggar as I now knew Tuareg language sufficiently to dispense with an interpreter. Until the beginning of April 1955 I lived in camps of the *Dag Rali* and the *Aguh-en-tehli* tribes, and passed some days in the *Amenukal*'s camp. I also had a house at Tamanraset where I could work more peacefully with problems connected with kinship, land tenure, and political organization. In this work I was mainly assisted by two older Tuareg of the *Dag Rali* and the *Aguh-en-tehli* tribes. Apart from Tamanraset I visited the following cultivation centres:— Utul, Tahart, Ti-n-amenser, Ennedid, Iglen, Abalessa, Amsel, and Tarhawhawt. – On the 3rd of April, 1955, I left Ahaggar for Ayr together with two Ayr Tuareg who were returning to their camps at Northern Ayr after a caravan journey to Tamanraset. We travelled south-eastwards via the small cultivation centre Tagnut and thence into the very barren country separating Ahaggar from Ayr. We refilled our six skin-bags with water at the wells of I-n-abeggi and I-n-azawa, and had no water again until we arrived at a fairly large and permanent waterhole (*agelmam*) known as Tamengoyt, situated on the northern outskirts of the Ayr Massif. Close to this place we met the first Tuareg camps of the *Kel Tedale* who dominate the northern parts of Ayr. The following days we saw several camps of these Tuareg. At last we arrived at the camp of one of my companions who belonged to the *Ikkoberen* tribe though his family was very mixed with *Kel Tedale*. This camp was situated in the Azel valley, where we stayed for about ten days to regain full strength. Thereupon we continued to *Iferwan* which constitutes the northernmost village of the Ayr Massif. I lived in this village for about three weeks and then I continued towards Agadez together with a Tuareg of the *Kel Akerra* tribe. We visited camps of various tribes on our journey southwards (*Kel Rarus*, *Ifoyas*). The journey was a difficult one as two of my camels were worn out. We left them in a camp of *Ikojjejiten* Tuareg. This was situated at the Afarak valley from where we continued to Agadez via the small agricultural settlements of Tabeydag, Azzal, and Alarses. From Agadez I went by truck down to Zinder, but returned quickly to make a more complete investigation of the Ayr Tuareg. The situation was now very difficult as my two camels left at Afarak died and I was too short of money to buy a new animal. My financial problems were rather acute and were solved only by the very kind and resolute help rendered me by Professor Daryll Forde of University College London. I was thus able to continue my studies for another six months. I hired a house in Agadez where I could work peacefully, and bought a fine riding camel in order to be able to visit Tuareg camps in the vicinity. The most extensive journey made went to the village of Awderas, north-east of Agadez and close to the Begzen Mountains. On this journey I revisited the small settlements of Tabeydag, Azzal, and Alarses, and visited pastoral camps of the *Ifoyas*, the *Ikojjejiten*, the *Kel Tamat*, the *Igen-*

101 114 122 *déynen*, and the *Imezzureg*. If not staying in Agadez I lived mainly in camps of the latter tribe, and spent a considerable time in one particular camp. My studies were concluded with a visit to the camp of the *Kel Ferwan* drum-chief north of Aderbissinat. I remained in his camp for about a fortnight and also visited camps of the *Echchikhen* Tuareg and the Fulani who are numerous in this area. I left Agadez by air via Tawa, Niamey, Bamako to Dakar whence I returned to Denmark by ship, and a [126] few days later returned to London to resume my studies at University College. On this comparatively long journey among the Tuareg I did not make any large ethnographical collection, as I could not afford to buy much, but brought back with me about fifty different specimens plus a few archaeological objects.

(7) In 1956 I returned to Copenhagen from London. I was then planning a new journey to North Africa, but for many reasons this had to be postponed until the autumn 1959. The journey was a very short one of only two months. I left Copenhagen by air on the second of August and arrived at Niamey the next day. After a week's stay at Niamey I continued by plane via Maradi and Zinder to Agadez. The day after my arrival at this ancient capital of the Ayr people I was able to join a car expedition organized by Mr. J. Demonceau, who was studying locust migrations, and by Mr. Claude Gardin of the "Pelotom Nomade", who was looking for Tuareg camel thieves. We went first to Ingal and from there continued northwards to the village and salt pits of *Tegiddha-n-tésemt*. We went further north but stopped at the well of I-n-abanferit, then going eastwards across the Talak Plains to the western edge of the Ayr Massif. Our journey back to Agadez followed the road through the mountains. Though this journey did not take much more than a week it was of great importance to my studies, as I had for the first time an occasion to see the extensive plains west of Ayr – a region of great economic value to many tribes not only of Ayr Tuareg but also to certain tribes of Ahaggar. On the journey I visited camps of *Idaléyen*, *Kel Tédalé* and *Iforas* (Ayr Tuareg), of [121] *Iregenaten* (Ahaggar Tuareg), and of *Tégehé-n-Efis* (originally Ahaggar Tuareg). In all these camps I collected much valuable material concerning tent structures and economics. – Shortly after my [123] return to Agadez from this brief journey I met a Tuareg of the *Imezzureg* tribe. I knew him well from my visit to Ayr in 1955, and he was in fact my classificatory elder brother. I went immediately to his camp situated not very far from Agadez, and I lived with him and his kinsmen for the rest of the time left at my disposal. During this period the camp was frequently broken and taken to the best possible pastures of annual plants. I left the camp only once for a week when my brother and I made a camel journey westwards to Tegidda-n-tagayt and Tegidda-n-edrar. In these regions we visited several Ayr tribes which I had never been among previously (e.g. *Imezzuren*, *Ijakarkaren*), and we were lucky enough to meet during this journey the supreme chief of the noble *Kel Azel* tribe. We also visited the camp of the drum-chief of the *Kel Geres* Tuareg, who move northwards to Ayr at the end of the rains. I finished my field-work about the sixth of October and was back in Copenhagen by plane via Zinder, Maradi, and Niamey on the tenth. I made a very small ethnographical collection [126] comprising about twenty specimens. My investigations were not concentrated on any particular [121] subject. I acquired valuable supplementary material on such different matters as traditional political systems, kinship, ecology, and technology.

(8) Participating in The First International Congress of Africanists at Accra I had the opportunity

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

to visit Niamey for one week at the beginning of December 1962. Here I studied the very valuable ethnographical collections of The IFAN Museum, and I spent two days in camps of *Bélla* and Tuareg of the *Western Iwllemmeden* east and north-east of Ayoru on the Niger. Of particular value was my visit to a camp of the dominant noble tribe, *Kel Tahabanat*. Its supreme chief *Amder* and his family gave me important information on Tuareg culture in this little known area. My visit to Tuareg and *Bélla* near Ayoru was made possible by the very kind assistance of Mr. and Mrs. Bernus of the IFAN. They put a truck with its driver at my free disposition.

Altogether I have spent almost three years among North African pastoralists – mainly among the Tuareg. This length of time is not so impressive as it may seem, for my investigations have been carried out over an extensive territory ranching from the Mediterranean to the outskirts of the Sudanese savannah. A detailed study of Tuareg ecology and culture necessitates a detailed knowledge of change and variation in environment within and without the country in which the Tuareg live.

The literature which deals with the Tuareg is very comprehensive as can be seen from the bibliography at the end of this book, but most publications are of very little value and many of them are almost inaccessible.

The Tuareg are first mentioned in literature by Arab authors of the Middle Ages, but most of these historians and geographers did not know the Tuareg country and even the few of them who travelled in the Sahara tell us very little about the Tuareg in early Arabic texts generally called *Muletthemin*, that is "the veiled ones". The most important Arab authors who mention the Tuareg are Ibn Hawkal (10th century), El-Bekri (11th century), Edrisi (12th century), Ibn Batutah (14th century), and Ibn Khaldun (14th century). Ibn Khaldun gives the most intimate description of the Tuareg though apparently he never met them. But they played a very important part in his attempt to recount the ancient history of the North African Berbers. After Ibn Khaldun came Leo Africanus (16th century) who published information gathered by himself on journeys in the Sahara. His book was first published in Italian. There are certain later Arab authors who have contributed to our knowledge of North African cultures and the Tuareg, e.g., Es-Sadi who lived in the 17th century. We must also mention in this connection that there are other valuable Arabic manuscripts, notably those generally referred to as the Agadez Chronicle, which contain much historical material on the Ayr Tuareg (cf. Palmer 1910; 1928; 1936; Urvoy 1934).

The first modern description of the Tuareg was given by Hornemann who travelled from Cairo to Murzuk in 1798. Throughout the 19th century many European travellers contributed to our knowledge of the Tuareg, and it is very important now to have their accounts which derive from a time when traditional political systems were unaffected by European colonization. Among these travellers we should mention such outstanding names as Lyon, Caillié, Denham & Clapperton & Oudney, Richardson, Barth, Duveyrier, Rohlfs, Hourst, Foureau, and von Bary. Lyon gives a very valuable description of the Tuareg who live around Tasilé-n-Ajjer, but by far the most important among these authorities are Barth, who wrote about the *Kel Ajjer*, the *Kel Ayr*, and the *Iwllemmeden*, and Duveyrier, who published an excellent monograph on the Northern Tuareg with particular reference to the Tuareg of Tasilé-n-Ajjer. At the beginning of the present century military posts were established in the Sahara, and literature about the Tuareg became more abundant. Thus Benhazera wrote a good book on

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

114 the Tuareg of Ahaggar who were also visited by other scientists and explorers. The most important work on these Tuareg is the great dictionary edited by Foucauld, who lived several years in Ahaggar until his death in 1916. Later works are those of Lhote and Blanguernon. From the Tuareg of Tasilê-n-Ajjer literature is scarce, but recently good studies on them have been published by Dubief, who has also contributed to our knowledge of the Ahaggar Tuareg. From Ayr we have one early book by Jean, who is often unreliable, while the later book by Rodd contains much valuable material. More recently our knowledge of the Ayr Tuareg has also been extended by the studies of Lhote and Nicolas. The latter author has published a good survey of the tribes and groups inhabiting Ayr and adjacent regions, but Nicolas' most important studies deal with the *Iwllemmeden Kel Dennek* around Tawa. Our knowledge of the south-western Tuareg along the Niger and around Timbuktu (the *Iwllemmeden Kel Ataram* and the *Kel Tademaket*) is unfortunately very sparse. There are only two books to be mentioned, namely those of Aymard and Richer. As to the Tuareg north of the Niger in the mountains of Adrar-n-Foras, they have been described by Cortier, and there is no other important work about them.

Very recently our knowledge of the Tuareg has also been increased by important works dealing more generally with the Tuareg or with particular aspects of their culture, e.g., the works of Lhote, Gabus, and Briggs. But none of these authors has tried to describe in detail Tuareg social organization. Nobody but Miner, who writes mainly on culture and social life of Timbuktu, has published a Tuareg kinship system. This system, which is taken down among the *Bélla* who are the former slaves of the Niger Tuareg, does not seem to be entirely correct in the sense that it does not indicate the true classificatory terms. I may add that I have myself published one Tuareg kinship system incorrectly, namely that of the Ayr Tuareg (cf. Nicolaisen 1959, p. 102). This will be correctly re-published in this book.

Tuareg literature is largely superficial, but there are a few good studies. In some of them you will find information also given in this study. When I mention observations which have also been made by earlier authorities, I do not refer to them in case they may be said to be generally known and made by several authors. Many of the works which I mention in my bibliography are of extremely little value. However, I wish to describe cultural features in detail, and a few interesting notes may be found even in more popular travelling books which are also sometimes furnished with good photographs. [126] Almost all photographs published in this book are of my own taking or represent objects collected by myself among the Tuareg. Where other pictures are used reference to authorities is given.

Fig. 1. Map of the central parts of the Western Sahara and the adjacent Sudanese zone inhabited by the Tuareg who fall into eight major political groups or federations. These groups, as mentioned in the text, are sub-divided into the politically very important drum-groups. The geographical position of the eight groups is roughly indicated by Roman numerals. The *Kel Tademaket* Tuareg (VIII) from about A.D. 1800 were subjected to the Iwllemmeden Kel Ataram (VII) (cf. Richer 1924, p. 96). Scale, 1 centimetre = 125 kilometres.

known and used particularly by women. There are slight distinctions in the characters of the alphabet 212
used by various Tuareg groups. I here reproduce the characters generally used in Ahaggar (Tasilé-n-Ajjer) and in Ayr. In transcribing *tifinar* into the Roman alphabet I have on the whole adopted the [104]
system used by Foucauld who has made the most profound studies of the northern dialect (Foucauld 1918–20, 1920, 1925–30, 1940, 1951–52), but certain alterations have been made in agreement with the proposal of K.-G. Prasse. The Ayr dialect is very badly known. Its grammar and its peculiar [114]
vocabulary has never been studied.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

826 get more sexual satisfaction from intercourse with them. "A fat woman is like a woman who has never
832 known a man", they say. Some women are steatopygous though never to the same extent as women
142 among the Bushmen and the Hottentot. Very comprehensive studies of Tuareg physical anthropology
114 are lacking. Readers are referred to the chapter written by Lhote who has also published a brief bibliography of studies on this subject (Lhote 1955a, p. 158–170, 433), and to the recent and valuable publication by Briggs (Briggs 1958, p. 163 ff., 183 ff.).

291 The custom of Tuareg face veiling has attracted the curiosity of many scholars and travellers. Much has been written about the fact that Tuareg men wear a veil (*tagulmust* in Ahaggar, *tagulmust* in Ayr) while their women are unveiled in contrast to Arab custom. There have been given various explanations of the origin of the custom of Tuareg face veiling. Most authors refer it to hygienic conditions: the veil protects the face from sand and dust, and it prevents mouth, nose, and throat from drying up in hot weather. The fact is that the veil has the latter function, and Arab bedouins of the Sahara will also frequently veil their faces during journeys in the hot season. But the hygienic explanation is definitely not the reason why the Tuareg also veil themselves in many situations where face veiling is unpractical and unpleasant. Another explanation of the custom of face veiling is that the veil may perhaps have certain religious or magic functions. This explanation is apparently also insufficient. A
[254] few Tuareg have claimed that the veil may yield protection from persons having an "evil eye" or an "evil mouth" beliefs known in Ahaggar as *tehoj*, in Ayr as *tugarchet*. But as I have stated elsewhere
291 (Nicolaisen 1957a, p. 112; 1961, p. 114) the proper function of face veiling seems to be a social one.
576 Many Tuareg will leave their face uncovered in family camps or on journeys, but they will always
[602] cover mouth, nose, and brow in the presence of foreigners (particularly foreign women) and in the
[604] presence of their parents-in-law (particularly their mothers-in-law). Towards such persons it is also considered very indecent to show one's legs. It has been overlooked by most authors that Tuareg women wear a head-cloth (*ekerhey* in Ahaggar, *adalil* in Ayr), which is similar to the veil worn by men in form and shape. The headcloth and the veil are properly made from Sudanese indigo cotton, and both the veil and the headcloth are therefore also known as *alechchu*. It is true that Tuareg women do not veil their face by means of this headcloth in the same way as do the men. But in the presence
[602] of foreigners (particularly foreign men) and towards fathers-in-law the women will draw their head-
[604] cloth over their mouth (cf. Fig. 297a). The man's veil and the woman's headcloth have identical social functions which is also proved by the fact that young men and women adopt veil or headcloth at initiation (Ahaggar), or at marriage (Ayr). Both the veil and the headcloth are worn by people of various black-skinned castes of Tuareg country but the custom of face veiling seems to be more strictly observed among the true Tuareg.

181 The custom of face veiling is one characteristic of all Tuareg. Another quality peculiar to all Tuareg, and particularly to those of the noble class, is their "snobbishness" as it is frequently called by many Frenchmen living at Tamanrasset and Agadez. There are a great many things a Tuareg cannot do, and there are many situations in which he will have to act in a very special way if he is to be regarded as a man worthy of respect and prestige. Tuareg attitudes to etiquette are not easily described in words. Gait, gestures, and posture are all intended to express qualities of elegance, arrogance, refinement, and strength. Vanity with regard to dress and ornaments is another characteristic of all true Tuareg.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*tamat, Acacia seyal*) and tamarisks (*tabarekkat, Tamarix aphylla & azawa, Tamarix gallica* and related species). Other important perennial species are the grasses *afezu* (*Panicum turgidum*) and *tullult* (*Aristida pungens*) the latter grass being found especially around the northern massifs of Anhet and Téfedest, and in Tasilé-n-[illegible]er. 137

2) *Tarayin*, the middle mountain zone which has the following characteristics:— Acacias are lacking or are very rare and badly developed. The big tamarisk (*tabarekkat*) is lacking while the smaller species (*azawa, T. gallica*) is common in certain valleys. Two trees are found which do not grow in the lower zone, namely *tahunek* (*Rhus oxyacantha*) and *alew* (*Olea Lapperrini*). The *tullult* grass (*Aristida pungens*) is missing and the *afezu* grass (*Panicum turgidum*) is scarce.

3) *Atakor*, the highest part of Ahaggar with the following characteristics:— There are no trees with the exception of *alew* (*Olea Lapperrini*), and there are on the whole very few perennial species while annual species are abundant in case of rainfall.

It should be noted that only the important characteristics of the three Tuareg zones are here mentioned, and I add that a few perennial plants are found within all three zones. Thus the perennial species *aramas* (*Atriplex Halimus*) occurs along the valleys in all three zones, but it is of very low stature high up in the mountains, while it forms very high and bush-like tufts in the lower parts of the country.

In Ayr there is also a change of vegetation according to altitude but a general description of this is rather complicated. The lower parts of the Ayr Massif as well as the southern plains are dominated by acacias (*afagag, Acacia Raddiana & tamat, A. flava*) like the lower parts of Ahaggar, and the *afezu* grass (*Panicum turgidum*) is very common almost everywhere throughout the country, while the *tullult* grass is found only in sandy regions at the eastern slopes of the Massif. Species of tamarisks are extremely rare, and this is true of certain other species which are common in Ahaggar. The trees *tahunek* (*Rhus oxyacantha*) and *alew* (*Olea Lapperrini*) grow only in isolated mountainous parts of Ayr. The extensive plains west of the Ayr Massif around Ingal are dominated by acacias and the *afezu* grass, but these perennial plants become less and less common towards the north, so that the regions around I-n-abanerit have very little persistent vegetation but a rich vegetation of annual plants. For further information on the botany of Ayr I refer to the study of Miré & Gillet who describe all known species and indicate their division into particular vegetational zones (Miré & Gillet 1956). I conclude this outline of Tuareg botany with the statement that Ahaggar and Ayr have many important species in common. But there are northern species which do not thrive in Ayr while some southern species are unknown in Ahaggar, e.g., the dum palm *tagayt* (*Hyphaena thebaica*) which plays a great role with the Ayr Tuareg. [114]

Climatically as well as botanically the Ahaggar Mountains are situated on the frontier of two distinct zones, namely the Mediterranean and the Tropical zones, while Ayr is predominantly tropical. This seems true also zoologically, as the Ayr fauna contains a great many species of birds and mammals characteristic of tropical Africa. The bird life of Ayr seems very akin to that of the Sudanese savannah, and, for instance, guinea fowl is extremely common even in valleys of the northern-most parts of the Massif. As example of tropical mammal life in Ayr we may here mention that the wart-hog lives in Central Ayr, and that oryx antelope and giraffe are found in the plains immediately south and west of the Massif. I do not wish here to compare in detail the natural history of Ayr and Ahaggar, but [132] 136 13

camels among the Northern Tuareg, as there are cross-breeds between camels of this type and Tuareg camels. There are also to-day some Tuareg camels among Arab pastoralists of the Sahara, but I was told among *Ulad Ba Hammu* Arabs that originally all their camels were of the *marroki* type, while camels of the southern Tuareg breed were introduced among them more recently. I have not been able to prove or to refute Cauvet's theory that northern and southern camel-breeds differ in dentition

*233
133

Fig. 35. A young camel (about 14 months old) sucks its mother before milking. The Tuareg boy bends up the right foreleg of the she-camel and ties it in this bent position to the left foreleg – a method known as *ésemmetil*; it is applied to she-camels that are restless during milking. The camel has the colour name *téserift*, its big calf that of *aïlar*. Ayr, the *Imezzureg* tribe.

*233 (cf. Cauvet 1925–26, I, p. 15, 76 ff.). I have inquired about this, and the Tuareg seem to hold that
● [114] all camels have an identical number of teeth.

She-camels should ideally be reserved for breeding which is a very slow process. A severe loss of goats during a drought can be restored quickly once rainfalls start again, but this is not so with a loss of camels. She-camels are not generally mated until they are about three years old, and their gestation period is about one year. In addition, she-camels get only one calf which has a long period of sucking so that a she-camel is frequently not mated until one year after the birth of a calf. In other words:—
[435] One she-camel has only one calf every two years. For this reason, and because a grown camel has about the same value as 25–30 goats, the Tuareg pay much more attention to camel-breeding than to the breeding of goats and sheep.

Most she-camels are mated during the cold season in Ahaggar, while the proper season of mating in Ayr is *akasa* with the beginning of *ṛarat*, though some she-camels are also mated in the spring period known as *tabsit*. As the gestation period is about one year most camel calves are born during the cold season in the north, in the rainy season when annual plants are well developed in the south. The rutting male camels roam freely in search of she-camels on heat, and a Tuareg may own several she-camels and not even possess a bull-camel for breeding. Both in Ahaggar and in Ayr there are Tuareg who try to keep their very excellent bull-camels away from herds other than their own, but this is considered very bad conduct. In fact, there are Tuareg who do not know with which bull-camels their she-camels mate though the act of mating is normally seen and heard by somebody. Mating is also very frequently arranged by the Tuareg who then assist the bull-camel in introducing its penis into the she-camel's vagina. The act of mating may be connected with some difficulty for the bull-camel because the she-camel has to lie down on the ground during copulation.

A she-camel is well looked after during the period it is expected to have a calf. She stands upright while bearing the calf, and the umbilical cord breaks when the calf falls to the ground. The birth of a calf is not always seen by the owners but they will generally be present at least a few hours after birth.

Fig. 42. She-camel provided with the plaited pouch (*abegu*) which covers its udder. The pouch is attached as follows:— A cord is tied around the body in front of the animal's hump while another cord runs along the back at both sides of the hump to pass under the tail. The three cords which form part of the pouch are tied to the tail cord in front of the hind thighs and at the tail. To milk a she-camel carrying a pouch around its udder the hind pouch-cord fastened at the animal's tail is untied. Tasilé-n-Ajjer.

[234]

*233 they are hobbled by means of a cord (*téffart*) attached around their forelegs (p. 72, Fig. 45b–e) and
[284] are kept away from the mother animals during grazing in day-time. In Ahaggar as well as elsewhere in Northern Tuareg country suckling of calves are normally regulated by another method, namely a plaited pouch (*abegu*) which covers the udder of the mother camel, and the calf can thus be allowed to graze freely together with its mother (Fig. 41–42). This device is known to the *Kel Ferwan* Tuareg of Ayr as *ébeyembey*, but though they know it by name they do not use it. They say, however, that it is in use among the *Kel Ewey* of the Ayr Massif.

The plaited pouch just described also serves as a means of weaning half-grown calves, but there are other weaning methods, namely the following:— (1) *ikembar*, that is cuttings on the bridge of the nose as described above for cow calves (p. 51). In addition to these cuttings, the scars of which form small bumps, it is common to cut the calf also under the chin, the visible result of such a cut being a hanging patch of skin. This method is known both among the Northern Tuareg and in Ayr, and it is, I believe, nowadays carried out mainly for aesthetic reasons as the bumps and the hanging patch of skin adds, in Tuareg opinion, to the beauty of riding camels (Fig. 43). In fact, the cut made under the chin does not seem to hurt a sucking calf, and this cut is not made on cow calves (cf. Fig. 30). – (2) A method
[114] which is described by Cauvet from the oasis of In Salah may perhaps also be known to the Northern Tuareg though I have not recorded it. It consists of a thorn put into a patch of skin cut loose on the

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

bridge of the nose of a calf, so that it hurts its mother when it tries to suck (Cauvet 1925, I, p. 359). – 233*
(3) *akimbab*, that is a plaited muzzle which allows the calf to graze, but prevents it from sucking. I have been told both in Ahaggar and Ayr that such muzzles are used for camel calves, but apparently they do not constitute a normal weaning method. – (4) *azedres* or *ameru* are said to be synonymous terms for the weaning method generally adopted among the *Kel Ferwan* Tuareg of Ayr. The method is as follows:— The upper lip of the calf is pierced on both sides of the harelip so characteristic of all camels. A piece of thin root of the *afagag* acacia (*Acacia Raddiana*) is drawn through these holes so [124]
that the ends of the root protude at both sides, and a knot is made at both ends that the root will not fall out. These knots hurt the udder of a she-camel when the calf starts to suck, but this is not the real idea of the device. For the root-piece keeps the pierced holes open and the calf is therefore unable to suck at all.

A she-camel may yield about ten litres of milk at the beginning of its lactation period, but at the 234
end of this period it does not yield more than two or three litres even with good grazing. The yield is always dependent on grazing conditions. Thus during my stay in Ahnet and Ahaggar 1954–55, a Tuareg who owned about twenty she-camels acquired only two litres of milk a day in all from these animals. But conditions of camel-breeding are much better in Ayr and in the southern plains where [433]
she-camels are tolerably good milk-yielders most of the year, and camel's milk is therefore very im-
portant to some pastoralists of these regions. Camel's milk is drunk and not generally used for food [272]
in other ways. It is much esteemed by all Tuareg, who claim that it possesses a particular power and gives strength. It is never stored in the shape of butter or cheese. The Tuareg of Ahaggar and Ayr [262]
never eat camel's butter which they consider possesses a poor taste, and, besides, it is very difficult to churn. They make butter of camel's milk only when butter of milk from other domestic animals is [302]
lacking for the greasing of the hair. Both in Ahaggar and in Ayr butter is then churned by the men in a rather peculiar way:— A skin bag containing an amount of camel's milk is attached to the riding [415]
saddle of a camel which is then ridden at very fast speed for some time. But even with this method, it is said, camel's milk gives very little butter, and it is also definitely stated that the milk cannot be used for cheese-making. These Tuareg statements seem to be confirmed by analyses of veterinaries, [114]
who claim camel's milk to contain very little casein, and it has been proved difficult to separate butter from camel's milk (cf. Cauvet 1925, I, p. 707 ff.).

She-camels can mate and yield milk until an age of about 25, and their average length of life is 233*
estimated by the Tuareg at about 30 years. But pastoral Tuareg do not generally keep their camels until they die a natural death. In Ayr I was told that she-camels more than twenty years old should be sold or killed. Most Tuareg sell their old camels in the oases of the Central or Northern Sahara [432]
where a large population of sedentary farmers is constantly yearning for meat. Very few camels are [366]
killed by the butchers of Agadez, where meat from oxen, sheep, and goats is always available and [262]
fairly cheap, but a great many old camels are slaughtered at the market places of the oases further north.

Pastoral Tuareg of Ayr very rarely kill their own camels to eat them. They will slaughter a camel 262
which suffers from some severe disease as all animals dying by accident or from disease are unlawful to eat. However, there are also some Ayr Tuareg who will never eat camel's meat. They say that they [261]
would feel very sick at heart were they to do so, and some Tuareg even say that they would vomit

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

137
233*
552

Fig. 46. A resting she-camel with the colour name *tawinak*. The colour term of the young she-camel standing in the back-ground is *ténilt*. Ayr, the *Imezzureg* tribe.

In Ayr the Tuareg do not 237
use camel's hide in their crafts, but give it to the blacksmiths who use it for lashing, or to people 564
who manufacture beds from ribs of palm leaves (cf. Fig. 257). The Northern Tuareg use camel-skin 352
for the manufacture of a few household implements and also use it for lashing (cf. p. 84, 110, 222, 824
270 f. & Figs. 70, 86, 132a–b, 161a–d, 162, 213). But even in Ahaggar and Tasilé-n-Ajjer the skin of camels is little used compared with the skin of goats, sheep, and barbary sheep.

When employed in craft, camel's hide is normally used raw and unprepared after soaking in water, 281
but the Ahaggar Tuareg say that for certain purposes the hide is treated with salt. In literature there 114
are many statements about the tanning of camel's hide. Thus it is stated by Cauvet that the hide is tanned with plant material in Algeria, and Cauvet also quotes Duveyrier's statement that the Northern Tuareg tan camel's hide to use it for tents and various other implements (Cauvet 1925–26, I, p. 714 ff.). I very much doubt the correctness of this, as all Tuareg asked about it have stated that the hide of camels is not fitted for proper tanning. Camel's hide is therefore of very limited use to the Tuareg, and the same is the case with camel's hair or wool. Tuareg camels in Ayr have very little wool, and 237
among the Northern Tuareg most animals have less wool than Arab camels of the Northern Sahara. The Northern Tuareg pluck a little wool with the hands or cut it off with a knife. It is spun into cords 283
to be used for certain minor objects, notably for the manufacture of the plaited pouch (*abegw*) to prevent the suckling of calves (p. 62, Fig. 41) and for the particular cord (*asarun*) tied around the foreleg of camels to keep them in a reclining position (p. 72, Fig. 45a). Mixed with goat's hair the wool is 286
also used for a kind of primitive weaving (p. 265 ff., Figs. 209a–b).

Camels are very important to the Tuareg as pack-animals for the caravan expeditions which will 492*
be mentioned in a later chapter when other means of subsistence have been described. 484

In the past camels were also extremely valuable as riding animals on raiding expeditions which 492*
721

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

of riders and their camels. This is intimated by the following poem quoted from Foucauld's excellent books on the poetry of the Ahaggar Tuareg:—

| | |
|---|---|
| *Ébeydeǧ, é ti n ami mellen* | My white camel, O woman with white teeth |
| *W-allahi! iḍeǧ ul ifel kem* | I swear by God, it shall not go raiding, shall not leave you |
| *Ula daṛ ikk am akal ien* | It shall not go away from you to another country |
| *U i ḍineṛ ar y arabuh ennem* | I lead it to the pastures only to visit you with love again |
| *Ula taharǧit d asemmeḍren* | Neither in dreams nor in thought |
| *Innin é ham yekk akal ien* | Shall it go away from you to another country |

(cf. Foucauld 1925-30, I, p. 210 f. for a literal translation).

## DONKEYS

Donkeys are very important domestic animals in the Tuareg groups I have studied. Most animals are grey or greyish but there are other colours for which the Tuareg have special terms. From Ahaggar the following colour-terms can be mentioned:— *adebara* (greyish), *afawa* (greyish with a white stomach), *ewriṛ* (yellow-brown), *éhenbey*, or *takenbawt* (donkey with a black head), *ékawél* (black). Black donkeys seem to be more common among the Arabs of the Northern Sahara than among the Tuareg.

Donkeys vary less in colour than other domestic animals among the Tuareg. It is interesting to note in this connection that there are fairly big herds of wild donkeys, or asses, in the mountainous massifs of Ahaggar, Tasilé-n-Ajjer, and Ayr. These animals are generally greyish like most domestic donkeys.

that the horse was introduced to Egypt with the Hyksos invasion about 1700 B.C. From Egypt it 231
spread to other African peoples, and it was common among the Libyans during the reign of Rameses 174
III (about 1200 B.C.). This first horse-breed introduced among the North African Berbers seems to have been of the pony type (cf. Bates 1914, p. 96 f.; Adametz 1920, p. 46 ff.; Antonius 1922, p. 284) which is still represented in Africa. I believe that the so-called Togo-pony which is found in scattered and isolated parts of the Western Sudan belongs to the old pony-breed, though this theory is not accepted by Doutressoulle on the ground that such ponies are not found nowadays in North Africa and Egypt (Doutressoulle 1947, p. 238). Doutressoulle has made a detailed study of the horse-breeds 231
of the area formerly known as French West-Africa. Apart from the pony-type just mentioned above, 171
there are three main types:— (1) the *Aryen type* known in Ayr as the Begzen horse. It is an Arab breed [114]
introduced from the North – from Tripolis according to tradition. Horses of this type are found scattered throughout Ayr, Adrar-n-Foras, and Hodh. (2) the *Barbe type* found mainly among the Moors west of Timbuktu. (3) *the Dongolawi type* mainly found to the east of the Niger (Doutressoulle 1947, p. 237 ff.).

Horses become valuable riding animals to many Tuareg living in the true savannah country. The 492*
*Kel Geres* Tuareg use horses for short riding trips though they prefer camels for riding on long journeys. They claim horses of the Begzen breed to be the very best riding animal. In the remote past when the 492*
horse was introduced into North Africa and the Sahara, horses may have been important also to 174
Libyans and Tuareg living further north in the desert, where the climate may then have been more favourable to horse-breeding than it is in modern times. Lhote has studied the ancient rock-pictures representing horses, horse-riders, and horse-drawn waggons in the Sahara, and he ascribes to the horse very great importance for the opening up of the desert country and invasions into these regions by fair-skinned Berbers (cf. Lhote 1953a). This theory is perhaps supported by the fact that the Ahaggar [192]
Tuareg though they do not breed horses have a fairly extensive vocabulary connected with horses and horse-breeding. Briggs states as his opinion that horses were probably never common in the Sahara (Briggs 1960, p. 21). This, of course, we cannot know, but it seems safe to say that in the Sahara the horse has never had the same economic value as the camel later has had.

# Rationality and Beliefs in Stock-Breeding

Literature on so-called primitive pastoralists often states that these peoples are irrational stock-breeders. It is said that they attach an enormous value to big flocks and herds which overgraze and deteriorate pastures, that they take too little interest in selective breeding with the result that they do not castrate their superfluous male animals or perform this operation too late, and that they take an overwhelmingly large interest in the aesthetic qualities of their animals. 121

Tuareg stock-breeding is essentially rational and is well adopted to environment. This viewpoint can be proved by reference to the description of stock-breeding given in the preceding chapter. I have here described in some detail the system used in the mating of sheep and goats, and how mating is regulated in accordance with the development of pastures. From this description of mating regulations it also appears that the Tuareg are not only interested in having large flocks. They also want flocks of healthy and strong animals, and they generally kill or sell domestic animals before they grow barren. It should be added that the Tuareg very well know that there is a limit to the number of animals (goats and sheep), which can be herded in one and the same place. The Tuareg certainly want to be rich and to possess large flocks and herds, but they are also aware that there is a limit to size. Regarding Tuareg interest in the aesthetic qualities of their animals, I have mentioned that it is mainly focused on camels, and I have described in some detail the value attached to colours. It is clear, however, that the Tuareg interest in their animals is not confined to the aesthetic. The true value of any domestic animal is always judged rationally, and takes into consideration such qualities as age, build, stature, and the like. The Tuareg also know that qualities of domestic animals are inherited and are aware that it is necessary to have good breeding animals. Cauvet states that pastoral Tuareg attach very little importance to the quality of she-camels used in breeding, while greatly interested in the build and stature of bull-camels. In this, he says, the Tuareg differ from Arab pastoralists, who think that camel calves inherit their qualities mainly from the mother-camels (Cauvet 1925–26, I, p. 348). This statememt, I believe, is not quite correctly expressed, for the Tuareg I have asked about this have stated that a camel-calf inherits qualities from both parents and they have also stressed the necessity of having good she-camels to produce the best possible calves. But most Tuareg have so few camels that they are forced to mate all their she-camels. They cannot afford to select certain she-camels for breeding, while it is easy for them to select one or two good bull-camels. All Tuareg I have asked admitted the great value of selective breeding, and said that superflous rams and he-goats should be castrated or

233 232 [556] 232 [171] [114]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

232 [114] killed. This does not agree with Nicolas' statement that selective breeding is unknown among the *Iwllemmeden Kel Dennek* for all types of domestic animals (cf. Nicolas 1950a, p. 133).

Superfluous bull-camels are generally castrated very late – rarely before they are six or seven years old, and frequently much later. But this is not to say that all bull-camels are used in breeding, as those used for riding and transportation are generally hobled during grazing and copulation is thus effectively prevented. Bull-camels used in breeding are not always used for riding and pack animals, as they may be very savage and dangerous. In the rutting season they are left unhobled among the she-camels.

The Tuareg consider it best to castrate bull-camels late, and say that bull-camels if castrated at a very early age will not develop fully, or become such good riding and pack animals. Bull-camels which have not been allowed to mate are not so difficult to control during the periods when she-camels are on heat. Nevertheless, when bull-camels are castrated they become more docile. But to the Tuareg it is more important that gelded animals easily grow fat and thus acquire the strengh and endurance to enable them to perform the long and arduous expeditions connected with caravan trading and, in the past, also with raiding. In brief, castration of bull-camels is done as follows:— The legs of the animal to be operated are tied tightly with strong cords, and it is kept firmly to the ground by the weight of people sitting upon it. The operator thereupon cuts two slices in the animals scrotum and pulls out the testicles together with the spermatic cords. This must be done with great care because, it is said, the animal may die if one of the spermatic cords breaks. This method of castration by extraction is the only method used for camels, and it may also be applied to other domestic animals such as bulls, rams, he-goats, and in Ahaggar also to donkey stallions. In the north this extraction method is known as *aselbi* while the *Kel Ferwan* Tuareg of Ayr use the word *azam*. The latter people claim that castration by means of cutting and extraction should be performed in spring (*tabsit*) or during the early rains (*akasa*), as the wounds will heal properly at these seasons. The other important castration method used among the Tuareg is that of chrushing the spermatic cords, it is known to the Ayr Tuareg as *éddaz*, and is never used for camels but is frequently applied to he-goats, rams, and bulls. Chrushing of the spermatic cords is done by means of stones or pieces of wood – frequently by [112] beating with the heavy wooden pestle of the large millet mortar (cf. Fig. 177). I believe that this method is that most commonly applied to he-goats and rams, and Tuareg of Ayr claim that they can use this method all the year round as it leaves no wounds to be healed. Rams and he-goats may be castrated at any age and even very old animals are castrated to make them fat for slaughtering. It is claimed that it is best to castrate superfluous lambs and kids very early, preferably as soón as they are weaned.

I believe that the examples given above confirm my statement that the Tuareg are mainly rationalists in their stock-breeding methods. To elucidate this in more detail I shall now present my material on Tuareg veterinary knowledge. This material is unfortunately not very precise because the Tuareg distinguish between very many stock-diseases, and the treatments applied can be studied scientifically only by a veterinary surgeon. A description of stock-diseases is available for the northern parts of the [113] Sahara ("Notice sur l'Institut Pasteur d'Algérie", I–II, 1934–1949), but there seems to be no particular study of Tuareg stock-diseases, which I know only by their Tuareg names. As I have not studied this [114] rather special subject in great detail, I supplement my own material with informations gathered from literature.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

A chest disease for which the Ayr Tuareg have no particular name. It is cured by cutting two rows of small slices through the animal's skin at both sides of the fore thighs so that blood flows. 233* 232

*awaras*, that is swelling of the foot caused by an acacia-thorn or other pointed object. The remedy is to remove the thorn by means of knife and awl and then burn the upper side of the foot with a red-hot iron.

*tafadé*, that is wounds on the camel's back caused by galling of the saddle and the loads. Very many camels have such wounds which are treated by pressing out the pus, by cutting, and by burning.

*ajawad*, that is scabies (*Sarcoptes scabiei* var. *Cameli*) which is extremely common. The Tuareg living around Agadez treat it in two distinct ways:— (1) an animal bone is crushed in a large mortar and the pounded mass is put into a cooking pot to be heated over the fire. A black liquid with a consistency like that of liquid butter comes out of the bone-substance after heating. It is rubbed into the skin of the infected animal. (2) Fruit of the *aborak* tree (*Balanites aegyptiaca*) are put into a cooking pot to be heated over the fire. A black liquid comes out of the fruits after heating. This is rubbed into the skin. [824]

Camels in Africa are considered to suffer from only three major infectious diseases (*anthrax*, *pasteurellosis*, *trypanosomiasis*), but several types of local infections can be met with. 233*

I believe that camel diseases of Ayr and Ahaggar are not very different, but I have not collected much material on the subject in the north. I give a few additional examples from Ahaggar: *adder*, that is a bunion close to the junction of leg and body of camels. The bunion is produced by rubbing of the fore thigh against the chest during walking, and some camels suffer from such bunions during long journeys. I do not know if there is any treatment for it. *gelek*, that is the swelling of camels which have drunk too much water after the consumption of salty plants; this swelling disappears by itself. *irelenrwahen*, a nose disease which attack camels and goats. The nostrils are filled with pus so that the animals have difficulty in breathing. The treatment is burning. *amerwas*, swelling of the feet which are washed with hot water. *loza*, a chest disease considered contagious. The animals lose their appetite. The remedy is burning. Dr. Grunnet thinks that it could be an oedematous form of *pasteurellosis* (*haemorrhagic septicaemia*). – For scabies the Ahaggar Tuareg seem to know several treatments. They use pounded leaves of *ahoyyar* (*Cleome arabica*) and of *telulut* (*Capparis spinosa*) added to sour milk and rubbed into the camel's skin. According to Maire, who has made use of information from Voinot, there are other treatments for scabies, namely the use of ashes of the *aferegak* plant (*Chrozophora Brocchiana*), tar extracted from the *azawa* tree (*Tamarix gallica* ssp. *nilotica*), charcoal of *turha* (*Calotropis procera*) which is pounded and mixed with butter, seeds of *tegellet* (*Colocynthis vulgaris*) which are boiled into a black oil called *akaha* (cf. Maire 1933, p. 145, 156, 172, 200). Congestion due to heat-apoplexy (*ahni*) is cured as mentioned in the case of the Ayr Tuareg. [114] 233* 232 232 824

From the above description of camel diseases and their treatment it will be seen that the Tuareg know several types of veterinary methods. In brief the veterinary techniques can be summarized under the following five items:— 232

(1) Treatment by the hand, e.g., *Corpus luteum* which is squeezed out of the ovary by the manipulation (cf. *sanes*, p. 120), and massage treatments which the Tuareg practise with human beings and with domestic animals. [257]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

human beings, and in the past was used by the Tuareg to poision their enemies. However, this plant does not seem to be venomous for domestic animals which grow fat from eating it (cf. Maire 1933, p. 192). One plant (*téhereggelé*) (*Artemisia judaica*) is said to have an intermediate position: When camels eat its green shoots they may contract entrail diseases, but the plant is also considered a remedy for entrail worms. Domestic animals which have eaten venomous plants are generally treated with liquid butter which is poured into their mouths. Venomous animals are also very dangerous for domestic animals, notably scorpions and snakes which abound everywhere. The treatment of swollen limbs caused by snake bites or scorpion stings is sometimes bleeding, but the Northern Tuareg also consider it effective to give the affected animal fat from a female barbary sheep and to place a little fat over the place where the animal has been bitten or stung. Under this heading of veterinary medicine mention must finally be made of the fact that tobacco is considered to possess curative qualities in the case of certain diseases. When camels get tired and slow owing to congestion during the hot summer season the Tuareg consider it an excellent remedy to put, as mentioned above, powdered tobacco leaves in the animals' eyes. This was frequently practised with my own camels, and it seems to me that the method is efficacious.

It is evident that many veterinary methods among those mentioned above are effective, and I believe that Tuareg veterinary methods are largely to be considered rational. It is a true that it is most difficult for an anthropologist without any veterinary training to judge objectively the value of all treatments of stock-diseases. But French veterinary surgeons I consulted at Agadez held the view that the Tuareg methods they knew of were effective, though in specific cases of disease they could do better than the Tuareg, and one veterinary surgeon admitted that the Tuareg knew far more about camel-diseases than did modern veterinaries. It can be added that the Tuareg possess an anatomical knowledge of their animals which is no less than astonishing. Apoggi has noted 43 terms used by the Tuareg of Tasilé-n-Ajjer to describe the exterior parts of a camel (Apoggi 1933), and this list is not complete. It goes without saying that the Tuareg also have a large vocabulary for internal organs which they know in detail from slaughtering. And I believe they have a fairly good knowledge of physiology.

I have elsewhere given some information of Tuareg medical methods applied to human beings (Nicolaisen 1961; cf. also Humann 1933), and I have stated that Tuareg medicine cannot be understood entirely without reference to religious and magic beliefs. This is to some extent also true of their veterinary methods. But as far as I know there are many medical methods based on magic and religious ideas which are applied solely to human beings. This may seem quite natural.

Domestic animals may run the risk of being attacked by evil forces such as the evil eye and the evil mouth (*tehoj* in Ahaggar; *tugarchet* in Ayr), the *Kel Asuf* spirits, and the mystic power known as *ettama* or *tezma* in Ayr (cf. p. 21), and valuable animals may carry Islamic amulets as a protection against these evils. I have seen such amulets carried by a few rams and he-goats, but they are used particularly for camels, and I believe that most camel amulets are meant to protect the animals from the evil eye (the evil mouth). Against this malignant force camels may also be provided with a donkey's hoof hung around the neck as an amulet. Another non-Islamic amulette is used for riding camels in Ayr:— Some Tuareg of this region hang the foot of a turtle around the camel's neck in order that their riding animal may not stumble.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

428 sister, and his mother (or his mother's mother). At the death of the unmarried man one sixth of his fortune is given to his mother (or to his mother's mother), and the remaining parts are collected and re-divided into three parts, two of which are given to the brother, one to the sister.

(7) An unmarried man who has lost his father but has alive his father's father, his father's brother, and his mother (or his mother's mother). At the unmarried man's death his fortune is divided into six parts, one of which is given to his mother (or to his mother's mothers) while the remaining five parts go to his father's father.

Patrilineal rules predominate in the system of inheritance. With the exception of the mother (or the mother's mother), who inherits one sixth, no matrilineal relative can inherit a deceased person. If a deceased person has no mother or mother's mother alive, all property left is inherited by patrilineal
[114] kinsmen, and even very remote relatives in the paternal line have inheritance rights. Bissuel states that sisters' children can inherit (Bissuel 1888, p. 110), but the Tuareg I have asked in Ahaggar (and in Ayr) denied this.

428 Furthermore, it is claimed in Ahaggar that if a deceased person of the *Kel Rela* drum-group has
643 no patrilineal relatives alive, his fortune is taken over by the *Amenukal* with the exception of one sixth in case the mother or the mother's mother of the deceased person is alive. The *Amenukal*, however,
[632] will not keep livestock thus inherited for himself, but will leave it in the tribe to which the deceased person belonged, and the animals will be under the supervision of the tribal chief who has usufructs of them. Livestock thus inherited by the *Amenukal* is known as *éhéré wa n eṭṭebel* ("the fortune of the drum-group"), or *éhéré wa n butelma* ("the fortune of the public"); cf. p. 400).

422 It appears from the rules of inheritance just mentioned that domestic animals are owned individually,
[858] and almost everybody among the Tuareg is a stock-owner. Even little children (boys and girls) may
[553] own a few animals which are given them by their parents and their close relatives on various occasions,
422 e.g., on the naming day seven days after birth. The offspring of these domestic animals also belong
592 to the children who own them, but milk, butter, meat, and the like derived from the animals should serve the needs of the household to which the children belong. Within the household the husband and his wife also have their individual animals. Husband and wife can freely kill or sell the animals they own without asking permission of each other, but the meat and the money acquired from sold animals should serve the benefit of all members of the same household. A household forms an economic
422 unit of closely related stock-owners.

*233 All Northern Tuareg use ear-marks, cut with a knife, for their goats and sheep. There are a great many types of cuts which have particular names. I have noted some of these marks among the Ahaggar
[114] Tuareg (Fig. 100). But I did not investigate this subject in great detail as it is considered very impolite
[576] to ask a man about ownership of goats (cf. p. 41 f.). The cuts illustrated Fig. 100 are all family marks
[602] so that each mark is used by several patrilineally related persons. But though the Tuareg know their goats and sheep by sight a small and not very deep cut is frequently added to indicate individual
422 ownership. The earmarks are preferably cut when kids and lambs are weaned (cf. p. 37) at which
*233 time superfluous male animals should also be castrated (cf. p. 118). All true vassals of Ahaggar mark
565 their donkeys with earmarks similar to those used for goats and sheep, though in one vassal tribe (the *Dag Rali*) donkeys are also branded with a redhot iron, like camels. The noble Tuareg of Ahaggar

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

Fig. 101 a–c. Camel-brands of three Ahaggar tribes.

a. Brands of the *Kel Rele* tribe.
b. Brands of the *Afuh-en-tehit* tribe. The main brand of this tribe is V called *tamazert*. The brands ⌉ & ⌉ are due to intermarriage with the *Ikiao-en-tawait* tribe where the principal brand is ⌉ called *amezlaq*.
c. Brands of the *Dag Rali* tribe. The main brand characteristic of this tribe is | placed on the right side of the camel's neck. This brand was that used by the founder of the tribe named *Rali* and to-day it forms part of most *Dag Rali* brands which are always placed on the right side of the camel's neck. The *Dag Rali* brands have individual names. The last one is known as *tikkilt n ayalaq*, that is "the raven's foot".

*Dag Rali* tribe may claim that these two halves are matrilineally related to one another, b[illegible]at they do not descend from sisters. It seems in fact as if these two halves stand in a cross-cousin relationship to one another, and it is in agreement with this that the *Dag Rali* proper speak of the *Imezzilliten* as "children of their mother's brother". The two halves in the past intermarried much though marriages between them are very rare nowadays. Thus in 1951 there were only two marriages between people of the two tribal halves.

I believe that other tribes of Ahaggar have a structure similar to that of the *Dag Rali*, but the structure of Tuareg tribes is extremely difficult to grasp because very few Tuareg know their genealogies more than three or four generations back.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133
342
361

Fig. 108. A camp of two related goat-herding units with their straw-huts (*ikebran*, of the cylindrical type) placed at a certain distance from each other in order that the two flocks shall not mix. Tasilé-n-Ajjer, the *Kel Uhet* tribe (*Iseḳkemaren*).

423 422 224 the head, and half the meat (Lhote 1955a, p. 284), but for certain hunting grounds there are different rules (cf. list p. 148).

423 241 (4) The tenants have the right to dues from the crops of every garden in their sub-areas, but for sub-areas of the *Dag Ṛali* tribe these payments are now given to the *Amenukal* because, it is said, the *Dag Ṛali* Tuareg consider such dues incompatible with Islamic law. In the *Aġuh-en-tehlé* tribe the tenants receive 10 kg per garden from a crop of wheat and barley (grown in winter), 10 kg from a crop of millet (grown in summer), and 4 kg from a crop of tomatoes.

685 643 423 [428] [613] Should the rights of tenants be violated, the offenders will be fined by the *Ạmenukal*, the indemnity falling to him and not to the tenant. In the past there was a fixed indemnity of three goats for the violation of protected pastures. Nowadays the price is determined by the *Amenukal*. When a tenant dies his rights and obligations should preferably be taken over by a maternal kinsman. Traditionally the usufructs of a sub-area are reserved to people of the same section as the tenant, but should the tenant be identical with the chief of the whole tribe they belong to all tribal members. These traditional rules, however, do not seem to be observed very strictly nowadays except for the hunting of barbary sheep in certain areas. Lhote seems to be wrong in stating that the chief of the tribe has the right to [114] forbid grazing and protect pastures in the whole tribal territory (Lhote 1955a, p. 279). In the two tribes here described this right is invariably vested in the tenants of sub-areas.

## AYR

422 233 [428] The Ayr Tuareg follow the Islamic rules of inheritance described from Ahaggar p. 137 f., and property marks as in Ahaggar are patrilineally inherited in the way that people take over their father's mark. However, property marks play a less important role in Ayr, where the Tuareg with the exception of the *Iġdalen* Tuareg (vassals) do not mark goats, sheep, and cattle. Other tribes of Ayr mark only camels and donkeys, and branding with a redhot iron as well as earmarks cut with a knife are used for these animals. Both types of marks are known as *éjwel*. Some Ayr Tuareg and all Tuareg of the *Kel Geres* group use brands for camels and donkeys, and this seems also to be the case with the *Iwillemmeden Kel Dennek*. Some of the brands used among the *Kel Ayr* are published by Rodd and [113] Nicolas (Rodd 1926a, pl. 21 p. 195; Nicolas 1950a, p. 268 f.). The earmarks used for camels and

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

133

Fig. 117. Fishing pool (*aḡelmam*) in Tasilé-n-Ajjer.

136 sunset. There are wild pigeons by the thousand and innumerable flocks of guinea fowls and partridges (*Alectoris* sp.). Two species of turtle-dove are almost as common in Ayr as is the sparrow in Europe. 224 Possibilities of hunting are much more favourable in Ayr than in Northern Tuareg countries, yet, [410] nevertheless, the Ayr Tuareg engage even less in hunting than do the Ahaggar Tuareg. One reason for this is perhaps that very few Ayr Tuareg possess guns. It is extremely rare to meet hunters in Ayr. 224 They are found mainly within one tribe, namely that of *Imedderaren* (or *Kel Tamgak*) living in the 433 Tamgak Mountains of Northern Ayr. I have myself never visited camps of these people, but all Tuareg agree that they live largely as hunters and possess few domestic animals. Unfortunately, these people [119] have never been studied in detail. Buchanan, who met a hunting band of these Tuareg in 1920, says [222] that they have neither goats nor grain, but live by hunting and the collection of wild edible plants (Buchanan 1921, p. 191), while Campbell, who met them at Iferwan in 1926, describes them as hunters who also breed goats and sheep (Campbell 1928, p. 204 f.). Rodd also states that the *Kel Tamgak* have goats and sheep, but that they do not possess camels (Rodd 1926a, p. 307). This is in agreement with information gathered by myself at Iferwan where I met a few Tuareg of this group. There are 224 no Ayr Tuareg who live exclusively by hunting and collecting. The number of game animals killed

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

catching wild donkeys in the mountains around the valley of Anu Mekkeren. The method is not used for proper game animals. 224

(7) A pulling and a throwing snare are both known as *tuṛunt*. They are said not to be used for hunting, though commonly employed to catch wild donkeys and domestic animals which have gone astray; cf. p. 108 f.

(8) The spiked wheel-trap (*tawchit*) provided with a noosed rope (*tuṛunt*) attached to a stick. This is used for gazelle and bigger game animals in isolated places rarely visited by representatives of the administration. According to Buchanan, the spiked wheel-trap is used for ostriches in the plains south of Ayr (Buchanan 1921, p. 117 ff.). Large traps of this type are also used for giraffe by certain hunters within the Cercle d'Agadez (Brouin 1950, p. 453).

(9) The torsion trap (*tenderbat*) akin to that of Ahaggar. It is used for big game animals, notably for barbary sheep.

(10) Snares (*tazek*, pl. *t'izagin*) made from strips of dum palm leaves are used for guinea fowl and other edible birds. They are generally set near water where birds come to drink. Little boys of the negroid *Imeggedezen* of Agadez also make snares of hair to catch small birds (Fig. 118). [223] [857]

These are the hunting methods known to the Ayr Tuareg, who do not engage much in hunting with the exception of the *Kel Tamgak* mentioned above. Most Ayr Tuareg refuse the small types of game and beasts of prey, and reject not only the *aṛata* lizzard (*Varanus* sp.), but also the smaller lizzard known in Ahaggar as *aggezzeram*, in Ayr as *emekkechchu* (*Uromastix acanthinurus*), though it is claimed that the latter is eaten among Tuareg of the *Kel Ewey* group. The two lizzards do not play any part in Tuareg mythology – the *aṛata* lizzard is greatly detested by the Ayr Tuareg who kill it with stones or sticks whenever possible. The Ayr Tuareg, including those of noble descent, have no taboos about birds and eggs, and many pastoral Tuareg collect guinea fowl eggs late in summer after the rains. There are a few animals not mentioned above which are considered edible among the Ayr Tuareg, e.g., the tortoise (*aṛaras*) which is found in the plains south of the Massif. With the exception of the *Kel Ewey* Tuareg the people of Ayr do not collect locusts (*tahwalt* in Ahaggar, *achwal* in Ayr). Locusts are eaten by all people of the two Northern Tuareg groups. The animals are roasted in the ashes or are boiled in a cooking pot to be pounded in the large mortar together with dried dates. This dish is very esteemed by the women who say that it is fattening and in this way adds to their beauty. [252] [832]

Certain weapons have not been mentioned above because they either cannot be considered proper hunting weapons, or because it is doubtful whether they exist among the Tuareg or not. 411 [114]

Traditional Tuareg arms comprise an iron lance (*allaṛ*), a sword (*takuba*), and a dagger (*télek*) carried in a sheath fastened to the left arm. The iron lance may serve as a hunting weapon, and this is true also of the sword. Thus the Ayr Tuareg of the *Kel Ferwan* group said that wild animals were occasionally killed with the sword, and they claimed that two Tuareg of the past had killed lions with the weapon.

The bow (Ahaggar, *taṛayyé* or *taṛañhé*; Ayr, *taganzé*) and arrows (Ahaggar, *imurren*, sing. *amor*, or *tinassabin*, sing. *tanassabi*; Ayr, *imeran*, sing. *amer*) are not traditional Tuareg weapons. Nowadays very ineffective bows and arrows are used as toys by little Tuareg boys, but they are never used by [524]

[text continues on p. 169]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

p. 447; Bissuel 1888, p. 94 f.; Harding King 1903, p. 272, photograph opposite title-page; Rodd 1926a, p. 235; Lhote 1955a, p. 375).

In Ayr I collected evidence of the fact that the sling known as *éfezemfes* was very common in former days. It was made from plaited dum palm leaves, but the Tuareg claim that it was not a hunting weapon, as it could not be used with precision. For the same reason, it is said, the sling could not be used for herding domestic animals – there would be a great risk of wounding them. It seems as though the sling among the Ayr Tuareg was used mainly as a toy. It has apparently disappeared, and a Tuareg of the religious *Ineslemen* class told me that the sling was a bad thing to use, because of a story in the Koran of a sling that was once used to throw a man into the fire. I do not know whether the sling is, or was, used among the Northern Tuareg, but think it very likely. The sling has an extremely wide distribution in Africa, and it has been recorded from various northern Berber tribes and from the Fezzan (cf. Lagercrantz 1950, p. 214 ff.).

The Tuareg of Ahaggar and Ayr, like pastoral Arabs of Algeria, frequently carry a short, heavy stick (*aburi*). A stick of this kind is sometimes used as a throwing stick, or throwing club, by Tuareg and Arabs, but cannot be characterized as a proper throwing stick. It is only occasionally used as a hunting implement thrown against birds and small animals and serve many different purposes. I believe that most Tuareg carry such heavy sticks as a weapon for personal protection and for killing poisonous snakes. In literature it is stated that true throwing clubs or throwing sticks occur among the Tuareg (cf. Lindblom 1925, I, p. 117, 137 f.), but they seem to be unknown both in Ahaggar and in Ayr. A large wooden club, collected at Timbuktu by O. Hagerup and now in the National Museum (Copenhagen), is rather to be considered a weapon than a hunting implement (cf. Fig. 120 b). The throwing knife that is sometimes stated to be a Tuareg weapon is not traditionally used by these people. A rare throwing knife may be introduced into Ayr from the Teda together with spears and knives of Teda type (cf. Lagercrantz 1950, p. 202 f.).

Hunting may have been important to many Tuareg in the past when game was more abundant. To-day true hunters are found mainly in tribes living in isolated and mountainous regions, notably among the *Kel Tamgak* or *Imedderaren* (Ayr), and among the *Dag Rali* (Ahaggar). It is very interesting that proper hunting territories are found within the territory of the *Dag Rali* tribe, and it is significant that it is strictly forbidden to graze domestic animals withing two hunting territories where barbary sheep are also protected for a period of three months every year (cf. p. 148). It is also interesting that the Tuareg have certain age-terms which are used exclusively for game animals. Thus the Ahaggar Tuareg have three age-terms for gazelle:—

| Age | Male | Female |
|---|---|---|
| Kid from its birth to the appearance of its horns . . | *awhim* | *tawhimt* |
| Animal not yet fully grown having small horns . . . | *ahjar* | *tahyart* |
| Fully grown animal . . . . . | *ahenkoḍ* | *tahenkoṭ* |

Certain superstitious usages and beliefs are connected with hunting among the Tuareg:—

(1) When a gazelle is killed its black tail-tuft is immediately cut off and placed in one of the animal's nostrils (Fig. 122). This is common practise among all Tuareg and also among Arabs of the Sahara.

# Collecting

In this chapter on collecting such edible plants are mentioned as play a part in Tuareg nourishment. Wild plants are also collected for other purposes. Many species are important to craft or have a medicinal value. Some of these latter species are mentioned elsewhere in this study.

## EDIBLE PLANTS OF THE AHAGGAR AREA

Wild plants which yield edible fruits, seeds, stems, or roots in Ahaggar comprise more than fifty different species. But the importance of collecting should not be judged from this, as all these plants are never found within the same area, and most are eaten only occasionally as a kind of relish or when agricultural food (wheat, barley, millet, dates) is lacking. I have supplemented my own list of edible plants with important information from Maire's study of Ahaggar botany (Maire 1933 & 1940). In my list the letters Tr., L.M., and U?M. stand for Maire's botanical zones, namely the Tropical Zone, the Lower Mediterranean Zone, and the Upper Mediterranean Zone. The following edible plants are collected in Ahaggar and adjacent regions:—

*tirfas* (sing. *tarfest*) (*Terfezia ovalispora*). Tr., L.M. A fungus which, according to Maire, lives on the roots of *Helianthemum Lippii* & *H. ellipticum* known to the Tuareg of Ahaggar as *urruǧ* (Maire 1933, p. 22, 159 et suiv.). This white fungus, which is frequently termed *tirfas n urruǧ* by the Tuareg, is prepared for eating together with various other dishes. It is frequently added to the so-called kus-kus.

*tahlé* (*Typha elephantina*) Tr. Roots and certain lower parts of the stem are eaten raw or boiled. When vegetable food is scarce they are also pounded or ground into flour.

*akeywoḍ* (*Typha australis*) Tr., L.M. Roots of this plant are ground into flour.

*téseñǧelt* (*Saccharum Ravennae*). Tr., L.M. "Cette plante ... laisse très souvent exsuder un liquide sucré qui se concrète en masses plus ou moins cristallisées; les Tuareg utilisent ce sucre" (Maire 1933, p. 54).

*afezu* (*Panicum turgidum*). Tr. A perennial grass extremely common in the lower valleys of Ahaggar. Seeds are collected in receptacles (e.g., *ahaǧa*, Fig. 213) by beating the ears of the grass with a stick. The seeds are not suitable for bread, but are esteemed for porridge and *tébik*, that is seeds pounded in the mortar and eaten without further preparation. Ashes of this grass contain soda and are often mixed with tobacco for chewing.

deep, and are dug into the sandy river bed to lead its water to the gardens of the valley terrace. A map of the foggara aqueducts placed in the river valley of Tarhawhawt is reproduced by Capot-Rey (Capot-Rey 1953a, Fig. 18 p. 328). There are many advantages attached to the use of foggara systems of the Ahaggar type, for once the aqueducts are dug water automatically flows to the garden. But there are also disadvantages. If a foggara valley is heavily flooded after rains and changed into a roaring stream, the aqueducts are destroyed and the crops also. In general it will be necessary to abandon a foggara system after some years, as it must be cleaned at intervals and in time it becomes too dangerous to work in them as subsidences may occur and kill workers. It may also happen that a river valley is not flooded at all for a period of years when it becomes essential to move to another valley, rich in water under the sandy river bed, to make a new foggara there. For all these reasons deserted foggara systems are common in the river valleys of Ahaggar. [114]

The *foggara* system is unknown south of Ahaggar and has on the whole a rather limited distribution in the Sahara. One reason for this is perhaps that the construction and maintenance of the aqueduct imply the agricultural co-operation of several households. This is not the case with the other common system in Ahaggar, the use of wells (*tunin*, sing. *tanut*) from which water is raised by animal traction. The wells are usually shallow and not very difficult to dig out, and the maintenance of the whole system is usually limited to occasional mendings of the zebu's harness and of the large waterbag. While a foggara canal is always used for the irrigation of several gardens (6–12), the wells are used for single gardens. The irrigation wells are dug into the valley terrace so that they are not destroyed by a flood, and in dry years watering from wells is considered the better system. But in the period when crops need much water irrigation by means of wells is hard work for the garden owner who must drive his ox all day long. [184] [476]

Irrespective of the system resorted to irrigation of a garden is done in the same manner. Water from the *foggara* aqueduct or water raised from well flows into a large basin (*tihemt*) through a canal

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

433 439 in the Sudan for such articles as camel saddles, sandals, swords, millet mortars, indigo cotton, earthenware pots, and the like. The Tuareg may also buy quantities of butter and cheese for sale to the sedentary people of Tidikelt and for their own use in dry years.

The Sudanese trade constitutes the great stabilizing factor in the economy of pastoral Tuareg of [262] Ahaggar. In return for the valuable rock-salt, pastoral Tuareg obtain the bulk of their agricultural food products (millet), butter and cheese for their own consumption in dry years, many important artefacts and notably their camel saddles and their millet mortars. They also get a surplus of millet and goods for investment in their Ahaggar gardens and for selling to the sedentary people of the Tidikelt oases.

There are certain Tuareg who do not engage in the Sudanese salt trade, notably those living in Ahnet; and these Tuareg nowadays have no irrigated gardens either. They acquire their necessary vegetable food products from Tidikelt (dates) and from Abalessa and Tamanrasset (wheat). They buy these vegetable products with their surplus of goats, sheep, camels, butter and cheese, and an occasional [511] barbary sheep. In a good year they can meet their needs of food in this way, but it is most difficult for them to subsist in dry years; and it may happen that two dry years come in succession. When I [114] stayed among the Ahnet Tuareg in 1954–55, all camps visited were very short of food, while the Tuareg of the Ahaggar Massif who engage much in the salt trade (the *Dag Rali* and the *Aguh-en-tehlé*) possessed what they needed of wheat, barley, dates, and millet.

[366] To-day there is a rather important market at Tamanrasset where many Tuareg sell surplus livestock, and where they can also buy cereals and dates. But it is always profitable to sell livestock and meat [435] in the Tidikelt oases where meat, butter and cheese are very expensive articles. Dates are cheap in these 000 oases, European goods and woven blankets are also cheaper than at Tamanrasset. The trading expedi-

804 322 177

Fig. 150. Wooden measure (*muda*) which contains one kilo of cereals, or the like. The Tuareg have adopted the kilogramme into their own weight system. The proper Tuareg unit is the *taṣiwa* which, according to Foucauld, corresponds to three kilogrammes (Foucauld 1951–52, III, p. 1160), but nowadays the Ahaggar Tuareg count one *taṣiwa* as equal to two kilogrammes and a half. The Tuareg have wooden or metal measures of *taṣiwa* size, and there are also larger measures to be used for grain, dates, and the like. For units smaller than *muda* the Tuareg sometimes use a wooden measure called *tamakast* which holds half a kilogramme. Smaller quantities are measured with the hand held half open, and it is recognized in Ahaggar that one *taṣiwa* corresponds to 99 handfuls. In Ayr it is very common to use a little plaited bowl (*téfakemi*) as the smallest unit of measurement. Dimension: 0.140 m high, 0.125 m in diameter at the rim. (F.M. 168).

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by the Tuareg of Ayr, the *Kel Gerez*, and other Tuareg. The Tuareg obtain salt generally in exchange 437
for millet, but they also bring with them dried meat, and meat from animals newly slaughtered; and 439
although this meat is largely rotten when it arrives at Bilma it is easily sold to the oases dwellers who
are yearning for meat. The oases dwellers have little to subsist upon but dates of which they have a
surplus. This is purchased by the Tuareg, who get two loads of dates for one load of millet. The [178]
Bilma trade is less important nowadays than it was at the beginning of the century. In 1922 the Bilma [484]
caravans comprised about 7000 camels (Buchanan 1926, p. 83), while in 1908, when the trade was
already decreasing, caravans numbered about 20,000 camels (Abadie 1927, p. 292). Caravans still go [438]
to Bilma to fetch salt and dates, but the salt trade is not so profitable to-day when Bilma salt can be [494]
bought fairly cheaply at Agadez, as the trucks bringing provisions from Agadez to the French admin-
istration and to the merchants of Bilma, take salt back with them when they return. The Ayr Tuareg 437
do not organize their trading expeditions within family groups or sections as in Ahaggar. A Tuareg [602]
who does not want himself to go to Bilma may let a kinsman or a friend trade for him with his camels.
The payment for this is a large loaf of salt which constitute one sixth or one seventh of a camel load.

The Ayr Tuareg do not generally obtain salt from the pits of Tegidda-n-tésemt though this place 317
is not very far from the Massif to the west. They say that the Tegidda salt is not as good as 439
Bilma's. The salt of Tegidda-n-tésemt is purchased mainly by the *Iwllemmeden Kel Dennek* when
visiting the regions around Ingal after the rains. Some of the *Kel Ayr* who live in the extreme north [437]
(the *Kel Tédalé*, and others) occasionally go to Amadṛor in the north to fetch salt which is taken down
to the Sudanese towns and villages. In years when drought prevails in Ahaggar these Tuareg take their 437
surplus of livestock to the market at Tamanṛaset, for in dry years the provision of meat, butter, and 438
cheese consumed in Ahaggar come mainly from Ayr and adjacent regions. When I stayed in Ahaggar [114]
in 1954–55 a great many Tuareg of the *Kel Tédalé* came to Tamanṛaset to sell camels, donkeys, sheep,
goats, and zebus, and also brought with them large quantities of cow's butter and cheese. The route 437
followed from Northern Ayr to Ahaggar runs via I-n-aṛawa and I-n-abeggi which are the only wells 487
between the two mountain massifs. Water is very scarce and so is pasture, which is mainly limited to
a scattered vegetation of annual plants; over very large areas there is no vegetation at all. It is easy
to drive camels and donkeys through these regions, while more difficult for sheep, goats, and cattle.
The zebus easily get cut hooves from walking on stony ground, while sheep and goats suffer much
from thirst. In spite of this, all kinds of livestock can be driven through the barren desert from Ayr
to Ahaggar, even as late as the month of March which is extremely hot in the barren desert country.
The Tuareg frequently lose animals which die from thirst and hunger during the journey, but the trade [435]
is nevertheless extremely profitable as prices of livestock are high in Ahaggar in dry years, while prices
of European goods such as tea, sugar, cotton, metal vessels, and the like are extremenly low compared
with the prices asked for these goods in Ayr.

The Ayr Tuareg, though owning more livestock than the Tuareg of Ahaggar, have a certain demand 433
of agricultural food products. These products are mainly grown outside of the Massif, for the farmers 439
of Ayr grow little millet, very few dates, and part of the wheat grown in Ayr is exported to the oases
of Ganet and Ṛat in the north. Though these vegetable products can be purchased at Agadez, it is
profitable to fetch them where they are cheap, namely in the Sudan (millet) and in Bilma (dates). And

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

1888, p. 21 f.). Duveyrier says that among the *Kel Aïjer* all noble Tuareg had slaves, while only some of the vassals were slave owners. He says that slaves were bought and sold in towns (Duveyrier 1864, p. 339). Information about the Tuareg slave trade is given by Richardson, who undertook his journeys mainly to collect material on slavery which is described throughout his journals. According to Richardson's descriptions there can be little doubt that the Tuareg engaged in the slave trade, but I think that perhaps his statements are tinged by his deep antipathy to slavery (cf. Richardson 1848, I–II & 1853, I–II). It is most possible that the Tuareg slave caravans he mentions were organized by Arab merchants of Ṛat and Ṛadames. The former engagement of pastoral Tuareg in the slave trade has also been mentioned by Lyon (Lyon 1821). 175 567 [114]

As to Tuareg caravan trade throughout the 19th century, we can add that all Tuareg tribes did not trade to the same extent. Within most groups there were certain tribes of particular classes which did not go in so much for warfare and raiding, but were keen traders. This was true of tribes of the *Isekkemaren* class in Ahaggar, and in Ahnet there were two Arab tribes allied with the drum-group of *Tāyoḳ*, namely the *Sekakna* and the *Mazil* who were responsible for the very important trade with Timbuktu (Bissuel 1888, p. 24). Among the *Kel Aïjer* the *Iforas* tribes traded on a much larger scale than other tribes (Duveyrier 1864, p. 359 ff.). In Ayr the same was true of certain tribes of the *Kel Ewey* group. 175 437 184

However, throughout the 19th century all Tuareg, with the exception of those of the nobility, engaged in caravan trading which played a great part for the pastoralists, providing them with cereals and dates necessary for their subsistence. Already in this century certain pastoralists had taken up irrigation agriculture, and some of them practised a very primitive type of agriculture, but vegetable products were acquired mainly through caravan trading. 175 437 433

**Fig. 164. Pail (*éṛir*) made from tinned brass by blacksmiths. It is used for storing butter to be used for food preparation in the tent. Pails of this type form part of the dowry in the *Dag Ball* tribe. Ahaggar, *Ahl Azzi* Arabs of Tamanrasset. Dimension: 0.155 m high, 0.230–0.235 m in diameter at the rim. (N.M. G. 5820).**

Whenever the Tuareg kill an animal for food 231
they perform a sacrifice, the idea of which seems to be an identification of the man and the killed animal. 282
This idea appears most clearly at the sacrifice made on the occasion of the name-giving feast seven 825
days after the birth of a child. A marabut, that is a Tuareg of the *Ineslemen* class, and the father of 553
the child stand close together with their faces towards Mecca while the animal to be sacrificed is kept 282
to the ground. The marabut cuts the animal's throat and doing so cries out the name to be given to [565]
the child, and this name is thereupon repeated by the child's father. When the killing is performed in [442]
this way the knife (*elmusi* in Ahaggar; *ézegiz* in Ayr) and the cut across the throat are washed with
water before skinning is undertaken. I have dealt with certain ideas of Tuareg sacrifice elsewhere, 114 ●
and have stated that on certain occasions they may sacrifice not to God but to the *Kel Asuf* spirits 282
(Nicolaisen 1961, p. 122 f., 147 f.). But whatever may be the ideas attached to Tuareg sacrifices all 231
animals, with the exception of the camel (cf. above p. 65), are killed by cutting their throat.

The methods of meat preparation are almost identical in Ayr and Ahaggar. The most common 252
method everywhere is cooking in an earthen pot, known in Ahaggar as *ufrun*, *téṛirt*, *alekkin*, or *talekkint* 415 *
according to its size and form, or in a metal pot (*éṛir*) of European origin. Such European pots are [77]
common everywhere in Tuareg camps, but earthen pots are still used though less durable, for earthen
pots are cheap. Pots made of metal or copper, which are also known as *éṛir*, were also found among

All knives are manufactured by blacksmiths.

wheat bread is eaten particularly during migrations and on trading expeditions, or in periods when 262
butter is rare (Lhote 1955a, p. 262). This statement disagrees with my own experience. Wheat bread [114]
is an ordinary diet of many Northern Tuareg. Bread is also baked from barley and from certain wild [324]
seeds (notably *tawit*, *Chenopodium Vulvaria*; *éhéyefyef*, *Aizoon canariense*; *tullult*, *Aristida pungens*)
and wild roots (*ahahel*, *Cistanche Phelypaea*), while millet and sorghum are considered less suitable
for baking. Seeds are generally prepared for baking by grinding them into flour by saddle querns or 252
handmills. In Northern Tuareg country there are two types of bread which have been introduced as [172]
a result of contact with Arabs or the Arabic-speaking *Harratin*. One type is named *elfetat* and is baked

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

by blacksmiths (*Ineḍen*). Tuareg women wear certain stone ornaments which derive from prehistoric finds or are introduced from other countries. But in Ahaggar I have collected one stone ornament, or rather an amulet, which was said to have been manufactured by a Tuareg woman of the vassal class. This stone amulet (*ameywan*) (Fig. 201) may be described as a large bead or button pierced in the middle for the insertion of a leather strap. It is said to be used as an amulet against diseases of little children, who are also very fond of looking at the red-white stone material from which the amulet button is made. The hole for the little carrying strap is made by means of an awl known as *éndel* (Fig. 218b, p. 278). This stone amulet has been described elsewhere together with certain other stone ornaments used among the Ahaggar Tuareg (cf. Nicolaisen 1961, Fig. 6a–l p. 128 f., p. 139 f.).

Earthen pots are widely used by pastoral Tuareg even nowadays, though European metal vessels are available at the principal trading centres. They are particularly common in Ahaggar where the Tuareg take their earthen pots with them on donkey's back during nomadic migrations – the old belief that pottery does not go with the roaming life of pastoralists is contrary to fact. However, metal vessels are, of course, more durable and will no doubt in a few years replace the earthen pots which are not manufactured by pastoral Tuareg. The Ahaggar Tuareg acquire their pots from the cultivation centres where there are a few women who practise the art of pottery making. There are various types of pots (cf. Figs. 186, 187a–b) which are made from black clay (*talak*). The lowermost part of all pots is formed over the bottom of an old pot on which is placed a piece of moistened cotton in order that the clay shall not stick. The upper part of the pots is built up with the hands according to the well-known technique of the application of thin sausage-like strips of clay. This technique is also used for the manufacture of other containers such as earthen milk-bowls (*akus*) (Fig. 21a), incense jars (*elbakhkhar*) (Fig. 203), and drums (*akralal, abakar*) (Fig. 202a–b). These latter types of pottery are not in general use among pastoral Tuareg but are common among sedentary agriculturists. The pottery made in

Fig. 201. A stone amulet (*amerwan*) made by a Tuareg woman of a brown and white stone like that depicted. Ahaggar, the *Agub-en-sehlé* tribe. Dimension of the amulet: 0.025 m in diameter. (F.M. 176).

The pottery made in

323 Ahaggar is plain and usually without any kind of ornamentation. But I have brought home from
[53] Abalessa a piece of a pot decorated with pricks in much the same way as are the prehistoric potsherds frequently found in caves in the Ahaggar Mountains. The pot in question was made by a woman from Abalessa. The pots to be burned are covered with wood, and small pieces of wood are also placed within them. Burning takes place in the evening when there is not too much wind, and the pots are removed next morning. After burning, the pots assume a red colour, but all pots that have
[114] been used over the fire for some time become black. I have myself never attended the manufacturing
[113] of pottery in Ahaggar, and readers are referred to a study by Lhote for more detailed information
[437] (Lhote 1947b, p. 145–154). Pastoral Tuareg of Ahaggar acquire most of their earthen pots from sedentary agriculturists of their own country, but they also buy some pots of superior quality during trading expeditions to the Sudan (Fig. 192).

[462] In Ayr, pottery is manufactured by sedentary women of Agadez and probably also by women of the sedentary *Kel Ewey* of certain Ayr villages. No true pastoralists seem to make pots, which in Ayr are manufactured according to techniques related to those from Ahaggar (cf. Lhote 1950c, p. 507–512).

[Text continues on p. 260]

285
824
237
531

Fig. 210a–b. Two coiled baskets provided with lids.

[462] a. *takhulit*, basket plaited from pieces of palm leaves (*aḡum*) and reinforced with coloured leather (goat-skin). Manufactured by women of the sedentary *Kel Ḡat* in Tasilé-n-Ajjer, bought from blacksmiths at Tamanrasset in Ahaggar. Dimension: 0.13 m high. (F.M. 227).

b. *adabun*, basket plaited from pieces of palm leaves (*aḡum*). It is ornamented with coloured leather thread and with woollen yarn. Ahaggar, blacksmiths at Abalessa. Dimension: 0.205 m high. (N.M. G. 5837a–b).

283 This stick, which is held in the right hand, is turned around its own axes while the hair taken out from the mass with the left hand is occasionally moistened with water or with spittle. The stick upon which the hair is spun is known as *aseggelem*. I have noted in Ahaggar that a length of 50–60 metres of spun hair can be made in about twenty minutes. Such a lenght of spun hair is trebled and attached to two sticks also known as *aseggelem* (pl. *iseggelam*). It is twisted together by two women each holding one of the sticks, and may be conserved for some time before it is finally made into a rope by further trebling and twisting (cf. Fig. 208). Certain cords to be used in connection with riding camels (e.g., reins) are not twisted in the above manner, but are plaited (cf. Fig. 51). The spun hair is used for the manufacture of certain objects without twisting (cf. Fig. 167a–b). Lhote states that the hair growing on the knees and neck of barbary sheep is also used for spinning (Lhote 1955a, p. 319).

[237] The Northern Tuareg spin camel's hair or wool (*tedhit*) which is used for very few purposes (cf.
[286] p. 67). But camel's hair is sometimes mixed with goat's hair to be spun for thread used for a primitive type of weaving; true weaving is an unknown craft among the Tuareg while important to Arab pastor-
286 alists of the Northern Sahara. The Tuareg type of primitive weaving with spun hair is carried out
* [415] with no other implement but the hand; it is used for small transportation bags known as *tirrar* (sing.
[114] *téṛerirt*), a word, according to Foucauld, derived from Arabic (cf. Foucauld 1951–52, IV, p. 1776) (cf. Fig. 209a–b). I have myself never had the opportunity to see how weaving of this type is done.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

A photograph illustrating a women making a bag from spun hair is reproduced by Lhote, who states 286 that bags of this nature are rarely manufactured nowadays and are made exclusively by a few noble 415* women of the *Kel Rela* tribe (Lhote 1955a, p. 319 f., pl. XV p. 384). This statement does not agree 462 with information gathered by myself in Ahaggar, where I was told that bags were made from spun 565 hair by Tuareg women of other tribes and notably by women of the *Isekkamaren* class. 114

In Ayr spinning of cotton is performed mainly to obtain sewing thread, which is considered superior 283 to European thread for sewing cotton clothes. To my knowledge most pastoral women do not spin [432] their own cotton thread but buy it at the market of Agadez. However I have noted the existence of [171] simple cotton bows in a *Kel Tédalé* camp in the northern part of the Ayr Massif. The occurrence of [248] the simple cotton bow among the Ayr Tuareg should no doubt be viewed in connection with the use [172] of this implement in the Western Sudan (cf. Lagercrantz 1950, p. 260 ff.) from where the cotton plant has also been introduced.

Coiled basket-work plays an important part with the Tuareg, particularly the Northern Tuareg 285 who are experts in this technique which is related to sewing. A very primitive type of coiled basketry

[824]

Fig. 211. Basket (*aleguegur*) plaited from date palm leaves (*aguni*). The handle is of date palm bast (*asan*). Ahaggar, blacksmiths at Abelessa. Dimension: 0.38 m high. (N.M. G. 5835).

291
281
587

Fig. 238. Loin-cloth consisting of a piece of tanned and depilated goat-skin. It is known as *arḡaḡ* and is worn mainly by boys and young slaves. Dimension: 0.715 × 0.575 m. Ahaggar, the *Aḡah-en-tehli* tribe. (N.M. G. 5258).

291 *liga* or *tagua* for this garment piece; (2) *téri*, a large piece of cotton worn as a skirt wound around the waist in the same way as in the north; (3) *tesegbes*, a large piece of cotton used as a petticoat.

[114] Lhote has published some very interesting information on the dress of Tuareg women. Thus he mentions that certain women among Sudanese Tuareg wear a kind of shawl over the shoulders instead of a poncho shirt. I have myself seen this garment among pastoral Arabs south of Ayr and close to [587] Aderbissinat, but I have never seen it among the Tuareg. Still more interesting is Lhote's description of a skin skirt worn by slave women among the *Iwillemmeden* (Lhote 1955a, p. 308). This leather skirt, which is laced around the waist by means of a leather cord, is also recorded from the *Bélla* of Timbuktu by Dupuis-Yakouba (cf. Seabrook 1934, p. 251), and some skirts of the same type are conserved in the "Musée de l'homme" in Paris. One skirt among those found in the Paris museum (no. 33.78.9) comes from the Sudanese *Bélla*, and was collected in the region of Arawan by the "Expedition du [294] Hall" in 1945. It is made from several pieces of decorated leather sewn together with leather thread; its total length is about 0.70 m. Another skirt of the same type, but without a museum number, is perhaps of the same origin. In addition to these two skirts the Paris museum possesses three other leather skirts of the same type. They were collected by Lhote in 1939 among Tuareg living in the south-west. One of these skirts is from the *Tengerregif* Tuareg (mus. no. 41.19.845) while the two others [587] come from the *Kel Inteser* (mus. no. 41.19.846 & 847). The skirts are known as *ekraite* according [565] to the museum's card-index, where it is stated that they are worn by slave women, and it is added that similar leather skirts were worn by slave women and poor women of the vassal class among the

Ayr Tuareg up to the French occ[illegible] of Ayr

[Text continues on p. 296]

291 l'homme, nos. 41.19.1376 & 1377). A skin skirt suspended from the shoulders by means of two leather straps also occurs among the *Iwllemmeden Kel Ataram* around Meneka and Gao (cf. Nicolas 1950a, Fig. 38,7 p. 169, p. 176).

292 In case of severe cold a simple hairy skin mantle may be worn by both men and women of the [232] Northern Tuareg. These mantles are not very common nowadays, when most Tuareg use woollen [177] blankets introduced from the north, but they are still worn by vassals, slaves, and sedentary agriculturists of Ahaggar. A skin mantle is known as *aglim* and it frequently consists of a single sheep-[294] skin worn over the back with hair inside (Fig. 240). But there are also larger mantles composed of several hairy goat-skin and/or sheep-skin sewn together with leather thread by means of a little awl (*ilstent*). These larger mantles are attached around the upper part of the body by means of a leather [184] cord around the neck (cf. Fig. 241). Skin mantles are said to be unknown in Ayr, and literature makes no mention of them in other Tuareg groups.

128 Garments made from skin or leather are nowadays rare among the Tuareg. But the Tuareg, like 291 many other peoples who have given up the use of skin and leather for dress, still use this material for foot-wear which comprises various types of sandals.

291 The common type of sandal used among the Tuareg is known as *ifatimen* (sing. *ifatim*) which [257] word is also used more generally for sandals of other types. It is made from the hide of oxen and sometimes of hides of the oryx antelope or giraffe whose hides are considered superior for sandals. It is not manufactured by the Tuareg but by sedentary peoples of Agadez and other towns in the south. [438] The Northern Tuareg, like the Tuareg of Ayr, generally procure their sandals from Agadez where the type is also known by the Hausa word *takelmi*. The manufacture of such sandals is described in 294 detail by Lhote, who states that the untanned hide to be used for soles is treated in the following way:— (1) Beating with wood against a flat stone; (2) Softening in wet sand; (3) Continued beating with wood against a flat stone; (4) Greasing with butter, tallow, or fatty vegetable substances; (5) Continued beating in order that the fat may penetrate into the pores of the hide. A sandal is made from two layers of hide thus prepared and covered with a tanned piece of sheep-skin which is dyed and decorated. These three layers are sewn together. The sandal is finally provided with a leather strap to pass between the first and second toes, and this strap again is connected with a broader band of leather sewn to both sides of the hind part of the sandal so that the band supports the instep (Fig. [114] 242b). The reader is referred to Lhote's study of sandals for further information about their manu-291 facture (Lhote 1950d, p. 514 ff.). The *takelmi* sandals are excellent for many purposes: They are easily pulled off and put on which is advantageous to camel riders who ride bare-footed but frequently dismount, and then need their sandals put on quickly because of the burning sand and rocks. The [137] very broad soles of this sandal type is also very advantageous not only as protection against the burning soil, but also against the numerous acacia thorns lying so to speak everywhere in the river valleys. But the Tuareg do not wear sandals of this type just because they find them practical and efficient. They also wear them because they are considered more beautiful in shape and colour than other sandal types made by the Tuareg themselves. Among the Ayr Tuareg a particular type of sandal [285] is plaited from dum palm leaves. According to Lhote this plaited sandal is known as *slisleplatine* (Lhote 1950d, p. 522, Fig. 10 p. 521, pl. XXII Fig. 1). I have never heard it called this, the name I

[Text continues on p.300]

It is 291 never manufactured by noble women, but noble Tuareg obtain this footwear from vassals, or have them made by their slaves. Lhote states that *imerkeden* sandals in the past were more common among [294] the noble Tuareg of Ahaggar (Lhote 1952a, p. 605). *Imerkeden* sandals are very common in Tasilé-n-Ajjer. They are said to be known among the *Kel Ewey* Tuareg under the name *tadakat*. The *Kel Ferwan* Tuareg say that they have a related type, but this I have never seen. The *Kel Ferwan* Tuareg almost exclusively wear sandals of *takalmi* type.

A third main type of sandals is that known to most Tuareg as *tagliezez*. Like other sandal types it [114] is described in detail by Lhote in his study on Tuareg sandals (Lhote 1950d, p. 512–533). Sandals [294] of this type are generally made from one piece of hide or leather which is bent up over the toes. The system of attachment consists of a leather strap attached to the bent-up flap of the sole and passing around the heel through two loops at the back of the sandal. These sandals are extremely common all over the steppes and savannahs of the south, and in Ayr they are used among the *Kel Ewey* and other Tuareg who make them from untanned hide of oxen. In Northern Tuareg country this sandal [184] type is rare and generally not used by pastoral Tuareg who do not manufacture them. However, a pair of sandals resembling this type was brought from Ahaggar to the National Museum of Copenhagen by Olufsen (museum number G 1.8) (Fig. 243). Sandals of *tagliezez* type are nowadays used by many sedentary people of Tamanraset in Ahaggar. They are esteemed by Europeans and by Tuareg and Arabs of the camel corps in Northern Tuareg country. But the sandals worn by the last-mentioned people are manufactured by professional craftsmen. The sandals illustrated Fig. 244 were bought at [439] the market of Agadez, but derive from the south – from Sokoto it is said. I have noted their name as *akeroga*. – The type of sandal here called *tagliezez* is known to the Ahaggar Tuareg as *téfedilt* (pl. *tifedilin*) (cf. Foucauld 1951–52, I, p. 304).

A fourth type of sandal is described by Lhote under the name of *éfekil* (pl. *ifekilen*). It is made of a single piece of untanned hide which is treated as described above for the *takalmi* type, and Lhote thinks that this type of sandal, which is common in the south among poor people, is the most primitive type. Lhote believes that the same type occurs also in Ahaggar because the word *éfekil* is mentioned by Foucauld in his dictionary (Lhote 1950d, p. 525 f., Fig. 18). This does not seem to be correct, for [114] the word *éfekil* (pl. *ifekilen*), according to Foucauld, is used synonymously with *émerked* (pl. *imerkeden*) (Foucauld 1951–52, I, p. 313).

Lhote writes that the sandals worn by the Tuareg can be divided into three main types, namely the 291 *ératim*, (or *takalmi*), the *émerked*, and the *éfekil*, and that these three types correspond to different 182 types of environment, namely desert, mountain, and steppe (Lhote 1950d, p. 528 f.). Perhaps one should substitute the word *éfekil* with *tagliezez*. There seems to be a certain correspondance between footwear and environment, but it should be added that the distribution of sandal types cannot be explained solely by reference to natural conditions. The *ératim* (or *takalmi*) type of sandal, for example, is used throughout Tuareg country from the Sudan to the central and northern parts of the Sahara, an extremely large area comprising great environmental differences. Nor are they suited to all types of desert. They quickly wear out when used on stony ground, and it is very tiring to wear them when walking through deep sand as the broad soles do not bear upon the surface. The *émerked* type of sandal is doubtless the best for walking in mountains, for it is fixed firmly to the foot and its sole of

291

[439] Fig. 244. Sandals known to the Ayr Tuareg as *okeroga*. Bought at Agadez, said to be manufactured at Sokoto in Nigeria. Similar sandals were very common among the *Kel Asarum* Tuareg I saw near Ayoru on the Niger. Dimension: ca. 0.29 m. (N.M. G. 6641).

291 tanned skin does not so easily slide upon the rocks. But sandals of this type are used by a great many
182 Tuareg who do not live in proper mountain areas. The distribution of cultural traits can rarely be explained by mere reference to environmental factors.

292 A most interesting type of footwear, known to the Northern Tuareg and to those of Ayr, is a kind of skin-stocking which is worn with sandals in the winter. I have never myself seen it among the Tuareg and though it has been described in literature published prior to my investigations I failed to enquire
[114] about its use and manufacture. The fact that I have not seen Tuareg skin-stockings does not prove that they are rarely used, for while I have stayed among the Tuareg throughout five summer seasons I have only been among them for one winter, when I mainly lived in the lower parts of the Ahaggar Massif. Most Tuareg I met that winter went barefooted or wore sandals, and those who wanted an extra protection against the cold wore various types of European footwear and stockings.

Lhote describes the skin-stockings (*abuheg*) used among the Ahaggar Tuareg as having a very particular cut, so that the first toe is separated from the other toes in order that the stocking may be worn with sandals. The following description of Tuareg skin-stockings is additionally given:— "Cette chaussette monte un peu plus haut que les chaussures européennes à tiges et se lace de même au moyen d'un lacet de peau. Il y a une petite languette et la jonction empeignetige est renforcée par une rondelle de peau fixée par une couture. La semelle est une simple peau de filali qui serait vite usée si l'on marchait directement dessus. *L'aboûheg* est fait en peau de mouton ou en peau de gazelle tannée, et souvent avec des chutes de mauvaise qualité. Les peaux sont ordinairement teintes en noire et la rondelle de renforcement en vert. Mais il y en a aussi qui sont faites en filali rouge de bonne qualité. Le prix de ces dernières est plus élevé et elles sont généralement faites sur commande. On trouve sur le marché d'Agadez, des *iboûhegen* qui sont l'oeuvre des artisans cordonniers de cette ville. Nous n'en avons jamais vu faire chez les Touareg du Nord, qui les font aujourd'hui confectionner par des artisans de Tamanrasset et s'en procurent également à Agadez. De même, nous n'en avons jamais vu porter chez les Ioullimiden de Ménéka ou chez les Tenguéréguifs. Les gens d'In Salah et de Djanet la connaissent ainsi que les Chaamba" (Lhote 1950d, p. 527 f.). According to Lhote, just quoted, *abouheg* (*abuheg*) is described by Foley not as stockings, but as boots, which form part of the ceremonial equipment of the Ahaggar Tuareg, while Foureau (1894, p. 203) says that wealthy Tuareg among the *Kel Aïr* wear boots made of soft leather and manufactured at Rudames, Rat, and in Ayr. These boots according to Foureau have a separate space for the first toe in order that they may be worn with sandals, and as claimed by Lhote, they are not true boots, but skin-stockings (cf. Lhote 1950d, p. 527 f.). Duveyrier also speaks of the use of soft leather boots known as *ibôhadjen* sometimes worn by chiefs (Duveyrier 1864, p. 407), and in the case of the *Iwllemmeden Kel Dennek* Nicolas mentions the use of a type of boots ("la botte de cavalier") known as *abūzag* (pl. *ibuzāgen*) (Ar. *tmāg*) (Nicolas 1950a p. 174).

Foucauld speaks of *abuheg* as a type of soft leather boots, but he mentions that this same word is also used for knitted stocking. Such stocking are also known by the feminine form *tabuhek*, though the proper meaning of this latter word is "slipper". Slippers are worn by a few men and women in winter, and a woman frequently wears them during the period of isolation (4 months and ten days) after her husband's death. According to Foucauld the leather boots (*abuheg*) are never worn by women but only by a very few men (cf. Foucauld 1951–52, I, p. 36). It is a great pity that the authors who refer to the use of soft leather boots or stockings have reproduced no illustration which clearly indicates their cut. But fortunately there is a pair of leather stockings in the collection of the Ethnographical Museum at Neuchâtel. There can be little doubt that this garment serves as a stocking and not as a boot, for it has a separate space for the first toe which would be meaningless if not worn with sandals. The leather stocking is made from three pieces of leather:— (1) A sole or rather a bottom piece which is bent slightly up over the foot, notably at the heel; (2) A piece of leather covering the instep and sewn to the forepart of the bottom piece; (3) A piece of leather forming the leg and sewn to the instep and bottom pieces. It is interesting that all three pieces are of the same type of leather and that the bottom piece resembles that of moccasins.

The sort of slipper termed *tabuhek* by Foucauld and worn by both sexes, is identical with leather slippers or shoes provided with a distinct sole. These shoes seem to be of Arab origin, and I have

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

492 an ancient North African custom. It is the method generally applied by the Tuareg and those Northern
171 Arabs who use saddles of the *térik* or *tahyast* types; it is also practiced among the Moors of Mauretania (cf. Monteil 1952, Puigaudeau 1945, ill. p. 128–129), and is known to the Tebu (Cline 1950, p. 34). It would appear that the use of nostril rings for riding camels has much the same distribution in North Africa as have saddles of *térik* or *tahyast* types including the Moorish saddle, which is also placed in front of the animal's hump.

The Tuareg halter made of iron or metal shackles and used in connection with the nostril ring so that the camel is controlled by means of a double rein (*akeskabbu*; cf. p. 73, Fig. 50–52), is perhaps a combination of two originally different systems, for the Tebu use this peculiar halter without any attachment to a nostril ring, the camel being controlled by a single rein combined with the halter (cf. Le Coeur 1950, p. 133, pl. XXIX Figs. 111–112 & Cline 1950, p. 34).

136 Much has been written on the history of the camel in North Africa, and I do not want to take up
174 this question in great detail as I can add very little to what is already known. René Basset's theory
● 114 that the camel was first introduced by Arabs of the first invasion (Basset 1907) is contrary to all historical information, for we know with certainty that the camel was known to the Berbers before the Arabs arrived. Contemporary with Basset it was pointed out by Flammand, that skeletal remains of camels from North Africa proved the exsistence of these animals as early as "les temps quaternaire moyens" (Flammand 1907). But while Flammand states that the camel disappeared with a more humid climate, Cauvet later tried to substantiate the theory that the camel did not disappear, but continued to exist further south in Africa. Thus, he claims, the southern camel-breed descends from the ancient camel found in Africa even during the mio-pliocene of the tertiary period, while the northern breed was introduced by the Arabs (cf. Cauvet 1925–26, I, p. 15 ff.). I can agree with Cauvet's latter statement regarding a connection between northern camels and the Arabs, but his theory of the existence of the one-humped camel in Africa since tertiary time is most difficult to accept. The camel breed which existed in Africa prior to the Arab invasions was no doubt comparatively recently introduced from Asia. Barth pointed out that the camel came to North-western Africa about the beginning of the Christian era (Barth 1849, I, p. 3 ff.). This theory has later been supported by many scholars, notably by Gautier (Gautier 1928,, p. 99 f., ed. 1946, p. 129 ff.; 1942, p. 190 ff.). Quite recently the various problems connected with the history of the camel in North Africa have been re-examined by Walz. He largely accepts Barth's theory of its introduction in antiquity, but also points out that the camel, which seems to appear in Egypt about 500 B.C. or somewhat earlier, may have been introduced to southern parts of Africa via the Bab-el-Mandeb Straits at an earlier date (Walz 1951, p. 29–51; 1954, p. 45–87).

Gautier states that the Romans had a certain responsibility for the introduction of the camel into North-Africa, though he also claims that it was introduced by the Berber-speaking *Zenata* tribes
174 (Gautier 1942, p. 209 f., 227). It is to be doubted that the Romans introduced the camel into North-
177 Africa, and on the whole it seems as if the Romans have influenced Tuareg culture very slightly. It is difficult to point to any definite traits of material culture taken over from the Romans, though Foucauld states that certain lamps of Roman form are found in Tasilé-n-Ajjer (Foucauld 1951–52, III, p. 1399). A fair number of Latin words can be proved to exist in Tuareg dialects. This fact is

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

with hot stones, which is still used for certain dishes, constituted in the past a very important method of food preparation being used for milk, meat, and for vegetable dishes alike. Also an ancient implement is perhaps the quern-stone, though it has to be admitted that it occurs throughout the world in many farming cultures. Tuareg dishes known as *tébik* and *téderka* (cf. p. 175 ff., 251) should doubtless be considered very ancient, and this is probably also the case with Tuareg method of bread-baking which is different from the methods used among most North African farmers. Bread is frequently baked from wild seeds, and it is not made from true dough but rather from a kind of gruel to be baked according to the *abatul*-method. /174

The existence among the Tuareg of leather garments of simple poncho type is of particular interest, the more so as such shirts are extremely rare in Africa. In literature they seem to be mentioned only in the case of the Tebu, and there is a well-preserved shirt from this people in the Musée de l'homme (Paris). It is made of the skin of barbary sheep, and is sewn together at both sides, but the upper parts of the sides are left open to form very large and wide arm-holes; patches of leather with ornamented fringes are sewn to the shoulders to form a kind of open sleeves. This skin shirt, which resembles that of the Ahaggar Tuareg, is said to be worn by blacksmiths (Musée de l'homme, no 35.50.107). Le Coeur mentions leather shirts from the Tebu stating that they are but little used nowadays:— "Seuls les hommes de condition servile le portent encore". He provides a photograph showing a Tebu blacksmith in a long skin shirt which has a kind of open sleeves attached to the shoulders (Le Coeur 1950, p. 100, pl. XXXIII Fig. 124). Leather shirts are mentioned from Central Tibesti by Fuchs, who depicts a shirt of this kind which is now in the Museum für Völkerkunde in Vienna (Fuchs 1961, p. 23 f., Fig. 7 p. 24). Lebeuf says that among the Tebu, skin shirts are worn mainly by the Aza who make them from antelope skin, but they are also found among the Danoa of Kanem. These two peoples, the Aza and the Danoa, are related to each other. They never live in villages, but are roaming hunters who use the bow and arrow but mainly hunt by driving animals against cords. The Aza form small sections and are attached to the nomadic Daza as a kind of vassals (cf. Lebeuf 1959, p. 9, 16, 24, 39, 44). The origin of these peoples is uncertain. They seem to constitute remnants of an ancient hunting population. /171

Tuareg garments of leather or skin are in general of simple form and cut, and most probably constitute types of early dress development. This is perhaps also true of sandals of the *imerkeden* type, and perhaps even of skin stockings. If this be so it is very remarkable that we find among the Tuareg a poncho shirt of very primitive cut together with sandals and stockings, for we know from Hatt's brilliant analysis of arctic dress development that the oldest complex of skin garments in Arctic Eurasia and America – the so-called "Sandal System" – consists of (1) Clothing developed from the poncho type; (2) Breeches developed from leggings, in some cases probably from leggings combined with a triangular genital cloth; (3) Boots and shoes developed from stocking and sandals (cf. Hatt 1914, p. 214 ff. 1934, p. 2755 ff.). /174

I think that this brief description of Tuareg culture in the light of African culture complexes can adequately be concluded as follows:— Most of Baumann's cultural groupings have little value for an analysis of the historical development of Tuareg culture. His classifications are often too vaguely defined, and he does not always substantiate his theories by archaeological facts. The so-called Old /121 (114)

## B. PORTABLE DWELLINGS

*342 Portable dwellings represent a great diversity of types among pastoral Tuareg. I speak of all these dwellings as "tents". For practical reasons I distinguish between "mat tents" and "skin tents", and to make it easy to refer to definite types I give them particular numbers. I believe that most portable [12] dwellings of the Tuareg *are* historically related to each other and the problem of historical development is considered later in this chapter.

### B.1. *Mat Tents*

285 *342 Mat coverings are nowadays used only in Southern Tuareg groups, but they were formerly known also to the Northern Tuareg, for Duveyrier states that the Northern Tuareg may use for their tents a covering *éhen* "en tissu de chaume" (Duveyrier 1864, p. 403).

Tent mats are of two different types, the more common one being that made from dum palm leaves plaited into long narrow bands which are sewn together with strips of the same material by means of a large needle (cf. Fig. 220b). Mats of this type are collectively known as *asalu* (pl. *isalan*). The innermost mats which cover the upper part of the tent among the Ayr Tuareg and the *Kel Geres*, among whom dum palm mats always form the main covering, are made from pieces of straw or similar material which are not plaited, but are attached horizontally to one another by means of thread in much the same way as the mats described p. 269, that is like mats of the *éseber* type. Where dum palm material is not available the tents may be covered exclusively with mats manufactured in this way, and a tent of this kind may then be referred to as *éwerwer* (pl. *iwerweren*), the word used for tent mats of this type. The *éwerwer* type of mat tents is described from the *Kel Dennek* country (Nicolas 1950a, p. 156 f., Fig. 31a–d), and it seems as if tents exclusively covered with mats of *éwerwer* type also occur among the *Bélla* along the Niger (cf. Chudeau 1909, pl. XXXII & XXXIII p. 218).

*342 My knowledge of Tuareg mat tents derives from my studies among the Ayr Tuareg, the Ahaggar [14] Tuareg living in or close to the Ayr Massif, and the *Kel Geres*. Mat tents used among these Tuareg are largely identical, and the material I have collected in these Tuareg groups will now be presented:—

B.1.a. This is a mat tent like that generally used among the *Kel Ayr*. It has an elaborate structure:—

(1) Three wooden arches each consisting of two curved pieces of wood, lashed together when the tent is erected. These three arches are placed in the middle of the tent at right angles to its longitudinal direction. The two curved wooden pieces which together constitute an arch are not of equal length. The arch piece which is fixed in the soil at the frontal side is very long, while the other curved piece attached to it and buried in the ground at the back is shorter. The short curved arch-pieces of all three arches are known as *ineggebela* (sing. *aneggebalu*), while the three long wooden arch-pieces to which they are attached have different names. The curved frontal piece of the middle arch, higher than the two outer arches, is called *tekkekkewat* (pl. *tekkekkewatin*). The frontal arch-pieces of the two outer and lower arches are known as *t'ilisawin* (sing. *t'ilisawt*). These latter names are also used to designate the erected arches made from the arched pieces lashed together, so that the central arch is referred to as *tekkekkewat*, while the two lower arches are called *t'ilisawin*. – The curved pieces

Fig. 270. An arched barrel-vaulted tent covered with a sheet of skin. In the background two arched mat tents. In the foreground to the left two cotton bows. Ayr, the *Kel Tédalé* tribe.

*342 true structure, and structurally there is a great diversity of tent types. It seems as if these tent structures can be divided into a few main groups which I shall describe in detail.

B.2.a. *Skin tents of arch construction.*

Tents which have one or more arches, generally placed at right angles to the longitudinal direction are widely found in Tuareg country. They are in fact more common than appears from the literature which has been so far published on Tuareg culture. The wide distribution of this particular structure in skin tents is interesting, the more so as it is related to the structure of mat tents. There are the following types of arch structures:—

B.2.a.1. This tent was seen in a camp of the *Kel Tédalé* Tuareg of North-western Ayr. It is known that skin tents are found among them (cf. Joubert 1939, p. 252 f.), but they have never been described. The Ayr Tuareg say that in the past many Tuareg of the *Kel Tédalé* lived in skin tents which, however, are less common among them nowadays. This agrees with my own experience. I have visited several *Kel Tédalé* camps, but I have only seen the skin tent here mentioned. This was found in a camp of three tents, the two others being ordinary mat tents. The skin tent I saw in this camp was also of the normal structure used for mat tents in Ayr, though shorter. The lower part was partly covered, not by a mat plaited from dum palm leaves, but by an *afezu* mat.

[114] [361]

B.2.a.2. Under this heading I describe two identical tents seen in a camp of *Ireġenaten* Tuareg who belong to the Ahaggar federation but have their traditional grazing grounds west of the Ayr Massif in the Tamesna Plains. The camp was actually situated in the region between Tegidda-n-tésemt and I-n-abanṛerit, where perennial vegetation is extremely scarce and mainly comprises scattered *tamat* acacias (*Acacia flava*). The camp visited had eight skin tents among which were the two of arch construction as follows:—

[221] [361] [137]

Both tents were very small, and their wooden structure was made of boughs of the *tamat* acacia (*Acacia flava*). In the middle of the tent and at right angles to its longitudinal direction there was an

[824]

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

upon this structure is attached to poles fixed in the ground at the sides (cf. Lhote 1947a, p. 84 ff., 123 ff., 154 f., photographs Nos. 59–65, p. 96–97). 342*

B.2.f.2. This type, described from the *Iwllemmeden Kel Ataram* by Lhote, is similar to the above-mentioned type but has four pairs of forked sticks provided with cross-bars. The two middle pairs of uprights are somewhat higher than the two outer pairs. This structure is used for particularly large tents among the Western *Iwllemmeden* (cf. Lhote 1947a, p. 85).

Lhote says that the above-mentioned two types of structure are also found among the Kel Adrar (Lhote 1947a, p. 108 f.) and this would also seem quite natural in view of the fact that these Tuareg once formed part of the *Iwllemmeden* group. Cortier says that the *Kel Adrar* have tent structures of uprights with horizontal cross-bars (Cortier 1908, p. 327 f.). I have myself been told by Iforas Tuareg whom I met in Ahaggar that they possess tent structures similar to those commonly used in Ahaggar nowadays, and these Ahaggar tents resemble those described from the *Iwllemmeden* by Lhote. I shall now describe these structural types of Ahaggar.

B.2.f.3. This tent, which has three pairs of uprights carrying horizontal cross-bars, has been frequently described and depicted in literature. A most valuable description, with many photographs showing the wooden structure, has been published by Lhote in his book on Tuareg tents (Lhote 1947a, p. 34 ff., photographs Nos. 1, 5, 7, 8, 13, 20, 27, 36, 37). The structure is also described by the same author in his general work on the Ahaggar Tuareg (Lhote 1955a, Fig. 22 p. 254). I present my own [22] observations from Ahaggar, where I have lived in such tents over extremely long periods. A tent which I measured among the noble *Kel Rela* may be taken as an example of the normal structure of this type. It was made from boughs of the *tabarekkat* tamarisk (*Tamarix aphylla*) which is generally [24] used for wooden tent structures in the north. The boughs had a diameter of about 0.05–0.07 m, the upright poles being somewhat thicker than the horizontal cross-bars. The three pairs of uprights had small prongs to which the cross-bars were firmly attached by cords of goat hair. The cross-bars were slightly curved, as is normal for this structure. All three cross-bars are called *ireğerağaten* (sing. *areğarağa*). The two pairs of outer poles are termed *tiğeffewin* (sing. *tiğeffewi*), while the middle pair of uprights are called *iğetten* (sing. *ağet*). Lhote gives the name *tamankayt* to the middle pair of sticks [14] (cf. Lhote 1955a, Fig. 22 p. 254), but this is not correct as the term *tamankayt* is used properly for a central T-shaped post to be described in the next section. The sheet rests upon the structure of uprights with their cross-bars, and pieces of old cotton are normally wrapped around the place where the cross-bars rest in the prongs in order that the sheet may not be galled by the prongs. It should be noted that the cross-bars are lashed separately to their uprights, and not by longitudinal cords as among the *Iwllemmeden Kel Ataram*. A piece of cord is tied around the end of a cross-bar and around one of the prongs of its uprights, and is then drawn along the cross-bar to be tied around its other end resting in the prong. All upright poles are fixed in holes dug 0.30–0.50 m deep in the ground, like the holes for the outer poles to which the sheet is fastened with cords of goat hair.

B.2.f.4. This tent differs from that just described in that it has two equally high pairs of uprights in the middle of the tent. These middle uprights (*iğetten*) are higher than the two pairs of outer uprights (*tiğeffewin*). There are in other words four parallel pairs of uprights carrying cross-bars which are frequently slightly curved as in the above-mentioned structure. This structure, with an additional pair

Fig. 283. Cross-bar (*tamankayt*) of the B.2.g.7 type. Ahaggar Tuareg of Tamesna, the *Ireğenaten* tribe.

in case of very extreme heat in the summer make a kind of primitive T-shaped post from a simple bough of tamarisk, to the top of which they attach a short stick of the same material. They then wrap pieces of old cotton around the place of attachment in order that the post shall not gall the sheet. [214] But though I have lived among vassal Tuareg of Ahaggar over extremely long periods of the hot season I have seen such primitive T-shaped posts only once. As already stated T-shaped posts seem to be advantageous also during heavy showers of rain as the water quickly runs off the sheet. However, I have never seen vassal Tuareg use simple T-shaped posts in case of heavy rainfall, for they content themselves with holding a stick or pole against the sheet as long as rain falls. Primitive T-shaped posts like those just described from Ahaggar and consisting of a simple post at the top of which a short horizontal stick is attached, seem to be a mere imitation of the true T-shaped posts. However, there is another and very interesting type of T-shaped post, which I describe below under the two headings:—

[361] B.2.g.7. This tent I saw in a camp of *Ireğenaten* Tuareg not far from I-n-abanrerit in the Tamesna Plains. The tent had two pairs of forked sticks (*tiğeffewin*) each pair carrying a horizontal cross-bar (*areğarağa*). These forked sticks with their cross-bars were about 0.70 m high. While these sticks were buried in the ground there was between their two cross-bars a central forked post (*ağet*) about 1.20 metres high. In its prong it carried a most unusual cross-bar called *tamankayt*. This consisted of a wooden frame 1.44 m long and 0.72 m broad made from three long sticks attached to three short ones the middle one of which was particularly heavy and rested in the prong of the central post (cf. Fig. 283). The short sticks were parallel to the two outer cross-bars and at right angles to the longitudinal direction. In other words, the length of this cross-bar frame followed the longitudinal direction of the tent, but in spite of this we can speak of a cross-bar placed at a right angle to the longitudinal direction, as one of the short sticks of the frame rests upon the central post. The frame-like cross-bar was not fastened to the outer cross-bars with cords, and the central post was not buried in the ground.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

In literature there are tent descriptions which I have omitted in my survey of Tuareg tent structures, partly because the descriptions are unclear, and partly because they clearly indicate tents which are not erected according to any definite method (cf. Demoulin 1928, p. 159; Campbell 1928, p. 205; Bernard quoted by Laoust 1930, p. 225). 342*

Finally, I add that the sheet of skin is very commonly used for a kind of wind-screen among the Tuareg. Such wind-screens are of two types:— (1) The sheet is attached to three or four sticks buried in the ground. A wind-screen of this kind is depicted in Fig. 284a. It serves as a temporary shelter for visitors in a camp. (2) The sheet is supported by three or four sticks placed in one row with a long stick resting horizontally in their prongs. Such wind-screens are seen in Figs. 284 b-c. They are used by the members of a household in ordinary camps, and it is quite common to erect tents in this manner during seasons when rainfall is not expected. Indeed, many Ahaggar Tuareg use their skin tents only for a part of the year, for skin tents are not too well adapted to the burning hot desert climate. If possible, many Tuareg prefer to live in the shade of rocks and trees, and if efficient shade of this type is found the skin tents are generally not erected. But the Tuareg will then erect part of the wooden structure, namely the forked sticks carrying cross-bars, as these elements serve not only as supports of the sheet, but also for the suspension of skin bags and various domestic implements (cf. Fig. 106). [574] [182] [352]

Capot-Rey writes that the Tuareg skin tents are also less waterproof than mat tents (Capot-Rey 1953a, p. 225), but this is not correct. During the rains, as we have seen, skin tents are preferred by many Tuareg who at other seasons live in mat tents, and we have also seen that many Ayr Tuareg will then cover their mat tents with skin. If skin tents were not well fitted for rain they would indeed be very badly adapted also to the Sudanese zone where they are widely found among the Tuareg. [114] [182]

There can be little doubt that the use of skin sheets is very old, for all over the world we find them used for portable dwellings among people at primitive subsistence levels. It is also substantiated by Feilberg that we have throughout the Near and Middle Easts isolated occurrences of skin tents, and that these seem to have been more common in these regions in the past. Feilberg mentions in particular the use of skin for tents among the Tuareg and among the Sluba of Central Arabia (cf. Feilberg 1944, p. 144). When Feilberg wrote his book on tent development in the Near and Middle East, a description of the structure of Sluba tents was not available. But later investigations have intimated that some skin tents of the Sluba do not seem to be structurally related to ordinary Tuareg skin tents, but rather constitute a kind of wind-screen (cf. Lundbæk 1962). I have mentioned above that the Ahaggar Tuareg also use their tent skins as wind-screens, but it is evident that structurally the normal skin tents in all Tuareg groups have nothing to do with wind-screens. 342* 171

It is possible that the use of skin for wind-screens is extremely old among the Tuareg, but there seem to be some evidence that plaited grass mats for covering the true tents are older. We have seen that among Tuareg who use mat tents (the *Kel Ayr* and the *Kel Geres*), the inner layer of mats covering the dome-shaped top consists of *ćwerwer* mats made of plant stems tied together, and it has also been mentioned that certain arched tents among the *Kel Dennek* and the Sudanese *Bélla* are covered exclusively with mats produced on this principle. According to Duveyrier mats of straw were formerly used for tent covering among the Northern Tuareg, and it is possible that the *qfezu* mats, which seem to constitute the walls of all Tuareg skin tents, may be considered a survival from tents 342* 174

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

*342 174 covered exclusively with straw mats. Tuareg skin tents may perhaps have originated from tents covered with grass-mats which had the dome-shaped top covered with a sheet of skin during the rains. At all events I assume that most Tuareg skin tents have developed from a type of barrel-vaulted dwelling, and it is most significant that rudiments of arch constructions occur in skin tents within all Tuareg groups.

The development of Tuareg tents is difficult to explain by mere reference to environment, and we should also try to take into consideration historical factors. I believe that tents with upright forked poles which carry horizontal cross-bars developed from a barrel-vaulted structure. I believe that this is indicated by the material presented above. Thus most or all barrel-vaulted dwellings among the Tuareg have at their narrow ends a pair of forked poles with a horizontal cross-bar placed at right angles to the longitudinal direction and parallel to the arch or the arches, which are placed in the middle of the tent. We have also noted that we have tents of one central arch and two outer pairs of sticks with cross-bars covered with two semi-arches, and tents in which this middle arch is substituted by a pair of sticks carrying a cross-bar. It seems quite natural to consider all tents supported exclusively by pairs of sticks carrying horizontal cross-bars as deriving from barrel-vaulted dwellings. One would perhaps then be tempted to suppose that such an evolution took place in the true desert country, where it might seem easier to make tents from a certain number of sticks tied together than from curved arches. However, as far as our knowledge goes, an evolution of portable dwellings among the Tuareg from arched types to types exclusively consisting of cross-bars resting in forked sticks seems to have taken place outside of the proper desert country. All old Tuareg of Ahaggar admit that the common type of tent structure in their childhood was that of two arches, while these arches, they say, have now been replaced by cross-bars resting in pronged poles. This agrees with the fact that Foucauld, [114] who lived in Ahaggar from 1905 to 1916, does not mention tents of the cross-bar type which are now almost exclusively used by the Ahaggar Tuareg. According to Foucauld, Ahaggar tents fall into two main types, namely those supported by arches and those supported by T-shaped posts. When the structure made exclusively with forked poles and cross-bars was adopted we do not know, but I believe that it may perhaps have taken place in the twenties. In any event there seems to be little doubt that [114] they were common at the end of the twenties, for they are depicted by Moberg from his journey to Ahaggar 1929-30 (cf. Moberg 1933, p. 59, 63, 65). The question now arises why the Ahaggar Tuareg *342 178 gave up their arched dwellings, which are so extremely rare nowadays, and adopted the upright forked poles-crossbar structure? Lhote thinks that in Ahaggar there were perhaps the following reasons:— (1) The arched structure is better adapted to rain, but has become less useful owing to the increasing dryness of Ahaggar; (2) It is more difficult to procure the long roots of tamarisks for arches; (3) The arches used in ancient times were difficult to carry from camp to camp; (4) The structure consisting of cross-bars resting in forked poles may perhaps have been introduced owing to contact with the *Iullemmeden*, who use a similar type of tent-structure (cf. Lhote 1947a, p. 42 f.; 1955a, p. 256). Of these arguments I find the last the most convincing, the more so as I have myself been informed that the tents of cross-bars resting on forked prongs have been introduced owing to contact with the Southern Tuareg who have similar tents. One might perhaps assume that the tent was actually introduced owing [388] to contact with the *Kel Adrar*, as the Ahaggar Tuareg have married women of that Tuareg group

[text continues on p. 388]

173 tradition according to which some of the *Isebeten* formerly engaged in agriculture in Ahaggar (Fou-
565 cauld 1951-52, II, p. 535). The *Isebeten* spoke a Tuareg dialect different from that spoken to-day.
[172] Numerous prehistoric survivals draw attention to the mode of livelihood of the ancient *Isebeten* people. A huge tomb at the foot of the Asekrem mountain is said to contain the remains of their supreme chief, *Akkar*, and the Tuareg say that the large stone pestles (cf. Fig. 200) commonly found in Ahaggar, were used by the *Isebeten*. The existence of the *Isebeten* in Ahaggar is a fact, besides, two men known as *Mokhammed ag-Kerku* and *Êmenni ag-Khedidda*, both members of the *Dag Ṛali* tribe, are said to descend patrilineally from the *Isebeten*. Tuareg of the *Dag Ṛali* claim that their tribe descends from the *Isebeten*, or is very closely related to it, so that the ancient population of *Isebeten* formed the ancestral tribe of the oldest vassals *Dag Ṛali* (*Kel Ahnet*) and *Ayt Lowayen*. These *Isebeten* were conquered by the ancestors of the noble Tuareg who came to Ahaggar at a later date and introduced the camel.

It is striking that this tradition about the origin of the oldest Ahaggar vassals from the ancient *Isebeten* contains no mythical elements, and I believe that it holds an element of truth, the more so as it explains the origin of the class division in a quite natural way. Dr. Vycichl has tried to connect the word *Isebeten* with the name of a Libyan tribe *I-s-b-t-u* mentioned in Egyptian accounts, according to which the tribe was exterminated by Rameses III (cf. Lhote 1955a, p. 145). However, there is no reason to speculate about the name in this way, as it can be explained more naturally without much
[551] difficulty. For the word *Ésebet* is very frequently used as a personal name of women in the *Dag Ṛali* tribe so that it would seem natural to interpret the name *Isebeten* as "a group of people descending from the woman *Ésebet*". If this interpretation is correct it would seem that the ancient *Isebeten* had
[114] a system of matrilineal succession. Lhote has stated that certain hunting territories in the *Dag Ṛali*
[428] tribe are inherited in the paternal line by people who descend from the ancient *Isebeten* (Lhote 1955a, p. 144 f.) but this is not in agreement with my own investigations, which show that the two men said to descend patrilineally from the *Isebeten* have no rights over hunting-territories.

174 The cultural features said to have been characteristic of the ancient *Isebeten* are to a large extent
614 conserved even nowadays in the *Dag Ṛali* tribe. These vassals, like other true vassals of Ahaggar, are
565 known by the name *Kel Ulli*, that is "the goat people", or by the name *Imṛad* which perhaps also refers to goat-breeding for, according to Nicolas, the word is related to *eṛeyd* meaning "a kid" (Nicolas
[433] 1950a, p. 189). We can add that even to-day the subsistence activities of the true vassals centre mainly around goat-breeding, with hunting and collecting as subsidiary occupations. Hunting is particularly
[224] important to the *Dag Ṛali*, descendants of the *Isebeten* and living within the same territory as did this ancient people.

173 As to the arrival of the noble Tuareg, comprising the *Kel Ṛela* and the *Taytoḳ*, said to descend from
565 *Ti-n-Hinan*, there is some evidence that they did not constitute the oldest noble Tuareg settling in Ahaggar. The tradition of their descent from *Ti-n-Hinan* claims that these noble Tuareg came from Tidikelt in Morocco, that they descended from the *Beraber*, and that they were Islamic. The claim that they were Islamic cannot be easily reconciled with the view that their ancestress was buried in the large tomb or fort at Abalessa, for this huge building is beyound doubt pre-Islamic. I think it possible that the tribes said to descend from *Ti-n-Hinan* were Isamic when they immigrated to Ahaggar.

## THE KEL FERWAN DRUM-GROUP

634 Lists of tribes which belong to the *Kel Ferwan* drum-group have already been published. Jean has
614 fourteen in his list (Jean 1909, p. 104), Rodd and Abadie have fifteen (Rodd 1926a, p. 427 f.; Abadie
[114] 1927, p. 391 f.), while Nicolas puts twenty-two tribes in the group (Nicolas 1950b, p. 474 f., 480). My own list comes close to that of Nicolas, but contains a few additional names. I have divided my list in two parts, as there were within the *Kel Ferwan* drum-group two important noble tribes each with a group of particular vassals. The traditional grazing grounds of the important tribes in the past are also indicated. I have not been able to get precise particulars about the size of tribes, and therefore
[162] quote the figures given by Nicolas (Nicolas 1950b, p. 474 f.). The tribes differ greatly in size, ranging from 653 to 42 individuals. The average figure for a tribe is about 250.

178 The traditional political structure of the *Kel Ferwan* drum-group has almost completely disappeared,
634 and it seems as if the ancient rules were in decay shortly after the French occupation of Ayr when
648 the Sultan became strongly supported by the administration. Since the rebellion against the French in 1917, political life has become completely altered and the traditional political structure has had to
121 be reconstructed. I have tried to make a reconstruction of this nature by my investigations in Ayr,
634 where I had a number of old men as informants on this particular subject. My investigations were
115 most difficult because many Tuareg would often ascribe their tribe, their class, and their drum- group a far higher political importance than it seemed to have had. However, I found a few old vassals who seemed to be able to tell about the past without much prejudice, and I believe that I obtained a fairly correct description of ancient political life within the *Kel Ferwan* drum-group.

173 The two noble tribes of the *Kel Ferwan* drum-group, namely the proper *Kel Ferwan*, or *Irawatten*,
614 and the *Kel Azel*, have certain traditions about their origin in addition to those mentioned above
634 (p. 413 f.). The noble *Kel Ferwan* (the *Irawatten*) sometimes say that the ancestress of the *Kel Azel* married an Arab who was killed at her own request, but there is another and more general tradition

342

Fig. 288. The palace of the Sultan of Ayr at Agadez. The Sultan has just returned from a short journey out of town and musicians including three drummers mounted on camels (left) are playing in his honour.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

the *Al-Ḳadi*. In this respect the position of the *Kel Geres* drum-chief is similar to that of drum-chiefs among the Ayr Tuareg, and though the present drum-chief says that the *Kel Geres* were never divided into noble and vassal tribes, he nevertheless claims that part of any war-booty taken by *Kel Geres* Tuareg in the past should be given to the drum-chief who had the right to *témaggedaz* and *téwit* (cf. p. 428). The drum (*ettebel*) of the *Kel Geres* drum-chief is akin to drums of other Tuareg chiefs. The drum must not touch the ground, but the drum-chief did not believe that its power would be spoilt were it to be touched by women.

## THE KEL ADṚAṚ

The *Kel Adṛaṛ* are very superficially described in literature, but their political system has been outlined by Cortier. They constitute only one drum-group under the leadership of an *Amenukal* who is the possessor of the drum (*ettebel*). The class-division is rather similar to that of most other Tuareg groups. There are certain vassal tribes (*Imṛad*) and certain noble tribes though the latter are not considered noble in the usual sense. They are known as proper *Ifoṛas* Tuareg and they are to be grouped rather with the *Ineslemen* class than with the proper noble class termed *Ihaggaren* or *Imajeṛen*. However, their position within the drum-group is almost identical with that of noble Tuareg in other groups. The *Amenukal* is elected according to patrilineal rules being succeeded by his younger brothers and next by his sons, but the vassal tribes do not participate in the election. Within the drum-group there are many smaller divisions of noble families who have their individual vassals, so that from any vassal tribe there are always certain families living in the camp of a noble lord to work for him and to guard his domestic animals. A noble Tuareg can also claim what he wants from his particular vassals while on the other hand the vassals do not pay any fixed tribute to the noble chiefs, not even to the *Amenukal*. The power of the *Amenukal* is a very limited one, and his position is mainly determined by his personal qualities (cf. Cortier 1908, p. 274 ff.).

## THE IWLLEMMEDEN KEL DENNEK

The *Kel Dennek*, that is the *Eastern Iwllemmeden* around Tawa, have been described in detail by Nicolas who, however, is not very clear as to particulars. Apart from the class of *Ineslemen* the *Kel Dennek* Tuareg are divided into the classes of noble Tuareg (*Imazeṛen*) and vassal Tuareg (*Imṛad*, or *Kel Ulli*). These vassal Tuareg are politically attached to four drum-groups (*ettebel*) in which the drum-chief is elected from a noble tribe according to patrilineal rules. One of these drum-groups has a leading position, as its chief with the title of *Amenukal-n-akal* is the supreme chief of the whole *Kel Dennek* group known as *tégezé*. In addition to his drum this supreme chief (*Amenukal-n-àkal*) has a burgee or flag to be used in case of a holy war and on certain ceremonial occasions such as the installation of an *Amenukal*. This flag is made of silk and is green, blue, and red in colour. The title *Amenukal* is

28

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

The title of Amenukal is

634 used for other important chiefs but the *Amenukal-n-akal*, while the title *ettebel* is reserved to those
565 chiefs that command a drum-group and possess a drum. These drum-chiefs, including the *Amenukal-n-*
651 *akal*, have the right to an annual tribute known as *šiuse* (*chiwsé*) from their individual vassals, and it seems as if the tribute known as *sadaḳa* or *tamessadeḳ* must also be given to them, because the drum-chief is inseparable from his *Ḳadi* or *Imam* who shares this tribute, originally a purely religious one. It would appear that the drum-chief also has the right to *tekasit* or *takote* (*takuté*), that is the
634 right to inherit part of the fortune left by deceased vassals. As in Ahaggar, the drum-chiefs have certain
565 delegates or representatives who are known as *Khalifas* or *Anemazul*. It also seems as if there were in the past, as in Ahaggar, smaller units of noble Tuareg and vassals, and it is stated by Nicolas that the vassals were under the obligation to guard the herds of their noble lords. The vassals have the right to take part in political or judicial councils (*ameni* and *zemaret*), but they have no right to take part in decisions, or to vote at the election of a drum-chief. They had also no right to possess camels. The noble Tuareg had all political rights and the privilege of waging war. They had the right to war-booty which they would distribute among their vassals who might even be wealthy. – These are the
[178] main features of the *Kel Dennek* system. It began to break down already in 1900, and there has been
[642] no supreme chief of the *Kel Dennek* since 1917 (cf. Nicolas 1939, p. 579–586 & 1950a, p. 188–193, 201–209).

## THE IWLLEMMEDEN KEL ATARAM

642 The *Kel Ataram* have been little written about. The best description is given by Richer who says that
565 in pre-French times the South-western Tuareg were divided into two federations:— (1) the *Kel*
[114] *Tademaket* around Timbuktu and (2) the *Iwllemmeden Kel Ataram* around Gao and Meneka. In both federations there are noble Tuareg (*Imuchar*) and vassals (*Imrad*, sing *Amerid*, or *Dara*). The dominant noble class holds its power because of its pure origin and strength. The vassals are more mixed with
[567] Arabs and Negroes. They have herds of their own and slaves (*Bélla*). They pay *tiwsé* to the noble Tuareg, but this payment is a very small one and mainly to be considered a symbolic admission of the supreme power of the noble Tuareg. The noble Tuareg in the past had to protect their vassals, but the vassals accompanied their noble masters on raids and were given part of the war-booty. All
[614] tribes, whether noble or vassal, have a chief known as *Amrar*, but all important decisions are made
[648] by the *myad*, that is a council of noble Tuareg with their chief acting as a kind of president. This
643 council of noble Tuareg elects a supreme chief with the title of *Amenukal*, but the vassals also have the right to vote at his election. The *Amenukal* is mainly occupied with foreign policy and with warfare. He is always elected from the same tribe, but his office is not hereditary nor is it necessarily held for a lifetime. The insignia of the *Amenukal* is the drum, *tobol*. Richer gives no further particulars of
642 the political system, and many of the vassals had already at his time gained an entirely free position
565 (Richer 1924, p. 3 f.). – To this description given by Richer I add a few notes taken from Aymard:—
[614] Vassal tribes can have a superior position in relation to other vassal tribes. Thus many small and weak tribes are commanded by the *Kel Gossi* and *Idnanes* who are vassals. A noble Tuareg does not marry a vassal woman, while a noble woman may marry a vassal Tuareg as her children will become noble.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

602 However, the Tuareg say, a man can complain in very extreme cases when sons or sister's sons constantly take animals from him. I have met several Tuareg who have lost many animals taken by sons and sister's sons. One Tuareg had lost seven camels, taken by his oldest son, who had sold them. The Tuareg was very annoyed about this but he had not complained about it directly to his son. The old drum-chief of the *Kel Ferwan* group was constantly complaining to me about his sisters' sons, who took his animals so that he could not leave so large a fortune to his son. He openly called his sisters' sons "thieves", but as far as I know he did not complain about it to them. I was also told in Ayr that the fact that a man could take animals from herds and flocks of his true mother's brothers would not normally lead to conflict between them. Some Ayr Tuareg said that they were as fond of their sisters' sons as they were of their own children. It can be added that if a man has taken many animals from a mother's brother the latter's son may perhaps be able to retaliate as he has the right to take belongings from this man, who is his cross-cousins.

(6) As the last characteristic of Tuareg kinship behaviour it may be mentioned that, among certain Tuareg of the *Kel Ferwan* group, it is normal for a man to inherit the kinship status of his parents on their death, in the way that he adopts their joking relationships with their classificatory cross-cousins, but he will never inherit a joking relationship with the true cross-cousins of his deceased father and mother.

The above-mentioned rules of kinship behaviour seem traditional to Tuareg social organization and very different from those considered valid among the Arabs. The social systems of Tuareg and 177 Arabs are on the whole most disssimilar, but nevertheless the Arabs and the Tuareg of to-day have 428 exactly the same rules of inheritance which follow Koranic law. It is evident that these rules have been introduced among the Tuareg owing to contact with the Arabs who brought Islam to North Africa. It is very difficult to determine when the Tuareg adopted Islamic inheritance rules, and also to learn about their pre-Islamic inheritance system.

634 In regard to Tuareg rules of succession there can be no doubt that the matrilineal principle was 643 originally recognized in all groups, but the patrilineal principle has been introduced into certain groups owing to Arab influence. The Tuareg who have adopted patrilineal succession are notably the two groups of *Iwllemmeden*, the *Kel Adrar*, and Tuareg of the *Ineslemen* class in various groups (cf. Nicolas 1950c, p. 492 f.; 1950a, p. 213). In fact we know that the *Iwlemmeden* adopted patrilineal succession as early as in the 17th century (cf. Richer 1924, p. 3, 52; Nicolas 1950a, p. 54 f.), and patrilineal succession is undoubtedly also of great age among the *Kel Adrar*, where the dominant tribes belong to the *Ineslemen* class. As to the two important groups of Southern Tuareg, the *Kel Ayr* and the *Kel Geres*, Nicolas states that succession among them is matrilineal, as it is in Ahaggar (Nicolas 1950c, p. 492 f.), and matrilineal succession is also mentioned as traditional to the Ayr Tuareg by Rodd (cf. Rodd 1926a, p. 151 f., 463 ff.). I have not been able to confirm these statements [119] during my investigations among the *Kel Ayr* and the *Kel Geres*. All people questioned in these two groups claimed that the proper successor to chieftainship would be the deceased chief's son, though it was admitted among the Ayr Tuareg that a sister's son might be elected chief if considered better fitted for this position than a son. It would be correct to state that both the *Kel Ayr* and the *Kel Geres* to-day acknowledge the patrilineal principle of succession, but it is not quite certain when they

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

634 Nicolas says that a maternal cousin is the first in line of succession, not only among the Northern Tuareg,
643 but also among the *Kel Ayr* and the *Kel Geres* (Nicolas 1950c, p. 492 f.). This, however, is not correct.
[114] I have been told by many Tuareg in Ahaggar that a maternal cousin is the proper successor next to a brother of the deceased chief, and genealogies seem to intimate that a maternal cousin has more frequently been elected chief than has a sister's son. Nevertheless, Ahaggar Tuareg, whom I consider extremely versed in traditional custom, claim the priority of a sister's son. In connection with Duveyrier's statement this makes me believe that the Northern Tuareg originally preferred sister's sons to succeed as chiefs, while preference to maternal cousins is a custom more recently adopted.

591 The rules of residence have been outlined in a previous chapter (cf. p. 142 ff.), and I have mentioned
768 that in Ahaggar residence is based upon both the patrilocal and the matrilocal principle as follows:—
586 A man remains with his father after marriage, but after his father's death he joins the camp of his mother and her brothers to live with his matrilineal relatives. A woman after marriage moves to her husband's camp. At her husband's death she will return to her father's camp, and if her father be dead she will join the camp of her mother and her mother's brothers. In case of a divorced woman the same rule is observed, but the children of a divorced couple belong to the father, and stay in his camp as long as he is alive. After his death they belong to the camp where their mother lives. However, the Ahaggar Tuareg sometimes dispense with this rule in case husband and wife belong to different classes or castes (cf. p. 22). It may even happen that children of a dissolved marriage, where husband and wife come from the same class or caste, grow up with their mother – particularly if, when the divorce takes place, the children are so small that they need their mother's care. On the whole, however, the Ahaggar Tuareg follow the rules of residence indicated above, and we have already seen that these particular rules are strongly supported by the authority of the *Amenukal*. The same practise
[178] was perhaps once also followed by the Ayr Tuareg, but, as we have seen (p. 152 f.), in the *Kel Ferwan* group there is nowadays a strong tendency for a man to remain with his patrilineal kinsmen after his father's death. The rules of residence do not play a very important part to the *Kel Ferwan* Tuareg nowadays. The political unit of the drum-group has very little practical value, economic and political relations between noble Tuareg and vassals have disappeared, and there are no land rights to which certain individuals succeed.

582 In the light of what has been said so far about Tuareg social organization, we shall now consider their traditional rules of marriage. Preferential marriage is that with a cross-cousin; the very best is to marry a mother's brother's daughter, but father's sister's daughter is also considered a suitable choice. An exchange of spouse between two family groups is considered most excellent. It is thus considered ideal for brothers of family A to marry sisters of family B, for brothers of family B to marry sisters of family A.

If Ego marries a classificatory cross-cousin it seems preferably for him to marry one of his mother's
[43] family. This is intimated by a custom connected with marriage in Ahaggar:— At the beginning of the wedding ceremony a pair of sandals should be given to the man who does not marry the bride though traditionally possessing a sort of prior entitlement to do so. Such men are:— (1) the bride's father's sister's son; (2) the bride's father's mother's sister's daughter's son; (3) the bride's father's father's brother's daughter's son.

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

The custom of giving sandal gifts to a cross-cousin of the bride is unknown among the *Kel Ferwan* 582
Tuareg, who also claim that cross-cousin marriage and particularly that with a true mother's brother's
daughter is the best type of marriage. But though they consider such marriages ideal they admit that
some cross-cousin marriages will not last long. For closely related cross-cousins have frequently grown 586
up together, and it is said that such cousins when they have married sometimes agree to dissolve their
marriage on the ground that they feel like brother and sister so that there is no mutual attraction or
love between them. This is only one of many reasons for divorce which is extremely common in all
tribes of Ahaggar and Ayr. Briggs' statement from the Ahaggar Tuareg that divorce is both unusual [114]
and generally frowned upon is absolutely untrue (Briggs 1959, p. 86).

According to the Tuareg there are many reasons why a man should preferably marry a cross-cousin 582
and ideally a mother's brother's daughter. Among the *Kel Ferwan* Tuareg I have collected the following
arguments in favour of cross-cousin marriage:— (1) All people (that is, all Tuareg) descend from one
and the same woman, and her sons and daughters consequently had to marry one another. Their offspring
established cross-cousin marriage which has been the rule since then. (2) There are many stories told
to confirm the contention that cross-cousin marriages are good, while other marriages are bad. There
is, for example, the following legend:— Once upon a time the parents of a young Tuareg arranged for
him to marry a cross-cousin. This Tuareg, however, was not in love with his cross-cousin but wanted
to marry another woman with whom he had no kinship bonds. The result of all this was that he
married both his cross-cousin and the other woman. After this it so happened that a heavy punish-
ment was imposed on him by the Sultan. It could be atoned for in one of the following two ways:
He could give all his livestock as a fine. or he could have one of his hands cut off. To make his
choice he now asked his two wives whether they thought he should loose his hand or rather give
away all his stock. The wife to whom he had no bonds of kinship considered that he should keep his
animals and have his hand cut off, while his cross-cousin wife asked him to dispose of flock and herd
to save his hand. He thus realized that it is best to marry a cross-cousin. (3) It is considered good to
marry a cross-cousin because cross-cousins are always extremely good friends. (4) The institutional
joking relationship between cross-cousins is considered an important institution in preventing con-
flicts between married partners. For though joking between two cross-cousins stops on marriage, the
mere fact that there has once been joking between them prevents quarrels and adds to the stable
relationship between husband and wife. (5) Cross-cousin marriage has an important economic function
as it establishes a constant exchange of persons, goods, and livestock between two families.

The three latter arguments in favour of cross-cousin marriage are also supported by the Ahaggar
Tuareg. These arguments are very important and will now be discussed in some detail. There is no 605
doubt at all that cross-cousins of both sexes are extremely good friends. They do not joke just to annoy
each other, and when joking they laugh and feel very pleased. Cross-cousins who have not seen each
other for a considerable time are always pleased to meet. When doing so after a long separation they
may make jocular remarks and gestures, but they will also be very kind to each other. They frequently
address each other heartily as "cross-cousin", and male cousins will walk around hand in hand, while
a woman will do her outmost to please a visiting male cousin. She will serve him the best possible (533)
food, will mend his clothes, and she will play her violin for him. Joking goes with intimate friendship. 582

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

administrators settled in Ahaggar, the noble Tuareg under the leadership of the *Amenukal* are said to have claimed that the French should respect their ancient matrilineal organization. It seems as though such an intimate relationship between noble Tuareg and vassals was unknown in Ayr in pre-European times. Subsistence in Ayr is easier than in Ahaggar, and the noble Tuareg there were not so dependent upon their vassals for food as was the case in Ahaggar.

The fact that the Ahaggar Tuareg have conserved matrilineal rules in their social organization though influenced by Islam and the patrilineal Arabs for centuries, may perhaps explain why they have come to consider marriage with a mother's sister's daughter (or her daughter) as a better type of mating than cross-cousin marriage. Marriages with a classificatory sister (or sister's daughter) are, according to the Ahaggar Tuareg, not to be considered a recent phenomena, but have been practised for generations. The Ahaggar Tuareg claim that these marriages are most suitable because they do not give rise to changes of residence for the children. It is very probable that such marriages, which do not harmonize with traditional kinship rules, indicate the transition towards fully-fledged patrilineal rules among the Northern Tuareg.

We have no knowledge about Tuareg social organization in pre-Islamic times, but there can be little doubt that matrilineal traits are very ancient, for they are mentioned by Ibn Batutah (cf. p. 457), and most Tuareg have traditions of their descent from an ancestress. Bates thinks that the Libyans of antiquity possessed a type of social organization which was partly or fully matrilineal, though he admits that indications of the existence of the matriarchate are strong, but not conclusive (Bates 1914, p. 111 f.). Gsell, on the contrary, thinks that the ancient Libyans did not have a social organization of a matrilineal type. They were patrilineal like most Northern Berbers of to-day (Gsell 1920–28, V, p. 37 f.).

Baumann states that Tuareg matrilineal organization derives from the so-called Old Mediterranean Culture (Baumann 1940, p. 66). This is perhaps not the true explanation, for Frobenius is probably right in his statement that the Syrtic Culture was a high one which gained little influence among pastoralists, but became very important to sedentary people of North Africa and the Western Sudan (Atlas Africanus, H. 1, Bl. 11). On the other hand the theory advanced by Frobenius that the Tuareg matriarchate is an old Hamitic custom does not constitute a satisfactory explanation (cf. Frobenius 1933, p. 238 f.; Atlas Africanus, H. 1, Bl. 5).

The history of Tuareg matriarchate has been analysed very recently by Murdock, who states that its origin can be explained in three distinct ways:— (1) The Tuareg may have preserved the matrilineate from a very early period of Berber culture, perhaps also reflected among the extinct Guanche of the Canary Islands. This, however, is not considered very probable, because matrilineal traits do not exist among the many other North African Berber tribes, and also because the present relative isolation of the Tuareg is historically recent, dating from the Hilalian Arab invasion. (2) The indigenous *Béla* were characterized by avunculocal residence and matrilineal descent, and they transmitted these rules to the conquering Tuareg. This second theoretical possibility is discarded by Murdock on the ground that the *Béla* were presumably akin to the Hausa peoples on the southern border of the Tuareg country, and the Hausa are strictly patrilineal. (3) The ancestral Tuareg, while still resident in Tripolitania, were patrilineal, like all other mainland Berbers, and the matrilineate was developed as an

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

174 114 adjustment to special local conditions after their displacement into the Sahara. Murdock accepts this. He believes that the Tuareg, when adopting the very un-Berber caste stratification of the Arabs, may well have instituted matrilineal affiliation for inter-caste marriages in order to preserve their purity of race. He seems to believe that patrilineal affiliation among the *Iwllemmeden* and the *Iforas* is old, while matrilineal affiliation is recent (cf. Murdock 1959, p. 408 f.).

In the main Murdock's theory was advanced already by Gsell, who also stated that the Tuareg constituted the only known example of a people who had substituted their patrilineal type of affiliation with a matrilineal system (Gsell 1920–28, V, p. 38). The problems connected with father-right and mother-right in Tuareg society are complicated. It seems as if patrilineal succession among the Tuareg mainly, perhaps exclusively, is due to Arab influence. The existence of a pre-Islamic patrilineal system in the ancestral tribes of certain noble Tuareg can neither be discarded nor confirmed. However, there is absolutely no doubt that Tuareg matriarchate is very old and constitutes the traditional system in vassal tribes. I have shown above that matrilineal succession was once recognized in most Tuareg groups (cf. p. 456 ff.) and that certain vassals of the *Iwllemmeden* even to-day follow matrilineal rules of inheritance.

Briggs believes that pre-Islamic social organization was characterized by matrilineal inheritance and succession to authority, while residence was patrilocal so that the household consisted of a patriarchal extended family (Briggs 1958, p. 87). This is perhaps not very likely for the present custom of ultimate matrilocal residence is undoubtedly very ancient.

I find it adequate to conclude this chapter about diffusion and function in Tuareg social organization as follows:—

Tuareg patrilineal succession seems to be recent and post-Arabian; this holds also for present inheritance rules which follow Koranic law. Thus there can be no doubt that social organization changes owing to the diffusion of certain social traits. Murdock's statement that social traits diffuse only under circumstances where the traits would have developed independently is contrary to the known facts.

805 Tuareg. Some people are able to reckon only five or ten years back in time, but there are also Tuareg who can count many years back so that they can determine the exact age of most members of their [114] household. The chronology of Ahaggar years has been studied by Foucauld, who gives the names from 1860 to 1906, and a remarkable study has been published by Dubief (cf. Foucauld 1951–52, III, p. 1538 ff.; Dubief 1942). In later studies on the chronology of the years among the Tuareg of Tasilé-n-Ajjer, Dubief has shown that there is no uniform calendar for the *Kel Ajjer*. The *Uraṛen*, the *Imanṛasaten*, and the *Iforas* have their particular chronologies (cf. Dubief 1948, 1950, 1956). In addition to these chronologies for larger groups of Tuareg comprising several tribes, there are also special chronologies for individual tribes referring to events within these units.

To indicate future events the Tuareg may use the lunar calendar and refer to a particular day (night) of a particular month. They normally count in nights but to indicate the length of a journey they will frequently count in days. The sub-divisions of the day among the Tuareg of Ahaggar and Ayr are mentioned in the list below:—

(1) The early morning before sunrise, when one begins to see but does not see very clearly. It is a very short period known in Ahaggar as *ahokhak*, in Ayr as *dengelwak*.

(2) The period from sunrise until 1½–2 hours later during which the sun is low and the heat not very trying. This is known in Ahaggar as *agedelsit semmidet*, in Ayr as *aṛora*.

(3) The period when the sun is getting high in the heavens. People will now avoid the sun and rest in the shade. The name of this period, which corresponds to late morning or forenoon, is in Ahaggar *agedelsit tekkuset*, in Ayr *agedelchit*.

(4) The period when the sun is very high. It comprises a certain period before and after midday, and is known as *tarut* (Ahaggar) and *terut* (Ayr).

(5) The early afternoon which begins around two o'clock. It is called *tazerrahat* in Ahaggar, *tézzar* in Ayr.

(6) The late afternoon from about four o'clock until sunset is known as *aẓellewaz* in Ahaggar and as *takkes* in Ayr.

(7) The period of dusk which is known as *almeẓ* and *almez*, respectively.

For the night the divisions are few and less clear, and it seems as if they are based mainly upon normal activities such as eating time, bed time, and the time of the early morning when it is considered preferable to set out upon a journey.

7:Nicolaisen E-5 (1951-1962) 1963 .MS25 Tuareg MS25

(6) My sixth journey to North Africa was undertaken 1954–55 and comprised about 14 months' field-work among Northern and Southern Tuareg. I left Algiers by car via Djelfa, Laghwat, Ghardaya, El Golea to In Salah at the beginning of the autumn 1954. At In Salah I bought four camels and hired an Arab guide of the *Ulad Ba Hammu* tribe. After a short visit to his camp we went southwards to the region of the Ahnet Massif where I visited camps of *Kel-ahem-mellen* (a small noble tribe), *Kel-Immidir* (*Isekkemaren*), *Ayt Lowapen* of the *Kel Turha* section, *Kel Rezzi*, and notably the *Kel Ahnet*. Two small camps visited claimed to belong to the noble *Taytok* tribe, but they had no matrilineal relationship to that tribe which is now found in the Tamesna plains west of Ayr. I left Ahnet for Tamanrasset about the middle of December, and in the following months I travelled alone with my camels in Ahaggar as I now knew Tuareg language sufficiently to dispense with an interpreter. Until the beginning of April 1955 I lived in camps of the *Dag Rali* and the *Aguh-en-tehle* tribes, and passed some days in the *Amenukal*'s camp. I also had a house at Tamanrasset where I could work more peacefully with problems connected with kinship, land tenure, and political organization. In this work I was mainly assisted by two older Tuareg of the *Dag Rali* and the *Aguh-en-tehle* tribes. Apart from Tamanrasset I visited the following cultivation centres:— Utul, Tahart, Ti-n-amenser, Ennedid, Iglen, Abalessa, Amsel, and Tarhawhawt. – On the 3rd of April, 1955, I left Ahaggar for Ayr together with two Ayr Tuareg who were returning to their camps at Northern Ayr after a caravan journey to Tamanrasset. We travelled south-eastwards via the small cultivation centre Tagnut and thence into the very barren country separating Ahaggar from Ayr. We refilled our six skin-bags with water at the wells of I-n-abeggi and I-n-azawa, and had no water again until we arrived at a fairly large and permanent waterhole (*agelmam*) known as Tamengoyt, situated on the northern outskirts of the Ayr Massif. Close to this place we met the first Tuareg camps of the *Kel Tédalé* who dominate the northern parts of Ayr. The following days we saw several camps of these Tuareg. At last we arrived at the camp of one of my companions who belonged to the *Ikkoberen* tribe though his family was very mixed with *Kel Tédalé*. This camp was situated in the Azel valley, where we stayed for about ten days to regain full strength. Thereupon we continued to *Iferwan* which constitutes the northernmost village of the Ayr Massif. I lived in this village for about three weeks and then I continued towards Agadez together with a Tuareg of the *Kel Akerra* tribe. We visited camps of various tribes on our journey southwards (*Kel Rarus*, *Iforas*). The journey was a difficult one as two of my camels were worn out. We left them in a camp of *Ikojjejiten* Tuareg. This was situated at the Afurak valley from where we continued to Agadez via the small agricultural settlements of Tabeydag, Azzal, and Alarses. From Agadez I went by truck down to Zinder, but returned quickly to make a more complete investigation of the Ayr Tuareg. The situation was now very difficult as my two camels left at Afarak died and I was too short of money to buy a new animal. My financial problems were rather acute and were solved only by the very kind and resolute help rendered me by Professor Daryll Forde of University College London. I was thus able to continue my studies for another six months. I hired a house in Agadez where I could work peacefully, and bought a fine riding camel in order to be able to visit Tuareg camps in the vicinity. The most extensive journey made went to the village of Awderas, north-east of Agadez and close to the Begzen Mountains. On this journey I revisited the small settlements of Tabeydag, Azzal, and Alarses, and visited pastoral camps of the *Iforas*, the *Ikojjejiten*, the *Kel Tamot*, the *Igen-*

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

to visit Niamey for one week at the beginning of December 1962. Here I studied the very valuable ethnographical collections of The IFAN Museum, and I spent two days in camps of *Bélla* and Tuareg of the *Western Iwllemmeden* east and north-east of Ayoru on the Niger. Of particular value was my visit to a camp of the dominant noble tribe, *Kel Tahabanat*. Its supreme chief *Amder* and his family gave me important information on Tuareg culture in this little known area. My visit to Tuareg and *Bélla* near Ayoru was made possible by the very kind assistance of Mr. and Mrs. Bernus of the IFAN. They put a truck with its driver at my free disposition.

Altogether I have spent almost three years among North African pastoralists – mainly among the Tuareg. This length of time is not so impressive as it may seem, for my investigations have been carried out over an extensive territory ranching from the Mediterranean to the outskirts of the Sudanese savannah. A detailed study of Tuareg ecology and culture necessitates a detailed knowledge of change and variation in environment within and without the country in which the Tuareg live.

The literature which deals with the Tuareg is very comprehensive as can be seen from the bibliography at the end of this book, but most publications are of very little value and many of them are almost inaccessible.

The Tuareg are first mentioned in literature by Arab authors of the Middle Ages, but most of these historians and geographers did not know the Tuareg country and even the few of them who travelled in the Sahara tell us very little about the Tuareg in early Arabic texts generally called *Muletthemin*, that is "the veiled ones". The most important Arab authors who mention the Tuareg are Ibn Hawkal (10th century), El-Bekri (11th century), Edrisi (12th century), Ibn Batutah (14th century), and Ibn Khaldun (14th century). Ibn Khaldun gives the most intimate description of the Tuareg though apparently he never met them. But they played a very important part in his attempt to recount the ancient history of the North African Berbers. After Ibn Khaldun came Leo Africanus (16th century) who published information gathered by himself on journeys in the Sahara. His book was first published in Italian. There are certain later Arab authors who have contributed to our knowledge of North African cultures and the Tuareg, e.g., Es-Sadi who lived in the 17th century. We must also mention in this connection that there are other valuable Arabic manuscripts, notably those generally referred to as the Agadez Chronicle, which contain much historical material on the Ayr Tuareg (cf. Palmer 1910; 1928; 1936; Urvoy 1934).

The first modern description of the Tuareg was given by Hornemann who travelled from Cairo to Murzuk in 1798. Throughout the 19th century many European travellers contributed to our knowledge of the Tuareg, and it is very important now to have their accounts which derive from a time when traditional political systems were unaffected by European colonization. Among these travellers we should mention such outstanding names as Lyon, Caillié, Denham & Clapperton & Oudney, Richardson, Barth, Duveyrier, Rohlfs, Hourst, Foureau, and von Bary. Lyon gives a very valuable description of the Tuareg who live around Tasilé-n-Ajjer, but by far the most important among these authorities are Barth, who wrote about the *Kel Ajjer*, the *Kel Ayr*, and the *Iwllemmeden*, and Duveyrier, who published an excellent monograph on the Northern Tuareg with particular reference to the Tuareg of Tasilé-n-Ajjer. At the beginning of the present century military posts were established in the Sahara, and literature about the Tuareg became more abundant. Thus Benhazera wrote a good book on

7:Nicolaisen E-5 (1951-1962) 1963 MS25 Tuareg MS25

## THE KEL FERWAN DRUM-GROUP

634 Lists of tribes which belong to the *Kel Ferwan* drum-group have already been published. Jean has
614 fourteen in his list (Jean 1909, p. 104), Rodd and Abadie have fifteen (Rodd 1926a, p. 427 f.; Abadie
[114] 1927, p. 391 f.), while Nicolas puts twenty-two tribes in the group (Nicolas 1950b, p. 474 f., 480). My own list comes close to that of Nicolas, but contains a few additional names. I have divided my list in two parts, as there were within the *Kel Ferwan* drum-group two important noble tribes each with a group of particular vassals. The traditional grazing grounds of the important tribes in the past are also indicated. I have not been able to get precise particulars about the size of tribes, and therefore
[162] quote the figures given by Nicolas (Nicolas 1950b, p. 474 f.). The tribes differ greatly in size, ranging from 653 to 42 individuals. The average figure for a tribe is about 250.

178 The traditional political structure of the *Kel Ferwan* drum-group has almost completely disappeared,
634 and it seems as if the ancient rules were in decay shortly after the French occupation of Ayr when
648 the Sultan became strongly supported by the administration. Since the rebellion against the French in 1917, political life has become completely altered and the traditional political structure has had to
121 be reconstructed. I have tried to make a reconstruction of this nature by my investigations in Ayr,
634 where I had a number of old men as informants on this particular subject. My investigations were
115 most difficult because many Tuareg would often ascribe their tribe, their class, and their drum- group a far higher political importance than it seemed to have had. However, I found a few old vassals who seemed to be able to tell about the past without much prejudice, and I believe that I obtained a fairly correct description of ancient political life within the *Kel Ferwan* drum-group.

173 The two noble tribes of the *Kel Ferwan* drum-group, namely the proper *Kel Ferwan*, or *Irawatten*,
614 and the *Kel Azel*, have certain traditions about their origin in addition to those mentioned above
634 (p. 413 f.). The noble *Kel Ferwan* (the *Irawatten*) sometimes say that the ancestress of the *Kel Azel* married an Arab who was killed at her own request, but there is another and more general tradition

## The Tuareg of the Ahaggar

## Social Organization

## The Ahaggar Confederation

---

## Chapter 1

## Social Organization

101 Here we shall speak of the Tuareg of the Ahaggar. But since all of the Tuareg form a quite homogeneous ethnic group, what we [184 177] say about their /Tuareg of the Ahaggar/ social organization will, in general, be valid for the whole, although their social organization remained more sheltered from foreign influences than that of the other groups, because of their isolation in the heart of the Sahara.

The Ihǎggaren /Ahaggaren/ may thus be considered, as a result of that isolation, the witnesses and representatives of Tuareg civilization.

565 Classes and castes. -- Social organization among them /the Tuareg/ shows strong analogies with our ancient feudal system. Indeed, there is a chief whose nominal authority holds sway over all the tribes, a class system (aserkam) which divides tribes into suzerains and vassals, religious elements and serfs, enfeoffed the ones to the others, and an artisan class.

564 Classes in so-called primitive societies are born out of private 565 property, wealth, and the authority of the strong who become the protectors of the weak, and have had as a corollary war and slavery. The caste system, which is an accentuated form of the class system,

565 includes hereditary specialization, hierarchy, repulsion between the
564 different groups, and refusal to associate with people of a different caste. These principles are partly in force among the Tuareg, whose type of social organization borrows from the two systems.

/150/ Furthermore, there are great analogies between the two systems. This sort of aristocratic organization is well suited to nomadic life, in opposition to democratic organization which is more commonly found among sedentary groups.

According to some authors, the caste system is specifically
171 Hindu; it only existed in its pure state in India and to a lesser de-
564 gree in ancient Egypt. (1) Thus we are hardly surprised to find this

1. Deniker, Les races et les peuples de la terre /The Races and Peoples of the World/, p. 489.

organization among the Tuareg who, culturally, belong to the same cycle of civilization.

182 The crystallization of that organization among this people,
564 who on the whole possess quite high intellectual qualities, as well as the material crystallization, can only be explained by the isolation in which it was confined as a result of circumstances where climate has certainly played a large role.

565 The Tuareg are divided into suzerains (Imochar) of a specifically warlike nature, vassals (Imrad) most commonly shepherds, religious men (Inislimen), and serfs (Iklân). Other elements from different origins are enfeoffed to them, such as the Issekkemâren, the Iboroliten, and the Enaden.

The present hierarchy obviously results from a series of wars
174 and civil conflicts. In the fight for life each person endeavored to
182 get his share, and as always this was at the expense of the weaker.
565 Tribes achieved a predominance which they were not always able

174 to maintain, which others seized from them, and suzerains became
182 vassals. But in spite of these contingencies of war, the Tuareg
565 attach great importance to blood origins and always respect high-
[554 727] born people, even though they may be their vanquished /adversaries/.

Thus, at the present time, the nobles of the Ahaggar and the
554 Ajjer may be seen to seek alliances with women of the fallen fraction
565 of the Imenan Sultans. This adds to the luster of their high origin
581 a certain character of religious nobility, which is much appreciated among Moslems.

000 Monogamy and matriarchy. -- To understand Tuareg society, one must remember two important facts, facts which are, moreover, not completely independent of each other, monogamy and matriarchy.

/151/ While the Tuareg are Moslems and have polygamous
174 peoples as neighbors, it is astonishing to note that they practice
562 monogamy. This is an evident indication that women occupy an
[595] important place in their society, in no way comparable to what they occupy among the Arabs. This was very striking to the first travelers who thought they saw traces of an ancient Christianity in the persistence of monogamy. This argument might be held if we did not know, on the other hand, that the social organization of the Tuareg rests on matriarchy, an ancient custom much earlier than the Christian era, which explains monogamy and the particularly high position of women.

Gautier writes on this subject: "It may be said that the Tuareg practice chivalrous gallantry; the expression is inadequate only because of the association it evokes. Our chivalry has a Christian origin; the respect of the Tuareg for women has much deeper and more remote reasons. It goes back to matriarchy, which is earlier than the notion of the state and even that of the family. It is a living witness of completely primordial humanity, a sentiment, if I may say so, of the quaternary age." (1)

1. La conquête du Sahara /The Conquest of the Sahara/, p. 33.

174 Matriarchy, in fact, goes back to the times when primitive man had no exact notions on the causes of childbirth.

For, "it seems," Gautier continues, "that primitive man attributed all birth to parthenogenesis and could only imagine a conception which was immaculate. He saw no ineluctable connection between caressing and gestation. Although he practiced fertilization by instinct, he had no clear idea of this. The word 'father' had no sense for him, and consequently the children could only group themselves around the mother." (2)

2. La conquête du Sahara, p. 190.

On the other hand, since rules of marriage had not yet been established in that period, it was impossible to seek out paternity. It is from this state of things that filiation by the uterine branch is derived. With the totemic beliefs to be found in lower civilizations, the matrilocal system found still another reason for existence. It was linked with exogamy, preventing unions between the closest relatives and between people of different castes, and making incest impossible.

171 In certain primitive Australian groups, /152/ the study of which
601 helps us understand the evolution of societies, there is a system of kinship by classes of kin that is found among the Tuareg and the peoples of the Sudan. It was defined by Morgan, and groups in the first degree brothers, sisters, and cousins; in the second degree the father, mother, and their siblings; in the third degree the grandparents with their siblings, etc.

174 In matriarchy, the natural protector of the child is the brother of his mother. In the same way the obligation for the husband to live with his wife's family is connected with matriarchy. This
591 custom is practiced in the Ahaggar, where the husband must live
[851] one year in the camp of his parents-in-law, this time being shortened when the young wife has borne a child. When a woman becomes
768 the widow of a man who does not belong to her tribe, she rejoins her tribe and takes her children with her.

000 tribe and takes her children with her. But if she is divorced and has
586 adolescent children, they stay with their father. We find here an
177 Islamic influence as well as a mixed matri-patriarchal system.

184 One of the consequences of matriarchy is to cause disputes
which set cousins against each other and put the father, torn between
614 his paternal affection and his clan bonds, in an embarrassing situation.
It is a different case for masculine filiation, which, as Lowie has
written, (1) although it does not create solidarity by itself, favors

1. Manuel d'Anthropologie culturelle /Handbook of Cultural Anthropology/, p. 292.

the formation of larger and more stable political units. It is thus
that we could explain in part the somewhat anarchic state in which
the Tuareg live.

[174] In their case we are confronted at the present time by a
562 matriarchy evolving toward a patriarchy. Although the woman
[178] ascribes the caste of her children and assures their political rights,
her social position is not predominant in proportion to that of the
[611] man, who is the head of the family. We find this notion in many
[554] Australian tribes with an archaic matriarchy, where the woman's
position is no better in matrilinear than in patrilinear tribes. (2)

2. Lowie, op. cit., p. 292.

However, a woman has more liberty at her disposition in
[584] matriarchal societies than in patriarchal ones. She is consulted on
choosing her husband insofar as marriage is concerned, she has
[421] free disposition of her goods, handles them /153/ as she wishes,
and even has a greater freedom of mores.

174 It is rather difficult to clarify the origin of the matriarchy
among the Tuareg.

174 It seems to have existed in ancient times among all the Hamites. Frobenius sees traces of it in traditional customs which leave the raising of the tent to the women and give them a monopoly on leather-work. These singular characteristics reveal the primordial nature of the sentiment of life among the Hamites. (1)

1. In Jenson, "Les orbes culturels de l'Afrique /Culture Spheres of Africa/, " L'Afrique, Cahiers d'art, 1931.

428 554 622 Among the Ihaggaren, the wife wills her social and political rights to her children. These are particularly important when it is a question of the succession of a chief. Political filiation of the first degree is made to the brother; in the second degree to the eldest son of the maternal aunt; in the third degree, to the eldest son of the eldest sister, which constitutes a guarantee for blood descent in the line of chiefs.

184 622 The Ioullimmiden /Aulliminden/ do not practice political succession according to matriarchal rules. The explorer Barth has even reported that they consider this custom shameful "and show that the chief has little confidence in his wife's virtue." (2)

2. Voyages et découvertes en Afrique /Travels and Discoveries in Africa/, vol. I, p. 205.

174 Though command is now the privilege of the men, it is not impossible that in the past women were invested with power. We have evidence of it in the story of the Berber queen, Kahéna, who for a long time resisted the Arab invaders who were trying to conquer Aurès in the eighth century. The legend of Ti-n-Hinan, maternal ancestor of the Ihaggaren Tuareg, leads us to believe that the woman was their queen. In 1475, a Berber fraction settled

174 in the Sudan, the Sanhadja-Nounou, was governed by a woman named Bikoun-Kabi, whom the Sonrhaï /Songhai/ emperor Sonni-Ali had to conquer in order to seize her territory. Es-Sadi, author of the Tarik-es-Soudan, reports several facts of this kind.

The Islamization of the Berber tribes certainly had a part in the elimination of the custom. Women no longer play any official [562] political role in our times. But they have made themselves the guardians of ancestral customs and folklore, and their authority is [626] so strong that one /154/ can only quote the answer of a Tuareg to an Arab who admonished him upon the subject of Tuareg mores: "No one would dare do otherwise, for then no woman would look at us any longer."

162 The persistence of monogamy among the Tuareg is also favored 182 by the considerable excess of men found among them, an exceptional 515 fact and contrary to what we observe in other human groups.

The aménokal. -- Aménokal means in Tamashek "possessor of 643 the country" (from am, possessive prefix, and akal, "country").

[192] In the Ahaggar this title is conferred only upon the supreme chief reigning over a whole of noble, vassal, or assimilated tribes. [184] In Sudanese tribes, on the other hand, it may be applied to heads of fractions, indeed even to mere camp chiefs.

The aménokal is designated according to hereditary rules deriving from the matriarchal system. He is always chosen, not only in the same tribe, but in the same line which one could compare to the clan. His domination, to be effective, must be sanctioned by the approval of the nobles to whom are joined for the occasion the chiefs of vassal tribes. For the latter, approval involves an agreement to pay tribute later.

Sometimes there are several pretenders to the title; perhaps a descendant of a formerly ousted family asserts his rights, or perhaps the natural heir is recognized incapable of leadership. This brings about a competition where hereditary rules are not always respected.

643 According to the rules cited above, the political succession of an aménokal goes in the first degree to his brother; in the second degree, that is, if he has no brother, to his first cousin, the eldest son of his maternal aunt; and in the third degree, to the eldest son of his eldest sister. In fact, this is what comes out of the genealogical [114] study of the Ahaggar chiefs made by Mr. Benhazéra, (1) modifying

1. Six mois dans l'Ahaggar /Six Months in the Ahaggar/.

the order indicated by Duveyrier who attributed the succession to the eldest son of the eldest sister. (2)

2. Les Touareg du Nord /The Northern Tuareg/, p. 397.

For reasons we do not know, these rules have not always been followed. Thus, Aménokal Younès succeeded his /155/ father Mohamed el Khir, and Aménokal Ăitarel /succeeded/ his cousin El Khadj Akhmed, even though the latter had closer relatives. More recently, upon the death of Aménokal Akhamouk, his second cousin Meslah was named to replace him, although he had a first cousin, son of the sister of the former Aménokal Moussa ag Ămâstan, who was removed from command because of incompetence.

184 643 Among the Tenguériguif /Tehgeredief/, chiefs are chosen alternately from two lateral lines descended from the same chief, Ikhmed. Thus the deceased aménokal can never be succeeded by his brother, but by a second or third cousin, who is not necessarily taken from the uterine branch. The nomination of the aménokal is submitted to an assembly of notables for their approval, just as among the Ihăggaren.

Among the Ioullimmiden, since Aménokal Our Ilmet (1650-1715), out of fourteen chiefs who succeeded one another, we note six successions from father to son, two from brother to brother, two

184 from uncle to nephew, and two from second cousin to second cousin.
643 The matriarchal custom was not followed, but we know from traditions
gathered among the Ioullimmiden that at the election of Our Ilmet,
[173] the eponymous ancestor of the tribe, the Tuareg fought among themselves about the custom of succession, and the party which backed Our Ilmet, the patriarchal candidate, finally won out. (1)

1. Dr. Richer, Les Oulliminden.

171 As we have already remarked and as Seligman has pointed out,
611 it is seen that in spite of the fact that descent is matrilinear (except
631 among the Ioullimmiden), the government of each unit is patriarchal and similar in principal to that in a nomadic Arab tribe. (2)

2. Les races de l'Afrique /The Races of Africa/, p. 128.

643 The aménokal does not hold his appointment for life, and the
651 titleholder may be dispossessed by a more popular chief for one reason or another. Each year he levies a tribute on each fraction, either in the form of foods, grains, butter, animals, servants, or in skins and worked objects. The caravans pay him a tithe as a toll.
He receives the products of certain lands and herds which are his
[644] appanage. In exchange, he must maintain the members of his entourage and the relatives of his predecessor.

There was formerly a custom among the northern Tuareg, /156/
[178] today fallen into disuse, which was called the right of tamaa. It
[644] benefited the eventual heir to the command and consisted of a due from the tributes payed by the vassals. This custom was still in use a little less than a century ago.

643 The aménokal's symbol of leadership is an enormous war drum
[534 called tobol; this word is of Arabic origin and means "drum, "
177 "cylinder of a drum. "
192]

643 This instrument is so representative of command in the eyes of the Tuareg that they often refer to the aménokal and all the tribes which he holds under his command as "tobol."

184 Among the eastern Ioullimmiden (Kel Dinnik), the aménokal
643 always had a standard placed in his tent, which was taken out exceptionally for war or the enthroning of a new aménokal. It was in blue-green and red silk. (1)

1. Nicolas, "Notes sur la société et l'état des Touaregs du Dinnik /Notes on the Society and State of the Dinnik Tuareg/," Bulletin de l'Institut Français. Afrique noire, vol. I, nos. 2-3, 1939, p. 586.

Among the Ihăggaren, the tobol tribe, that is, the one from which the aménokal is always chosen, is the Kel Rela; however, the tobol has presumably changed hands over the centuries. The memory
[173] of another chief-tribe, the Tégéhé-n-ou-Sidi, has remained, and thus the former Aménokal Altarel was accustomed to saying that the Tégéhé-n-ou-Sidi formed the back (of the political organization of the Ihăggaren), /while/ the Kel Rela, the Tăltok, and the Tégéhé-Mellet /formed/ the sides, but that the back was weakening to the profit of the sides. (2) This modification was caused by the total

2. Benhazéra, Six mois chez les Touaregs de l'Ahaggar, p. 107.

extinction of the Tégéhé-n-ou-Sidi.

578 The aménokal's role is chiefly that of a war chief. In normal
643 times he arbitrates the conflicts which set the tribes against one
692 another, and he has the power of life or death, in principle. His authority is often contested by the Imochar of his own tribe, who try

578 to arrogate rights over vassals for themselves. There are internal
643 disputes of the sort: "Who made you a count? And who made you
692 king?"

It is particularly in the relations with neighboring or foreign
643 tribes that the aménokal's role takes on a more national aspect, yet his decisions do not have full authority unless they have been approved by an assembly of notables -- the arollan -- composed of the principal chiefs of fractions and nobles.

/157/ The aménokal lives like the other Tuareg, and there is no ceremony surrounding his person. All comers present themselves
[644] at his tent with no more formality than that. There is no court or court etiquette.

Only the tobol, generally placed at the entrance to the tent,
534 indicates the rank of the host.
643 This drum is in the shape of a hemisphere, hollowed out of a tree trunk and covered with a cowhide with the hair still on it. The hide is held by leather thongs with the hairy side up. It may be as much as 80 centimeters in diameter. Two leather handles on the sides are used to carry it. For gatherings, two men strike it alternately with a camelskin drumstick (imîtkar). Only the aménokal has the right to have it sounded, which he does only on the most important occasions. Upon his death, his brother or his caliph is entrusted with it until it can be given to his successor. The aménokal does not go
[492] far without his drum, which is carried on a camel led by a trusted man; when he gives the order to beat the drum, another meharist /man mounted on a mehari, or fast dromedary/ approaches to take the other handle, and the two men march side by side, striking alternately. Any warrior who hears it is supposed to rally to the call and at the same time inform the people he meets. In case of war,
[202] the beating tells whether they are dealing with foot soldiers or meharists, depending on whether there are one or two imîtkar.

When the hide of the tobol is worn out, the most renowned
[554] warrior of the tribe is entrusted to replace it.

643 644 The aménokal generally has one or two caliphs charged with taking his place or representing him with the fractions.

The amrar. -- Each tribe, called taousit, has its amrar, who, 631 like the aménokal, is chosen according to matriarchal rules.

Amrar, in Tamashek, [192] means "the old," "the respectable," "the ancient," /158/ and by extension, [643 534] "possessor of wisdom." It is the equivalent of the Arab word "sheik."

Fig. 16. The tobol, symbol of the aménokal's command, with its "imîtkar."

The amrar is the intermediary between the people of his tribe and the aménokal. He transmits orders from the latter and sees that they are carried out. He collects the tioussé intended for the aménokal from the Imrad and sets the share that each is to pay. He settles minor disputes between the people of his tribe and fixes the pasturing zone to be used by each camp.

He takes part in the vote which sanctions the election of the aménokal and at the arollan, which discusses major decisions concerning the life of the confederation.

In a confederation subject to an aménokal, a grouping which the Ahaggar Tuareg also call tégéhé, there may be several tobol, that is, several suzerain tribes, each with its vassals. The name taousit, making double use of the word for tribe, is sometimes used to designate the whole whose chief also bears the name of amrar among the Ihaggaren and agoalla among the Kel Aïr /Asben/.

The amrar has no characteristic symbol of command, at least [171] among the Ihaggaren. In certain Sudanese tribes, many formerly had a drum analogous to that of the aménokal.

565 192 The Imochar. -- The Imochar (singular, Amacher) form the aristocratic class. This word means "man of dominant stock

565 /Fr. race/, " "aristocrat, " and not "noble" as some have written.
[192] This would be said elli (plural, illellan) in Tamashek. (1)

1. Cf. Nicolas, "Notes sur la société et l'état des Touaregs du Dinnik, " Bulletin de l'Institut Français, Afrique Noire, vol. I, nos. 2-3, 1939, pp. 579-586.

In Sudanese dialects, amacher, by transposition into local
192 phonetics, becomes amajer (plural, imajeuren). As we have already
197 said, it is easy to find in these names the old Berber root amazir, which formerly referred to certain Libyan peoples and which still exists in the name of a considerable Berber fraction in Morocco.

The Imochar, who hold the political rights, are the real masters
565 of the country. All of them claim to be of sherif origin, more or
[173] less descendants of the Prophet; however, this claim has no solid foundation, except the desire to assume a high birth affiliating them to Islamism and its founder a long time back, but this is not true.

/159/ Among themselves, the Tuareg refer to men of old nobility and old stock /Fr. race/ as loumet.

All the Imochar are essentially warriors. They owe their high
565 social position to the saber, and they know no other occupation than
701 war and raiding. Their role as suzerain makes them parasites of the
631 vassal classes, and they used to constitute a scourge to caravans
[181 crossing their country. Their way of life has always been pillage,
461] and in their eyes manual labor is a disgrace which only slaves can accept.

Covering the desert on their camels, fighting, risking death in
181 faraway escapades -- that is what the life of a man of noble blood,
565 who intends to remain one, must be. They take their vassals on their escapades and save part of the booty for them, by right of participation. Scorn for manual labor is a class prejudice with them

181 and not caused by a state of laziness, for although they would not
565 consider working the land at any price, they would not mind traveling thousands of kilometers under often difficult and quite dangerous conditions to go pillage opposing tribes. Once back in camp, they intend to lead a life free from any material cares, shifting the burden to their vassals.

422 They entrust the keeping of the captured herds to the Imrad,
565 reclaiming the beasts from them when they need them and the necessary usufruct for their food. For themselves, they keep only
[231 mounts for war and for transporting household objects and are content
234] with small herds of goats with only the number of head strictly necessary to assure their daily milk needs. In the same way, they
[567] do not own many slaves of their own, for the latter would make so many months to feed, which they are wary of.

565 Although they rely on their Imrad for everything, they do not abuse them, for, as a Tuareg proverb says, "we must not kill the camel which feeds us," and their demands always take into account the wealth and the possibilities of the moment.

566 Every year the Imochar levy a vassalage tax called a tioussé
631 on the Imrad. This tax, fixed for each tribe, includes an annual
651 contribution of a certain number of head of livestock, loads of grain, miscellaneous items /160/ waterskins, tent stakes, etc.),
[643] tanned hides, butter, etc. In principal it is invariable and paid to the amenokal who disposes of it as he wishes, making allowances for the needs of the Imochar.

643 The amenokal leaves the animals which he levies under the
651 management of the Imrad, who furnish him the usufruct from them.

Individual rights of Imochar over Imrad do not exist in principal.
565 Actually they do exist when a man is the last representative of a
631 tribe and levies for himself the rights falling to his tribe.
651 On the other hand, some undertake to make small levies on the Imrad; the latter never refuse. And we must say in defense of the nobles that they treat their Imrad quite generously when a fortunate raid makes them temporarily well off.

565 In exchange for the rights of suzerainty which the Imochar exer-
631 cise over the Imrad, they owe the latter absolute protection, defend their interests each time that they are threatened, and endeavor to obtain reparation if they are pillaged by an opposing tribe.

The Imochar spend lavishly as great lords and have kept this
177 mania in spite of the change in regime brought by the French peace.
631 Their way of living like parasites has taken away any idea of fore-
565 sight, and because of this they are more often in want than well off.
511 In fact, the first consequence of the French occupation was to stop the state of war and the pillaging, which deprived the Imochar of their principal resources. They became poor people, while the Imrad, as herd owners, saw their wealth increase and become stabilized. This social disturbance could have had serious consequences, but the Imrad did not totally abandon the Imochar, despite the opportunity which was offered them to emancipate themselves from their ancestral guardianship. Perhaps we can be glad of this, for one might wonder what the material situation of the Imochar would have been and, consequently, their state of mind with regard to us.

291 The terms "black Tuareg" and "white Tuareg" have often been
565 used to designate the Imochar and the Imrad. "In the north, "
178 Seligman says, "the nobles have black veils and the subjects white ones." (1) This distinction in dress does not exist today, when the

1. Les races de l'Afrique, p. 129.

Tuareg indiscriminately wear black or white veils according to their taste and wealth. /161/ It is possible that the Imrad formerly could not obtain indigo veils, always considered a luxury item, and had to be content with ordinary cotton veils; that would explain the division into black and white Tuareg.

According to Duveyrier, the white Tuareg, "Touareg-el-biodh," were probably the Oulad Ba Hamou, Arabs of the region of In-Salah. They took from the Tuareg the habit of wearing veils, but in white instead of dark indigo.

565
554 The Imochar, on the other hand, are much more distinguished
[302] than the Imrad; their toilette is more elaborate and their bearing
[516] nobler, so that it is often easy to distinguish them from the Imrad
by their more majestic carriage. They also assume a more elegant
[195] language, from which are banished vulgar expressions and words
foreign to their language, brought in by slaves. This difference of
appearance and language is even more perceptible among the
554 women; they are sometimes astonishing by their grace and their
562 refined manners. They are real great ladies, who receive in their
574 leather tents with as much dignity as European women of good society.
Moreover, they make a certain show of receiving their guests well
[533] and charm them with the melodious sounds of their violins. The
qualities esteemed in a wellborn young Tuareg girl consist in know-
[565] ing how to keep her tent, making a few beautiful embroidered leather
articles to give to friends or to a knight waiting upon her, and know-
565 ing how to play the violin.
[83] Outside of their trips in the desert, the Imochar spend one part
513] of their life courting women and the other sleeping.

The mores are much looser for the Imochar than for the
[842 Imrad, bringing about late marriages and consequently unions which
582] are most often rather unprolific. The French occupation, on the
other hand, has taken away their real raison d'être as they see it,
[648] and a certain neurasthenia seems to have taken hold of them in the
last few years. It would be quite regrettable to see such an original
stock /Fr. race/ disappear, but faced with its inertia in adapting it-
self to new conditions, we cannot quite see what palliative we could
bring it.

565 The Inislimen. -- The Inislimen make up the religious class
[793 among the Tuareg, playing the role of chaplains and marabouts /162/
871] and entrusted with the formation and religious education of the
children.

Therefore, they occupy an important social position, quite
[651] superior to that of the Imrad. In some confederations they are exempt

565 from all vassalage taxes and are often the object of much respect
[651] and consideration wherever they go. Thus, in the Ahaggar, they are treated on an equal footing with the Imochar, and the latter
[582] sometimes accept marriages with them, while at the same time re-
[641] fusing to grant political rights to the children born of these unions.
[184] On the other hand, among the Ioullimmiden, the Imochar reject any alliance with them and make them pay a vassalage due. These
[582] /Inislimen/ of the Damergou, contrary to the rule, are considered nobles; they own Imrad and may wage war. Furthermore, they have made themselves noticed as the most bellicose among the A'ir tribes. Finally, those of the Adrar succeeded in forming a confederation after the Ioullimmiden abandoned the country; they have Imrad, but the Imochar from the other confederations do not want to regard them as their equals.

They are often referred to under the name of Ichériffen, or
[192] Chériffen, which comes from the Arab word sherif, meaning "noble," or, by extension, "descendant of the Prophet." But among the Tuareg, Ichériffen has a more specialized meaning and designates persons of a religious nature, without their necessarily being descendants of Mahomet.

The marabout tribes include the Ichériffen properly so called and the Ifôra.

This religious nature has various origins and qualities.

Some elements really number sherifs among their ancestors; such is the case of the Ifôra from the Adrar and certain Kel Es-Souq fractions. But opposed to them are others who have only an accidental religious character.

174 Concerning this, Commander Cauvet says that these marabout
565 tribes often appear to be noble collectivities, who were formerly
793 strong and became too weak to continue enjoying the rights and prestige of the strong. They declared themselves withdrawn from the business of arms and devoted to pious practices for love of God and Islam. "A tribe threatened with losing its preponderance,

174 its rank, or even its class as a result of events of war or of too fre-
565 quent or too strong splits, sometimes decides to declare itself /163/
793 marabout. Piety is not indispensable for this; the tribe need only stop pillaging its neighbors and bearing arms. If some of them display the appearances of pious Moslems, learn a bit of the Koran, and wear beads, particularly if they can refer to some Arab ancestor, who formerly took refuge in the tribe, they succeed in being classed as marabouts after a certain time." (1)

1. Commander Cauvet,
Les noms des tribus Touaregs
/Names of Tuareg Tribes/,
p. 10.

565 In tribes which really practice their religion in a more serious
793 way than most of the Tuareg, he continues, there is surely an instillation of foreign blood, sometimes Semitic and often earlier
[144] than the Arab invasion. Without discussing here the reasons on which Commander Cauvet stands in speaking of the infusion of
[142] Semitic blood into the Ichériffen, we shall recall what we have already said, that we were strongly struck to find persons of a Semitic appearance, particularly marked in the old man, among the Ichériffen from the region of Gao and the Kel Es-Souq of Mohamed Ouguinat.

565 The explorer Duveyrier, who lived for a long time among the
631 northern Ifôra, considered them former nobles "who had abdicated
793 any political role in the administration of the confederation in order to conquer a greater religious authority, necessary in a society where justice is represented by no power." (2)

2. Les Touareg du Nord, p. 132.

He attributed to them a great moral and religious activity. It is true that certain Ifôra chiefs, like Sheik Othman who was one of

565 Duveyrier's protectors during his stay in the Tassili, acquire a real
631 authority over the Iḫaggaren and the Kel Ăjjer, surely serving the
793 causes of peace. Their general action is much less significant than he says, and we may cite as proof that the same Ifora were pillaged themselves upon several occasions by the Iḫaggaren and forced to seek shelter in our South Algerian posts.

The influence of the Inislimen on the Iḫaggaren and the Kel
[797] Ăjjer is not very considerable, for their religious proselytism is hardly active, and they are more diligent at making their herds prosper than they are at spreading the law of the Prophet, of whom, in fact, they are generally quite ignorant.

[554] /164/ They are very well thought of in spite of this, and their chief is surrounded by a very great respect. Very peace loving, they established trusting relations with us a long time ago and disapproved of the belligerent action of the Iḫaggaren against us, in particular at the time of the massacre of the Flatters mission.

184 The Inislimen play a very important role among the Ṭăḍemaket
565 and the Ioullimmiden, actively spreading Islamism. Some are
793 accomplished men of letters and teach the Koran in the camps.
797 While the marabout elements in the north were the first to
[648] become reconciled with us, we have had the most indomitable enemies in their brothers from the south. They were at the base of all the agitations and revolts with their preachings, and they preached resistance to the French occupation with the greatest ardor.

174 The cradle of the Ifora was probably the ancient Berber capital,
565 Ṭăḍemeka, whose present Arabic name is Es-Souq, which was
793 given to the principal tribe. They swarmed hither and yon from the Niger loop, by whole tribes or by small groups of a few tents. They are found all over Tuareg country.

[721 Many of them, using their religious character as a pretext,
181] refuse to take part in wars. But beside these pacifist groups are
701 other clearly warlike ones; among the Ioullimmiden, the Cheriffen are divided into ordinary Cheriffen and warrior Cheriffen.

184 The Inislimen way of life is the same as that of the Tuareg.
565 They speak the same language and administer themselves with no
793 intervention from the Imochar. A few cases of polygamy have been
[631] observed among them. This is the result of their gradual Islamization,
[595] which favors the custom, and of patriarchy which was already in practice in some Sudanese tribes.

565 The Imrad. -- Imrad probably comes from the Tamashek root
[192] Égeid, Égeit, which means "kid, " "little goat, " and from the prefix
[422] am indicating possession. In short, this means "possessors of goats. " In fact, the Imrad formerly could own only goats, for the Imochar reserved the possession of camels for themselves.

Their nickname is Kel Oulli, which also means "goat people, " a name which they prefer to Imrad, which is probably a bit degrading for them.

[631] /165/ They make up tribes enfeoffed to the Imochar and are their vassals.

The Imochar have a certain scorn for them and consider them people of low birth, not of the pure Tuareg race; the name Taouia Settefet, meaning "of black descent, " is often applied to them. (1)

1. Among the Ioullimmiden they are referred to as Idinet.

173 Nothing indicates a racial inferiority of the Imrad to the Imochar,
565 however. If we want to interpret the old legends of the Ahaggar,
144 everything leads us to believe that the Imrad were in most instances the first occupants of the country, and the Imochar, who were the invaders, were conquerers who made themselves masters of the country by force. The crossbreeding with the blacks cannot be a decisive criterion, for many Imrad tribes are not physically more "Negroid" than the Imochar. It is also true that the Imrad are
[186] less rigorous than the Imochar in maintaining the integrity of old
[184] Tuareg customs. They have less greatness of soul and sentiment, as well as less ethnic pride.

565 Although their present situation is more prosperous than that of
[511] the Imochar, as we have said, they do not stop at considerations of
[177] prestige of the latter. Since the occupation, they have been able to raise an appreciable income through animal husbandry and caravans.

565 The Imrad are organized by tribes, electing a chief and respecting
631 matriarchal rules like the Imochar. They administer their affairs internally as they see fit, without intervention of the amenokal or the
[642] Imochar in their affairs.

162 In all of the confederations, the Imrad are more numerous than the Imochar, in a ratio of one to five (northern Tuareg) and one to eight (Ioullimmiden).

181 They are of a more peaceful nature than the Imochar, perhaps
565 because they are less virile and less courageous. Still, they were often taken on raids against their will by the Imochar, and, aided by
721 their taste for gain, they began before long to pillage on their own each time that a good opportunity presented itself. They often
[727] organized expeditions on their own initiative, but, if they were successful, they had to pay a certain share of the loot to the nobles. This was a guarantee for the future, the Imochar said, knowing full well that a raid brings about a counterraid, and that they were liable to suffer /166/ the repercussions of the "misconduct" of their vassals one day or another.

565 Some Imrad even acquire renown as great warriors, and some
701 Imochar have agreed to place themselves under their command during a raid, bowing to their superiority.

There are ordinary Imrad (goatherds) and warrior Imrad among
[714] the Ioullimmiden. The former did not take part in war, while the others were in all combats and, for that reason, had a right to the same armaments as the Imochar, but without the buckler.

565 Some tribes even became so strong militarily that they succeeded
631 in freeing themselves completely from Imochar guardianship. This is the case of the Kel Gossi /Gossi/ from the loop of the Niger.

565 Imochar sometimes marry Imrad women who are renowned for
[582] their beauty, but no inverse cases have come to our knowledge.

565 Unions, or more exactly concubinage, between Imrad and
[595] Negresses are very common.

[567] Imrad have the right to possess black slaves who are employed in household work and in keeping the herds.

114 Schirmer has said that the Ahaggar Imrad were sedentary peoples
241 entrusted with keeping the gardens; (1) he has committed an error,
565

1. Le Sahara, p. 298.

certainly because of erroneous information. This is all the more curious since Duveyrier had already defined exactly the position of the Imrad. (2)

2. Les Touareg du Nord, p. 334.

114 Duveyrier translated the word amrid by the word "serf," which
565 corresponds exactly to the Arab expression ra'aya, and also because
566 the ra'aya are subjects liable to forced labor and taxes, whom the marabouts are not allowed to possess by Moslem law. Duveyrier believed he was confirmed in his opinion because of the fact that the Inislimen of the Ajjer did not have the right to have Imrad. This is an error of interpretation. This Arabic term cannot be suitable under the circumstances, for the social class of the Tuareg Imrad has no equivalent among the Arabs.

We have preferred the term "vassals" which is more suitable
[651] in our minds, because the Imrad are not unconditionally subject to
[643] forced labor, they pay a perfectly defined vassalage fee, their
[657] chiefs participate in the election of the amenokal, and they themselves own slaves.

/167/ Moreover, the term "vassals" has been adopted by Richer, Deniker, Verneau, etc.

565 In the Sudan they are often referred to by the name of Daga,
192 a word of Sonrhaï origin, as is the word Bourdame which designates the Imochar.

565 Owners of a great many goats, the Ahaggar Imrad are limited
233 to short moves, but they are not sedentary. They actually have a
423 great many centers of cultivation, but they do not cultivate them-
241 selves; for this purpose they use Negroes from the Tidikelt -- the
563 Harratin /Haratin/ who act as tenant farmers and cultivators.

563 Assimilated vassals. -- Tribes bearing the names Issekkemâren and Irréguénaten /Irreganaten/ are generally assimilated with the Imrad. These tribes, although also vassals of the Imochar, are appreciably different from the Imrad from the social point of view.

The Issekkemâren and the Irréguénaten are not people of their race in the eyes of the Tuareg. Linked to them by some remote
[602] bonds of kinship, they are considered mixtures, exactly as their name indicates. They are the product of mixed marriages, general-
[582] ly of Tuareg women with Arabs or Berbers. The term Irréguénaten has even been extended to groups springing from Imochar women or Imrad men. They exist in several confederations; there are Irréguénaten among the Ihǎggaren as well as among the river Tuareg, Issekkemâren among the Ihǎggaren and in the Timbuktu region.

563 Socially they occupy a higher rank than the Imrad; they are
631 free, and their vassalage to the Imochar is much more liberal. They have placed themselves under their protection because they were
[643 too weak to insure their own defense. For this reason, they pay an
651] annual indemnity called rharama to the aménokal. They administer their own affairs just as the Imrad do, and they have the same mores
[124] as the Tuareg. On the surface they cannot be distinguished from them. They also speak Tamashek, although they are less rigorous
[567 keepers of the old traditions, it is true. They own slaves, but they
461] do not show as great a repugnance for work as the Imochar and the Imrad. There are never unions between them and the Imochar,
[582] and they are quite rare with the Imrad.

563 There are also important tribes in the Sudan who bear the name of Daoussak. They are generally considered /168/ Imrad, but actually the Daoussak were probably former Ioullimmiden shepherds who were not authorized to carry the lance and take part in combats. They tend to give themselves a certain marabout air, and they multiply the Koranic schools in their camps.

[174] [701] [793]

Iborelliten. -- We can rank among assimilated vassals still other free tribes, quite little known until now, who bear the name of Iborelliten (singular, Aborelli).

They speak the Tamashek language and on the surface are in no way different from the Tuareg in the midst of whom they live. In some confederations they form very distinct tribes, depending in general only on the direct authority of the chief of the confederation; such tribes are those of the Aïr who are under the command of the anastafidet of the Kel-Oui. (1)

1. The Kel-Aïr are divided into Kel-Gerès and Kel-Oui, placed under the authority of the Sultan of Agadez. The Kel-Oui, probably of Oraren /Ouraren?, see below p. 37./ origin, have mixed enormously with the sedentary Hausa. Because of that they have diminished in the eyes of their racial brothers, who now consider them Negroes. They have a peculiar organization, and their chief bears the name of anastafidet.

They are more or less colored depending on the group, and some are as white as the Tuareg. They intermarry among themselves

563 and may be owners of slaves and herds. They sometimes seek
[582] matrimonial alliances with the Imrad, but the latter, who hold them in rather great contempt, most often refuse.

According to Nicolas, the Iborelliten might be captives of a
114 higher origin. (2) For de Foucauld, (3) Aborelli (plural, Ibourelliten)
563
[192]

2. Loc. cit., pp. 579-586.

3. Dictionnaire touareg-français /Tuareg-French Dictionary/, vol. I, p. 79.

designates a mulatto of a white man and a Negress, or inversely. In our opinion, it should be added that one of the parents is of Taureg origin; and we are all the more convinced that this trait is
[192] indispensable since de Foucauld elsewhere refers to the ordinary mulatto by the name of Achardan (plural, Ichardanen). (3)

3. Dictionnaire touareg-français /Tuareg-French Dictionary/, vol. I, p. 79.

We have gathered information in the regions of Tahoua and Gao, where éborelli refers to a child born of an Amajer and a non-captive Negress, or of a foreign woman. The Iborelliten are therefore mulattos born of mixed parentage, Tuareg and Negro.

563 As groups of Iborelliten we shall cite the Igdâlen of /169/ the Aïr and the Aboghelitè spoken of by Barth, (1) who were born of

1. Op. cit., vol. I, p. 204.

Tuareg mothers (Imochar, according to Barth) and Negro fathers. Another Iborelliten tribe, of Tuareg and Peul stock, said to have

563 become sedentary, exists in the Sudan, in the Niafunké region.

There seems to be a category of low-class Iborelliten who are 563 referred to as Irraouellan. Nicolas considers them former captives 567 who have been liberated. Chudeau reported an Irraouellan tribe, [727] whose members were said to be freedmen or descendants of former captives. He adds that the children of a Tuareg man and a slave are by law Irraouellan.

We shall add to these different definitions that in the Aïr a slave woman who marries a Tuareg becomes free as does her family, and the children born of her marriage are then called Ikalalen.

[184] Among the Kel-Ahaggar, we do not find any true Iborelliten or Irraouellan tribes, although there are men belonging to these social classes.

567 The Iklan. -- The Iklan (singular, Akli; feminine singular, Taklit) are the serfs, or slaves, of the Tuareg. The name Iklan [192 144] comes from the Tamashek root Kl, meaning "black being"; (2)

2. Nicolas, op. cit., pp. 579-586.

and indeed these people are foreign to the Tuareg race. They are Negroes of all origins, formerly captured in the Sudan and reduced to slavery by the Tuareg. They form a separate class, which is not a tribe, except when they are freed conditionally or completely. Then they are called Iklan-n-égef or Iderfan, depending on which is the case.

[144] They have founded a family among the Tuareg and given birth to a new race with the most diverse characteristics, from which the white element is not excluded.

[181] Slaves are employed in keeping the flocks, and in the household work of the camp; they share the life of their masters and from their contact with them have acquired an independent nature which makes them love the freedom of nomadism, so much so that it would now be difficult for them to resume the sedentary life of their Ancestors.

567 of their ancestors. Ahaggar slaves are perfectly adapted to the desert and possess physical qualities of sobriety much superior to those of their racial brothers /170/ in the Sudan, who have difficulty living there when they are transported from the Sudan.

The Akli is subject to forced labor at the will of his master. He owes all his work to his master and is his property, but he receives a few advantages and can use a few days of work a week for himself.

In the Ahaggar the Iklan are treated perfectly well by their masters, to whom they are quite attached. They share meals with them and sustain with an even temper the good or bad fortune which the camp enjoys. Their children are reared with those of the Tuareg and on the same footing.

They benefit from certain humanitarian rules which do credit to the Tuareg. Thus a slave who is too young or too old cannot be liberated and must be supported by his master.

[428] The Iklan are bequeathed as a heritage; they may be possessors of animals, whose usufruct they then have; but upon their death these animals fall to their masters and not to their own children.

The Imochar, Inislimen, and Imrad have all rights over their slaves. The latter cannot marry without their consent. Generally, 567 when there are a man slave and a woman slave in the same camp, 582 they are married to each other, and the man receives a goat which 583 he gives to his wife as a bride price. If the slave wants to seek a wife for himself and finds one in another camp, he receives nothing from his master and must find the means to pay his wife's bride price by himself; this bride price is commonly fixed at ten goats. The slaves put in charge of keeping the flocks and who are often absent from the camp because of their occupation usually do not [836] marry. "They take their pleasure where they find it," said Father de Foucauld.

665 The Tuareg often take slave women as concubines. There are 567 several advantages to this: first, they have no bride price to pay, 595

565 and, second, they are dealing with a woman who submits to their
567 caprices more easily than a woman of their race and whom they can
595 change at will. Children born of these concubinages are free but are not members of their father's class. The latter recognizes them as
[428] his, but they are morally considered slaves. However, they can inherit from their father.

565 /171/ Tuareg women of the noble class who have relations with
833 the Iklan are discredited among their own people. But the case is
558 not very rare, it seems, particularly since a legend maintains that
[842] the relations between Imochar women and captives are sterile.

The Iklan have very corrupt mores and practice pederasty and
167 other vices. To steal and lie is instinctive for them, defects found
[838 for that matter in most of the Sudanese Negroes.
679]

Thus, when they keep goats in the pasture, they are accustomed
[272] to sucking them. Therefore, in some camps they never receive any milk since it is rightfully presumed that they have served themselves
[304 first. Some masters, to protect themselves from these thefts, do not
234] hesitate to padlock the mouths of the herdsmen by perforating their lips. A few years ago, there was still an old woman in the Ahaggar who had suffered this mutilation.

They live very familiarly with their masters, and some have deserved their confidence, either by their intelligence or by their
[644] courage during raids. The former amenokal of the Ahaggar, Moussa ag Amastan, was always accompanied by his Negro Chernach, and the feats of war that they accomplished together are still the object of the most marvelous tales during camp nights.

A slave may ask to change masters when he is mistreated or
567 when he hopes for more advantages. Since the Tuareg generally
685 does not want to be separated from his slave with no recompense, the slave resorts to a subterfuge which consists in cutting off the ear of an animal from the herd of the master to whom he wishes henceforth to belong, or committing some other depredation of the same sort. This offense brings about a right of life or death over the slave who commits it, on the part of the injured party. In practice, according to the accepted custom, this slave automatically becomes

567 his property. In cases of this nature the two parties have usually
[685] come to an agreement beforehand.

The Iklan are responsible for introducing a quantity of words
[177 and new expressions into the Tamashek language, all of them
192] naturally of Sudanese origin. They have a very vulgar language and murder the language of their masters abominably, so that they make a real argot of it.

They have kept a great many characteristics of their folklore,
[536] which we /172/ find in their dances, the pantomimed scenes that they organize among themselves at the time of public rejoicing or of events in the family life of their masters.

Social evolution due to the French occupation will in an indefinite time bring about the disappearance of bondage, which we must explain does not have the inhumane nature that one might presume.

567 It would have been a blunder to immediately impose the
liberation of the Iklan, and it would have been contrary to their own
648 interests. Attempts made in this direction in the Sudan have given deplorable results. Iklan liberated from one day to the next are unsettled in class; they cannot and do not want to go back to working the land and thus find it impossible to earn a living.

The disappearance of slavery will come about gradually and individually. It will occur slowly, but inexorably, and it will bring important social transformations among the Tuareg.

One can already observe this evolution among the Ioullimmiden, in Adrar, and particularly around Timbuktu where Imrad women occupy themselves from now on with grinding millet and doing the heavy housework, which was formerly left to the captives.

567 Iklan-n-Egef. -- Liberation of captives, furthermore, has always existed among the Tuareg in more or less attenuated forms.

It may have several causes, first of which is the excess of captives, which makes a great many useless mouths to feed. The Tuareg thus gave a halfway freedom to some of them whom they

567 charged with tending their flocks. These are the Iklan-n-Egef, or dune captives. In the Sudan they are often referred to by the name of Bella or Bouzou.

Secondly, captives may be liberated through generosity in return for services rendered; then they are called Iderfan.

The Bella, without being definitely freed, live freely, and the Tuareg let them earn their living the best they can. In addition to tending the flocks, many of them engage in small industries. They [463] gather up wood to sell in the urban centers, make charcoal /173/ for the same destination, and some women have become potters.

They are then organized in tribes and live like nomads in tents, just as the Tuareg, practicing endogamy, but remaining enfeoffed to an Imochar or Imrad tribe. In case of a conflict they side wholeheartedly with their masters and participate in combats as foot soldiers armed with javelins.

Several of these tribes are known in the region of Timbuktu, among the Igouadaren and the Tenguéréguif, in the Gao region, among the Ioullimmiden, and among the Kel Dinnik (eastern Ioullimmiden) from the Tahoua region. There are none among the Ihaggaren, however.

In the Ahaggar there are no Iklan-n-Egef except in individual cases.

Iderfan. -- The word Iderfan comes from the root sederf: "to free (by amplification) one who is no longer able to render good service." (1)

1. Nicolas, op. cit., pp. 579-586.

In principal, one cannot get rid of a slave by freeing him if he is stricken by old age or slows down in his work.

Actually the case comes up from time to time, especially among the Sudanese Tuareg. But emancipation may be the result of a pious gesture on the part of the master. At other times, some

567 have been freed as a group as a reward for some outstanding action. Nicolas mentions the present Tamjert fraction in the center of Tahoua who were freed after the battle of Izerwan where they had courageously resisted the Kel Ahaggar (1898). Many Iderfan go back to cultivation. They often live with the sedentary groups, with whom they join forces. They do small services for the latter, such as tending their flocks.

114 Nicolas likens them to the Harratines of the Kel Ahaggar. This
563 is only partially justified, for, although it is true that a few former
567 slaves work in the centers of cultivation of the Ahaggar, the majority of the Harratin are Negroes from the Tidikelt who freely came to get jobs among the Tuareg. Thus, we must not confuse the Harratin with the Iderfan.

567 As in the case of the Iklan-n-Egef, there are no Iderfan in the Ahaggar except in isolated cases.

The Enaden. -- The Enaden (singular, Enad) form the artisan
564 class of the Tuareg. In the Sudan they are called /174/ garassa or gargassa, which is very probably of Sonrhaï origin.

[192] The word Enadan probably comes from enad, meaning "the other," extended to mean "those we don't talk about." (1) This is

1. Nicolas, op. cit., pp. 579-586.

because the Enaden form a closed caste, scorned and cursed by the Tuareg whose repulsion for manual labor is well known.

463 Their role is to manufacture anything the Tuareg may have need
564 of: weapons, wooden table utensils, tent pegs, mehari saddles, and harnessing articles.

In addition, they also willingly engage in the business of barber-
[757 surgeon, and with the little instruments they make they adroitly do
752] bloodletting, cupping, scarification, and other little operations of the same order, including tooth extraction. They are remunerated
[465] for their work when they work for tribes, or, if they are attached to a master, he has them entirely at his disposal.

564 The Tuareg, who heartily scorn them because of their obscure origin and servile profession, recognize their good qualities and are happy to profit from them. They also fear them a good deal, for [754] they credit them with supernatural powers of sorcery and magic. Possessors of fire, mistreating the earth and the minerals by beating them, they are placed in a world apart, inhabited by the genii with whom they are likely to enter into relations. Although the Moslem [751] marabouts willingly sell amulets, which the Tuareg prize, the latter do not hesitate, in case of need, to ask the Enaden for amulets in preference.

The Enaden are still more despised because they have no moral principles and willingly serve as spies and traitors; they spy on the Iklan and the wives of their masters and also act as go-between for [837] lovers. Like the jesters in our Middle Ages, they have the right to go anywhere, including among the women. Everyone finds this natural, for this is a right which is all but acknowledged.

Sometimes they take part in raids, and they are reputed to fight [726] bravely, although no one wants to stay beside them during combat, since they seem to possess talismans so powerful that javelins directed toward them deviate /175/ from their route and are apt to strike those [626] nearby. The Tuareg never kill an Ènad, for this brings misfortune and the Ènad might take revenge from beyond the tomb.

In Sudanese tribes they are called ag'gou (plural, ag'gouten) and 184 sometimes play the part of jesters (griot). Some are musicians and 564 storytellers. This role is not widespread, but it happens that the amènokal of the Tenguéréguif, Chéboun, has several griots attached to his person. They avenge themselves on people who are not [626] generous enough to them by making satirical songs against them to which the Tuareg are often very sensitive.

564 They are willing to do anything to earn a bit of money, which 426 they spend as fast as they get it. A blacksmith always has his debts, 454 but people give him credit for they know that he will be shrewd enough to repay them one day.

564 We must acknowledge that the
[153] Enaden often have very open minds and are gifted with an intelligence higher than the average of the ma-
564 jority of the Tuareg. That is why
644 they have sometimes filled trusted posts with the principal chiefs, who have used them as emissaries or interpreters, indeed even as
[152] counselors.

Thus, at the time of the Hourst mission in 1896, Madidou, amenokal of the Ioullimmiden, officially delegated one of them to Gao to deal with the French officer.

564 The Enaden live either in camp
361 groups or in isolated tents or even individually; they are attached to a chief or a tribe.

Although they are foreign to
564 the Tuareg race, they still enter into the components of the great family of veiled men, for the lives /176/ of the two groups are often intermingled. They speak Tamashek,
[198] more specifically a special dialect, tenet, which they alone understand and which is a bit secret in nature. This dialect is unknown in the Ahaggar.

Fig. 17. Forceps for extracting teeth and instrument used for laying bare the roots.

[173] Legend attributes to them a common ancester named Tamamenet, and all of their fractions are supposed to have originated in Adrar des Iforas. Their true origin is as obscure as
[174] can be; we are apt to say that they are descendants of the Jews who formerly lived at the Touat, in the Tamentit oasis, from which they

174 564 were chased by Arab marabouts at the end of the fifteenth century. It is plausible that a number of Jews from Tamentit, particularly those practicing the crafts of jeweler or blacksmith, very respected professions among the Tuareg, found refuge with them. Perhaps the Tuareg received a new artistic influence through them. Their knowledge /177/ of fire [30] [531] and treatment of ores must have permitted the introduction of a larger scale of iron industry among the Tuareg, as well as the use of metal instruments which certainly could not have been very developed before that time; in general, the techniques of the nomadic shepherds was limited to leather and wood. There is no doubt of the artistic relationship between Tamentit jewelry and the Jewish goldsmith's work from North [17] Africa, on the one hand, and the goldsmith's craft now in vogue among the Tuareg, on the other; this can justify the opinion that part of the Enaden are of Israelite origin. But Sudanese elements have also contributed to the physical formation of the group. We must see the peculiar Tuareg art, at the same time heavy in its forms and delicate in detail, through this heteroclite mixture.

Fig. 18. Silver pendant worn around the neck by Ahaggar women. In the composition are found the triangular motifs common to Kabyle art and to some Berber tribes from Atlas.

564 [527] The Enaden of the Ahaggar are few in number. They include five or six families who recently settled in the country following raids on them by the Ihaggaren. /178/ Most of them are natives of Adrar des Iforas

and were enfeoffed to the Kounta tribe, or Dag-Ech-Cheich. The origin of the oldest known families goes back no more than two generations. They are the Ehellellou, who have left descendants, the Badahol and Mohamed /families/, today extinct, and the Rati w[illegible] descendants are n[illegible] settled among the Taitok. 564

Fig. 19. Silver amulets worn by men on the crests of their hairdo.

At the time of Amenokal Attici (1899) there was a chief of the blacksmiths named Alamine whose role was to oversee and distribute the work and to reduce the newly captured blacksmiths from the Sudan to obedience. He also had judiciary power. 564 326 [301 789 531] [697]

Formerly endogamy was the general rule, but since the occupation it has been violated numerous times, and artisans often take their wives from the Harratin and the Eklan. 564 [582 177]

Their industry is limited to the fabrication of jewels, padlocks, knives, and a few wooden utensils. They are particularly occupied with repairing worn articles.

/179/ In the Sudan the Enaden are much more numerous. That is why industries there are found to be much more developed, even more so since more varied and more abundant raw materials are at their disposal. 564

564 The Enaden do not pay any vassalage dues. Socially, they [651] occupy a place halfway between the Imrad and the Iklan. In certain cases they can even possess captives, and many of them have [567] at their command an affluence unknown among the Imrad, and

[414 531 326]

even among some Imochar.

/180/ Chapter 2

Confederation of the Ahaggar

173 Oral traditions handed down among the northern Tuareg maintain that they originally came from the city of Es-Souq in Ăḍrar des Iforas, known as Tăḍemeka in ancient times, and equidistant from Timbuktu and In-Salah.

173 This tradition is also found among the Ioullimmiden and in all the fractions now camped in the Adrar and on the banks of the Niger, which implies the idea of a common origin in their minds.

Another legend, which originated in Arabic writings, takes the arrival of the Ihaggaren in their present habitat back to the sixteenth century. Formerly they had been settled in the Ajjer and Fezzan.

As we have already related, the Ahaggar nobles claim, on the one hand, to be of sherif origin descended from the Edrissides of Fez. This claim cannot be believed, except with regard to a few families who contracted alliances with marabouts coming to settle among them. In fact, tradition relates that the Arab sherifs came to settle among the Tuareg after Islamization and established great authority over them. Profiting, then, from the anarchy which reigned there, kept up by the constant rivalry between clans, the sherifs seized power and were able to keep it for a long time. These sherifs belonged to the family of Imenan, "sultan," who founded families by marrying high-born Tuareg women, thus forming a new nobility. They kept their authority for a long time, thanks to the support of an important tribe, the Imanrassâten, descended from the eastern Arabs.

The Imanan /sic/ sultans then grouped the Tuareg of the Ahaggar and the Tassili-n-Ajjer under their authority. But the national character, sharpened by the vitality of the old Berber customs, finally revealed itslef among the Tuareg. As a result of extortion on the part of the Imanan, several tribes revolted /181/ in a show of independence, and an Ajjer noble named Biska from the Oûraren fraction killed the Imenan Sultan Goma. This was the beginning of a series of wars between the Oûraren tribe, which made itself the champion of independence, and the Imanan and their Imanrassâten allies, a fight in which the Oûraren, after battles some favorable and some unfavorable, finally triumphed.

As a result of these events, the suzerainty of the Imanan was henceforth destroyed. The successors of Goma, who still bore the title of amenokal, tried in vain to re-establish their authority during interminable strife.

173 Sultan Goma was killed about 1650, and the independence of the Ahaggar tribes dates from that epoch. They profited from this event and from the Ouraren-Imanrassâten struggle to free themselves from the yoke of the Imenân.

The Ahaggar nobles formed only a single tribe in the beginning, the Kel Ehan Mellen tribe divided into fourteen fractions, which, according to pasture needs, split off and detached themselves from the original branch. The Kel Ehan Mellen probably lived in the Tidikelt in primitive times, whence they were chased by the Arab invasion. At the present time all that remains of them are the Tégéhé-n-as-Sakal, the Tégéhé-n-agg-Ali, and the Kel Ehan Mellen-ouan-Taghert.

At one time, one of these extinct tribes, the Tégéhé-n-ou-Sidi, was in power in the Ahaggar, but it gradually became weaker and weaker through misalliances, to the advantage of the present tribes of the Kel Réla, the Tâitok, and the Tégéhé-Mellet, who gradually absorbed the other fractions.

Among the Kel Réla today we find the last elements of the three tribes mentioned who descended from the Kel Ehan-Mellen.

The Kel Réla, Tâitok, and Tégéhé-Mellet each enjoyed the most complete independence. However, through political inheritances, the Kel Réla became the most important and the holders of the tobol.

Later, about 1755, profiting from the weakness of Aménokal Salah (called Mokhamed el Khir), the Tâitok and Tégéhé-Mellet obtained a distribution of the Imrad tribes among the three groups, at the same time still recognizing the authority of the aménokal. But the Tâitok, in spite of these considerable advantages, were dissatisfied and wanted to seize the tobol from the Ihaggaren, which set off a series of internal struggles with their Kel Réla cousins.

175 /182/ When the Ahaggar Tuareg surrendered to France, the
631 Tâitok and the Tégéhé-Mellet were organized as free tobol, and
643 their chiefs bore the title of aménokal, although recognizing at the
648 same time the authority of the aménokal of the Ahaggar, Moussa ag Amâstan, who had just been enthroned by the French. Azioul,

175 the Taïtok chief, and Ser'ir ag Bedda, the chief of the Tégéhé-
631 Mellet, accepted this vassalage without question, but later on they
643 raised endless difficulties. This policy, which had been initiated to
648 reinforce the authority of Moussa ag Amastan, caused us several disappointments. As early as 1910, Captain Niéger, Adjutant Commander of the Tidikelt-Hoggar, interpreted the dissidence of two Imrad tribes, the Ait Loaien and the Kel-i-n-Tounin, as the beginning of serious complications.

We were able to measure his perspicacity during the revolt of 1916-1918, and the misunderstanding between the Kel Réla and Taïtok still persists today. But since the Taïtok and the Tégéhé-Mellet participated in the revolt of 1916-1918 and their chiefs did not live up to the confidence which had been placed in them, they were placed under the direct authority of the aménokal of the Ahaggar, with the title of amrar.

## Tobol of the Kel Rela

631 The tobol of the Kel Rela is the most important in the Ahaggar,
643 and its chief is at the same time the aménokal of the confederation.

It is formed by a certain number of noble families, several of
565 which have been reduced to one or two tents. They are the Inemba,
631 the Iboglan, the Ikerremlen, the Tégéhé-n-agg-Ali, and the
643 Tégéhé-n-as-Sakal; all of whom are entitled to the tobol, and the Kembiden, the Oulad el Goute, the Oulad Amechaoui, and the Oulad Ibra, who lost their right to the tobol through misalliances.

173 Legend recounts that the Kel Rela nobles were descended from a woman by the name of Ti-n-Hinan, who came from the Tafilalet with her servant Takamat. Then her people bore the name of Kel Ehan Mellen (meaning "white-tent peoples") as opposed to another tribe, the Issetafenine, "black-tent peoples," who were the ancestors of the Ioullimmiden.

Later the dominant fraction was the Tégéhé-n-ou-Sidi, /183/ which was that fraction of the former Aménokal Sidi, and which was composed of the Kel Rela, the Taïtok, and the Tégéhé-Mellet.

173 Another fraction, the Ikerromoïen, was formed meanwhile. The ancestor of this tribe, named Akerromoï, was of guérissouten origin from Aïr, and had married a noble Ahaggar woman, daughter of the tobol; their most famous descendant was Aménokal Moussa ag Ámâstan.

As for the Iboglân, their ancestor is a man called Khatita, brother of Sakal, the chief of the Tégéhé-n-as-Sakal. He had married a Kel Réla woman.

The Tégéhé-n-ăgg-Ali gave birth to the Inemba, and their name disappeared with the last men of that old tribe.

According to legends gathered among the Tuareg of the Ahaggar, Ti-n-Hînân had seven daughters, three of whom had children who were the forefathers of the present tribes. The first engendered the Iboglân and the Inemba; the second, the Ikerremoïen and the Kel Ehan Mellen; the third, the Kel Rela, the Tăïtok, and the Tégéhé-Mellet.

Let us interpret the legend by saying that descendants of the three daughters of Ti-n-Hînân are found in the different tribes mentioned.

173 According to another legend current in the Ahaggar and reported by Mr. Benhazera, (1) Ti-n-Hînân had three female descendants

1. Six mois chez les Touareg du Ahaggar, p. 92.

who were the ancestors of the three principal noble families of the Ahaggar; we do not know how many generations separated them. They are:

Tinirt, the antelope, who was the ancestor of the Inemba

Tahenkat, the gazelle, who was the ancestor of the Kel Rela

Tamerouelt, the doe rabbit or female of the hare, who was the ancestor of the Iboglân

The Kel Rela (alteration of the word Kella) owe their right to the tobol to Kella, a descendant of Tahenkat, who was married to Sidi ag Mohamed el Kheir.

173 The Kel Rela have accurately kept the memory of the filiation of their amenokal from Sidi ag Mohamed el Kheir down to the present amenokal. Formerly, the filiations were established through the women, but aside from a few of them, their names have been forgotten. This very clear demarcation dating from the seventeenth century indicates a profound modification /186/ in the rules of succession and a pronounced weakening of the absolute matriarchal system.

Succeeding Amenokal Sidi ag Mohamed el Kheir (ca. 1750) were the following:

Younès ag Sidi (ca. 1790)
Ag Mama ag Sidi (in 1830)
El Hadj Ahmed ag El Hadj el Bekri (1830-1877)
Aitarel ag Mohamed Biska (1877-1900)
Attici ag Amellal, named at the same time as /the following/
Mohamed ag Ourzig (1900-1905)
Moussa ag Amastan (1905-1920)
Akhamouk ag Yema (1920-1941)
Meslah ag Amyas (1941- )

Sidi ag Mohamed el Kheir ag Salah married Kella, great-granddaughter of Tahenkat, herself the daughter of Ti-n-Hinan, the ancestor of the Ahaggar Tuareg. He had nine children, six of them girls, who are the ancestors of all the great present-day families from whom the following amenokal were taken. He is the founder of the tribe of the Tégéhé-n-ou-Sidi.

He died about 1790, after having yielded, or so it seems, to all the demands of the Taïtok and the Tégéhé-Mellet on the subject of the dividing up of the Imrad. He had to carry on a war with the Taïtok, but finally conquered them, and peace was made. His two sons then married two Taïtok women.

Younes ag Sidi succeeded his father. He was the eldest of the children of Sidi ag Mohamed el Kheir. He married a Taïtok woman by whom he had a son, Amechaoui, who later became amrar of the Taïtok through the blood of his mother.

Scale: 1/5, 000, 000.

173 Ag Mama ag Sidi was the brother of Younès ag Sidi and the second son of Sidi ag Mohamed el Kheir. Like his brother he married a Tăïtok woman, who bore him a son, Mohamed, who also later became amrar of the Tăïtok. Ag Mama reached the age of 100 before he died.

175 El Hadj Ahmed ag el Hadj Bekri was the grandson of Sidi ag Mohamed el Kheir through the latter's daughter, Zahra, who was married to El Hadj Bekri from the Ifôra tribe. He was the nephew of the preceding aménokal, being the son of his eldest sister. He had to fight against the Tăïtok, because one of them, Mohamed ag Mama, the son of the preceding aménokal, wanted to succeed him.

During his reign a long war broke out with the Ăjjer, when the Ihăggaren wholeheartedly supported the descendants of the Sultan Imânen. He was killed during this fight.

/187/ Aïtarel ag Mohamed Biska was the grandson of Sidi ag Mohamed el Kheir through his third daughter Ăménéna, married to Mohamed Biska of the Tégéhé-Mellet tribe.

In relation to the preceding aménokal, he was his first cousin, the eldest son of his father's sister. He led a very eventful life. He had to fight the Ăjjer over whom he won a great vitory at Edjmidhan, and he was subjected to Tăïtok attacks. Under his aménokalat the Flatters mission was massacred, and he was largely responsible for it.

He died in 1900, leaving a daughter who married Ămayas ag Khelbi, by whom she had a son, Meslah, now aménokal of the Ahaggar.

Ăttici ag Ămellal was the nephew of the preceding aménokal, as the eldest son of his second sister. He was named at the same time as his cousin Mohamed ag Ourzig, the eldest son of the eldest daughter of Ăïtarel; the tobol ordinarily would have gone to the latter, but he was old and tired and could not assert his rights. This was a long period of anarchy, for which the Imrad had to bear the consequences, and which ended with the French occupation and the nomination of Moussa ag Ămâstan.

175 Moussa ag Ămâstan, Ăttici's cousin and great-grandson of Sidi Mohamed el Kheir by the latter's last daughter, Tar'aoussist, and by his grandmother Tiguent, was born about 1865 of a Kel Rela mother and an Ikerremoïen father. The latter, very acute in nature, had advised against the massacre of the Flatters mission, although it has been asserted that he participated in it.

Moussa was still young when his father died, and his uncle Ămdor brought him up. Ămdor lived with the Ifôra from the Adrar, and it is there that Moussa made the acquaintance of a very famous Kounta marabout, who had established his religious center at Teleya and must have had great influence on Moussa.

Later he always lived north of the Adrar, which permitted him to make raids among the Ioullimmiden, the Ifôra, the Idnân, the Kounta, and the Bérabiches, who finally paid him dues to secure peace. But Moussa ag Ămâstan never raided the poor or the weak, making himself their protector instead.

When the Tăïtok were raided by the Kel Tădelé (from the A'ïr) [578] they accused Moussa of it; the animosity which still prevails between them dates from that day. Since his brother had been killed by the Ioullimmiden, he organized a raid composed of Kel Tădelé, /188/ Tăïtok, and Ifôra. En route, however, the Tăïtok pillaged the herds of the Kel Tădelé. Moussa was deeply angered by this conduct and did not hesitate to attack the Tăïtok to punish them and take back their loot. The Ihăggaren became indignant at this gesture and demanded that Moussa return the raided animals to the Tăïtok. He refused and withdrew to the home of the Ioullimmiden aménokal, Firhoun, where he worked to re-establish peace between his hosts and the Ihăggaren. He did the same with the Kel A'ïr, which made it possible for the Issekkemâren and the Imrad to go to the Sudan on business, and did much to establish his fame.

Leaving the Sudanese camps, he then approached the Ahaggar and followed events closely.

175 It seems that Ăitarel had designated him as his successor, but he refused the job in view of the anarchy which reigned in the Ahaggar and did not oppose Ăttici, who was elected by the party hostile to peace with the French.

Events moved very rapidly; in 1903 he talked with Kaid Bilou of In-Salah, one of our trusted men, about the surrender of the Ihăggaren. Then he went to Ghat to visit the chief of that region, In Gueddassen, in order to invite him to come to In-Salah with him. When In Gueddassen refused, he went directly to In-Salah to discuss the surrender of the Ahaggar people.

The history of his life after that is the history of the French penetration.

Moussa married late and lived until 1910 in concubinage with a captive who bore him a daughter. Then he married the daughter of Ibedi ag Bassi, Tihit, from the Tăitok tribe, who gave him a second daughter. After that he left for France on the invitation of General Laperrine.

The following year, as a reward for services rendered, he was made an officer of the Legion of Honor.

Through his efforts, thus recompensed by the French, Moussa ag Ămăstan saw his people rally completely, but he was not to enjoy his triumph for long. He died rather mysteriously on December 30, 1920.

Sickly by nature -- syphilitic, it is said, and asthmatic -- he was taken one day by sickness which he attributed to the aftereffects of a serious chest wound received at the time of a fall from a horse. He had to take to his bed the sixth day, but he seemed to be getting better when, during the night, he asked to make his prayer. At that time, he was camped /189/ near Tamanrasset and had the resident officer informed. When the latter arrived to visit him, however, Moussa had just died, not without having first advised the chiefs in attendance to always follow the French.

The members of his family were overwhelmed by such a sudden death, and one Ăjjer man who had arrived in camp within the

175 previous ten days, was accused of having poisoned him. He was made to swear on the Koran, but he swore that he had no hand in the death of Moussa and was set free.

A marabout from the zāwiyah /monastery --ed./ of Teleya, Sidi Mohamed ben Badi, a mkaddam delegated by the great religious leader of the Kounta, Bey el Bekkay, was present at the death of [787] Moussa. He claimed to have been sent by Bey, to whom the death of Moussa ag Ǎmastan had been revealed in a dream.

This assertion did much to dissipate the doubt in people's minds, at the same time as it increased the reputation of the marabout from Teleya as a "saint."

A few days later, the djemaa met and named as a replacement [643 648] Akhamouk ag Yema, informing the authorities by the following letter:

30 December 1920

"Glory to the one God.

"On the part of your friend Boukhelil ben Douka to your Lordship the honorable Captain Depommier, head of the dependency of In-Salah and the Ahaggar. May salvation be yours.

"I have the honor to inform you that our father, Moussa ag Ǎmâstan, is dead, may God bless him.

"We, the Kébar Tuareg nobles, have met with the Kébar of the Imrad. Without any exception, we have accepted Ǎkhammouk ag Yéma to replace Moussa. Be well assured that while Moussa was alive, we entrusted to him all the affairs with which he was charged in dealing with the French military authority.

[648] "I would have you know that today we shall make all possible efforts to serve the French government in good faith as before, and even better, and we shall do in good part all that we can do."

Ǎkhamouk ag Yema was the first cousin of Moussa ag Ǎmâstan, the eldest son of the latter's maternal aunt. Through his mother he descended from the Inemba. He was a childhood companion of /190/ Moussa, undergoing his cousin's influence and following him

175 in everything. Much less intelligent than Moussa, he was none the less a faithful chief who knew how to make himself respected.

He married twice and had seven children.

175 Meslah ag Ǎmayas is a second cousin of Ǎkhamouk. He is a
643 grandson of the former Aménokal Ǎ'ltarel and a second cousin of Mohamed ag Ourzig and Ǎttici ag Ǎmellal. The tobol thus came down in the branch of Ǎmennaï, the third son of Sidi ag Mohamed el Kheir, for want of male descendants in the branch of Héguier. This follows the rules of matriarchal succession.

Although Moussa ag Ǎmâstan's sister, Rakhma, who married Ǎnaba ag Ǎmellal, brother of Aménokal Ǎttici, left a son named Louki, he was bypassed by the Imochar as weak-minded.

651 The aménokal levies the tioussé on the Imrad and assimilated
[643] vassals. Some of them also pay dues /Fr. droits de redevance/ to the descendants of the old noble families. Thus the Dǎg Ra'li pay an annual due to the Inemba Kel Tǎhat, and the A'lt Loa'len to the Inemba Kel Emori. The latter levy four percent of the loads of grain brought back from the Sudan by the A'lt Loa'len.

[178 But these duties levied are tending to disappear gradually with
161] the extinction of the old Ahaggar families, some of which are no longer represented by more than a few individuals.

631 The Kel Rela tribe has been gathering strength in a singular way
644 for a century. It is all powerful by the number of its representatives, and matriarchy has only accentuated this situation. Indeed, since
[643] only Kel Rela women are capable of giving birth to an aménokal, young men from other noble tribes seek alliances with them, abandoning the women of their own tribe. This new blood has given
[582] the Kel Rela a certain physical vigor by preventing them from becoming impoverished through too close and too repeated inbred alliances.

631 643 578 For more than a century the life of the Kel Rela has consisted of a constant struggle against the Taïtok. The latter, belligerent and jealous, dreamed only of seizing the aménokalat of the Ahaggar, and the history of the Tuareg of this country is nothing but a long succession of wars where the two fractions were alternately /191/ successful, but where the Kel Rela always kept the advantage thanks to their numerical superiority. The account of these events may be found in the book of Mr. Benhazéra. (1)

1. Six mois chez les Touareg du Ahaggar, p. 99 ff.

[162] In the 1838 census the Kel Rela included 312 persons, 38 of them men. In 1905, according to Benhazéra, they numbered 55 to 60 tents.

631 The tobol of the Kel Rela at the beginning included only two tribes, the Dăg Râli and the Ăgouh-en-Tèhlé, as well as a large part of the Issekkemâren. Since then, other fractions have come to seek their protection or to assimilate themselves. Such is the case of the Aït-Loaïen and the Relaiddîn.

[65] The Imrad call the Kel Rela "the people who cost dearly," thereby making an allusion to the dues which they are obliged to pay them.

The Dăg Rali. -- The Dăg Râli form the principal fraction of the [643] Kel Rela tobol, on whom the aménokal of the Ahaggar has always relied to enforce his rights, and without whom he would be nothing and could do nothing.

With the Kel Ăhnet, they originally formed the Imessîlîten tribe, and they were said to be the descendants of Takamat, the servant of Ti-n-Hinân, the ancestor of the Kel Rela. They sprang from four sub-fractions: the Ikechchemâden, attached to the Taïtok tobol, the Imessîlîten, the Oulad Ir'dal, the Dăg Mertemek.

At the present time they are subdivided into: 1) Kel Tăhat, 2) Kel Tarahananet, 3) Kel Tamanrasset, 4) Kel Hirhâfok, 5) Kel Ărechchoum. To the Dăg Râli must be added a few individuals, today completely assimilated with them; they are descendants of

631 a very ancient tribe, the Isbeten, who were the autochthons of the Ahaggar and whom the Dăg Rali would have found in Ătakor when they came to settle there.

After the battle at Tit where they lost more than 100 fighters, the Dăg Râli still numbered 60 warriors. The 1938 census gives 1, 090 [161] persons, 334 of them men, including the Iklan. This increase is quite [177] rare among the Tuareg and reflects their wealth and the improvement [511] of their living conditions since the French occupation.

They nomadize in the western part of the Koudia, which is their absolute fief where no other fraction is admitted.

/192/ On the east, the boundaries of the lands over which they range are fixed by the right bank of the Tamanrasset wadi and the Interkadène wadi as far as Ideles; on the south by the southern zone of the Tahalra as far as Tin Dahar; on the west by In Eker; and on the north by the line from In Eker to Hirhafok to Ideles.

631 The Dăg Râli pay a tribute of ten bags of dates or sorghum to the 651 amenokal; in addition, each family which sends a caravan to the Sudan pays him a small bag of sorghum. If the pastures are good, they add several "botta" of melted butter and the milk of twenty ewes. In the case of a successful raid, they pay the nobles half of the ewes.

631 The Dăg Râli are now the richest people in the Ahaggar. They 233 own more than 1, 200 goats and more than 1, 000 camels. Thanks to 556 their beasts of burden, they can take many very remunerative caravans 439 to the Sudan and to the Tidikelt. They hold in common escheated flocks which are called Edjeré-n-boutelma. When the pastures are insufficient to feed all their livestock, they entrust their camels to the Irréguénaten who graze them on the Saharo-Sudanese border.

631 Since they are very open-minded, they were in favor of cultivation 241 in the centers of the Ahaggar, and at the present time they possess 423 lands at Ilâman, Tarahananet, Tamanrasset, Abălessa, Iglen, Tăfârit, I-n-Ămegel, and Silet, which Negroes cultivate for them. The aménokal has granted them a certain number of palm trees in the Silet oasis which formerly belonged to the Tăitok.

357

Young Tuareg couple seated in the shelter of the asaber. Behind them is a household servant, a taklit of Sudanese origin.

Plate X

342

Tent belonging to the amenokal of the Kel Ahaggar. It has eight poles inside, and the awning is made of 60 skins sewn together. The separate poles in the foreground are used to hold up the asaber in the evening.

391
342
516

The tent is always set up by the women, mainly by servants. They make holes in the ground to put the pole in, then pile sand around it. When the pole is in place, the skin is attached by a thong.

631 781 [794] The Dăg Râli are the most pious people in the Ahaggar. The majority of them are affiliated with the order of the Tijanyyah, although some of them adhere to the Sanusiyyah and the order of the Qādiriyyah; these affiliations seem to be purely formal, however, for, with a few exceptions, they do not follow the rites of these religious orders.

797 The activity of Father de Foucauld was particularly effective in this tribe. Because of his installation at Tamanrasset and later at his hermitage at Ăsekrem, Father de Foucauld was in constant contact with the Dăg Râli. At first they were mistrustful of him, but they were not long in coming to him, and they were the first beneficiaries of his good deeds, for the Father went to them, caring for the sick and rendering them many services.

[622] Their chief, Ouksem ag Ourar, was a short, stocky man of average intelligence, but very crafty, especially when it was a question of material interest for him or even that of his people. /193/ He saw the benefit that he could draw from this getting together. Little by little the priest did his best to conquer him and win his affection, and he supported his interests with the authorities of Fort Motylinski. Thus, a few months later, Ouksem was completely won over.

[648] Ouksem gained a certain importance with the authorities, which made him proud and which he knew he owed to Father de Foucauld.

622 631 797 Later on he was a good help in the pacification of the Ahaggar. During the dissidence of 1915, he showed himself very eager to please us, which made Father de Foucauld write to General Laperrine: "Ouksem, chief of the Dăg Râli, could not be better; he does not [648] cease to make progress. It is evident that he is bent not only on being faithful, but on showing his fidelity in a dazzling way by his attitude." He did nothing without asking the Father's advice, and he followed this advice by creating a garden at the Ilâman wadi in [777] order to use the waters which descended from the mountain. This garden was established, and to flatter this meritorious effort which was an example, Ouksem received the Medal of Agricultural Merit, a unique feat in the annals of the Tuareg even up to the present

622 631 717 time. Unfortunately the garden was abandoned after Father de Foucauld was gone.

Although it is difficult to imagine, Father de Foucauld had even thought of Ouksem ag Ourar as a possible aménokal, against all Tuareg social rules.

But what remains of all that? The dead are quickly forgotten among the Tuareg, and although Ouksem may recall from time to time that the marabout was his good friend, it is to be presumed that he, no more than his Dăg Râli, understood the devotion and the affection which was to cost the life of the hermit in the Sahara.

631 The Ikechchemâden, whom we have mentioned previously, have always lived near the Dăg Râli, with whom they used to form only a single tribe. Upon the distribution of the Imrad, they became the vassals of the Tăîtok, but they remained with the Dăg Râli and contracted numerous unions with them so that it is difficult to tell them apart. And so, in 1907, they asked to be attached to the tobol of the Kel Rela.

173 631 The Ăgouh-en-Tĕhlé. -- The Ăgouh-en-Tĕhlé form the most important Imrad tribe in the Ahaggar after the Dăg Râli. They are said to have formerly nomadized in the neighborhood of In /194/ Gall in A'ir and have emigrated into the Ahaggar because of the demands of the Sultan of Agadez on whom they originally depended. The latter had polygamous mores and each year demanded of them a young and pretty virgin. Tired of this custom, which was contrary to Tuareg mores, they left the country and came to place themselves under the protection of the aménokal of the Kel Rela, Younès, the son (?) of Kella (ca. 1700). (The version reported by Mr. Benhazéra says "son of Mohamed el Kheir.")

Before coming to seek protection from the Ihăggaren, they belonged to the tribe of the Tégéhé-n-Élimen, a name by which they are still called sometimes. One fraction of this tribe remained in A'ir and bears the name of Ir'Alaman or Kel Rapsa. They were the ones chiefly responsible for founding the Ghat oasis.

173 Ăgouh-en-Tĕhlé means "reed people." Legend has it that they
631 were forced to eat the roots of that plant during their flight from the Aïr. Their chief was then a man of Herculean size named Assékal ag Louka; the legend says that his feet were so big that when his pursuers saw the footprints, they preferred to abandon the chase.

The Ăgouh-en-Tĕhlé claim to be originally from Mecca where their remote ancestor received a camel from the Prophet. He was supposed to drink only the milk of the camel, but he committed the sin of killing it. Therefore, they had to flee, and after long years of wandering, they settled in Aïr.

At the time when the Imrad were divided up (1750), they were part of the Issandaten. The Ăgouh-en-Tĕhlé went to the Kel Rela, and the other fraction, the Tégéhé-n-Ĕfis, went to the Tăîtok.

631 The land over which they range borders on that of the Dăg Râli. It goes from Tamanrasset to Ourchi wadi, then from the Koudia as far as Afrahouhine and Tamaghine.

[651] They pay a tribute to the aménokal, the same size as that of the Dăg Râli, but they do not share captured goats and sheep with him.

They are currently allied with the Dăg Râli and the Relaiddîn.

They took sides against us in the battle of Tit where they had
[648 about ten men killed. During the insurrection of 1916-1918, they rose up, and their women even seized thirty mehari /dromedaries/
669] belonging to the meharist company at Fort Motylinski. On the other hand, they did not take part in the revolt directly and were the first to ask for mercy.

[161] /195/ Totaling 60 men in 1905, the tribe numbers about 150 persons at the present time.

The Ăgouh-en-Tĕhlé own nearly a thousand camels, which they
[233] graze on the Saharo-Sudanese borders, and 1,200 to 1,400 goats.
[651] Every year they pay a tribute to the amenokal of 12 bags of dates, 6 pots of butter, and the usufruct of 10 goats. Most of the cultivated
[423] land and the foggara of Tarhaouaout and Tahifet belongs to them,
[241] and they have gardens at Ămsel, Tamanrasset, and Talan-Tédit.

631 427 [175] The founding of Tamanrasset is attributed to them; it is said to be the work of the chief of the Issenda (Issendaten) fraction, Ilachen by name. This creation goes back some sixty years, but the irrigable lands were the property of the Ajjer. In the last few years, the Imanrassatên, who were the true proprietors of the cultivable lands at Tamanrasset, came several times to claim the rental price which was one ass or a sheep per year according to the place. But this claim was only payable if the owners presented themselves; the year not claimed was gained by the renter.

[651] They often found themselves in conflict with the aménokal, because they made difficulties in paying the tiousée.

631 They are subdivided into Kel Aguelella or Kel Tarhaouhaout, into Kel Rapsa or Kel Ezarounfat, and into Issendaten or Kel Tahîfet.

631 173 [192] The Aït Loaien. -- The Aït Loaien get their name from the verb élouai, which means "to attach camels in Indian file." (1)

1. According to Benhazéra, Six mois chez les Touaregs du Ahaggar, p. 148.

Through their ancestor Takamat, the servant of Ti-n-Hinân, they are said to be of the same origin as the Dăg Râli and the Kel Ăhnet. At the time of the division of the Imrad, it is said they were bestowed half upon the Inemba and half upon the Tégéhé Mellet. They are subdivided into Irayen (today extinct), Kel Torha or Dăg Houa, and Aït Loaien proper.

631 [651] The Aït Loaien pay the tioussé to the family of the Téjéhé-n-ăgg-Ali, also called Kel Ahamellen (Kel Rela), and the Dăg Houa group pays it to the Tégéhé Mellet.

[578] Formerly allied to the Imekkérressen of the Ajjer group by numerous marriages, they separated from them following disputes and the murder of one of them, the Tuareg Reskou /196/ ag Yahia, famous in all the Ahaggar. Since then, the Imekkérressen have settled in the Ajjer.

631 They nomadize near Ideles, T-i-n Tarabine, Temasint, Aïtoklane, Ẋrokam, Serouanout, and in the Ẋnahef.

[162] They now number 50 men and 102 women. This predominance in the number of women is quite rare in Tuareg tribes.

[233] They own about 350 camels and a thousand goats.

The Aïtoklane and T-i-n Tarabine centers of cultivation are [241 423] their property, but they have been left fallow for several years for lack of manpower.

631 669 They took part in the massacre of the Flatters mission, and the guide Ser'ir ben Cheikh who led it into the ambush of the Iheaouen wadi, had ties in the tribe. They were also at Tit and rebelled as early as December, 1916. They bear the entire responsibility for the assassination of Father de Foucauld and made up [797] the majority of the raiding party which came to kill him at Tamanrasset.

Several reconnaissance missions were launched against them (Sgt. Remiot), which did not prevent them from giving hospitality to Ajjer rebels and taking part in the battle of In Eker with the rebel bands of Chief Abeuh ag Khabelli, one of the biggest robbers in the Tassili.

631 The Aït Loaien form a perfectly undisciplined tribe which [181] must constantly be called back to order and which is always ready to escape from control when we relax our hand a bit.

[651] They pay an annual tribute of six bags of dates to the aménokal.

The Relaiddin. -- The Relaiddin probably came from Aïr, like the Ẋgouh-en-Tehlé, to whom they are related. They camp near them in the northeastern part of the Koudia and go up toward T-i-n Tarabine and Aïtoklane.

[162 651] They number only a dozen tents and about ten able-bodied men. They pay the tioussé to the Iboglin.

This tribe was formerly rich and strong, possessing nearly 400 [177 233] camels at the time of the French occupation; today they count only about 20, and 300 goats as opposed to 1,500. They owe this state of things to losses which they suffered during the revolt of 1916-1918, and which they could never compensate for.

631 /197/ They do own a few gardens at Tazerouk, Ti-n-Tarabine, Attoklane, and Sersouf, but all lie fallow.

[669] During the revolt, they left the Agouh-en-Tehlé in dissent, but they soon surrendered, for their position between the Ahaggar and the Ajjer always put them at the mercy of raids by the latter.

[651] The Relaiddin pay an annual tribute of two loads of grain, a pot of butter, and a goat to the amenokal.

[162] To the Relaiddin must be added a small fraction on its way toward disappearing; they are the Kel Bardjen, of undetermined origin.

[674] Numbering some ten warriors, they are recognized as inveterate robbers, always encroaching on the nomadic territories of others.

[423] Bardjen is located between Tazerouk, Imerera, and Ideles. The territory of the Kel Bardjen was probably marked off about 1750 and

[212] defined by monoliths, some of which bear tifinagh characters.

The Ibettenaten. -- The Ibettenaten are not "Imrad," properly speaking. According to Benhazera, this tribe was formerly noble. They were probably subjugated by the Kel Rela following the murder of an Amacher /singular of Imochar, the aristocratic class. Ed./ committed by one of them. Since then, they pay the tioussé to the

[651] aménokal.

The Ibettenaten probably descended from Kel Afella Ifora on the maternal side and from Tidikelt Arabs on the paternal side.

631 About thirty tents are nomads in the Sudan near Bou Djbiha, but they go up as far as Taoudart and In Ouzal in the Adrar des Iforas,

162 following the pasture grounds. Fifteen other tents enfeoffed to the Kel Fadel camp in Air.

They number 160 persons, 62 of them men, in the 1938 census.

631 They are entirely herders, making very few caravans and owning

233 no cultivated lands. They have very fine pasture grounds at their disposal. They own about 800 camels, 1,000 sheep, and (a rare thing, but quite in keeping with their area of nomadization) nearly 100 cows.

631 They did not take part in the revolt of 1916-1918. But since
[669] they left the environs of Kidal in spite of the order which had been given them to remain there, they were overtaken and raided by the column of Captain Depommier in the outskirts of Tamaïa.

565 The Iklan-en-Taousit. -- The Iklân-en-Tâousit, still called
644 Kel Koas, were probably former servants of the Imenân; /198/ they
631 made up the sultan's guard and were still dependent on his command at the end of the last century.

Their name means "servant of the tribe." They are said to be
[184] of low birth, and unlike all the other Tuareg, they have no aversion
[241] to working the land. They contract alliances with the people of the Djanet oasis.

631 They are subdivided into Iklân Settafen and Iklân Mellen, and
[162] they include about 180 people, some 60 of them men.

[231] They own about 250 camels and 400 goats which are grazed in the Lower Ahaggar, in the Tâhalra, and in the region of Silet-Âbalessa, as well as in the northeast of the Adrar near Tin Zaouaten.

Much interested in cultivation, they own gardens in the centers
[241] of Tîgeneouin, Âbalessa, and Tifert, as well as in the little palm
423 grove at Tibeghîn, beside Silet.

[669] During the revolt of 1916-1918, they did not do anything to speak of.

[648] Today they furnish a good part of our mounted troupe.

The Issekkemaren. -- The Issekkemaren, whose name is
563 synonymous with "mixed," were probably from Arab fathers and
631 Tuareg mothers.

They are subdivided into the following eight tribes:

Iheiaouen Hâda
Kel In Rhar'
Kel Tâfedest
Kel Immîdir
Kel Tâzoûlet
Kel I-n-Toûnîn
Kel Téroûrirt
Kel Ouhet

563 They are not vassals like the Irréguénaten and the Ibettenâten,
631 but are incorporated.

563 According to a tradition reported by Dr. Richer, (1) the
173

1. Les Oulliminden, p. 71.

Issekkemâren are the descendants of the family of the Sagmara, pointed out in the Ádrar des Iforas and in the region of Gao by El Bekri. They were driven back by the Sonrhai invasion and came to take refuge among the northern Tuareg while a small fraction remained in the south in the environs /199/ of Timbuktu and today has a marabout character.

Although they are more Islamized than the other tribes, they are
[799] nonetheless Tuaregized in the sense that they follow Tuareg customs
197 and speak Tamashek. Many of them speak Arabic fluently, either
[648] because of their origin or because of their constant relations with the Tidikelt.

173 At the time of the division of the Imrad, some tribes were be-
563 stowed upon the Kel Rela, others on the Tâitok and the Tégéhé-
631 Mellet. The tribes attached to the Kel Rela are the Ihéiaouen Hâda, the Kel Immidir, the Kel Tâzoûlet, the Kel Tâfedest, and the Kel In Rhar'.

563 They are all great caravaneers who trade a great deal on the
439 Tidikelt markets. They own a large number of camels and their
484 camel raising is particularly renowned.
233

The Iheiaouen Hada. -- The Iheiaouen Hada, also called Oulad
563 Elias or Ihéiaouen-n-Temounent, are said to be descended from an
[173] Arab woman who was seized at Touat. The word Iheiaouen means in Tamashek "the grandsons of . . . ," so that we must conclude that the people of this tribe are the descendants of a woman named Ada.

They nomadize in the Tâfedest massif near Ádenek, Abezou, In Takoufi, Eguelougal, and Tidessi. During dry periods they lead
[221] their camels to the Saharo-Sudanese borders in the neighborhood of the Tamaïa well.

963 [162] They are subdivided into three fractions: Oulad Elias, Oulad Asseroum, and Oulad Fassi, grouping about 120 people.

[233] They possess about 100 camels and 280 to 300 goats. They formerly occupied the small centers of cultivation of Sékaïa and Tagemout, [423 241] which they own, but which they abandoned for lack of water and manpower. Very religious, they are for the most part affiliated with the [795 788] sect of the Tijaniyyah; four or five of them adhere to Senusism /Sanusiyyah sect. Ed./. They have among their number two pilgrims who have made the trip to Mecca, a very rare feat.

[669] In 1904 they were completely raided by Lieutenant Besset and kept out of the revolt of 1916-1918.

The Kel in Rhar'. -- The Kel In Rhar' probably owe their name to the village of In Rhar' in the Tidikelt, where they must have lived before coming to settle in the Tăfedest.

/200/ Their oral tradition relates that they were conquered by [173] Sultan Goma and bestowed upon the Kel Rela at the time of the division of the Imrad.

[162] Numbering about 150 persons, they camp on the eastern side of the Tăfedest, and also nomadize in the region of Méniet and in the Immidir.

[233] Before World War I they owned nearly 800 camels and 1, 500 sheep and goats. Their camel livestock has now fallen to 200 head. [241 423] They own gardens at Mertoutek, a little center which belongs to them entirely, and at I-n-Ămegal, Déhine, and Ăbézou.

[795] Like the Ihéiaouen Hăda, they are mostly affiliated with the Tijaniyyah sect.

[669] During the revolt of 1916-1918, they refused to rise against us, which caused them to be raided by the Ajjer Tuareg.

[224] They are renowned as very great hunters of wild sheep.

[651] The Kel In Rhar' annually pay the aménokal six bags of dates and a young camel.

The Kel Tăfedest. -- The Kel Tăfedest or Kel Tégatoufé (or ant [162] people) are a very poor small fraction including some 50 persons, 18 of them women.

563 They nomadize near the Garet ed Djenoun, the Ăseksem, Ămegid, and the Ădrar Torha; they own about 300 goats and 30 [233] camels. (1938 census, as opposed to 600 goats and 200 camels in 1905.)

[241 423] They are the owners of a few gardens in the Tăfedest.

[795] They are quite religious and members of the Tijaniyyah order.

[651] The Kel Tăfedest annually pay the amenokal four loads of dates and a young camel.

The Kel Immîdir. -- The Kel Immîdir, or Kel Mouydir, are still called Ihéiaouen-n-Tin-Emma. They are of the same origin as the Ihéiaouen Hâda and the Kel Tazoulé.

[162] They are subdivided into Kel Terahart and Kel Raris and include about 50 people. They nomadize in the Immîdir massif toward Joraf and Tagmout and have areas for nomadization between Ifetessen and In Eker.

[233 464] They are poor people who own about 20 camels and 250 goats. Very good merchants and excellent caravaneers, they hire themselves out to camel owners to provide for their needs.

/201/ The Isselamaten must be added to the Kel Immidir. They [162] are a small fraction of about 15 tents which lives with them and nomadize near Aneserfa, Ărak, Ahohor, Tagemout, and Tiredjert.

The Kel Tazoûlet. -- The Kel Tazoûlet or Dăg el Mesk camp in [162 233] the Tăzoûlet region and near Tăzerouk. They number about 225 people and own 285 camels and more than 2, 000 goats. They dryness [132] of the region which they inhabit forces them to take refuge in the Sudan when there are no rains in the Ahaggar.

[241 423] They possess gardens at Bloumet, Iberbern Touakkine, and at Tăzerouk.

[669] They were in contact with the Aït Loaien and followed the latter in revolt, participating with them in the battles of Tit and the Ilaman wadi.

[795 788] They are quite religious and members of the Tijaniyyah. Four or five of their number have made the pilgrimage to Mecca.

563 [651] Every year they pay the aménokal three loads of dates and three young goats.

[554] The Irréguénaten. -- The Irréguénaten, like the Issekkemâren, are assimilated vassals of a social rank superior to that of the Imrad.

They are of Tuareg mothers from the Ibettenâten tribe and Arab fathers from the Kounta tribe.

They are divided into two groups: 1) the Adrar Irréguénaten or Issettafénine Irréguénaten, who descended from a sherif of Gourara named Abdelmoumen, whose two sons Mouima and Inchelane married Ibettenâten women; 2) the Ahaggar Irréguénaten or Ihaggarénine Irréguénaten, who descended from the Dermachaka, an incorporated tribe of Kounta and Ibettenâten.

All of them nomadize in the northern Ăadrar des Ifôras and the Timétrine and even push as far as Erg Chech. They also visit the Ăhnet and Tamasna.

[233] This is a very rich tribe engaged in raising camels. The Irréguénaten own more than 2, 300 camels, 350 cows, and more than 2, 350 goats and sheep.

[162] In 1908 they numbered 50 to 60 men, according to Benhazéra. The 1938 census raises the figure to 358 persons, 100 of them fighters.

[651] /202/ They pay the tioussé to the descendants of the Inemba and to the descendants of Si Mohamed ag Othman.

[669] Although they associated with the Adrar Kounta, they maintained relations with the rebellious marabout Abidine, who took refuge among the Kel Ahnet. They probably even served him as spies, and the people of Ăadrar des Ifôras held them in suspicion for a long time.

[281] 462 Their camel raising is very well known, and their wives are quite expert in leatherwork.

[602] There are also Irréguénaten in the Niger loop, but they have no bonds of kinship with the Ahaggar Irréguénaten.

## Tobol of the Taïtok

631 The Taïtok are the high-born nobles of the Ahaggar along with
565 the Kel Rela and the Tégéhé Mellet.

They are related to the Kel Rela by Kella's female cousin,
[602] Sakina, who was married to Amer el Khadj, amrar of the Taïtok.

According to Duveyrier, part of this tribe is of the same origin
[173] as the Imenan sultans, that is, descendants of Idris, and the other part is originally from the Kel Fadei in Aïr where the stock /souche/ still exists. (1)

1. Les Touareg du Nord, p. 322.

114 The Taïtok captured by the Mouadi Chaamba at Hassi Inifel in
631 1887 reported to Captain Bissuel that they rejected any fraternity
565 with the Ihaggaren: "We are natives of the country where we live; our fathers were born there, also our ancestors, as far back as the beginning of the world. Our ancestors did not come from a foreign country. At no time were we the brothers of the Hoggar or the Ajjer or any other tribe." (2) This version does not seem to be of

2. Les Touareg de l'Ouest
/The Western Tuareg/, p. 18
(Algiers, 1888).

any great value, and Captain Bissuel gives it with reservations, by setting forth the probable ignorance of his informants.

They are very independent in spirit and can never bear without
579 balking the predominance, even in name only, of the Kel Rela
631 and the suzerainty of the amenokal of the Ahaggar. After the
643 division of the Imrad, they still endeavored to seize the amenokalat,
[181] which gave rise to fratricidal struggles with the Kel Rela. These
175 battles are even more deserving of the name of fratricide /203/ by the fact that the Kel Rela and the Taïtok are bound by numerous marriages and are all more or less cousins.

175 The dissensions began with respect to the Imrad tribes depend-
579 ing on the Kel Rela; they were shamelessly stolen by the Tăitok,
631 necessitating the intervention of the suzerains. The Tăitok, fewer
643 in number than the Kel Rela, got the worst of it most of the time, but that never prevented them from beginning again a short time later.

This was still the state of affairs at the end of the last century when Amĕnokal Ăttarel, a very peace-loving man, succeeded in bringing about a cessation of hostilities between the two rival tribes.

The chief of the Tăitok at that time, Sidi ag Kĕradji, was the nephew of Ăttarel through his father; consequently, he was a Kel Rela, while he held the right to the Tăitok tobol from his mother. Ăttarel, as his uncle, strove to protect him from the Kel Rela as well as from some Tăitok elements whom this truce did not suit.

Sidi, feeling the situation escape him, renounced his tobol, believing that by so doing he was ensuring the safety of his wealth and his person in case hostilities broke out again. He took refuge in the Ahaggar with the Kel Rela.

But upon the death of Ăttarel, rivalry reawakened, and the Kel Rela begged Sidi to leave their camps. Where could he go when the Tăitok had only enemies?

Anarchy reigned everywhere, and the Kel I-n-Toûnîn, Imrad of the Tăitok, took advantage of this to emancipate themselves. They appealed to the Oûraren, a noble Ăjjer tribe. Sidi resolved to settle among them, when Aziouel, a pretender to the tobol, was trying to seize it.

[81] Aziouel was the typical Tăitok, the typical desert looter, with cruel and unrestrained instincts. Captain Métois, former chief of the Annex of the Tidikelt-Hoggar, called him a "man of fine saber blows and abusive language, and in addition, a liar, thief, and traitor." He negotiated the surrender of the Tăitok, while Sidi ag
643 Kĕradji was kept as amĕnokal.
175 Aziouel was guided by his taste for robbery to lead an enormous
631 raid in the Hodh in 1905, but he had a run of bad luck. Pushed
[82]

175 back by the Berabers after a hard fight and forced to flee, most of
631 the men, including Azioueł, died of thirst in the desert.
643 /204/ As a consequence of this raid, Sidi ag Kéradji, now old, was relieved of his command and replaced by Amri ag Sidi Mohamed.

The Tăitok had also suffered a bitter defeat in 1887 at the Inifel well, where the Mouadhi Chaamba had destroyed a raid coming to attack them. This series of failures reduced the tribe to some 40 men.

579 At the present time, the Tăitok still accept unwillingly the
631 suzerainty of the aménokal, more nominal than effective, under which they have been placed. Altercations, often violent ones, still take place between them and the Kel Rela. They have taken refuge in the Sudan, in the In Gall -- In Abangarit region, and
[648] more and more tend to want to pass under the control of the Sudanese authorities in order to have no more to do with the Kel Rela and the aménokal of the Ahaggar.

[511] Poor like all the Imochar, the Tăitok live at the expense of
631 their numerous Imrad. In times past they also levied a due on the
651 nomadic Arab camps between the Ahnet and Akabli, and on the Asoudji and the Ferguémoussen of the Ădrar des Iforas, the Tégéhé-n-Ĕfis and Isoknâten of the Aïr.

[162 Their group includes about 30 tents and possesses 300 to 400
233] camels and about 1,000 goats.

During the war of 1914-1918, Amri ag Sidi Mohamed, who at
175 first had done all he could to please us, was one of the first to leave
631 us for the camp of Kaocen, the chief of the revolt, led by his
648 Imrad Kel I-n-Tounin. But it must be said in his behalf that he did not take arms against our troops. He was taken prisoner before Agadez by the Sudanese troops.

As a result of these events, he was relieved of his command, and it was given to Mohamed ag Mohamed, the present amrar.

Through their Imrad, the Tăitok possessed the palm grove of
[423] Silet which was taken away from them by General Laperrine to punish them for their rebellion and given to Moussa ag Amastân.

631 The amrar of the Ťaitok is named according to matriarchal rules, and his election must be approved by the chiefs of the Imrad tribes. However, it must be pointed out that since Amrar Salah the chiefs have succeeded from father to son upon several occasions.

101 The Ťaitok sometimes give the name Ar'rerf Ǎhnet to /205/ their group, from the name of the region where they range most of the time and also from their Imrad. (1)

1. "Ar'rerf" corresponds here to "tobol." According to Nicolas, op. cit., "Agref," following his orthography, means small fraction.

631 565 [582] The Ťaitok live on very good terms with their vassals, and the vassals, proud of being called Ťaitok, espouse all the rivalries of their lords. Marriages between different castes are not uncommon, and many nobles have married Imrad women, which causes their children to lose political rights to the tobol. But the greater and greater extension of this custom will necessarily bring about modifications in the customary law of filiation, or else patriarchy will finally replace matriarchy.

[651] The Imrad pay a lump tioussé which is divided among the different Imochar. There is no longer any individual right /droit/ like that still found among the Kel Rela and the Tégéhé Mellet.

631 648 [101] Thieves to end all thieves, the Ťaitok have still been able to keep alliances almost everywhere outside their country in the regions they have to cross to carry out their robberies; these alliances are military or protective. Thus, in order to keep from being robbed, the Sékakna and the Mazil, Arab tribes from the environs of Ǎkabli who sometimes nomadized in the Ǎdrar Ǎhnet, paid them a slight due. They were allied with the Fergoumoussen, an Imochar tribe from the Adrǎr, with the Tarat Mellet, the Kel Boujbiha, the Kel Arouan, the Tadjakant, the Arib, and the Kel Taoudeni. These

631 alliances give a glimpse of the scope of the Tăitok raids.
[648] The tobol of the Tăitok includes the Irechchoûmen, a little noble tribe which lost its rights to the tobol as a consequence of misalliances, the Kel Ăhnet, the Tégéhé-n-Efis, the Kel I-n-Toûnin, the Iouarouaren, the Ikouttissen, and the Ikechchemâden.

The Irechchoûmen. -- The Irechchoûmen, also called Iradjenaten (mixed blood), usually camp in the Ăhnet, going as high as Aoulef. The head of the family was Ibédi ag Bassi, who married a daughter of the Oulad Zenan (Aoulef Arabs) and had for sons-in-law Aziouel and Tacha ag Serada of the Tăitok, both dead as a result of raids. (2)

2. Aziouel's widow married Moussa ag Amastân, aménokal of the Ahaggar, in 1910.

[582] They are allies of the Tăitok through numerous marriages, and also of the Imrad Kel Ăhnet. They also marry with /206/ Arab
[643] women from the Touat, and these multiple misalliances have made them lose their right to the tobol.

[173] According to a tradition reported by Duveyrier, the Irechchoûmen originally came from Es Souq. Part of the tribe descends from the Edrissians, and others have the Ikadeien for their ancestors.

[162] They include only about ten tents, or 60 persons, at the present time.

The Kel Ăhnet. -- The Kel Ăhnet are of the same origin as the
[173] Dag Râli with whom they formerly made up the Imessiliten fraction. This schism occurred under the aménokalat of Sidi ag Mohamed el Kheir, at the time of the distribution of the Imrad among the different noble tribes, and the Kel Ăhnet were bestowed upon the Tăitok.

They were among the first to come and surrender, and their chief, Badjeloud ag Maklia, came to In-Salah as early as 1902.

631 Taken away from the Tăitok and made free, they were put back under their command in 1909.

631 131 They nomadize from Silet to Reggan and Aoulef. The land over which they range includes all of the Ădrar Ăhnet, the Ăseg'rad, and part of the Immidir. The boundaries which separate them from the Issekkemaren are as follows: Tin Tir'atimine and Tagemout (belonging to the Kel Immidir) on the northeast; Arak wadi as far as Amsir, and Méniet (belonging to the Kel Immidir) on the east, by the In Rabir well; they have at their disposal all the mountainous part on the south, including In Ziza and Nahalet, that is, the whole region bordering on the Tanezrouft and bounded on the east by Ouallen, the last watering place before the Tanezrouft; to the north by the Ăsouf Mellen wadi.

[132] In dry years they descend to the Sudan in the region of In Abangarit-In Gall and Tamaïa. They camp near the Tăitok in the Ădrar Tazerzaït, where they escape the control of the Algerian and Sudanese authorities.

They formerly exploited a sebkha in the In Méraguen wadi.

631 [162] In 1905 they were a group of 35 to 40 tents. In the 1938 census, they numbered no more than 58 persons, 21 of them men.

[181 721] Rather pugnacious by nature, they always accompany the Tăitok on their expeditions and share the loot with them in equal parts.

[669] During the World War, they stayed in the Ăhnet and /207/ took part in the revolt only individually by supplying the rebels, willingly or by force. Only at the end of 1917, under the influence of Ăjjer elements, did they rise up and pillage in Ădrar and at Ăkabli.

[181 795] They are rather unreligious; they follow the Malekite rite, and some are members of the Tijaniyyah order. They profess great respect for the marabouts and willingly receive them in their camps. At the beginning of the conflict the agitator Abidine of [669] the Timbuktu Kounta, took refuge among them; he had led the struggle against us in Timbuktu for a long time.

173 Let us add that the Kel Ăhnet claim to be of Beraber origin
631 through Takamat, the servant of Ti-n-Hînân. But the Tăitok say that it is not known where they come from, except that they must have inhabited the Ahaggar long before the arrival of Ti-n-Hînân.

631 The Tégéhé-n-Ĕfis. -- The Tégéhé-n-Ĕfis are of the same origin as the Tégéhé-n-Eîmen.

They used to nomadize in Aïr and had to leave that country as a result of the murder of the sultan who wanted to force them to pay too heavy a tax. Efis was their chief, and it is he who decided to leave. The descendants of these families thenceforth bore his name.

They formed only a single tribe with the Ăgouh-en-Tĕhlé. When Mohamed el Kheir was aménokal, the Tégéhé-n-Eîmen came to ask protection from the Ihăggaren -- some say this was under Mohamed el Kheir's grandson, Younès.

During the war which put the Kel Rela and the Tăitok in conflict, the Tégéhé-n-Ĕfis took refuge on the Aïr borders. Afterwards, they returned for the most part, but some ten tents remained in the Sudan.

[162] In 1905, they numbered about 30 tents; in the 1938 census there were 164 persons, 51 of them men. They own 80 camels, and 250
[233] goats. They are the proprietors of cultivated lands at Tîgenouin,
[241] Amsel, Ăbalessa, and Tahart. They also see to the cultivation of
423] gardens at Tamanrasset, which have belonged to the Imekkeresen (an Imrad tribe of the Ajjer Tassili) for a long time. By rights they should pay the latter a due, but it is never asked for.

They nomadize in the Tahalra (southwest of Koudia) and migrate on the parallel Amsel, Tîgeneouin, Tâmaïa. The line of demarcation separating their area from /208/ that of the Ăgouh-en-Tĕhlé is formed by the Tamanrasset wadi.

They were bestowed upon the Tăitok at the time of the distribution of the Imrad, and they have followed their suzerains in all their affairs.

The Kel I-n-Toûnîn. -- The Kel I-n-Toûnîn are Issekkemâren.
[173] They were given to the Tăitok under Sidi's aménokalat (1755) when the Kel Rela tobol was split up, while the Kel Ouhet and the Kel Téroûrirt were given to the Tégéhé Mellet.

The inside of a tent. The baggage is hung from the tent poles. Very young children play on the ground, where a thick layer of fine sand has been placed.

Kel Ahaggar women, especially the Imrad women, often ride on the backs of asses. One of them has just met two friends, with whom she is exchanging news on the maharists who have gone far away.

Plate XII

Hunting with dogs is common among the Tuareg, who use saluki something like Arabian greyhounds for the purpose. Their eklan /Iklan? Ed./ are often famous hunters. In this photograph we see one of them holding two dogs on a leash and getting ready to go track wild sheep.

Besides hunting with dogs, the Tuareg engage in trapping. Here we see a trap with radial points being set. The lasso is being tied to a big tree branch sunk in the ground and hidden by a layer of sand.

Table of the brands applied to camels in the different Ahaggar tribes.

631 The Kel I-n-Toûnîn owe their name to the wadi near which they ordinarily nomadize in the Tăfedest massif. At the end of the last century they took advantage of the dissensions existing between the Tăitok and the Kel Rela as well as the internal strife of the
[651] Tăitok to free themselves of the latter. They moved to the Ăjjer, claiming kinship with them, but they pay them no taxes.

After their surrender to the French, the Tăitok reclaimed them, and General Laperrine agreed to their demand.

[669] They took a big part in the rebellion of 1916 and were the first to rise up, for they were under the direct influence of the Ăjjer.

Taking refuge in Fezzan at first, they set about combating us by launching raids against the fractions under our influence. Later they participated in the combat of Aïn el Hadjadj. Then they went to the Sudan, where they succeeded in taking with them a number of Tăitok, their Chief Amri among them, in spite of the efforts Moussa ag Ămastân made to keep them.

[162] They number about 20 tents which camp in the north of the Tăfedest massif and go up as high as the Ădrăr Ifetessen on the foothills of Immîdir.

[582] They are allied to the Tégéhé Mellet by recent marriages.

Famous as good herders, they own about 100 camels and 300
[233 439] goats. They are also good caravaneers who trade on the markets of In Salah, Ghat, and Ghadames.

[241] They have a few gardens cultivated at Ideles and in the Tassili centers of cultivation.

[162] The Iouarouaren. -- The Iouarouaren form a little tribe of about 15 tents, which nomadizes with the Kel Ăhnet in the Adrar.

Some say they are natives of Aïr, others say of the Ăjjer.

173 /210/ When an Ăjjer (or Ifôras) woman had been taken prisoner by the Aïr people, according to Sidi ag Kéradji, it was Ămastân
631 ag Ourzig, maternal uncle of Sidi, who paid her ransom and married her to a Kel Ăhnet; from this union sprang the Iouarouaren. (1)

631
[173]

1. Benhazéra, Six mois chez les Touareg du Ahaggar, p. 177.

[582] They often camp near the Dăg Râli, and unions between the two tribes are not uncommon.

[669] During the revolt of 1916-1918, they followed the Tăitok in their peregrinations.

[423] They were the owners of the little palm grove of Tibéghîn, near Silet, but it was taken from them after these events and given [233] to Moussa ag Ămastan. They possess some 50 camels and about 100 goats. The tioussé paid to the amrar of the Taitok consists of a [65] bag of dates or sorghum, a 10 kilogram pot of butter, and half of the loot in the case of a successful raid.

The Ikechchemaden. -- The Ikechchemaden live mixed in with the Dăg Râli and are often included among them, although they belong to the Tăitok tobol.

[192] Their name means "the very ugly ones," from the Tamashek akechchemdh, referring to an ugly and ill-clad man.

In 1907 they asked to be put under the command of Moussa ag Ămastân.

[162] They are a small tribe of no more than 15 men.

They partly owned the Silet oasis which was taken from them [423] in 1916, but they still have the usufruct of their palm trees because of their dealings with the Dăg Râli.

We have no precise data on their origin, and it is probable that they will be rapidly integrated with the Dăg Râli.

[162] The Ikouttisen. -- The Ikouttisen, numbering about 70 men, are nomads in the region of the Tassili des Ăjjer. They get their name from one of their women ancestors named Takottis.

According to the information of Benhazéra, the people of this tribe never go out raiding. He does not explain the reasons, which may be of a religious nature.

[162] The Ikadeien. -- The Ikadeïen form a little tribe of some 15 tents, whose camp lies near Tit and Tigeneouin.

631 /211/ Originally from Es Souq in the Xdrâr des Iforas, they are mixed with the Ahl Azzi from In-Salah.

Without being Imrad of the Taitok, properly speaking, they may be considered satellites of this tobol.

## Tobol of the Tégéhé-Mellet

173 The Tégéhé-Mellet make up the third and least important of the three Ahaggar tobol.

631 According to oral tradition, they are the descendants of Ti-n-Hinân through her daughter Tahenkat. More recently they are said to be descended from the Tégéhé-n-ou-Sidi. But according to another tradition they are of Chaamba origin, from the Oulad Messaoud tribe. More exactly, we are led to believe that some Oulad Messaoud men came to settle among them and founded families; for some, this would make their pure Imochar origin questionable. On the other hand, they married Kel-I-n-Tounîn women, while Tégéhé Mellet women married Issekkemâren.

They obtained their independence at the same time as the Taitok while Sidi Mohammed was amenokal, and were assigned a certain number of vassal tribes. Since then, however, they have played only a very unobtrusive part in the history of the Ahaggar, and the Tégéhé Mellet are on the way to disappearing.

631 According to Duveyrier, they had the reputation of bringing a conciliatory spirit into the often strained relations between the Ihaggaren [578] and the Xjjer Tuareg. The geographical position that they occupied between the two opposing groups quite naturally drafted them for the role.

619 They were formerly a free tobol, and only with the French occupation were they placed under the guardianship of Moussa ag Xmastân.

648 Ser'ir ag Bedda, their amrar, protested for a long time and never stopped claiming his independence. In connection with this state of mind, many Tégéhé Mellet rebelled and left with the

619 Kel-I-n-Toûnîn Imrad rather than accept the supremacy of Moussa
648 ag Ămastân and the Kel Rela. For a long time they kept up the agitation, encouraged by the former Amenokal Attici ag Ămellal, and they were one of the causes of our difficulties with the Ăjjer.

619 It is now a small tribe of about 15 tents nomadizing near
[162] Ămegid, the Ounane, the Eguéré, and /212/ Tiramar. Its strength comes especially from its vassals, who could not be more turbulent.
[669] They probably participated in the massacre of the Flatters mission, and Attici and Ănaba ag Ămellal, the leaders of the drama, belonged to that fraction.

The Tégéhé-Mellet have no Imrad properly speaking, but several Issekkemâren fractions are enfeoffed to them.

The Kel Terourirt. -- The Kel Terourirt are Issekkemâren and nomadize northeast of the Ahaggar near Tiramar, Tahihaout,
[162] Ounane, the Eguéré, and the Garet ed Djenoun. They number 25 tents at the moment:

[669] During the 1916 events, they followed the Kel Ouhet and the Kel I-n-Toûnîn in rebelling.

[651] They pay the amrar of the Tégéhé Mellet a tioussé which annually adds up to four bags of dates and four goats.

The Kel Ouhet. -- Like the Kel Térourirt, the Kel Ouhet are Issekkemâren. They are subdivided into several small fractions: the Kel Raris, the Dăg-Khamaya, and the Dăg Iknân. In all there are
[162] about 40 tents (51 persons in the 1938 census, 23 of them men).

They camp in the northern part of the Tăfedest massif and go as far as Amegid and into the Igharghar Valley.

[233] They own a number of camels and frequently visit the markets
[439] of the Tidikelt and Ghat.

Some of them have left the Ahaggar and now live in the Ăjjer.

The Kel Torha. -- The Kel Torha, or Dăg Houa, are Aït Loaien and their small fraction is in the process of disappearing. Although they live with the Aït Loaien who belong to the Kel Rela tobol,
[651] they pay the annual tioussé of a mézoued of dates to the Tégéhé-Mellet.

631 It will be noted that there are no marabout tribes in the divers
793 Ahaggar tobol. The Ifôra who nomadize in the Témaçinine (Fort Flatters) region are completely independent. They maintain amicable relations with the Ihaggaren and the Kel Ajjer, but these relations are very few and far between and have no political or religious character. They do not send any chaplains among the Ihaggaren. Their chief has settled at the little zāwiyah of Témaçinine, near which his ancestors are buried, and where he enjoys great /213/
1978 repute. All the Tuareg, Ihaggaren or Ajjer, who pass near this
1988 place never fail to stop and pay a visit to the sheik and go pray on the tomb of Si Othman, a famous saint of this marabout lineage.

This zāwiyah is affiliated with the Tijaniyyah brotherhood.

There are several marabouts who live in the midst of the Ihaggaren camps, but all of them are of Arab origin and none of them are Ifôras.

631 The Ifôras are under the administrative control of the Ajjer annex, and politically they are much more a part of the Kel Ajjer than of the Ihaggaren.

They are subdivided into three fractions:

Ifôras-oui-n-Oukkîren

Ifôras-oui-n-Egdad

Ifôras-oui-n-Ettebel

The first two, who are of sherif descent, were in the habit of espousing the cause of the Ouraren, while the third was attached to the Imenân sultans.

114 Duveyrier said that the Ifôras-oui-n-Ettebel were provided with
533 drums and continued to constitute the court and the music corps
631 of the fallen sultans; he concludes by saying that their role is limited to making noise. (1) Now the Ifôras-oui-n-Ettebel have never been

1. Les Touareg du Nord, p. 361.

musicians, but their name, which can be confusing, means "those who are attached to the amenokal," just as Iklân-en-Tâousit (of the Ahaggar) means "servant of the tribe or of the group of tribes

114 forming the tobol" and, by extension, "servant of the tobol."
533 At the present time these three fractions number about 150
631 people.
[162] We call attention to them here only as a reminder.

Book V

Material Life

Chapter 1

Living Conditions Among the Ahaggar Tuareg

133 The Ahaggar, as we have already said, is a mountain refuge. We do not know why the Tuareg have continued to live there when they could have found much better countries to the south where they could have had a much easier life. Perhaps we should attribute this to attachment to the country or, quite simply, to an ancient state of things which forced them to take refuge against their will in the middle of the rocks.

13 A superficial examination shows that the Ahaggar is a very poor
[511] country with negligible resources, which imposes a living standard
[312] lower than the average. The pasture reserves are calculated, as are the water reserves. The subsoil possesses nothing, or almost nothing, which is marketable, except a little salt. Consequently the possibilities for life there are quite limited. For the inhabitants to live, then, they must have recourse to outside resources.

233 721 The Tuareg are herders. It does not seem that they ever knew any other stage of civilization, except hunting which is the prelude to animal husbandry. But even by judicious use of pasturage they cannot own a great number of domestic animals, and in the last analysis herding falls into the background in their means of existence. Since the country could not feed them, they had to look elsewhere for what they lacked. They therefore looked to their sabers for the rest.

181 721 Like the majority of herders, the perpetually famished Tuareg are born warriors, because from time immemorial they have had to dispute the rich lands with the sedentary peoples. Their free life has made them independent and anarchistic. The wealth /215/ of others has not inspired any respect in them, but rather a sentiment of envy which no moral rule has been able to check. Pillage has thus been raised to the state of an institution, and the Tuareg have become masters of the trade.

721 The raid, now a continual state of war with their neighbors, may be considered the principal social achievement of the Tuareg. [182] And thus we may see the important role that the Ahaggar Mountains play; they are not only a refuge for life, but also a refuge for brigands who want to shelter themselves from the possible investigations of their victims.

579 627 The raid is organized, even ordered, pillage. It is an institution with its rules which the antagonists respect. Its simplest form is taking the neighbor's herds; once the deed is done, the raider makes a deal with him and compromises by giving him back a certain number of animals so that he can subsist, keeping for himself what is judged to be the surplus. The complicated form occurs when the attacked man defends himself or tries to take back his property. That can lead to pitched battles and, as a consequence, dead men. From that time on, it is fratricidal war which demands blood and which creates eternal hatred.

That was what the life of the Ahaggar Tuareg was before the French occupation.

579 In addition, they robbed caravans who happened into their country, hatefully ransoming the voyagers. Sometimes they 721 727 went to empty the granaries of the sedentary people of the oases or the Sudanese villages, capturing Negroes and Negresses to [492] sett as slaves.

439 When peace reigned in their country, they willingly organized /218/ caravans to go to the Tidikelt or Touat oases and bring back dates, or else to the Sudan to get supplies of millet. They also made themselves the protectors of caravans [486] crossing their country, naturally making the caravaneer pay a consistently high duty in merchandise.

Fig. 21. Camel bit and bridle.

135 The Ahaggar has famous salt mines in the region called 182 Ɣmadror which lies to the east of 439 the Tɣfedest massif in a large depression. They are an appreciable resource for the Iheggaren, but manpower is needed to exploit them. Then, transportation and circulation demand a general state of peace in which the numerous herds of pack camels can be protected from possible surprise attacks [721] and raids. That is why the Ɣmadror salt deposits remained unexploited for a long time before the French occupation, because of the state of perpetual war existing between Ahaggar Tuareg and Tassili Tuareg.

E. Center of trade of manufactured goods and dried meat for dates after return from A.

436 The ideal medium of exchange is the salt which [492] abounds in the Sahara and which is totally lacking in the Sudan. 439 Thus we see a caravan cycle spread out over a whole year and thousands of kilometers. This is all the more viable /sic/ for the Ihaggaren since it makes use of their many camels which otherwise might remain unused in part.

Fig. 22. Camel bit (detail).

317 The starting point is naturally the salt deposit. The mine /219/ is open; one [415] need only detach the salt in pieces and place it in leather bags to transport it. This labor is kept for the Iklan, who arrive at the salt deposits during the summer and [492] stay there from three weeks to a month. Each camel owner operates at will, and transports the salt to his camp after extracting it.

Fig. 23. Device for attaching the camel's bridle.

439 Toward mid-September, all the 481 caravaneers gather together by tribes. Soon they leave their families in the Ahaggar and take the long route [487] for the Sudan, crossing the Tanezrouft. Thus one may see caravans of 100 to 150 camels, but rarely more, for the pasture grounds would not allow it. The arrival in the Sudan must occur after the rainy

season which generally ends with the month of September. 439
When the caravaneers arrive earlier, they wait in the Tamasna 484
region and protect their salt by hiding it in the crags of the rocks.

At any rate they always stay at least two months in that region so that their camels may regain their strength. Then, they go in small groups toward the Damergou where they know people in some villages with whom they exchange their salt for millet. These exchanges are made on variable bases, depending on whether or not the millet harvest has been abundant, or whether the salt has arrived in greater or lesser quantity. Most generally they are made on the basis of one load of salt for three loads of millet, but sometimes in the proportion of one load of salt for ten loads of millet, which is much to the advantage of the Ihaggaren.

[291]
[177]

Fig. 24. Irratimen sandal of Hausa make, such as the Ihaggaren wear.

[435]

Since they do not have enough camels to carry all this grain back, and since they do not need that much grain in the Ahaggar, they sell or exchange a good part of it for manufactured objects, which are easy to transport and /220/ easy to dispose of -- sandals, saddle bags, camel saddles, leather boxes,

439 cotton clothes, and Sudanese-made lithams /veils/. Then after
484 two months of rest spent in the Sudan, during which time the camels revel in the rich pasture, they all set out again for the Ahaggar, where they arrive from January on. February and March see them leave again for the Tidikelt or Touat. At that time they take only a few camels and exchange the excess manufactured articles which they collected in the Sudan and trade dried mutton for dates. This trip lasts an average of two months, and toward the end of April everyone is back in the Ahaggar, as a rule. There is a rest of a few weeks, and everyone thinks about the next salt campaign he is going to have to prepare.

Thus we see a complete caravan cycle which, by itself, could allow the Tuareg a normal life. But as we have said, it implies a
[461] state of peace which was previously the exception, as well as an amount of work to be furnished which is not always in harmony with the warlike tastes of the Imochar.

224 Hunting supplies some employment for the Tuareg, as does gathering. But both of them are only uncertain pastimes, without
221 much profit. The life of the Tuareg may thus be summed up in a few lines: basic animal husbandry doubled by brigandage raised to the state of an institution, and accessorily by some caravaneering. Now we shall see the domestic life of the Tuareg.

/221/

## Chapter 2

## Dwellings

361 The camp. -- The camp is the traditional Tuareg form of
621 habitation; it is connected with nomadism which always implies animal husbandry. It includes a certain number of people gathered together under a patriarchal authority by very close bonds of kinship.

312 The question of water is fundamental in the formation of the
[361 camp, both for the choice of its location and for the number of tents
182] to be included.

Water is obviously a problem for all life; it plays a role in the location of our small European villages, but this role is still greater in desert countries where water is quite rare. The existence of watering places is not only necessary for human life but also for the life of the domestic animals.

137 To this primordial condition of the existence of a watering
182 place must be added the condition of pasture for the domestic
312 animals. Therefore, we see that the establishment of a camp among
361 the Ihaggaren is conditioned by two main factors whose character may vary in time, depending on the seasons and the abundance or scarcity of rain. But in the last analysis the pasture needs take precedence, for, generally speaking, pasture is even rarer than
137 water, since it can sometimes be completely lacking. This need
182 for pasture forces tribes to split up and camps to be dispersed in
361 order to exploit it rationally. The situation is such that there are
621 rarely more than five or six tents in each group. Only the amenokal's
[643] camp may number as many as 15 or 20 tents, but this is quite exceptional, involving the question of prestige and social order at the same time. Indeed, the amenokal supports a numerous family, his caliphs, his servants, etc. But this grouping around the chief is quite artificial, and the flocks which the people own are not with them but are /222/ spread out in the mountains, kept by Imrad or servants.

361 The camp is always established rather far from the watering
312 places, for it is preferable to be closer to the pastures. It is often five or six kilometers from water. The animals go there to drink
[482 every two or three days, and the people use the occasion to get
492] their water supply, which will be carried in waterskins on their backs or under the stomach of the asses. Tuareg, moreover, do not like
361 to settle near a watering place, for it is always a stopping point for
609 transients, and they avoid making their presence known to strangers.

361 When a state of war existed, concealment was a capital necessity
609 easy to understand. By atavism, it seems that they have taken the
[121] habit of always placing themselves in spots where they escape the
investigation of indiscreet glances.

361 They set up their tents on valley terraces, and sometimes in a
[132] valley itself, if they do not have to fear the rains, which usually fall
at the end of the summer.

221 Because of the need to seek out pastures, camps are continually
361 being moved. They stay from one to two weeks, depending on
whether the grass has been revived by rains or whether it is dry. But
these moves are never of any great distance, not exceeding seven
or eight kilometers. If we take as an example the Dag Rali tribe
which nomadizes in the western part of Koudia, we find the camps
set up in the high mountain valleys, as high as 2,400 meters
altitude, in summer. In winter, on the other hand, they settle on
the slopes or in the low parts, seeking places sheltered from the wind.
This, of course, is in a normal period of average pasture. But
during the summer of 1940, following a long dry period, the Upper
Koudia saw a great number of its watering places dry up, and
vegetation was nonexistent, so to speak. Therefore, all the nomads
took refuge in the low parts of the massif, in the Outoul, Eferer,
and I-n-Amegel valleys where water was more abundant and where
a trace of pasture still remained. At the beginning of September,
the whole massif benefited from abundant rains. A week later, all
the tents moved into the mountains in order to use the alpine pastures
before winter and to save the lower valley grass for winter.

312 /223/ The watering places of Atakor are chiefly natural reser-
voirs (aguelmam) and springs flowing at ground level in the hollows
of the valleys. In the middle part, there are mainly rédir (abankor),
or little wells, dug less than one meter down in the soil to reach
the water layer, which is often retained by rocky sills. These
rédir are exhausted in time if rains do not come to renew the water
accumulated in the sandy wadi bed. The lower part of the Ahaggar
benefits from all the water trickling down from the high mountains

312 and from all the subterranean flows; thus it is richer in watering places. There are rédir, or wells, varying from 5 to 10 meters in depth.

342 The tent. -- This kind of habitation is found from the western Asian steppes to the Atlantic, where nomads have generally adopted the camel's-hair tent. Tuareg, who do not own any camels with long hair, use skins.

The tent is composed of a large awning formed by assembling [281] 30 to 40 wild-sheep or goat hides, with the hair removed and tanned. Because of the scarcity of wild-sheep skins, goatskin and even cow-[184] hide are gradually being substituted for them. Cowhide is used exclusively by the Ioullimmiden Tuareg. The awning is held up by a frame of arches or poles. The Kel Ahaggar, moreover, have two kinds of tents: one with vertical supports and one with arches. The former is more widespread at the present time. It includes a central pole with a wooden ridge tile and six secondary poles placed in a circle. The highest part of the awning is about 1.5 meters from the ground. The edges of the skin hang down almost level with the ground where they are attached by small pegs in order to keep out the sandstorms which are very common in spring and summer, and keep out the winter cold.

The ridge tile on a central pole is especially used in summer when rains are feared, for it gives the proper slope to the awning so that water can flow off. In other seasons this ridge tile is replaced by two poles supporting a crosspiece.

Although one cannot stand inside, the Tuareg tent is spacious 323 enough. The poles are in tamarisk wood, with coarse sculpture, 531 pyrography, and paintings on the upper part. /224/ This type of tent is used by the Kel Rela, the Dăg Râli, and most of the Kel Ahaggar.

[184] The other model is now used only among the Ăgouh-en-Tĕhlé. It appears that the Kel Ăhnet and the Kel In Rhar may still use it, too. The center stake of the type described above is replaced by one or two arches made of éthel /atle? Ed./ roots joined by a

342 crosspiece forming the central frame; four vertical stakes are placed two by two on each side of the tent.

[171] This model used to be much more widespread in the Ahaggar, and it seems to be an older form, for the model presently used must have been taken from the Ioullimmiden. All the old people recall having seen it used in their youth in all camps on an equal basis with the vertical stake form.

The tent with arches, the upper part of which forms a kind of dome, is better able to withstand the rains than the other. If [182] that was its raison d' [132] être, we may understand why it disappeared with the gradual drying out of the Sahara. This disappearance may also have been caused by the difficulty of procuring large roots to make the arches.

Fig. 25. Tent used by the Kel Rela. During the rainy season, the two central stakes are replaced by a single stake holding up a ridge tile.

[386] The awning is always covered with a coat of red ocher which protects it from the heat of the sun and from the rain.

[285] In both models, the tent always includes a sort of detachable closing made of a long mat (asaber) woven from the stems of graminaceae. It is unrolled inside around the stakes to close the tent completely. High up in the mountains the Tuareg reduce the inside area of the tent in order to keep warmer, and provide the part opposite /225/ the opening with a little stone wall which effectively protects them from the cold. The door is always opened toward the south.

The tent is occupied by only one household, and each of the married couple has his own side. The man's side is to the left as one enters the door; there he keeps his mehari saddle, his weapons, and his bags of salt. To the right is the woman's place, where she keeps her bag of personal things, her saddle if she has one, the bags containing the food supplies, and the kitchen implements which she has charge of. 592 [422]

In summer when it is very hot, the Tuareg sometimes use straw huts, as much to save hides as to be a bit more comfortable. The leather tent, in fact, is made almost useless by the heat, and nomads often seek shelter during the heat of the day under neighboring trees when there are any or else in the rocks. 342 [184]

Fig. 26. Tent used by the Agouh-n-Tehlé. Sometimes the stake supporting the aragailledagaille may be replaced by a second arch. In some tribes, particularly among the Kel Ahnet, the arches were placed crosswise.

trees when there are any or else in the rocks.

Captives never have tents. They build themselves little shelters with a few branches on which are hung scraps of leather or cloth. [727]

It falls entirely to the women to put up the tents. [462]

Granaries. -- One of the most characteristic facts of nomadic life is its lack of foresight in questions of food. For the most part, the nomad lives from one day to the next, following the seasons, without accumulating anything. This is somewhat the case for the Tuareg. Still, the Sahara is not a country where one can find supplies easily. 251 343

251 Thus, they are forced to keep supplies on hand, /226/ but it is a
343 limited stock, consisting of two or three bags of sorghum or dates which are transported each time the camp is moved. It is customary, when supplies are more considerable, to leave them in the rocks of the mountains in spots known to the people of the tribe. These granaries (ekaham) allow them to travel lighter and at the same time put supplies in safe places. In case camps are raided they make a sufficient food reserve so that the people are not driven to starvation.

184 Some tribes which have gardens in the centers of cultivation
343 often have food deposits there; they are stored for a whole family
423 group. Thus the Dag Rali have stores in the Koudia, at Ilaman,
251 Tarahananet, Abalessa, etc., where they entrust the care of their goods to their local representatives. These centers have secret granaries; they are scarcely used these days, but they were used before the French occupation for reasons of safety in case of raids. We have seen hiding places of this kind at Tit and at Bloumet, and there are probably some at Tazerouk and Ideles. They consist of cellars dug in the soil at ground level and hidden from the eyes of passers-by. Merchandise was thus protected from men and rodents.

171 While we are on the subject, let us add that granaries dug in rock are common among all Berbers. Today they may still be seen in Morocco and among the Chaouia /Shawia/ of Aurès. This custom seems to have been common in Mediterranean countries, in Syria, and especially in Palestine where it was already reported in Biblical times.

343 The Akhamouk amenokal was the only person who had real
643 granaries. He had three or four of them constructed of stone bound
251 with clay using the Sudanese technique. They were placed at the top of a rocky crest on the left bank of the Abalessa wadi, near the place where his camp was most often established.

513 Sleeping arrangements. -- Bedding includes only one or two
[56] sheepskins sewn together, or more rarely a rug among the rich people.

513 No one has a bed except the aménokal, who owns one of the Hausa
[352 177 643] type; this model has also been adopted in a certain number /227/ of Kel Oui /Owey/ camps. (1) The man and woman each sleep on

1. Contrary to what has been said, the bed is not Tuareg but Hausa. Its use is spread among the sedentary people of Aïr, Damergou, and Sokoto, and it is made by Hausa smiths.

his or her own side of the tent, the boys with their father and the girls with their mother.

354 There are no cradles for babies among the Ahaggar Tuareg, and young children are placed on a skin or on blankets. Sometimes a hemispheric wicker frame is put over them and covered with a cloth to cut off the light or protect them from sandstorms.

The Kel Aïr and the Tenguéréguif have little cradles which are suspended from the top of the tent.

354 Fire. -- In front of each tent there is a hearth, generally made of three stones. It is not intended for cooking purposes, but rather for warmth in the evening after the sun has gone down when all the people gather in the shelter of the asaber, which is unrolled in an arc in front of the tent. The flame warms up hearts and
[272] bodies and synthesizes family and friendship. Sometimes a container of water is placed on the three stones to heat in order to make tea.

343 The cooking fire is set apart, generally some three or four
354 meters from the tent, in the shelter of a little stone wall in order to protect it from the wind.

372 We have not been able to find any myth on the origin of fire
773 among the Tuareg. According to them it was created by God, who gave it to man to cook food. Iblis (Satan) wanted to seize the secret of how it was made, and God punished him by creating

773 the tortures of hell. Iblis, however, communicated his secret to
372 the blacksmiths, who since that time have known how to use it for metalworking.

The Tuareg used to obtain fire by friction, using a board of
372 torha (callotropis procera) and a branch of hardwood; they caught
[824] the spark on a tuft of silk from the fruit of the callotropis and blew on it until they got a flame, which required about a minute. They have kept this practice and still use it occasionally.

Today they find matches sold by /228 Ahamanrasset merchants,
[439 but they all have tinderboxes
177] with flint and a bent piece of iron.

They do not keep up the
[415 fire. They carry it from
439] one tent to the other in a fragment of an old gourd or sometimes hold a glowing ember in their hands without burning themselves.

Fig. 27. Ahaggar Tuareg dish, imported from Hausa country.

[237 When they want to transport
484] it long distances, they use camel-dung embers.

The Tuareg commonly
[237] use the excrement of camels and goats as fuel. In the high
[137] mountains, wood is quite rare, but in the lower parts of the Koudia old acacia or éthel /atle? Ed. / stumps are to be found. They never
[824] use the wood of the callotropis, which is the devil's tree and makes muffled noises when it is burned.

Basalt blocks are never used to make the hearth, since they be-
[823] lieve that basalt is possessed by genii and will explode violently when heated.

352 Furniture. -- We have briefly described the objects furnishing the parts of the tent reserved for the husband and wife. To these must be added a certain number of objects which make up the

362

furniture. These objects are not numerous and reflect the primitive life led by the Tuareg.

On the left side of the tent is generally found the goatskin water bag, hung on two wooden stakes placed in a V-shape. An old piece of cloth often covers it to protect it from the sun. The waterskin is often empty, for the Tuareg are not very farsighted. When there is water, they drink; when /229/ they are out of it, they stay there waiting a half day until the Iklan get back from the well. [415 271]

Fig. 28.
Tent shovel.

[412]

[574]

When a traveler passes by, he is most generally assailed with demands for water, while he himself often hoped to find some in the camp.

In front of the door and close to all the tents is an enormous wooden mortar and its pestle, in which the servant girl crushes millet and dates. By searching a bit in the tent or in the shelter used as a kitchen, one may find two or three hemispheric wooden dishes destined to hold food and two or three conical bowls serving as drinking vessels. Hanging on one of the outer stakes of the tent are a wooden milking vessel, an esparto winnowing basket for sifting millet flour, serving at the same time as a dish cover, one or two little esparto mats which can serve the same purpose, and finally a few wooden spoons. Each mistress of a tent has a little 412 415 [357] [252] [285]

412 Each mistress of a tent has a little
356 wooden scraper to clean the floor of the tent, which is generally
342 covered with a layer of fine sand taken from the bed of the nearby wadi.

415 Let us add one or two earthen pots, little teapots and tea glasses, and we have an idea of Tuareg furniture, which, as one may realize, is reduced to the simplest terms.

484 When a camp is moved, all these objects are loaded on asses,
492 provided for the occasion with little pack saddles. The women are
[462] left with folding the baggage, loading it, and transporting it on the asses. They themselves ride on the baggage during the moving;
[565] only noblewomen travel on camel back. Camels are used in moving only if it is a long trip.

/230/ Chapter 3

## Food

243 People may have said that the Tuareg, like many herding
262 peoples, lived on the milk from their herds. More precisely, they live on the products of their animals, but milk and meat alone would not be enough. Indeed, the base of their diet is a graminacea, bechena (Sorghum cernuum Host.), a kind of millet cultivated in the Saharian oases and in the Sudan.

The Tuareg eat some wheat, but very rarely. Especially during
[252 their moves and in the caravans, they eat wheat cakes cooked in
484] the sand, for they are easily and quickly made.

It is rather curious to note that the Tuareg, who belong cultural-
[101] ly to the Mediterranean civilization (which may be called the wheat civilization), have not kept wheat as the basic food as other North African peoples have. And yet the question of food is one of the things which most ties man to his native milieu and which

243 he generally carries with him in his migrations. Wheat raising
262 goes down to the Sudan as far as Timbuktu, Aïr, and a little north of Nigeria; but everywhere it has been introduced recently, due to the influence of the Arabs, who have not abandoned their traditional food.

Béchena is a food they adopted because of their exodus toward [412] the Sudan; they are at the present time much closer to the Sudan than they are to North Africa from the point of view of material living conditions, that is, unless this plant formerly existed in a self-sown state in the Sahara, as Professor Chevalier has assumed, and was one of the principal food resources of its first inhabitants.

Fig. 29. Caravaneer's mortar and pestle.

177 By its agriculture and its production, the Sahara is completely Negro. Agricultural
244 methods, except for irrigation, /231/ are borrowed from the Sudanese, especially work with the hoe (daba), while North Africa mainly uses the plow which is unknown in the intertropical zone.

252 Béchena is eaten as a cooked flour porridge, as raw flour, or
262 mixed with liquids, water or milk.

Dates also play a large part in the diet of the Tuareg. Every year each family head organizes a little caravan to the Touat or [438 484 512] Tidikelt to bring back two or three loads of poor-quality dried dates which are crushed with a pestle and eaten with camel's milk.

262 According to what we know of the production of the cultivated
433 lands of the Ahaggar itself and according to what the Tuareg are obliged
439 to import, we may know approximately their needs. During the good years, local production is equivalent to only one quarter of the needs. It may be evaluated at 150 tons. To this must be added wheat production, but this cannot be taken in con-
237 sideration insofar as con-
415 sumption is concerned, since
234 it is almost entirely destined for export. It follows from this that import needs amount to 4,000 loads of millet a year, calculated at 150 kilograms each, making 600 tons, which are for the most part bought or exchanged at Damergou or in the Tahoua region. The annual demand for dates is 400 loads.

Fig. 30. Sheep's horn used as a butter container.

From these figures it
146 follows that the annual needs per person are approximately one load of
262 millet and one-tenth of a load of dates.
511

Individual consumption may thus be estimated at 187 kilograms of millet and 15 kilograms of dates per year, while an identical calculation /232/ for the Saharian Arabs has given us 180 kilograms of wheat and 75 kilograms of dates. But we must not deceive ourselves. These figures are drawn up for years, if not of abundance, at least of relative facility. Indeed, the annual average is very much lower, for the Ihaggaren do not always have at their disposal the means of exchange to meet their needs, and one may reduce the figures cited above by a good third, sometimes even by half.

824
222

To make up this deficiency in graminaceae, the Tuareg have recourse to products of gathering.

After a rain the captives and the Imrad women gather the seeds [262] of certain plants which grow in the Ahaggar valleys. They are the afasso (Panicum turgidum F.) and the oulloul (Aristida pungens D.). But the size of the yield varies with the abundance of rain, and one may say that most of the time it is quite /233/ uncertain. This is not the case in the Sudan, where the Iklan gather whole bags of wild seeds, particularly cram-cram (Cenchrus echinatus), every year.

[233 281 415 234]

Fig. 31. Little leather flask used as a butter container.

To be sure, there are a few wild berries in the Ahaggar, such as those from the jujube tree (Zizyphus lotus D.) and the téborak (Balanites aegyptiaca). In case of [73] famine the Tuareg fall back on other seeds, such as those of the colocynth, the Acacia tortillis, etc. [262] However, all these plants play only a secondary role in the Tuareg diet.

The Tuareg have at their disposal milk from their camels, 272 goats, and ewes. They drink it either whole or diluted with water, either fresh or sour.

The luxury of drinking whole milk is reserved for young [264] mothers and children. Adults generally drink fresh milk morning and

[264]
272 evening after the milking, and at the noon meal they drink milk which has already soured. It may accompany the dishes /234/ of
[262] béchena, serve as a sauce, and also be taken as a drink. When they make long moves, the Tuareg carry a bag full of skim milk on their camels. This turns rapidly and gives a sour-tasting whey which is very refreshing. But milk is particularly appreciated for its by-products, butter and cheese.

234 Butter -- oudi -- is obtained by churning milk in a
[415 237] little leather bag; a woman shakes it on her knees, making it swing from right to left and from left to right. The butter col-
[237 415] lected is placed inside a sheep's horn which serves as a receptacle. When butter production exceeds daily consumption, the butter is placed in leather containers, in the shape of a flask, where the heat usually keeps it liquid or very fluid, except in winter when it is necessary to heat it to get it out of the container.

Fig. 32. Butter container made from the skin of a camel's neck.

Butter is mainly eaten as a sauce; béchena gruel or wheat
262 cakes are moistened with it. The Tuareg never cook it, as in fried foods.

In years when pasturage is particularly good, which assures an
234 abundance of milk from the animals, the Tuareg make cheese -- tikomaren. They sour the milk, squeeze the curds in little mats

234 to extract all the water, and then dry them on /235/ small screens placed in the branches of trees. It goes without saying that cheese making is very rare in the Ahaggar and that the Tuareg make it [438] particularly when they are nomadizing in the Sudan. Every year the Ihaggaren bring back large supplies of cheese from their stay in the Sudanese zone; these cheeses, dry as a bone, are either made by the Ihaggaren or bought from the southern tribes. They make 252 an important contribution to the Tuareg diet. These dry cheeses 262 are ground in a mortar and reduced to small fragments so that they have the consistency of flour. Then they are mixed with food, either in béchena gruel or in a drink of béchena flour and dates.

262 It might be supposed that meat plays a very large role in the Tuareg diet. But let us recall one of our old French proverbs which says that the shoemaker is always the worst shod. We could apply this adage to herders, who perhaps eat less meat than anyone else. A herder has animals for the use of their products, but he very seldom eats them, for each butchering is a loss of capital.

Indeed, the Tuareg kill their animals only under very unusual [233] circumstances, especially at the time of religious and family festivals. These killings recall somewhat the religious meaning of sacrifices. This does not mean that they do not like meat, for when they raid a rival camp, they hasten to make drastic inroads on the smaller livestock and eat until they are about to burst.

224 Hunting furnishes them a little additional meat. Each year 262 they kill a certain number of gazelles and wild sheep, eating part [251] of the meat fresh and drying the rest to keep it on hand.

They capture star lizards (Uromastix acanthinurus), jerboas, 222 gondi (Ctenodactylus sp.), sometimes even jackals and hares. We 262 can add to their meat diet grasshoppers (Shistocerca gregaria), [324] which they grill in the embers and then dry in order to pulverize [252] them. All Saharian nomads are very fond of grasshoppers, and since remotest antiquity some North African tribes are supposed to

222 have made them the base of their diet; for this reason they were
262 nicknamed acridophages. The Nasamonians of Herodotus prepared them in the same way the Tuareg do, and the /236/ similar diets of the two peoples is perhaps not pure coincidence.

There are a few fish ponds in the Ahaggar, but the Imochar
226 and the Imrad do not eat the flesh of these animals; only the
262 Issekkemâren catch barbels and sometimes catfish, or rather they gather them up in the wadis after floods, for they do not know how to fish, properly speaking.

The sedentary peoples raise chickens, but the Tuareg do not
262 eat them either, since they consider the meat impure. The same interdict is extended to eggs. The only bird which is an exception is the ostrich. There are no longer any ostriches in the Sahara, but
[223] when the Ihaggaren go to the Sudan they capture them if they have the chance; in addition, they eat ostrich eggs cooked in the ashes.

Times of scarcity were sometimes experienced. They are rare
262 now that caravans can circulate freely, but they were much more
731 frequent when the state of war continued for a long time. The
224 Tuareg fell back on wild plants which do not generally enter into their diet: the young growths of tahlé (Typha elephantina), the
[824] leaves of the tanekfit (Eruca aurea) and the aramas (Atriplex halimus), the underground stems of the danoun (Cistanche lutea) which resembles asparagus, and many other plants of very dubious food value, which they ate to assuage their hunger. The state of famine can
[252] become so pronounced that they sometimes gather up old bones, grind them up, reduce them to flour, and make gruels of them. It
[519] goes without saying that it is during these periods that pillaging is at its height. People steal from camp to camp, from tribe to tribe, and everyone forgets his brother and his friend, thinking of only one thing -- survival by any means.

264 Before the French occupation the Tuareg as a general rule had only one meal a day, in the evening, after milking the animals. During the day they contented themselves with drinking a little milk.

252 262 The national dish of the Tuareg is asink, which is a porridge of millet cooked in water and moistened with butter or whey. This meal is especially popular in winter and during the entire cold season. During the very hot months, they prefer a beverage of water or whey in which they throw millet flour, diluted sometimes with dry cheese or powdered dates. This is alakoh. Dates are also eaten /237/ in summer, ground and mixed with water or milk.

252 When the Tuareg kill a sheep, they prepare the intestines which they enclose inside the stomach. After having tied the two extremities of the stomach, they put it on a bed of ashes to cook. This way of cooking, which is the one most commonly used by hunters, is called abatoul. Meats are prepared boiled or cooked under the ashes. Those that are boiled are particularly the ones which were previously dried (wild sheep, gazelle, sometimes sheep). In this case, they are first crushed between two stones, for they are as hard as wood; the meat is then spread in pieces on a dish of asink.

The Tuareg do not prepare roast meat over embers, but they place it under the ashes. When they want to cook a whole sheep, they open it in two and then put it under the ashes, taking care to turn it once during the roasting.

252 262 For great occasions -- religious festivals, marriages, or receptions for prominent guests -- the Tuareg butcher young camels. They serve them with a couscous of coarse-grained wheat.

The domestic animals slaughtered are goats, sheep, camels, and cattle when there are any. They do not eat horses, asses, or dogs.

[727] Cooking is done by the captives, close by the masters' tents.

264 Men take their meals by themselves and receive the food first. Women and children eat in their turn,, and the Iklan receive the rest.

264 [415] The Tuareg use spoons. The use of this implement is peculiar to them, for their Arab or Negro neighbors eat with their hands. The custom must be related to the wearing of the veil, which they do not take off to eat and which prevents them from putting their [182 291] hands full of food to their mouths. They carry food to their mouths while slightly holding up the ends of their veils.

[271] 272 For beverages they drink only water, whether it is clean or polluted, and milk.

For half a century they have had the habit of drinking green tea in the Arab manner; they aromatize it with mint or some perfumed plants of the Ahaggar, /238/ chih (Artemisia herba alba) in particular. Coffee, which was formerly much used by them, is now [757 78] taken mainly as a medication to calm violent coughs or stomach aches.

276 If we now seek consumer goods taken as stimulants or narcotics, we see that the Tuareg know only tobacco, which they chew or take as snuff.

Smoking is not one of their customs. The young men who are [177] in contact with the French like to beg a cigarette, but it is simply in the spirit of imitation.

Duveyrier, however, has said that the Tuareg smoke. Was this, 114 perhaps, the fashion among the Tuareg who visited Ghat? Before 276 him Barth wrote that all riverain people living along the Niger loved to smoke. "It is very seldom that they leave their pretty little clay pipes, and all the Rouma, like the Tuareg, cover their mouths when smoking, so that all one sees is a pipe bowl coming out of the shawl which covers the face." (1)

1. Voyage en Afrique, vol. IV, p. 137.

[114] 276 For his part, Commander Cauvet, in describing Tuareg clothing, said that men kept their pipes and tobacco in the pocket of their big blouses.

Thus all these testimonies coming from such trustworthy travelers tried to make us believe that the Tuareg are pipe smokers. For our part, we have never seen any.

On the other hand, they are very fond of chewing tobacco, and their wives also practice this custom, so that they finally have a deformation of the lower lip caused by the craze they have of stowing the quid between the gum and lower lip.

[439] Tobacco is not cultivated in the Ahaggar; it is imported from the Touat by the Arabs. The Sudanese Tuareg get it from the sedentary peoples of the Niger or through caravaneers from Upper Dahomey. They generally add a few natron crystals to it to take away the acridity, or else the ashes of graminaceae which play the same role as natron.

177 276 Many Nigerian Tuareg have formed the habit of chewing kola nuts; this is a powerful stimulant which the Negroes use a good deal. A few Ihaggaren /239/ indulge in this practice when they go to the Sudan, but they have not introduced it into their everyday mores and never use kola when they are in their own country.

262 The Tuareg are subject to a rather large number of dietary interdicts. First, like Moslems, they may eat only meats from ritually butchered animals. They must abstain from eating the [273] meat of pigs and wart hogs and from drinking fermented drinks which are <u>harīm</u>. The meat of fowls--except the ostrich -- and fish is also forbidden and considered impure. But these are customs which go back before Islam. They also may not eat the [825] meat of the uran, because this lizard is considered to be the descendant of their maternal uncle.

252 They may not heat camel's milk which has just been milked
825 under penalty of causing sickness to the animal which gave it.

264 Insofar as personal interdicts are concerned, there are none to speak of, for although men and women must not eat together, this is a custom rather than an interdict.

[606] A married man must not eat with his parents-in-law, and the oldest son must not eat with his father. These are mainly marks of respect, perhaps traces of ancient practices of a religious nature.

/240/ Chapter 4

## Hunting and Fishing

080 We shall now say a few words on the industries allied to the problems of food, that is, on hunting, fishing, animal husbandry, and agriculture.

136 Hunting. -- In a country where fauna was at all dense, hunting would have brought a not inconsiderable dietary supplement to the
174 Ihaggaren. In the past it was very much esteemed in the Sahara. Many rock drawings and paintings prove this, for they depict hunting scenes which interpret the state of civilization of the men, their preoccupation, and at the same time the nature of the fauna, which has changed a great deal since then.

[132] Today, with the very advanced drying out of almost all the Saharian districts, the fauna has come out into the open and the
224 species likely to be usefully hunted are reduced to a few. Only gazelles and wild sheep are still hunted. We cannot mention the addax and oryx antelopes, for the former is in the process of becoming extinct in the Sahara, while the second is confined to the steppe zone. The hare and jackal may be accessorily added.

224 Among the Tuareg hunting is the business of a few men, a few
[463] specialists who have made it their profession; however, we see a
[567] large proportion of Iklan who seem to have more aptitude and more taste for hunting than their masters. There is certainly an atavistic character in this, a vestige of ancestral mores influenced by the original forest environment, where hunting was most often the basis of human activity. But it is nonetheless true that many Tuareg are very good hunters. The most renowned seem to be among the Issekkemâren and the Dăg Răli.

Hunting with hounds is the most popular. They hunt wild sheep
224 and gazelles with saluki-type greyhounds, who serve at the same
231 time as camp dogs /241/ for the Tuareg. These animals, who stand tall, belong to a race halfway between the Kabyle dog and the Berber saluki and must also possess jackal blood. They are particularly suited for running and have innate talent for hunting.

The hunter's job is to track down the animal, to succeed in
224 discovering him, either grazing or in his lair, and to set the dogs on him at the propitious moment when he does not expect it and at a suitable distance. An epic battle between the animal and the dogs sometimes results from this; often the battle necessitates the man's intervention, for example when there is a wild sheep which does not hesitate to confront its assailants. The hunter, who is
[411] usually armed with a long javeline with a wooden shaft, then tries to stick his weapon in the animal's body and kill it. When it is a question of gazelles, he only needs let the dogs alone. If they can catch it, the animal will be quickly neutralized by the powerful jaws of the saluki.

Beside the common hunting with hounds, the Tuareg engage in trapping, which is a lazy method of hunting. It is all the more appreciated in the Sahara because game is rare and wary, and a certain amount of luck is always involved in capturing it.

The Ihăggaren use two types of traps: traps with radial points and torsion traps in the shape of an arc.

224 The radial-point trap is the one described by Montandon (1)

1. Traité d'ethnologie culturelle /A Dissertation on Cultural Ethnology/, p. 222, fig. 8.

[M1] and was already known by the Egyptians. It is spread over all of central and intertropical Africa. It is composed of a disk made of vegetable matter to which are attached the stems of rather resistant graminaceae which converge toward the center. The apparatus is placed on a little pit with a diameter a little less than its own, then covered over with straw /242/ and sand. It is arranged under trees whose leaves are still green and which the gazelles come to browse on. While going around the tree, the beasts finally step on it, and the hoof which passes through the stems is caught in the disk. In spite of all efforts and movements, the disk remains attached, thus preventing the animal from getting away. The hunter then steps in. He gets on the animal's trail, follows it, and finally catches up with it. He kills it with a thrust of his lance. Sometimes a lasso is placed on the disk with its end attached to the trunk of the tree or to an old stump.

Fig. 33. Trap with radial points used to capture gazelles.

The torsion trap in the shape of an arch is a more complicated system. It is composed of a fragment of oryx antelope horn on [M3] which is set a layer of tendons coming from the same animal and

224 which is rolled up on a stick, one end of which is cut in a point. A
[237] second apparatus consists in a little wooden disk covered with hide, the whole mounted on another stick a little longer than that of the first apparatus which is embedded between the layer and the arc, while the pointed stick is fastened in the hole of a bead or on a little leather ring fixed on the leather disk. A lasso is placed on this disk, and its end is fastened on the main part of the pointed stick.

This trap is generally placed on the paths frequented by gazelles and lightly covered with sand. If the animal puts its foot on the leather disk, the pressure that it causes unhooks the pointed stick; the shock of this can break a paw and in any case it tightens the lasso around the paw.

More recently the Tuareg have used the metallic spring trap
[177] of the English type, which their blacksmiths now know how to make.
324 They have replaced the balanced bait pan by a taut skin on which they have attached a large glass bead. The bait is fixed to the bead and is more sensitive to the touch. This trap may accidentally catch gazelles, but the most common catches are hares and jackals.

224 The Tuareg hunt on the lands over which they range and have
423 no right to hunt on the lands of the neighboring tribes. If such a case occurred, they would be obliged to give the game to the owners of the area. The latter may at least grant back part of the meat, but they keep the skin, especially when it is a wild sheep.

/243/ Some regions are the hunting fief of a single man. So, in the Koudia, no one has the right to hunt on Tahat Peak without the permission of its owner, who is a descendant of the old Isebeten tribe. At any rate, the skin, head, and half of the animal must be handed over to him.

224 The Ahaggar Tuareg have had rapid-firing guns at their
411 disposal for a few years. They are not good shots, but they know admirably well how to approach game, so that they have made massive massacres which will take a long time to repair.

224 The administration fortunately has decided to confiscate these
[411 648] weapons.

It is very difficult to get an exact idea of the number of animals killed annually by hunters. But we believe we are close to accurate in giving the figure 300. Thus we say that hunting holds a very small place in Ahaggar Tuareg economy.

226 Fishing. -- Fishing is not done by the Tuareg for the reasons
[184] we have given. Only the Issekkemâren and the Iklan engage in it. They fish when the pond water is very low. In the Tassili they dig little ditches on the lower side at water level, leading to little reservoirs where the fish find refuge and are then surely caught.

[251] When fishing has been fruitful, the Issekkemâren dry the fish to keep them for periods of scarcity.

/244/ Chapter 5

## Agriculture

241 The Ahaggar Tuareg have never attached more than a very secondary importance to agriculture. Their nomadic turn of mind is at the opposite pole from land ownership and still more from exploiting it, which implies sedentary life. There are, however, a number of centers of cultivation in their country; they are of undeniable interest and could be extended more widely if improper legislation did not hinder their development.

177 The creation of most of these centers of cultivation does not
241 go back more than a century. It was accomplished under the influence of Arab groups settled in the Ahaggar. Only the Silet and Tibeghîn oases are much older and probably date from the time of the Imanan sultans who had brought into the Ahaggar some

177 marabouts from the Touat who brought with them the system of
241 irrigation by foggara. The Tuareg later grasped the advantage they could gain from multiplying these centers, and so, at the moment of the French occupation, more than forty centers were being exploited.

423 The enjoyment of land appertains to the people who first culti-
241 vated it. Land of itself appertains to the amenokal, but he leases it out and in return levies an annual tax -- mesk -- on the harvest, in
[427 the amount of four guessa of wheat, or about 10 kilograms per garden.
651] The land may thus have as proprietors Imochar or Imrad, indeed Enaden, but Iklan may not hold gardens.

Gardens are not cultivated by their proprietors but by Negro
241 tenant farmers, natives of the Touat or Tidikelt, who are called
427 harratin (singular hartani). An arrangement is worked out between them and the proprietors on the following terms: the proprietor furnishes the hartani two loads of millet a year for his sustenance,
[312] seeds, a hoe, and then pays for digging /245/ the wells of the foggara. Once the foggara has been dug, the hartani is responsible for keeping it up. He sows, waters, harvests, threshes the grain, and keeps one-fifth of the harvest. Furthermore, he has the right to sow on his own account in the irrigation canals and to cultivate several beds of vegetables.

[311] Centers of cultivation are set up on the terraces of valleys when
312 they are wide enough and have old alluvial deposits. The feggaguir
[241] /plural of foggara -- translator/ of the Ahaggar have nothing in common with those of the Tidikelt or those in the Saoura oasis, which pipe water to the gardens from great distances, from the geological faults where it is retained. In the Ahaggar rain water collects in the wadi beds and is stored under the sand. The feggaguir are therefore dug in the wadi bed and seek water at distances varying from one to seven kilometers. The wadi presents a certain slope, and it is necessary to bring the water gradually to the same level or to a level slightly higher than that of the gardens. The feggaguir

include a first subterranean part made of numerous wells of depths varying from two to four meters, linked together by a small canal serving as a water conductor; then comes a part on top of the ground in the form of a canal, first at the same level as the wadi, then at a slightly higher level. They empty into the distribution reservoirs (majem), which by secondary canals (seguia) carry water to the gardens to be irrigated.

These agricultural centers therefore extend along the wadi on both sides of its banks. The cultivators settle near their gardens and live in straw or reed huts or little clay houses.

There are five centers in the high mountains between 1, 500 and 1, 800 meters in altitude, but the majority are located between 1, 200 and 1, 500 meters. Some of them can be lower, such as Silet (730 meters) and I-n-Amegel (1, 030 meters).

Some are small date groves such as Silet and Tibeghîn, which have 10, 000 palm trees, Ideles, Tâhârt, and Ăbalessa, but because of its altitude, the Ahaggar does not seem to be very suitable for date growing. The instability of the harratin is also an obstacle to the development of arboriculture which demands continual care. Cultivators who can be here today and gone tomorrow would not be capable of interesting themselves in work from which they could not draw immediate profit. The country would lend itself, however, to rather large-scale cultivation of peaches, /246/ apricots, figs, and grapes. The little center of Tăzerouk has many peach trees, and the center at Tit produces a famous raisin.

The Ahaggar soil is of a high quality, owing part of its richness to elements of volcanic origin which make up a large proportion of the alluvial deposits. Furthermore, the climate favors agriculture so much that the natives obtain two or even three harvests a year.

In the medium altitude centers, they sow wheat and barley in December and harvest it in May. Barely finished with this, they sow millet which is harvested at the beginning of October. In between the natives also engage in kitchen gardening: carrots,

241 turnips, onions, garlic, pimento, beans, pumpkins, native melons, watermelons, various gourds of local origin, and sometimes lentils. [422] These vegetables belong properly to the cultivator and not to the [269] proprietor of the garden. They are consumed by him, for the Tuareg generally disdain them and eat them only when they are staying in the agricultural centers.

But these centers may be handicapped by numerous climatic 132 factors.

241 Rains are obviously beneficial when they come at the right 312 time; unfortunately, they most often fall in winter or in summer, seasons which do not correspond to the largest growth of vegetation. The plants benefit from them only when the rains are very abundant and the ground can store up water for several months. But still, rainfall must not be too strong, or else it can cause the wadies to overflow and immediately destroy the feggaguir. It then requires several months to reconstruct them and in the meantime the crops which cannot be irrigated dry up on the spot and are completely lost.

Cold can also have a disastrous effect. Winter wheat does not 132 suffer from it but its development is slowed up. It is much worse 241 for arboriculture, for if it is late and comes after the trees have blossomed, which sometimes occurs in January, it is likely to stop pollination completely. Fortunately, trees in arboricultural centers like Tazerouk bloom much later and there are only sudden frosts to fear.

/247/ The wind which blows violently in the spring may also hinder arboriculture by knocking down flowers or young fruits, indeed even fruits which are almost ripe. The great hot summer winds endanger the harvest by the intense drying they cause, unless this difficulty is overcome by abundant watering. Now, it is precisely at this time that the flow of the feggaguir decreases as a result of the heating of the soil and the intense evaporation.

It may thus be seen that agriculture in the Ahaggar is subject to many risks and that the harvests may be very variable. The abundance or scarcity of water causes the seeded areas to vary in

132 241 [166] [731] the proportion of one to four. After several dry years some agricultural centers must be completely abandoned. This was the case of Tit, Altoklane, Tâhârt, Dar-Mouli, etc., in the last few years.

In 1940, 555 hectares of land were seeded. This is the figure for a good year, which can occasionally be surpassed but can also be reduced by more than half.

162 241 [648] The population of the agricultural centers, which was 1, 310 people in 1916, was 2, 280 in 1938, which denotes a great effort made in favor of agriculture. This could be realized thanks only to the state of peace due to the French occupation.

162 103 Here are the figures for each of the principal centers, according to the archives of the Tamanrasset post (1):

1. Florimond report, 1938.

| | 1911 | 1938 | |
|---|---|---|---|
| Tamanrasset | 150 | 686 | |
| Abalessa | 272 | 250 | |
| I-n-Amgel | 180 | 206 | |
| Iglen | | 168 | |
| Ideles | 70 | 160 | |
| Tazerouk | 150 | 148 | |
| Tit | 75 | 98 | had to leave for other centers after the summer of 1938. |
| Tarhaouhaout | 140 | 91 | |
| Amsel | 90 | 66 | |
| Tahifet | | 39 | |
| /228/ Tigeneouin | 25 | 23 | |
| Mertoûtek | | 60 | |
| Hirhafok | | 80 | |
| Ilâman | 10 | | |

162
103

| | 1911 | 1938 |
|---|---|---|
| T-i-n-Ămenser . . . . . | 36 | temporarily abandoned |
| Tifert . . . . . | 50 | " " |
| Essélésékin . . . . . | 30 | |
| T-i-n-Târaâbin . . . . . | 15 | abandoned |

166 These figures bring out the weakening of some centers to the
621 advantage of others. Thus, a number of cultivators from
Tarahouhaout (where the French post was formerly located) came
[648] to settle at Tamanrasset, and the group of little centers in the outskirts of Ăbalessa, Iglen, Tăfarit, etc., has absorbed the groups from other abandoned centers like Tifert, Essélésékin, Ilâman, Tarahananet, etc.

[241 Together these centers number about 400 gardens and 80
312] feggaguir.

The wheat harvested is partly consumed by the cultivators and
262 chiefly intended for export; it is exchanged at the Touat for dates.
439 The total harvests in the Ahaggar corresponds to only one -fifth of
433 the needs of its inhabitants, even in good years.

621 There are fifteen agricultural centers exploited in the Ahaggar:
433 Tamanrasset, Tărhaouahout, Tahifet, Tăzerouk, Ideles, Ăbalessa, Hirhafok, Iglen, I-n-Amegel, T-i-n-Ămenser, Amsel, Tigeneouin, Talan-Tedit, Mertoûtek, and Esseléséкine.

[166] In addition there are twenty-two other centers which have been abandoned for some years as a result of dryness or lack of manpower: Aïtoklane, Ădenek, Ămrah, Ăbezou, Ăglil, Bloûmet, Déhine, Dar Mouli, Ennedid, Innezal, Ilâman, In Ămertek, Ilafok, Outoul, Ouhet, Souaïka, T-i-n-Târabin, Touakin, Teberbert, Tarahananet, Tahart, and Joraf.

/249/

# Chapter 6

## Animal Husbandry

233 If we study mainly the tribes which live in the Sudan, in a country which lends itself perfectly to animal husbandry, we observe that the Tuareg are experienced herders, capable of making their herds prosper. The scarcity of pastures in the Sahara has evidently put animal husbandry in the background among the northern Tuareg, but it was certainly not always that way. The example that we have before us in the Sudan allows us to class all the Tuareg among the great herders. [184]

Animal husbandry is at the very foundation of their living conditions. It is probably the source of their migrations and their swarming over the Sahara and the Sudan. On these grounds the Tuareg, like all shepherds, may be reproached for their thieving and destructive bent, the effect of which is often felt by urban groups and always by the vegetation which they shamelessly destroy. With these reservations, however, they have brought with them some elements of cultural civilization which have played a considerable role both in the Sahara and the Sudan. [167]

The Ihaggaren are forced to count on the income from their herds and could not live without them. That is why they devote a large part of their work to animal husbandry, despite the difficulties imposed on them by caring for the animals.

This animal husbandry, moreover, is peculiar to the Saharian regions and is totally different from that of the Sudanese Tuareg. The Sudanese own cattle, great quantities of sheep, and horses; the Sahara could not support such flocks. [184]

The Ahaggar Tuareg raise camels, goats, sheep, and asses.

174 The camel. -- We have seen previously what we must think about the introduction of the camel into the Sahara. Whether it was

174 /250/ introduced before or after the Christian era, it is nonetheless true that the ancestors of the Tuareg must have introduced it.

At the present time, human life in the Sahara, which is al-
182 ready of little consequence, would be reduced to zero without
233 the camel. This is a fundamental fact which has been amply demonstrated and which it is useless to dwell on. Th. Monod, who dedicated one of his works "To the camel and the goat, the vehicle and the container, the two sole conquerors of the Sahara, " (1)

1. Méharées/ Meharis/.

has not only been literary and witty, he has put the truth in a few words. Without the camel, no relation would be possible between the oases, no relation between North Africa and intertropical Africa.

233 One may therefore easily understand that the animal plays a large part in the life of the Saharian Tuareg, and that the latter make a great effort to raise camels. They have always endeavored to own many camels, and at the present time their livestock has increased to more than 10, 000 head.

[132] Although the camel has adapted perfectly to the Saharian
[492] pastures and terrain, it is nonetheless true that the aridity is such that he has difficulty keeping in good condition, and that a slightly prolonged march has to be compensated for by a rest period lasting twice as long as the period during which he was tired out. That is
[361] why the Ihaggaren nomadize with their camels on the borders of the Sahara in the steppe where there are acacias and graminaceae.

Ahaggar breeding is very famous. It furnishes animals which
232 are resistant, very frugal eaters, capable of braving mountain rocks or marching for weeks on end over the granite regoliths of the Tanezrouft, something the Sudanese -bred camels could not do.

The Tuareg select the animals when they are very young, destining them either for saddle camels or for pack camels. The meharis are castrated and undergo special training. In speaking of

232 these saddle camels, one may not, therefore, refer to a particular breed /race/ adapted for speed, as one may commonly hear spoken of.

436 The camel has a well determined exchange value among the Tuareg. It is one of the bases for comparison in their commercial transactions.

233 Each tribe marks his animals with a particular sign, and /251/
422 the owners who have many camels also have their own signs, marked with a hot iron on one of the parts of the animal's body -- neck, cheek, or thigh.

The sheep. -- Sheep are raised only accessorily in the Ahaggar,
233 because grass is not abundant enough. But it occupies a large place
[137] in Sudanese animal husbandry.

[136] It is a very peculiar animal with short hair and a long tail. It stands tall, a characteristic which has won for it the name of Ovis
[174] longipes. The Tuareg certainly introduced it into West Africa. Zoologists never refer to it except as Tuareg sheep. Its antiquity in North Africa is well known. The ram of Ammon is pictured with its characteristic form, and it is also recognizable in the splendid rock drawings of Géryville and Tiout. It seems to descend from the Corsican wild sheep rather than from the Algerian wild sheep. Today it is an animal found exclusively in Tuareg camps of the Sudan or in their area of influence.

574 Sheep is the dish served at great feasts, and its skin is used as
262
237 a ground rug, a blanket, or to make harnessing articles.

The goat. -- The goat is the mountain animal par excellence,
233 as frugal an eater as can be, resisting both cold and heat, and able to be content with the meagerest pastures. It is thus quite natural to find many of these goats among the Ihaggaren.

[136] /252/ The Ahaggar species is small with long black hair. In the Sudan it is different colors -- white and black, or red -- with
[232] short hair; it stands taller than the Ahaggar species and is often crossed with the dwarf female goat in the southern tribes.

The origin of the goat is less certain than that of the sheep. Very
136 widespread all over the world, it must have been domesticated at

136 several different spots, and it is not impossible that the species
[172] bred today in the Ahaggar is of African origin. Bones of the species are found in the Neolithic layers of the Sahara.

137 At the present time there is a death struggle between the goats
233 and trees in the Ahaggar. The goat itself is capable of browsing
185 the lower branches and destroying them, thanks to its agility. The Tuareg do the rest when pasture is scarce, by felling the main branches to put them within the reach of the animals. And so, in a relatively short time, trees, and the tahla (Acacia sp.) in par-particular, will be only a memory in the Ahaggar. Nothing has

[412
326]
172

Fig. 34. Triangular iron ax. The shape of the iron is not unlike that of Neolithic axes.

been done by the French administration in the Ahaggar to protect the trees, when it would be sufficient to close some valleys for several years, while taking into account the needs of the shepherds. Measures of this kind have been taken in the environs of Goundam and have given very good results.

132 Prolonged dryness which causes a lack of pasture often puts
233 goat raising in difficulties. The birth rate is stopped short, and mortality may result to such a great extent that the number of animals sometimes falls to one fifth. Then many years are needed to build up the flocks, granting, of course, the arrival of favorable rains.

232 The careless and fatalistic Ihaggaren do not even try to step up breeding by buying sires in Adrar or in A'ir. They let their weak flocks reconstitute themselves by their own means, which
[272] sometimes requires many years. In case of an overabundance of births, they limit the number of animals, for they are well aware

of the average resources of their country and never let their flocks exceed the number of head necessary for the milk needs of their family -- about ten to twelve animals per person. The surplus is consumed or sold to the sedentary people in the agricultural centers.

/253/ The Ahaggar goats give very rich milk which makes excellent butter. The meat, which is a little tough, is eaten boiled, and the hide is valued for making saddle bags, waterskins, and sometimes tents.

The ass. -- The Ahaggar Tuareg have many asses. They do not breed them properly speaking, taking no care of them and letting them reproduce freely. Many Tuareg do not know the exact number of asses they have, for they do not use them all and abandon them in the mountains where they become more or less wild. The young ones, born in the meantime, do not let anyone get near them, and they must be trapped and then trained in order to be used. These asses running loose, called haoulil by the Ahaggar Tuareg, have given rise to a legend of wild asses. On this subject, Gautier cited the adventure of General Laperrine who had a "wild" ass hunted by his Arab horsemen, only to notice later that the animal had been castrated.

Although there are no more wild asses in the Ahaggar, it is nearly certain that there were some. They were pictured in the rock drawings of the Djorat wadi, and some still exist in Abyssinia where they are called "onager."

The ass is very much at home in the Ahaggar. It is possible that it was domesticated there. The legends of the Ihaggaren have kept the memory of the first inhabitants, the Issebeten, who had only asses and goats.

In their short moves the Tuareg utilize asses to transport baggage, and men and women also use them as mounts. The servants also take asses to replenish the water supply, making them carry the heavy waterskins on their backs or under their bellies.

262
237 The ass is never eaten, and its skin is not used.

233 The horse. -- The horse is not a Saharian animal. In 1929 there were four horses in the Ahaggar belonging to the aménokal.
[643 Today there are about twenty of them belonging to the members of
644] his family or to the notables of his camp.

This is an expensive luxury, for these animals must be fed with
[184 barley, and there is not enough barley for the people themselves.
262] It tends to replace the camel for the Sudanese Tuareg.

/254/ The zebu. -- A few years ago the aménokal owned a
[648] small herd of zebus which he had had sent from the Sudan. This
[137] animal is not raised in the Ahaggar proper, and it could not be, for lack of appropriate pasture.

[312] The zebus serve in the agricultural centers by drawing water. They are furnished to the tenant farmer by the proprietor of the land,
[427] and they are very poorly fed on hardship rations of hay and grass, or else they are put in rush pastures, which are generally plentiful in the agricultural centers.

[438] When the animal is tired, the owner exchanges him if that is at all possible. The privations which the zebus must undergo bring about their death in a relatively short span of time, and so in the Ahaggar it is a question of keeping them alive rather than raising them. In any case, they never follow the camps in their moves and never live near them.

361
136 When we talked about the camp, we told how the search for pasture directed its location.

233 Insofar as animal husbandry properly speaking is concerned, we
361 observe that the small animals -- sheep, goats, and asses -- always stay in the Ahaggar and move with the camp.

As for camels, this is not the case; they are often put out to pasture far from the tents, watched only by a few shepherds. The majority are even kept in the Sudan 800 kilometers from their owners'

233 tents, where a few camps live permanently, filling the function of
361 shepherds for the people remaining in the Ahaggar.

At the same time, then, there is nomadism and transhumance.

Definitions of the two kinds of life are as follows: there is nomadism when the tribe accompanies the moving livestock, and transhumance when the flocks are accompanied only by shepherds. And so we see that it is not possible to link the Tuareg to one category or the other, but that they engage in the two kinds of life, even in a mixed system in some instances. Quite often, in fact, the goats are pastured in the Ahaggar with a few shepherds, while the women stay in the mountains, and all the men are in the Sudan with the camels.

/255/ The migrations of these little herds of goats recall the moving of flocks which Vidal de la Blache has described as "mountain transhumance," that is, the camps move regularly from the summer pastures located on the peaks to the winter pastures in the
[192] plain. These moves cannot be as regular as they are in our country, in view of the irregularity of the rains.

It may thus be said that the Ahaggar Tuareg are small nomads by the short range of the moves of their camps, but that they are, on the other hand, great transhumants.

## Rules Concerning Passage and Nomadization With Flocks

423 The lands over which the tribes range are fixed by the amenokal
643 to whom the land appertains. The origin of the tiousse comes
651 partly from the pasture rights which he grants.

Each tribe is proprietor of its land, with full and exclusive
423 enjoyment of it. Others can come settle among the tribe only with
621 the authorization of the tribe's amrar, but the right of way, including the right to water flocks, is secured for everyone.

These rules may be modified in periods of great dryness or in periods following plentiful rains.

423 When pasture is scarce as the result of a long dry period, an
621 understanding is reached between the different tribal chiefs, and
311 one of them may authorize the other's tribe to come nomadize on his territory, on the condition, of course, that they not do any damage, mutilate the trees, or engage in hunting.

185 When a region has been abundantly favored by rain, the amrar
423 decrees the land forbidden -- ganent. No one can go there, in-
621 cluding the people of the tribe. This measure is designed to protect
311 young growths from the teeth of the animals and let the pasture grow to maturity. A few weeks later the interdiction is raised, the land is free, and anyone, without distinction, may profit from it, always conforming, of course, to the jurisdiction /sic/ concerning the protection of trees and to the hunting interdiction.

423 Animals straying on the land of a neighboring tribe are /256/
621 returned to their owners without the intervention of any sanction.
685 But when a flock is surprised on ganent land, the owner is fined one head of livestock -- one goat if it is a flock of goats, one sheep if it is a flock of sheep, one camel if it is a herd of camels.

A branch cut by a member of a neighboring tribe entails a fine
[185] of one goat or one sheep. This rule is not often applied, however, for the Tuareg have little respect for the protection of trees.

/257/ Chapter 7

## Care of the Body and Bodily Habits

515 Cleanliness and care of the body. -- In a country where water is scarce, it is natural that the people are not inclined to wash every day. The Tuareg, through living in the desert far from wells, have lost the habit of washing themselves. It is not that they despise

515 care given to the body, but they find washing completely useless and even disastrous to health. They even claim that if they washed [826] every day they would become ill. Their argument is that daily ablutions of the limbs make the skin scale off.

751 For them the main question is protecting the different parts of the body from the rigors of the sun. All the care that they give the body is to that end.

291 302 They are in the habit of wearing clothing of material heavily dyed with indigo which comes off on the skin, giving it a dark-blue color. Far from trying to remove this dye by washing, they become prouder of themselves as the layer of blue becomes thicker. They rub their limbs and faces with new materials to obtain the desired color.

302 [171] To make their skin softer and more brilliant they smear their limbs with a fatty substance, butter or animal fat. This custom is also adopted by Sudanese Negroes and the desert Arabs.

515 [412] [824] The Tuareg pay the most attention to the mouth and teeth. They rinse out their mouths with a lot of water after each meal and brush their teeth with little branches which have one end chewed to form a brush. For this purpose they use irak branches (Salvadora persica) or palm jereed.

302 /258/ The men and women are very fastidious about caring for the hair.

Young boys have their heads shaved except for a crest or tuft of hair left on the top. Men wear long braided hair, with a little halo shaved on the front of the head. They have their hair dressed [593] by their sisters or their female friends, in return for which they offer 276 them a bit of tobacco. The hair styles vary from region to region. [184] They may include a greater or lesser number of braids; the braids may hang down in back or be lifted to the top of the head. At a [884] certain age, when the hair begins to get grey, the men have themselves shaved completely.

302 The women also wear their hair braided in a number of plaits which hang beside the temples. They coif each other, and since the job requires many hours, it is done only once or twice a month. [412] They begin by untangling the hair by means of a small comb, at the same time filling the hair with sand and wood ashes. Next they [515] proceed to delouse it, for each Tuareg head of hair generally harbors a whole little world of insects. Then the hairdresser separates the hair into bunches, using a small knife, soaks it with water and butter, and braids it, either in large braids so that there are three or four hanging on each side, or in many small braids. [751] They smear their hair with butter for no other reason than to protect it against the sun and especially against the dry air which makes it brittle.

Fig. 35. Tooth brush of irak wood with its leather case.

The men let their beards grow, but they almost always shave their mustaches or cut them very short so /259/ that they do not get in the way under the veils which cover the lower part of their faces.

Men and women shave the pubis.

[754] After dressing the hair or shaving, the Tuareg always bury their hair or down, for fear that people who wish them harm might get hold of them and take them to some sorcerer who could use them to make fearful evil spells.

302 751 Men and women make rings around their eyes with kohl; they put it not only on the eyebrows, but especially at the roots of the eyelashes. They do this for medical purposes, for they attribute [164] to kohl the ability to protect them against eye maladies, in particular against ophthalmia which strikes many of them.

[326] The Tuareg appreciate the long, narrow hands of people who do no manual labor. They do not take any particular [412] care of them and are [531] satisfied merely to cut [212] their nails rather short. As they do for hair, they bury the scraps so that no one can take them.

Fig. 36. Hairdressing knife, bearing the name of the artisan who made it in tifinagh characters.

304 [171] Tattooing. -- Make-up. -- Unlike the Kabyle and the Berbers, the Tuareg are not tattooed. This detail, which may seem insignificant, nevertheless indicates that the relationship of these different human groups is not nearly as close as one might believe, since there are such appreciable differences in mores.

184 304 Some women blue their gums and sometimes their lips by tattooing them, but this custom is particularly prevalent in the Sudanese tribes of the Timbuktu region.

302 [751] On the other hand, make-up is used on a large scale among Tuareg women. They put red ocher on their faces to protect the skin from the /260/ sun. For aesthetic reasons they also blue their [517] lips and around their mouths with indigo.

302 For festive occasions, some women bear paintings on their faces, white or ocher dots above the bridge of the nose, under the [517] cheeks, and on their chins. These paintings have only an aesthetic nature, or so it seems.

304 751 All Tuareg, men and women, have two or three small linear scars on their foreheads and temples, and the indigo from their clothing which is often inlaid there gives them the appearance of tattoos. They are incisions made for medico-magic reasons when [855] the children are very young to protect them from headaches and convulsions.

[856] It also seems that this custom contributes to make them strong and making them walk very early. (1)

1. De Foucauld, Textes en prose /Prose Texts/, p. 64.

757 Medicine and surgery. -- If we now turn our attention to medicine and surgery among the Tuareg, we shall observe that their knowledge is not very extensive and has nothing singular about it.

753 In their minds the Tuareg classify sickness in two categories: those which are the result of an external action, visible and determinable, and those whose origin cannot be explained by any causal link. The former are treated with appropriate medical treatments, the latter by magic procedures.

757 The medical procedures, which belong rather to surgery, are clearly empirical. A few of them serve for a quantity of ills. They chiefly include bleeding and applying heat. In bleeding, the operator relieves congestion in the diseased part; in applying heat, he limits the pain, at the same time relieving congestion.

278 [177] The Ihaggaren have a whole stock of drugs which they borrowed from the Sudanese. These are roots, plants, and seeds which grow in the Sudan and in which the Tuareg have a great deal

278 of trust. Every time they take a caravan down south, they purchase
[439] many drugs, either for their personal use or to resell in their country or at In-Salah.

164 There are not many diseases in the Ahaggar. The country is relatively healthy because of its very dry climate /261/ and the bracing action of the sun, which at the same time destroys microbic germs. Moreover, this is very fortunate, for with the small amount of hygiene practiced by the Tuareg it would be impossible to fight disease. It may also be true that this absence of hygiene stems from the fact that the Tuareg have not had to see the necessity of it.

[165 The Ahaggar people die of old age or of war wounds. Of course,
731] there are sometimes epidemics capable of doing damage, but they are rare because of the isolation of the camps. The great distances which separate one from the other are a natural defense against mass contagions. These epidemics always come through the medium
[361] of the caravaneers or the people who return from the Sudan, where they have stayed among sedentary people. We may mention smallpox, very common in the Sudan, which sometimes works great ravages in the tribes. Typhus, spread by lice, may decimate a whole tribe in a few days, and it is not uncommon among the Tuareg. But these two diseases are the exception when they are reported in
[751] the Ahaggar. When a man returning from the Sudan is stricken with one of them, his case is reported by messengers long before his arrival, and the sick man is systematically isolated.

The Tuareg under the circumstances recognize the state of
753 contagion, but they do not see the causes of disease. According to
[771] them, it is caused by the action of bad genii. As good Moslems, they pretend not to believe in these genii, but in reality most of the talismans they wear on their persons are intended to protect them from these. To obtain them, they go to the marabouts or to men
[756] with a reputation for their knowledge of the occult sciences; these sorcerers are known as amekelléou.

755 When a bad genie is supposed to inhabit a person's body, people gather together and make a frightful uproar around him, accompanied by the tom-tom. The object of this is to put him in a trance so that the genie finally becomes frightened and decides to go away. [233] They use the same method for camels who are sometimes stricken with nervous difficulties.

A few years ago, a noble Ahaggar woman was subject to epileptic seizures. She had hallucinations and said she was possessed by an evil genie which she saw and felt in her. And so, each time the seizure occured, the people of her camp engaged in their /262/ habitual demonstrations. One day she got it into her head to get rid of her guest and slit her throat to allow him to leave. She wounded herself so badly that her life was in great danger for a long time afterwards. Scarcely had she recovered, however, when she had another attack and slit her throat a second time.

759 The surgery of the Kel Ahaggar is as elementary as their 752 medicine. First let us say that there are no surgeons among them, no more than there are persons known for their medical knowledge. Medicine and surgery are everybody's business; the knowledge that they possess is everybody's domain, and each Tuareg is able to care for himself or for the people in his camp. For surgical operations, nevertheless, the Enaden are called upon by preference, 752 since they are generally more adroit than the others. They usually 413 have small instruments that they make themselves -- forceps, instruments for baring the neck of teeth, scarificator, cupping glasses, tonsil cutters, etc. -- and with which they operate quite skillfully.

They have been very aptly compared to our barber-surgeons of days gone by. (1)

1. Dr. Foley, Moeurs et médecine des Touaregs de l'Ahaggar /Mores and Medicine among the Ahaggar Tuareg/, p. 85.

Fig. 37. Tuareg syringe.

752 [278] The warlike and eventful life of the Tuareg exposes them to many wounds or accidents. They care for war wounds by sprinkling the wound with sugar or smearing it with plasters of vegetable origin, chopped leaves of the Zizyptus lotus, or ground resin of the Balsamodron africanum. Sometimes they pour butter on it, and if the wound is infected they apply plasters of butter and ashes of aferegak (Chrozophora brocchiana).

But we have been able to observe that the use of this ash was of no great efficacy, that the wounds took a very long time to heal, and that in many cases they preferred to call on a European doctor.

Fractures are cared for with absolutely the same methods as those used by our European doctors. The fractured member, after being set, is coated with a flour plaster, furnished with a little cushion of goat hair, and braced by means of splints made of wooden boards attached to a sheepskin and kept in place by leather cords.

/263/ We have never seen any amputation among the Tuareg, and we do not know whether or not they know how to do it.

757 413 287 The Tuareg also know the use of enemas. The apparatus is made of a sheep's bone, one end of which has been rounded and

757 polished and whose other end is inserted in a small goatskin water
[413 bottle which holds the liquid to be injected. During the operation
237 one presses on the bag so as to make the liquid penetrate, while
the patient has his head down and his feet attached to a tree. The
[278 enema is generally composed of water, butter, and ground afasso
roots. When it is a question of giving an enema to a young child,
[855 the mother fills her mouth with water and, putting her lips against
the anus, blows the liquid with all her might.

/264/ Chapter 8

Dress. Adornment.

291 Clothing. -- The portrait of the Tuareg is now well known. Draped in a long, dark-colored blouse, belted at the waist, and with his head surrounded by a black veil placed in the shape of a haumier /?/, he makes a silhouette as majestic as it is mysterious
[492 when he is mounted on his slender mehari. Hanging from the saddle, as well known as the man, is the broad antelopeskin buckler.

The Tuareg, even though they are poor, are very natty. Although they have only sordid rags, they always are able to wear them with good taste and to keep a proud and dignified attitude under all circumstances.

The costume for men is the same in all confederations. It is made up of: 1) a very full pair of trousers, drawn in at the waist by a cord of braided leather; the leg is nipped in at the instep /sic/ and blouses over it so that it sometimes drags the ground; 2) a big, very full blouse, formed of a rectangular-shaped piece of cloth, sewn by a stitch at the four corners, and provided with an opening in the middle to let the head go through; it descends to the knees

291 and is worn loose or, more often, drawn in at the waist by a belt; 3) a veil covering the face, letting only the top of the head and the eyes show.

This is the simplest dress of the Tuareg.

292 The holiday garb includes several blouses placed one on top of the other -- a white blouse underneath, an indigo-blue blouse on [556] top of that, and finally, for rich people, a third blouse made of bands of cotton, worked in the Sudan. This last blouse, usually with a

[291]

Fig. 38. Ahaggar men's costume.
1) Amrid with his gandurah pulled up over his shoulders.
2) Akli wearing a leather gandurah.
3) Amajer in ceremonial costume with a takoumbout on his head.

[531] purplish background color and large and small embroidery over the chest and the shoulders, includes a wide, deep pocket on the left side of the chest. Broad bands of white and red material gird the loins by forming a belt and cross over the chest to form a shoulder belt. Large silk cords with red or green tassels finish off the costume which gives the Tuareg such an impressive air.

291 /265/ Clothes, except for the gandurah made of cotton bands,
439 are made of material imported from Europe. This material, called
chêga, is heavily dyed with indigo, giving it a very dark gloss; it
[556] is the favorite material of Tuareg men and women, but it is replaced by ordinary cloth among less well-off people.

Veils are manufactured in English Nigeria, in the village of Koura near the large city of Kano. They are made by assembling
[435] a multitude of little cloth bands. They are very expensive and can cost from three to five goats, depending on the quality. In
[177] Hausa language they bear the name toukourdi, which has been adopted by the Tuareg. For a long time they have served as ex-
[436] change currency for commercial transactions.

It has been asked many times why the Tuareg were led to veil
291 their faces. Hygiene, which has often been mentioned, and the
174 need to protect their respiratory tracts against sandstorms, are not sufficient reasons to explain this practice. There is something else, a /266/ very ancient enigmatic custom whose origin is lost in the night of time and which is kept up without their really knowing why. It is so deep rooted among the Tuareg, however, that they cannot conceive of a self-respecting man who can forego wearing the veil.

The headless men and acephalous people of ancient authors certainly owed their cognomen only to this very peculiar custom of hiding their faces, a custom which must have already existed in this remote epoch. One can only construct hypotheses on the origin of this veil.

We know through Ibn Khaldoun that the wearing of the veil was in general use among the peoples who inhabited the Atlantic coast and adjacent countries in the fourth century. This establishes that the custom is very ancient.

In the rock paintings from prehistoric or protohistoric times which have been discovered in the central Sahara in the last few years, we have noted the very peculiar method of representing the

174 heads of human figures. It seems, under the circumstances, that
291 there was a taboo against representing facial characteristics.

Can the substitution of zoomorphic heads in the human figures drawn at a very early epoch on the Tassili-n-Ajjer rocks, springing from totemic beliefs, also contribute to explaining the origin of the veil? This is a permissible hypothesis.

291 What is certain is that, at the present time, it is shameful for
826 a Tuareg to show his mouth and that the veil is the principal part of his dress. When he goes to draw water from a well, he will take off his gandurah and rull up the bottom of his trousers to be more comfortable, but he will take care that his veil is always in place.

291 Wearing the litham /veil/ -- or tiguelmoust -- includes an entire ritual which implies the existence of beliefs whose details have escaped us, because the Tuareg themselves no longer elucidate its meaning.

184 The style of wearing the veil and of placing the different parts
291 on the head may differ from one tribe to another, and there are local modes which some prefer by personal taste. And so, in recent years, the young men of the Ahaggar adopted the style of wearing the veil used by the Kel Férouan from the Aïr. This, moreover, earned them harsh criticism from the elders of their tribe.

156 /267/ But apart from these different ways of placing the veil
291 according to local or personal modes, the shape and knack make it more or less elegant. There is also a veil psychology, and when one knows a man, the way his veil is fixed may indicate his state of mind -- the reserved, modest way used when he presents himself in a camp where there are women; the elegant, studied manner for going to lover's meetings; the haughty manner of a warrior conscious of his importance; and the whimsical air of the Imrad or the swaggering slave. There is also the jovial, good-natured fellow's style of wearing the veil loosely and sloppily, and the disorderly style of the unstable, easily irritated man.

156 291 The veil can express a fleeting sentiment. Thus, it is pulled down over the eyes before respectable people or women, while it is raised over the forehead, on the contrary, as a sign of familiarity. To laugh freely at a joke, a Tuareg will raise the lower part of his veil very high over his nose. When he is irritated, he will tighten it like a chin strap to mask his anger.

292 In the festive garb worn on the occasion of religious or family festivals, the veil is complicated with many turbans made of white muslin and bands of colored silk. The upper part receives a sort of frame which lets them arrange many cotton bands, interlacing them to form a kind of crest. The top part of the cranium is never covered, and the veil lets tufts of braided hair stick out. At marriages, it was formerly the custom to wear the takoumbout, a sort of big chéchia made of wool fortified with enormous flosses of cotton and covered with silvery appliqués. This headdress is on its way to disappearing completely, and there are no more than one or two in the whole Ahaggar today.

291 The Ihaggaren use two kinds of sandals: the broad cowhide sandal called irratimen with simple red leather straps crossing over the instep, and a sandal called imerkéden made of a number of scraps of goatskin sewed together, with a strap going around the heel and tying with a knot on the instep.

[184 556] The irratimen are particularly worn by well-to-do men and especially appreciated in sandy regions where their large carrying area keeps one from sinking too deep. /268/ This sandal, which [177 439] is manufactured by Hausa artisans from Agadez or Damergou, was borrowed from these peoples by the Tuareg. Its origin must not be attributed to the Tuareg.

The true sandals of the Ahaggar people are the imerkéden, [184 556] which they still wear and which the mountain people always prefer, since they are especially well adapted to walking on rocks. They are worn by the common people and by the Iklan who have no money to buy Sudanese sandals, while they all know how to make very comfortable imerkéden with a few old pieces of goatskin.

184 Although men's costume does not vary at all, or very little,
291 this is not the case for women's clothing. That worn by Ahaggar women is peculiar to that region, while Aïr or Ioullimmiden women dress in their own way.

Fig. 39. An imerkéden, sandal made of skins sewed together and worn by Ahaggar mountaineers.

291 Tuareg women do not wear trousers but have a white cloth skirt wound around the loins. Ahaggar women wear over it a large white cloth blouse, similar in shape to that of the men, but closed
[556] on the sides. Well-to-do women wear a second blouse on top, made of indigo-dyed cloth.

184 In Aïr the blouse is replaced by a little bolero, and in
291 Ioullimmiden tribes women usually go bare chested or content themselves with a rectangular piece of material which they casually throw over their shoulders.

291 They do not veil their faces like the men. A little mantilla made of one or two toukourdi is worn wrapped around the head and

face to hide their features in front of strangers. During their moves, Ahaggar women use a big, broad-brimmed straw hat -- the téléé -- to protect themselves from the sun. 291 [484]

/269/ They wear irratimen on their feet like the men, but more often they go barefoot. In the Sudan, during the rainy season, they replace the leather irratimen by very light wooden irratimen, which fulfill the same function there as wooden shoes do for us.

[184]

Fig. 40. Costume of Tuareg women.

1) Costume of Aïr Tuareg women, which includes a skirt and a little bolero.
2) Ahaggar Tuareg women's costume, including a skirt and a big gandurah reaching to the feet.
3) Sudanese Tuareg women's costume, including a skirt and a shawl around the shoulders.
4) Leather skirts for servant girls, in use in Ioullimmiden tribes.

In the Ahaggar and the Tassili, men and women wear a large white wool haik to wrap up the head and shoulders. During the cold period of winter they wrap up in a long woolen blanket (dokkali) made by the Arabs in Touat. The latter exchange them with the Ihaggaren for sheep. [439]

[177] Cloth garments have certainly been used only recently among
291 the Tuareg; they used to wear leather clothing. A few Ahaggar
174 Iklan still wear these knee-length blouses with fringes over the chest, sides, and sleeves. Evidences of these leather clothes are still to be found among captives from the Sudan and the Timbuktu region. They wear skirts tight at the waist, dyed half red and half yellow, and decorated with multicolored fringes. In Aïr little girls still wear /270/ a kind of small leather apron, and little boys, little leather trousers.

These seem to be the ancestral clothes of the Tuareg. The description of the dress of Libyan women which Herodotus has given us corresponds in all details to the leather dress used in the Timbuktu region, and some rock drawings of the Tassili are the very image of the small leather tunic of the Koudia Iklan.

832 Ornaments. Jewelry. -- The coquetry of the Ahaggar Tuareg is a most remarkable thing and quite unexpected among people who live under such primitive conditions and whose natural instincts must lead them first of all toward the spirit of self-preservation and material preoccupations. However, it reflects their rather superficial
[181] life, their light mores, and that pleasurable existence which the nobles intend to lead.

And so the Tuareg sacrifice everything to their coquetry, depriving themselves of food and parting with some of their goods in order to procure lustrous clothes, multicolored ribbons to set off the brilliancy of their coiffure, and amulet boxes which are carried more for aesthetic than religious reasons.

301 Women conform to the same faults and know no rest until they
832 have a certain number of jewels with which to adorn themselves.

For men, adornment consists of a few jewels, especially cases for amulets. As regards jewelry, they wear only one or two silver rings on their fingers, a heavy and coarse kind of ring, either plain or slightly twisted. In addition they wear a stone ring above the elbow.

301 [114] This stone ring (ahbeg) has been described by the explorer Duveyrier as a weapon. Actually it is only ornamental in nature, for it is so fragile that it could not withstand strong pressure without shattering, which might seriously wound the man wearing it.

Fig. 41. Types of bracelets worn above the elbow by the Tuareg. 1, 2, and 3 are in soft schist from Aïr, and 4 is made of marble from the Hombori region.

[171] At the present time the Tuareg are the only African people who wear this stone ring, except for some groups of people who live in contact with them and have adopted it in a spirit of imitation.
172 It was, however, in very common use among Neolithic peoples,
301 and it is not rare to find fragments of them in the middle of ancient

[172] 301 layers /271/ dating from that epoch. Its origin must be sought there, and it is now nothing more than a Neolithic vestige.

A number of little cases which the Tuareg wear suspended around the neck and resting on the chest may be considered ornaments. [531] They are little leather cases -- decorated, painted or embroidered, or even stamped in relief -- and they contain various little instruments. [415] Thus, there are mirror cases, needle cases, razor cases, scissor cases, toothbrush cases, etc., and little wallets in which the Tuareg put what they prize most -- money, a /strike-a-light/ steel box and its flint, or tobacco.

/272/ They also wear 301 75 quantities of amulets in leather or metal cases on their chests, their arms, or their hair. But [178] this custom, religious in origin, has evolved in the direction of ornamentation, for many of these amulet cases contain nothing.

Fig. 42. Needle case of worked leather, with knife slits and embroidery. The background is red; the ornamental painting, black; the embroidery, red and green cotton.

301 Female jewelry is much richer and more varied. It is [328] all made of silver; gold jewelry is never seen among the Tuareg. They maintain [223 777] that gold is unlucky for the possessor and that this metal corrupts people.

/273/ On their fingers Ahaggar women wear big, round-shaped rings, made of small cases in which there is a little pebble which tinkles like a bell. Rich women wear two or three on each hand. 301 [556]

The wrists are adorned with hollow silver bracelets with triangular cross sections, bearing little linear drawings. There are also rather

[531]

Fig. 43. Ahaggar women's rings.

broad black horn bracelets. Bracelets of Sudanese origin made of multicolored beads mounted on leather are also adopted by a few women. [177]

The neck is ornamented with a necklace bearing an oval (?) shell or a substance coming from a native Nigerian animal, which could very well be the manatee. This jewel (ameréouan) is extremely valuable and very rare in the Ahaggar. It is handed down from mother to daughter. [237] [428 556]

301 Under the necklace Tuareg women wear /274/ pectoral pendants, a small one shaped like a lozenge with a red stone set in it and embellished at the base with little triangular plaquettes, and another [531] large-sized one made of several triangles with big silver cabochons, each one decorated at the base with small triangular plaques.

The style of these jewels is simple and quite peculiar to the Tuareg. Although their triangular shape recalls somewhat that of Kabyle jewels, it is nonetheless true that they show no relationship with the [531] North African goldsmith's craft and that it is very difficult to explain their origin.

Fig. 44. Silver bracelet worn at the wrist by women.

Tuareg women of the Ahaggar do not wear earrings but great massive silver rings which are hung on each side at the height of the ears by a leather thong which passes over the top of their heads.

Very often they also wear little hair pendants which are attached to the ends of their braids of hair.

301 412 Both men and women are supplied with little tweezers to extract thorns (the irremdan), which they wear over the shoulder. That of the women, which is copper and bi-triangular shaped, /275/ takes on the nature of a jewel, for it is carefully worked and has a real artistic character. That of the men is simpler; it is completed with a little awl and a knife blade and serves as a small portable surgical kit.

1: Lhote--134 E-5 (1929-1940) 1944 MS25 Tuareg MS25

People adorn themselves with their jewels only during festivals; 30 they are ordinarily kept in bags closed by a curious rectangular padlock, which is provided with one or two interior bolts; it must be undone with an enormous key which the Tuareg always have on their person. [527] [414] [415]

Fig. 45. Ahaggar Tuareg women's ear hoop.

/276/ Chapter 9

## Arts and Crafts Among the Ahaggar Tuareg

The nomadic and pastoral life which the Tuareg lead obviously 32 limits the development of craft techniques and that of art itself. For them, all is reduced to the immediate necessities of everyday life -- articles for the household and the house itself, harnesses, clothing, and, accessorily, adornment. [532]

If we look for the raw materials used and at the disposal of the Tuareg for making the different objects which they need, we observe that wood comes first, then leather, then certain graminaceae stems, and finally metals.

32 If, secondly, we look for the aptitudes which the Tuareg have for working these different raw materials, we notice that their enumeration follows the same order as above, with the reservation 325 that none of them know how to work metals. The latter occupations 463 are the prerogative of the Enaden, that is to say, the artisans, and 564 it is evident from this that without the artisans' help Tuareg industry would be limited to work in wood, leather, and esparto. In short, it is the cultural cycle of the pastoral peoples of the steppe.

[174] It is only much later, when the Tuareg had integrated the Enaden with their social organization, that they used metals. Therefore, 415 531 we perceive the considerable role which artisans must have played in technical evolution and that of art itself.

Fig. 46. Wooden funnel.

/277/ The presence of Enaden in the camps has reduced the manual labor [322] of the Tuareg, but the latter are still able to make wooden articles -- milking vessels, bowls, tent stakes, etc.

565 One of their most curious customs is that women from the high 462 nobility work wooden vessels and funnels with their hands by means 322 of a little adze. They usually give them to the wives of their Imrad, 431 who are very appreciative of these gifts. In the Ahaggar camps we found many little utensils which were the work of famous noblewomen, of tamenokalin whose names are piously kept; these objects were saved with much veneration. This custom is even more re- [174] markable since we know the scorn that the Tuareg have for manual labor; we must see in it a relic of woodworking which must formerly have been everyone's work, without distinction, before the creation of the artisan class.

Wood furnishes containers for food, drinking vessels, milking 322
vessels, mortars, pestles, tent stakes, crosspieces and boards for making saddles. The Ahaggar does not have more than five or six species of woods which can be worked, and the articles, very simply shaped, are much less varied than in the Sudanese tribes.

All Ahaggar women, noble or vassal, know how to tan, re- 281
move hair from, sew, decorate, and embroider leather. They are 462
able to make a waterskin needed to carry water, prepare skins to make tents, and manufacture bags for transporting food and personal objects. They have all become so expert in these labors that it is

[415
862]

Fig. 47. Amoula, a little wooden "bottle" for young children to drink from.

difficult to find any other peoples in the world who possess such a developed leather craft.

The scarcity of vegetable materials in the Ahaggar is one of [137]
the reasons why the use of esparto is relatively restricted. Only the 285
stems of a graminacea common in the wadies (Panicum turgidum) [824]
are used to make mats -- large enclosing mats which surround the tent, sleeping mats, mats for covering plates.

/278/ The stems are bound by little leather thongs, and the [283]
combination of graminacea and leather is extremely effective; it [531]
allows very regular geometric decorations at the same time as a very solid work.

There are no esparto vans among the Tuareg. The women 291
use palm-leaf vans and hats, but these articles are the work of the 416
Harratin from the little palm groves of Silet, Ideles, and Abalessa. 438

283 Spinning is done by all Tuareg women. They spin the hair of the
462 goat, the camel, and the wild sheep, making very solid cords and saddle girths.

286 Weaving is limited to the making of goat's-hair, or more rarely camel's-hair, bags. This is a very primitive technique which does not require any loom and which is, furthermore, in the process of disappearing from the Ahaggar, where only a few noblewomen still practice it. It is completely extinct in Sudanese tribes.

324 Stonework, a relic of Neolithism, was still carried on in the Ahaggar
438 a few years ago to make arm rings. Layers of granitoid schists were formerly worked
[415] at Aseksem and Terahart in the Tafedest. We also found
322] an ancient workshop south of Silet on the banks of the Tamanrasset wadi. Today all stone bracelets come from Aïr and a few from Hombori, where they are manufactured by Tuareg or Hausa artisans.

Fig. 48. Tabarekkat wooden ladle, also serving as a drinking vessel.

326 Metalworking is exclusively in the hands of the Enaden, who transform
[56] silver, copper, and iron. These materials, with the exception of iron, do not exist in a native, workable state in the Ahaggar. But although iron
[135] ore is common /279/ in some volcanic rocks of their country, the Tuareg do not have it exploited, for it is found in such small particles that it necessitates a disproportionate amount of forge work for the quantity likely to be recovered. Nevertheless, the memory of casting ore still remains among the Enaden. They use several forges at once, but do not know
[439] the blast furnace. The caravaneers coming from the north or from the Sudan used to bring metals.

177 At the present time silver comes from coins which are melted. For
326 years the Tuareg have had Maria Theresa dollars at their disposal; these

coins were for a long time the money standard in all of Central Africa. 177 326
(1) Copper is chiefly furnished by cartridge cases, and iron by abandoned

1. The Maria Theresa dollar was introduced into Africa at the beginning of the nineteenth century by navigators [177 436]

[325]

Fig. 49. Double forge bellows.

and traders who visited the Gulf of Guinea. With the iron bar, it became the basis of commercial exchange, and it was circulated in the interior of West Africa as well as in Abyssinia.

scraps of old carriages, auto springs, sheet metal, tin cans, etc.

Aluminum, which is beginning to penetrate into the Niger region, 177 is not yet utilized in the Ahaggar. So far the pipes and guys left to the 328 four corners of the desert by wrecked airplanes have served only to make tent poles.

326 /280/ Silver is used to make jewelry--pendants, pendants for the
[301] hair, bracelets, rings, earrings, amulet cases, etc.

Copper furnishes a number of more important and naturally more
[492] commonly used
414 articles -- saddlery
articles, cavessons for
[412] camels, highly
ornamented padlocks
with keys, hair knives,
etc. This metal is generally better worked than silver. It is often
chiseled, engraved, and topped with applications of tin by a technique
[531] which is reminiscent of damascening. Various articles, little
knives, or medical cases bear inlays of copper on iron.

Fig. 50. Hammer.

325 Copper and silver are cast in little terra cotta
crucibles, and the high temperature needed to melt them
is obtained by a forge with a double hand bellows or
with a single bellows of the kind used by the Saharian
Arabs and the Sudanese.

Fig. 51. Blacksmith's tongs.

438 The Ahaggar Enaden do not manufacture arms;
326 they merely repair them. Sahara, daggers, and
411 lances were for the most part manufactured by black-
smiths of the Kel Dinnik tribe (Ioullimmiden from
Tahoua). Saber blades were imported from Rhat and
mounted by the artisans. Lances came from the Kel
Geres, where the Enaden of that group worked an
iron mine which is located beside the village of
Tassaoua.

Only a few daggers were made in the Ahaggar.

323 Pottery is in common use among the Tuareg. It is generally
not in use among nomads. However, it has been widespread in the
[172] Sahara for a long time, for quantities of potsherds and fragments
are found on the regoliths /regs/ which are subsequent to the Neolithic
period. Furthermore, its use is becoming more and more generalized
in the camps.

323

Pottery is made by Negresses, the wives /281/ of Harratin, or freed former captives who live in the agricultural centers.

This outline of the techniques and industries of the Kel Ahaggar Tuareg brings out their poverty.

Can we speak of art among the Ihaggaren? That seems difficult, for aside from a few rare objects, all those that they use are more or less in use in the Ahaggar are imported from Aïr or Adrar des Iforas, and that is explained all the better by the fact that the artisans are more or less originally from these regions. 438 531 517

Fig. 52. Sugar tongs.

[415]

It is difficult to determine the origins of Tuareg art in general. It is in reality a composite art taken from all their neighbors, which, is not, for the most part, the achievement of the Tuareg themselves but of their artisans. It is among the latter that the distant origins /of Tuareg art/ must be sought. 177 517

The tastes of the Tuareg appear to be unchangeable. They have been fixed for centuries; therefore, in ancient documents some hundred years old one finds the same shape, the same dimensions, the same coloring as today. In this regard we shall say that the Enad is not an artist. He is a worker who may have taste, but who is, on the whole, incapable of creating. He faithfully reproduces the model which has been handed down to him. He 517 [178 172]

517 may do this with more or less finesse, but his inspiration will stop there. Only work in leather and wood are definitely the achievement of the Ihaggaren, for they derive from ancient needs and the techniques have been preserved in their hands and not in those of the Enaden.

/282/ Book VI

Social Life

Ancient Cults, Religions, and Beliefs of the Tuareg

---

Chapter 1

Social Life

842 We are now going to observe the Tuareg in the details of their social life.

Birth. -- When young people are married, it is seldom that the bonds of marriage are not soon strengthened by the birth of a child. [586] It is very bad form for a young couple not to have a child, and sterility of one of the partners is often a cause for divorce.

843 The pregnant Tuareg woman continues to see to the household tasks, surrounded by the respect of her associates.

844 When the time for delivery approaches, the woman has herself taken to her parents' camp, if she is not there already, for she will give birth in her husband's camp only in case of absolute necessity.

A tent is set up where the woman is installed. She is usually assisted by a midwife who massages her belly and makes sure that

844 the child is in a good position; she also rolls her on the ground to put the child in place if need be, but she never makes a vaginal exploration.

845 If the birth does not go normally, the midwife may ask the [756] marabout's help. The latter comes and stands outside the tent, giving verbal advice but never intervening personally; he cannot go near the parturient woman.

844 To give birth the woman squats down on her knees and braces herself on the center stake of the tent. Generally /283/ the baby falls on a layer of fine sand which has been prepared for that purpose. The midwife immediately cuts the umbilical cord, washes the baby in warm water, and makes him cry by pinching him to make sure he is alive. Then the mother takes him, puts a bit of her milk in [856] his nostrils, stretches his nose so that it will be long and narrow, and presses his head between her hands to give it an elongated shape. [174] This custom is certainly a vestige of cranial deformation, which is no longer practiced among the Tuareg but which was formerly common among the Egyptians.

As soon as the father learns of the birth of the baby, he has a sheep butchered and sends it to the wife's camp. The sheep is meant 846 to feed her and the people who have assisted her. The woman is made to absorb a great deal of meat bouillon. Sometimes the new mother gets up two or three days after confinement.

851 The birth of a boy is welcomed with more joy than that of a girl. [842] In the first case, all the people, men and women, come to congratulate the mother, but if it is a girl only the women come to [852] see her. During this visit the women often put yellow ocher under [751] their eyes and around their mouths to keep away the bad genii which are always supposed to prowl around in tents where a newborn baby has just arrived.

846 On the seventh day after the birth, the woman returns to her husbands camp, accompanied by the women of her family and her brothers, if she has any. The father then sees his child for the first time.

553 852 Naming the child. -- It is then that the child is named. A choice is made among several names by drawing straws. In the tribes of the Aïr, when there is a dispute over the choice of a name, each of the parties present brings a small goat and secretly gives it the preferred name. The mother, who does not know who has donated each goat, chooses the one she likes and has it slaughtered. [574] The child must then bear the name which had been given the goat for the occasion. Then a meal is served to the people of the camp [431] and to the guests, and a present is given to the marabout if one came.

[302] The same day the newborn's hair is cut for the first time, and the marabout places an amulet around his neck.

551 /284/ The names given to children are quite varied and sometimes very whimsical. They observe customs like those of the American Indians, and so the parents take into account certain fortuitous circumstances which surrounded the birth. We have seen a young girl who bore the name of Tédigrès, meaning "hail," because there was hail at the moment she came into the world. Others bear the names of animals such as Ǎnaba, the panther; Ǎbagui, the jackal; Acotey, the jerboa; Tinirt, the antelope; Ǎhenkatt, the gazelle, etc.

[177] Because of Arab influence, the Tuareg have adopted many names taken from the Bible and Arabized, e.g., Moussa from Moses, Firhoun from Pharaoh, Younès from Jonas, etc.

They also bear very ancient names which come to them through tradition and whose meaning and origin they are ignorant of: Akhamouk (masc.), Amastane (masc.), Yklou (masc.), Chékou (fem.), Tinguelous (fem.). (1)

1. This name may come from the Latin angelus.

From then on the child has his father's name joined to his and keeps it all his life. There are no family names and marriage does

551 not bring about any substitution of names for either sex. If the father's name is Mohamed, one would say Anaba ag (son of) Mohamed, or Chékou oult (daughter of) Mohamed. Nominal filiation is therefore patrilinear.

Nicknames are numerous in the Ahaggar. Father de Foucauld tells us that "they are sometimes proper names of persons different from the one already received, sometimes names recalling a physical peculiarity or an event, sometimes meaningless names. A great many people have no nicknames. Among those who do have them, some accept them and others are insulted by them. Sometimes nicknames are temporary, known only to a few intimate friends and quickly forgotten. Sometimes they become so attached to the person that he is never referred to in any other way and his real name falls into oblivion." (2)

2. Dictionnaire abrégé Touareg-Français des noms propres /Short Tuareg-French Dictionary of Proper Names/, p. xv.

842 Conception and nursing. -- As for conception, the Tuareg see in it nothing but the will of God. However, they also establish the causal relationship of sexual intercourse and do not discuss the possibility that a woman can conceive without contact with a man. The existence and role of spermatozoa are unknown, but the Tuareg /285/ recognize the action of the seminal liquid and women practice spraying as a contraceptive measure. Professor [114] Gautier has even spoken of a primitive douche. This apparatus is not known by Tuareg women, and Gautier surely must have confused it with the enema.

841 Menstruation (iba-n-amoud) begins between the ages of thirteen [145] and fifteen years for Tuareg girls and causes them great fright. While they are indisposed they make no intimate toilet and often take no precautions to absorb the flow, which spots their clothing. [783] They also abstain from making prayers as if they were in a state of impurity.

841 The cessation of the menses during pregnancy is interpreted
843 discerningly, that is, that the baby is fed by the discharge and rejects the waste products from it at birth (placenta).

When a woman cannot have a child, her husband goes to find
842 a marabout who sells him an amulet which the woman must wear
[788] next to her skin. The wife, for her part, goes to pray near old
[782] tombs known to be those of venerated people. She asks God's
769 pardon for her faults and asks death to intercede for her with the creator. If the woman conceives, the husband takes the marabout
[431] an offering which sometimes consists of as much as several head of livestock.

After confinement the wife has no sexual relations with her
846 husband for a month and ten days. On the fortieth day the husband
834 makes his wife a present of sandals and new clothing.
431 Nursing lasts on the average from two to two and one-half
862 years. Boys, however, are weaned six months later than girls, for they are more fragile, it seems, and need stronger food.

In camp the young child is placed on a cushion, lying on his
854 stomach, and kept in place by a cloth band which passes over his loins and ties under the cushion. His wrists are also sometimes attached. Sometimes a wooden frame made of arches is placed over him; it holds up cloths and protects him from flies, light,
[184] and sandstorms, all at the same time. The Ioullímmiden Tuareg use little cradles which are hooked to the arches of the tent.

At moving time the mother carries her child on her back or on her hip, held by a loincloth knotted over the breasts. This
[171] method, also used by the Sudanese, does not seem to disturb the child, in spite of the /286/ mother's movements, which are some-
[853] times quite sudden. If he cries, she nurses him until all the milk is gone; there is no question of hours or measure for feedings.

The long nursing period as well as the carrying system causes
826 the woman's breasts to sag rapidly after the first child. For the
851 Tuareg, however, aesthetics count less than motherhood, which
517 ennobles the woman.

304 Circumcision. -- Boys are circumcised at the age of three or
852 four, usually by a marabout. Circumcision (amoud, amilli, or
azemmoued) is not the occasion for any festivity and is practiced
collectively. The contusing instrument used is a little knife with
[412 302] an iron blade, used by the men as a razor. During the healing
period the child rests in his parents' camp and is cared for by them.

[171] Little girls are not excised as they are among the Moors of
Tagant and Hodh.

Children go around naked until they are five or six years old,
291 depending on the wealth or the foresight of their parents. Little
855 girls wear a loincloth at the age of six or seven, while boys wear
[556] trousers of the same style as the men.

861 Education. -- Children's education begins after weaning. From
that time on the boy passes under the control of his father, while
the girl stays in her mother's hands. This education is hardly complicated for either the boy or girl.

The little boy, from the age of five, takes care of watching
868 the goats and sheep by himself. Later he is entrusted with the camels,
857 which he leads to pasture and to drink. He is also taught how to
[462] milk goats, for among the Tuareg, men, as a rule, take charge of
this job. Toward the age of seven he begins to ride camels. Then
fights with sabers or lances are organized in the form of games
between children of the same age, arms being replaced by millet
stems or tree branches. This is not a part of education properly
speaking, since it is done by the children themselves.

868 Religious education is rather neglected among the Ahaggar
869 Tuareg where marabouts are scarce. When there is a marabout in a
camp, he teaches children and young people the rudiments of the
[212] Koran, which they learn by heart by singing it all day long, for they
are ignorant of Arabic writing.

881 /287/ The litham /veil/ is put on the boy at fifteen or sixteen
[145] when the hair begins to appear in his armpits. It is put on by the
father, most often at the time of Ramadan. There is no additional
291 ceremony for the occasion. The father gives his son some good ad-
[431] vice, and young women and girls give him tobacco as a gift.

881 From this day on the boy enters into the class of men. He
884 may go to war and attend the ahal.

668 Education of girls is hardly more interesting. At six or seven, the little girl begins to see to household duties, participating in cleaning the tent and making meals, etc. A little later she learns to weave mats, work little copper articles, and spin goat hair.

[534] Musical and literary education for young girls is very much esteemed among the Tuareg and [212] most particularly among the Imochar. Little girls learn to write tifinagh letters and play the amzad, a sort of small one-stringed violin which brightens up the dull evenings of the Tuareg.

Fig. 53. Amzad, or one-stringed violin of Ahaggar Tuareg women, and its bow.

534 The amzad is made
237 of half a hollowed-out and dried gourd, over which a goatskin or uran /lizard/ skin has been stretched, attached by cords (in the Ahaggar) or little acacia thorns (in the Aïr). The skin is pierced by one or two holes to increase the resonance. The handle is made of a stick which penetrates into one side of the gourd through a hole and is secured at the other side by a point, or else it may go through that side too. The string is formed of several pieces of horsehair separated from the skin by a little bridge made of two small pieces of wood tied together crosswise. The bow (taganhé) forms an arc with

534 horsehair attached to the ends. During the music the player from
[237] time to time rubs the horsehair with a piece of resin from the gum
[314] tree; this serves as rosin. /288/ The amzad skins are often
decorated with painted motifs in very vivid colors, or else they
[532] are covered with tifinagh inscriptions indicating the name of the
owner and bearing love verses for the use of admirers.

Among the Ihaggaren violins are usually large, reaching as
much as 40 centimeters in diameter. In Sudanese tribes, on the
[171] other hand, they are much smaller, rarely exceeding 25 to 30
centimeters.

533 The amzad plays an important role among the Tuareg, who
really make a true cult of it. Young men go to listen to the girls
play it. After they are married, they love to hear their wives, who
charm in this way the empty hours of summer evenings. Not play-
533 ing the amzad is a punishment that the women inflict on the men,
626 and during battles warriors always try to be brave lest their wives
593 or their fiancées deprive them of music. "There will be no amzad,"
they used to say upon returning from an unsuccessful raid. This
prospect was often sufficient to restore their courage and incite
them to go efface their defeat.

882 The ahal. -- At about the age of sixteen, boys and girls have
access to adult society and begin to participate in the ahal.

571 The word ahal means "meeting, conversation, interview." A
521 synonym for it is édébuenné. These musical and literary meetings
have a more or less peculiar nature, depending on whether or not
they are mixed with asri.

517 Asri, literally "to run with the bridle loose," means the practice
521 of some very free mores. To live in a state of asri is to exist under
571 conditions which permit one to practice loose mores. Those who
533 can be in a state of asri are pubescent boys and girls, widowers,
and divorced people of either sex.

These meetings take place near the camps in the shelter of
a wadi, but always out of the sight of old people and respectable
people of the tribe. They usually take place before the evening

Plate XIII

136

Long-haired Ahaggar goat. This species is localized in the mountain massifs of the Central Sahara (Ahaggar, Aïr, Adrar des Iforas, Tibesti).

Daman sheep, or Tuareg sheep, very widespread in the Sahelian steppe, is also rather common in the Ahaggar, but it is raised there only accessorily. It is a very sturdy beast, and many caravaneers import them from Adrar des Iforas by making them cross the Tanezrouft. It is characterized by its long legs and long tail.

[439]

302
291

517 meal, which is taken very late, and more rarely after the meal if
521 it is to entertain a stranger. Everyone sits in a circle. Each per-
571 son takes a place in the order of his arrival, in such a way as to
533 alternate men and women. When everyone has arrived, they elect a male president and a female president, whose job is to see that the usages and customs of the ahal are respected and, as a joke, /289/ to inflict forfeits on those who bring on themselves the recriminations of the others. Sometimes only a female president is elected, but never a male president alone.

The presence of several girls in a camp is often sufficient
[574] cause for organizing an ahal mixed with asri. The young men come from neighboring camps, always dressed in their dressy clothes. Some of them sometimes come hundreds of kilometers to attend a meeting where they know they will find pretty girls and pleasant distraction. Then one of those present plays the violin. The sourish, plaintive, monotonous sounds which come out of it are quite in harmony with the wild setting made by nature and man. The men accentuate the rhythm by singing "ho ho" on the beat and finally by a hummed accompaniment. And every-
[538 one jokes and tells broad stories, for the poetic part is often of a
522] very doubtful quality, if not made up of more or less vulgar repartee.

Then the violin is silent, and laughter bursts out on all sides.
[832] Men and women make very free contacts and rub noses which is the peculiar form of the Tuareg kiss. These meetings end very late at night, and everyone returns to his camp, not, however, without having made an appointment by a special language of hand gestures to finish these amorous love feasts in a more intimate way.

836 The mores of the girls are indeed very licentious, so much so that Father de Foucault stated that the word "virginity" did not exit in Tamashek. (1) "There is no question of keeping the girl

1. Dr. Vermale, Au Sahara pendant la guerre européenne /In the Sahara During the European War/, p. 172.

836 pure until her marriage, " said Dr. Vermale elsewhere. "Those are sentiments which the Tuareg do not understand. Thus, as soon as she is nubile, she goes to the ohal and it is not long before she is deflowered. Virginity does not exist and has no representative value in the eyes of the Tuareg. " (2) Indeed, the women are

2. Op. cit., p. 171.

more or less easy. Some give themselves to the first comer; others grant their favors to only a small group of friends. To grant them [839 only to a single person, however, would be judged in very bad 577] taste and a sign of perversion.

No one finds fault with their free mores, on the condition [554] that they let themselves be courted only by men of a social condition equal to their own. Some women let themselves be courted by slaves and that is considered a shame for them.

842 /290/ One may be astonished that unwed mothers are not more numerous with such dissolute mores. Contraception is com- [833] monly used, and, as Dr. Foley said, effusio seminis inter crura is probably the frequent conclusion of the nocturnal rendezvous after the ahal. (1) These restrictive measures must not be unre-

1. Moeurs et médecine des Touaregs de l'Ahaggar /Ahaggar Tuareg Mores and Medicine/, p. 56.

lated to the low birth rate of the Tuareg, and it is quite possible that the married Tuareg woman continues to practice them.

847 Bearing children out of wedlock and bastardy (agama) are the [848] object of public discredit. The Tuareg rarely practice abortion, but infanticides used to be quite numerous, and no one thought of being offended by them. When a woman finds herself pregnant

847 under these circumstances, she usually goes to visit a relative and tries to hide her pregnancy. No one is taken in, but nobody says [756] anything. She goes to see a marabout who, for a rather high price, makes a few mysterious signs before the sinner, writes a few words in Arabic on a small board, washes the writing, and gathers the water in a gourd for the woman to drink. In case these practices are successful (?), a second sum identical to the first one is paid. [278] If not, the woman tries several mixtures, generally with a base of adjerdjir (Cassia abavata), and in case the results are still negative, the baby is simply strangled when it comes into the world. Although these mores are still more or less in force, they seem some- [797] what reduced by Islamization, and unnatural mothers are some- 848 times punished severely.

174 The ahal seems to have existed in ancient North African Libyan tribes. Herodotus mentioned the community of women among the Nasamonians, and the ahal is, in fact, only a derived and evolved form of it, if one could call it evolved.

582 Marriage. -- With the existence of such easy mores, it is understandable that young men and women do not care to marry early. Women rarely marry before the age of twenty, and men, before thirty.

584 Although the girl is free with her body, as we have seen, she still needs her father's authorization to marry. On the other hand, [593] however, it is rare for a husband to be imposed on her or for her to be married before puberty, as is the custom among the Arabs.

/291/ Mates are chosen in the lovers' meetings which form a sort of trial marriage. The suitor must ask the young girl's father through one of his parents or through a religious person if there is one in the region.

[184] Among the Ihaggaren everyone is informed of the suit, but in Aïr this is not the case; there the mother and the family of the girl are informed only when everything is arranged. If the [587] woman has already been married, her father's permission is no longer necessary.

583 The bride price (taggalt) to be paid by the bridegroom-to-be is then set. It is usually seven camels among the Imochar and [584 565] less among the Imrad, where it may be made up of camels, goats, or sheep. Asses are never given. This bride price may be paid all at once or in installments. It becomes the property of the parents of the girl; she, in turn, may be given a dowry by them.

593 In marriage (addoubâl) the woman retains free control of her property and in no way meets household expenses. These expenses [562] fall entirely on the husband. By this system, therefore, the woman's [421] fortune grows rapidly, while the man's remains stationary or decreases.

584 As soon as the bride price is settled, the date is set for the marriage, sometimes a few days after the request, other times a year later or even two years if the girl is very young. The latter [184] custom is particularly in use in Sudanese tribes, however.

585 The marriage festivities take place in the girl's camp, and the marriage is consummated only a week later. The brothers and parents of the fiancé come to the camp of the girl's parents, where they are entertained and given a sumptuous meal. During the seven days before the marriage is consummated, the fiancé does not have the right to come to the camp in daylight. He then takes shelter in a tent apart, where his friends keep him company. During this entire period he bears the name of anesdiben.

[536] The entertainment which accompanies the marriage festivities consists of a fantasia executed by meharists who pass back and forth in groups of two or four in front of the women, among whom the fiancée is sitting. The women play the [533] tambourine and violin accompanied by /292/ songs. In the Ahaggar the marriage song is played to the musical rhythm of "aliouen," that is, the olive trees. This custom, according to [174] Dr. Vermale, is a trace of the ancient pagan influence, where the olive tree was the tree dedicated to the goddess of love. (1)

1. Vermale, op. cit., p. 175.

585 A new tent is prepared with all the accessories -- mats, cords,
342 tent stakes -- also new. Inside on the left side is built a little sand mound, oval in shape, on which the consummation is to take place. Afterward, when the camp is forced to move, this edifice is respected and stays in place for several months.

585 On the seventh day, the girl's father has the marriage confirmed by a marabout. Then, in the evening the fiancée, who
[533] has stayed hidden all day at the home of a relative, is led amidst a procession of women playing tambourines to the nuptial tent, where the young man has preceded her.

The next day the young people gather in the tent of the newlyweds, as they do during the days of festivity which follow the marriage. This meeting is called tigedelsatin.

591 The newlyweds live in the camp of the girl's parents for a year. This institution of "service time" /temps de service/ is
[171] mentioned on several occasions in the Old Testament and was practiced by the Hebrews. It means that the fiancé must live with his future family, or quite near it, for a temporary or permanent period of time. This custom results in temporarily restricting the
[593] husband's authority and assuring that they become acquainted and that the young wife is well treated.

587 If the bride has already been married, she leaves for her
591 husband's camp on the seventh day, mounted on a camel and accompanied by her friends and her servants.

In the first case, new festivities are held a year later. The
585 men and women belonging to the husband's camp go one evening
591 to the bride's camp and simulate an armed abduction. The meharists who have stealthily approached then rush into the midst of the tents and utter war cries, answered by the cries of terror of the camp women. They surround the tent of the young wife and claim her as belonging henceforth to their family.

[492] /293/ This is the occasion for new gastronomic flights, and the next evening the young woman, wrapped in a big white shawl,

585 accompanied by her women relatives mounted on asses, leaves,
591 followed by the men on camel back, for her new home. There she
[492] is received by the chief and the old women.

While the married couple take refuge in their tent, the company carouses and dances. The festivities begin at sunset and do not end until dawn the next day, when all those present are exhausted.

593 The young women is then a member of her new family, which
[574] she will leave only in case of divorce or the death of her husband. In the meantime, she does not have the right to go visit her parents, but they may come to her camp.

562 Tuareg women keep a great deal of independence in marriage.
593 It is hard to tell whether they are faithful wives or whether they take advantage of their husbands' often prolonged absences to mis-
837 behave. According to some (Duveyrier) their conduct is exemplary; according to others (de Foucauld, Vermale) they leave much to be desired, and the wives continue to practice the light mores learned at the ahal. "Their unique preoccupation," says Dr. Vermale, "is love; having lovers is their only aim." It is certain that former lovers from the lovers' meetings continue to come visit the married women and to praise their charms in the ahal. But it must be explained that the husbands do not show jealousy, which would be in the worst taste, and that this courting seems quite Platonic. It is very difficult to ask questions on this subject, for the Tuareg are careful of their wives' reputations and maintain that they are above reproach.

As for the men, their conduct is proper in their camps, although some do not hesitate to make use of their women slaves. But when they go on caravans and arrive in the centers far from their country, they give free rein to their passion which a long abstinence has made more impetuous.

684 Adultery (aker) of women is often punished by death. The man does justice himself without anyone thinking to reproach him, killing the guilty parties by his own hand.

593 The very independent Tuareg woman has a very bad /294/ temper and in addition is often quite jealous. At the least misconduct by her husband, she goes home to her parents. She restores conjugal rights only after material compensation. For his part, the man is violent, and that often provokes disagreement in the household.

582 Obstacles to marriage. -- The cases of obstacles to marriage are identical with those fixed by Moslem law. It is forbidden to marry one's near relations, one's nurse or the child of one's nurse, or a woman having been fed with the same milk as oneself.

Alliances between Imochar and Imrad are very rare, for the Imochar who marries a woman from the vassal class makes his children lose the rights attached to his rank.

Noble and vassal women are willing to unite with Arabs, especially if they are marabouts, always on the condition that they respect monogamy, conform to Tuareg mores, and promise to live in the woman's camp. Tuareg men very seldom marry Arab women.

586 Divorce. -- Separation does not exist, so to speak, among the Tuareg, who make use of divorce, but do not abuse it. It is allowed by the Koran and is not subject to opprobrium. A Tuareg woman may ask for a divorce, while an Arab woman may not. The woman instigates it much more often than the man. The reasons set forth by the wife are usually bad treatment by her husband, insufficient support, embezzlement of animals, misconduct (which is a more rare motive), and sometimes nonpayment of the balance of the bride price.

The man more commonly sets forth misconduct, his wife's sterility, dispute over the bride price of animals, incompatibility, and often misunderstanding between the wife and her parents-in-law.

A few diseases such as leprosy may be grounds for divorce.

Divorces seldom take place without difficulties, and if a wife wants to leave her husband, any motive is good. The act of

586 refusing herself is a case for divorce, but disgrace is then thrown on the woman, who is rarely able to remarry afterwards. The man has only to say to his wife, "I send you back to your parents," to break the marriage. But more /295/ often he hides what he is doing and sends his wife home to her family for a few days. He then delegates an old woman from his camp to announce the breaking of the marriage to the wife's parents.

If the husband has instigated the divorce, the bride price remains the property of the wife's parents, but in any case the children remain the property of the father.

587 The woman cannot remarry before three months and ten days.
587 This forced retirement for women, which is prescribed by the Koran, is called ettef or ellouddet in Tuareg language. The women themselves are called tannanleft during this period. When this period has ended, her parents and the people of her camp organize a little celebration to announce that the woman is resuming her life of "free mores."

587 Many women do not want to undergo this retirement, and to
587 escape it they shift the responsibility onto a tree called agar in
824 Tamashek (Maerua crassifolia). They address the tree as if it were a person and say to it: "Agar, relieve me of my retirement which weighs on me too much; take the burden upon yourself." They place at the foot of the tree, by way of an offering, some antimony powder, a little perfume, and a fragment of cloth, which symbolize the attributes of a woman in the state of asri. Then, without waiting any longer, they resume their life of free mores.

587 If the husband wishes to take his repudiated wife back, a new marriage is necessary and a new bride price, smaller than the first, must be paid to the woman's parents.

Murder. -- Murder is rather rare among the Tuareg. It is
682 punished by retaliation when it was premeditated and by material
628 compensation in other cases. The vendetta, which was formerly common among the Tuareg, has disappeared, making way for the dia, or tax of blood. The custom sometimes demanded that the

682 assassin be returned to the victim's family. If he was not known,
628 however, the djema, or assembly of notables, designated a man from the tribe to go make himself prisoner in his place. There is
[692] no example of the hostage's having been put to death in such a
[643] case. Serious cases were usually judged by the aménokal, who was aided by four assessors, two taken from each side.

762 /296/ Suicide. -- Suicide is as rare as murder among the Tuareg. When one occurs, the person who committed suicide is
[766] abandoned on the ground unburied, and the camp is moved and abandoned forever. The Koran disapproves of suicide, and the Tuareg regard the suicide as if he had never existed and must never speak of him again.

Two crimes are blamed on the suicide: 1) doing away with oneself, which is not permitted for a human being who owes his life to God; 2) offending God in this way.

[775] The soul of a suicide cannot find refuge and wanders forever. It likes to return to the spot where it left its mortal covering, and people claim that they can hear it nearby in the evening and that it makes so much noise that it is impossible to sleep.

[761] Death. -- The Tuareg do not fear death. When one of them sees that he is dying, he gathers his relatives around him and gives
763 his last instructions. Then, according to the religious principles which he may have neglected during his life but which he recalls at the final moment, he pronounces the "Fatika /fatiha? Ed./" or
[209] if he does not have the strength for that, he raises the index finger of his right hand and breathes his last.

764 The body is immediately washed in lukewarm water and wrapped in a shroud into which aromatic herbs are put, while the
[567] slaves go to dig the grave on a neighboring high spot. The grave is made of a little trench with two stages such as the Arabs use.
[483 The body is carried on a kind of stretcher ans taken to the burial
417] place, head first, by four men. It is then placed on its right side with the face turned in the direction of Mecca.

764 A marabout or a literate man reads the Moslem prayer, and the men, standing behind him with their hands coupled and open at [782] chest height, repeat it with him. Women do not participate in the 763 [562] burial.

Modern Tuareg tombs have stone markers (chouabed), one at the feet and one at the head for men, one at the head and two at the feet for women. They are oval in shape and the mound is slightly dome-shaped. They usually have stones around them, forming a gully with a forward part open to the east. One often finds wooden stakes or tent stakes stuck into the two ends of the grave, as well as large balls of hyaline quartz which, /297/ according to the Tuareg, were used to rub the body of the dead man before burying him. In many places where there are hyenas, as in the Sudan, the tomb is generally covered over with thorny branches to prevent them from digging up the dead man.

After the burial the persons who came for the occasion present [264 765] their condolences to the family. The family has a meal served for them in memory of the deceased.

768 The dead man's clothing are given to the marabout or to the person who washed him.

[766] Then camp is immediately broken, and the people never return to camp at that place.

765 Mourning does exist among the Tuareg. It lasts only a short time for the man who has lost his wife. For three days he stays shut up in his tent. During this time the ahal and all rejoicings are forbidden in the camp. For the wife who has lost her husband, mourning is a real retreat which lasts four months and ten days, during which time she must not appear in public. The end of the retreat is marked by a little ceremony: the women of the camp take the widow to see the sunrise, present her with an open book of piety, and show her some salt.

761 The Tuareg never bewail the death of a person, and condolences often have the following formula: "You are fortunate, for the one you loved is now in the paradise of God."

# Chapter 2

## Ancient Cults, Religions, and Beliefs of the Tuareg

797 The Tuareg are Moslem today, but their conversion to Islam is very superficial and relatively recent. Although, like all new converts, they strive to hide their former beliefs, it is nonetheless true that these beliefs have left still visible traces among them. For a few years they have made a point of honor of calling themselves good disciples of the Prophet, and they have even tried to claim a sherif origin. Thus it is very difficult to obtain the least enlightenment on their former religion from them.

What were these ancient beliefs? Idolatry or fetishism? On this subject we can only interpret some facts which will always remain very vague, for, as Gautier says, the Tuareg are Islamized enough to have lost all curiosity about their own pre-Islam past.

172 Prehistoric and protohistoric cults. -- If we closely examine the rock drawings and paintings discovered in the Central Sahara in the last few years, we find a certain number of elements which can give us an idea of the beliefs of these ancient inhabitants. Perhaps there is no connection between the latter and the Tuareg, which is probable, but it can also be granted that there were common points of contact down through the centuries which have left traces in the different peoples who inhabited the regions we are interested in.

In the precameline drawings, earlier than the bovid period, the totemic nature is brought out by several persons with zoomorphic heads (dog, mastiff) and false tails; they recall the representation of the old gods of ancient Egypt and at the same time the ritual disguises still used among African Negroes. They may be either appropriate disguises used for hunting in order to be able /299/ to approach game more easily, or else they are persons wearing masks

172 for religious reasons. At any rate it may be stated positively that the fertility cult was in vogue at the same epoch, to judge from the many drawings which are erotic in character. Finally, we may add that magic was practiced with regard to some animals -- antelopes, hippopotamuses. Their reproductions are often connected with cabalistic signs, such as a double spiral or an appendage between the horns resembling the uraeus of the Egyptians. Several stone statuettes, probably from the Neolithic age, have been found at Tit, Tazerouk (Ahaggar), and Tabelbalet (Tassili). They represented animals, rams or bovids and owls, which were surely the object of idolatry.

In the so-called bovid period, identical observations may be made. Several cows wear disks between their horns or else a little ring representing a slip knot. Perhaps these drawings are related to ram worship which was very much in vogue in North Africa and especially in the oasis of Ammon; this cult seems to have been replaced in the Central Sahara by worship of the cow. This animal was still honored as a god by the Berbers, who called it Doul Korneïn. The Sudanese Peul had no mystic life except
[171] their cow worship. We must explain that no similar belief has been discovered among the Tuareg.

The rock paintings, which are on the whole more recent than the oldest drawings, also give us a few indications to be remembered. Near Djanet a large painted panel represents a series of more or less steatopygic women dancing in the middle of a circle of people who are clapping their hands; then on his side, a man enters in turn into the dance, wearing a mask topped with horns (he is a sorceror or wears an ancestors' mask). This is exactly the picture of the magic scenes which we see among the Sudanese, where they periodically organize dances in which the masks of family ancestors participate. Traces of these dances have even been maintained
[532 535] in the Djanet oasis; every year there, on the occasion of the festival of "zébiba," people dress in tawdry finery and masks topped with horns. At Mertoûtek one may also see a large

172 personage painted in the back of an apse resembling an altar; his head is crowned /300/ by an enormous disk which must be religious in nature. Finally, many little human figures are headless, which, according to several scholars, Gautier in particular, must be interpreted as an interdiction relating to the head; the wearing of the veil among the Tuareg would be a reminder of this.

Let us also recall that in Tuareg country there are numerous stone disks, large in diameter, which might be ancient altars intended for sun worship (Gautier). There are also many pagan tombs where the bodies lie in a fetal position, a custom of religious nature which was widespread in all of North Africa and in pre-Pharaonic Egypt.

Religion of the ancient Libyans. -- We have only very little
000 information on the religion of the ancient Libyans, most of it left by Herodotus. This author tells us that the Nasamonians venerated the tombs of those of their ancestors who passed for having been the most just and the best, and that they swore on them by going to touch their tombs (CLXXII). The Ammonians from the Ammon oasis practiced ram worship, which must have been borrowed from Thebes, where Zeus, the god of that locality, was pictured as a human being with a ram's face (CLXXXI). The Auseans worshipped the goddess Athena, daughter of Poseidon and the limmê Tritonis (CLXXX). As for the Atlantes, greatly renowned for their wisdom, they did not dream dreams (that is, they did not use oracles as most of the Mediterranean peoples did) and ate nothing which had been alive (CLXXXIV); this may be interpreted as a vestige of totemism. Herodotus tells us further that all the Libyan nomads, who lived from Egypt to Lake Tritonis and ate meat and milk, imitated the Egyptians and abstained from eating beef and pork; their wives also followed that rule out of respect for Isis, the Egyptian goddess (CLXXXVI). They all made sacrifices to the moon and to the sun. Those of Lake Tritonis made sacrifices to Athena, then to Triton and Poseidon (CLXXXVIII).

000 In the third century B. C., the Massyles, a Numidian nation, worshipped Cronus, it is said, and offered him human victims. (1)

1. Gsell, Histoire ancienne de l'Afrique du Nord /Ancient History of North Africa/, vol. IV, p. 289.

The Byzantine author Corripus tells us, on the other hand, that the /301/ Louata and the Hoouara professed paganism. They pictured divinity in the shape of a bull who was the source of other native gods also having the shape of young bulls. One bore the name of Gurzil. They had holy idols whose names they shouted during battles, and these idols were watered with the blood of sacrifices on the eve of the battles.

114 Christianization. -- Much has been said about an early
175 Christianization of the Tuareg. Duveyrier in particular attributed the high place of women in Tuareg society to Christian influence. He wanted to see the same influence in the existence of a certain number of Latin words of religious origin in Tamashek, as well as in the decorative motifs of some objects where the cross is often represented (on warriors' bucklers, in saddle pommels, on the handles of daggers and swords, in a little pendant worn around the neck by women).

Furthermore, Duveyrier is not the only one of this opinion. One has only to look at the drawing given by Barth (vol. I-II, no. 12), picturing a Tuareg meharist, where the crosses on the saddle and the buckler are clearly Christian. Such a document, which has no connection with reality, is well calculated to propagate a belief based on imagination rather than on the facts.

First we must examine what the true position of Christianity was in North Africa, where it took root in the first years of the Christian era. From the very first the new religion made great progress; many bishops were created who took the new faith from Caesarean Mauritania to Byzacène /Byzacium? Tr./ reaching the High Plateaus

114 and even the Chott Djerid. According to Tertullian, not only
175 was all of proconsular Africa Christian, but also all the Syrta /Syrtis Minor? Ed./ region and some Getulian tribes as well. However, Father Mesnage, to whom we owe important works on Christianization in Africa, has asked with justification whether the ministers of the gospel were sufficiently careful of the quality of the new converts. The spectacle given in particular by the community of Carthage in 250, at the time of the persecution of Decius, was really lamentable, and the apostates numbered thousands. The Numidians, by converting to Christianity, /302/ adopted the religion of their conquerors, or at least they seemed to be converted, for the masses remained pagan. What, then, are we to think of the nomadic tribes who still escaped the masters of North Africa? In a letter written to Hesychius, Bishop of Salone in Dalmatia, Saint Augustine said "that the gospel had not been preached among the barbarians, and as for the more remote nations who did not in any way recognize Roman power, they did not belong to the Christian religion through any of those who make it up." (Letter no. 199)

Speaking of the Berbers to whom the gospel had been preached, Saint Gregory said, in another connection, that many had remained pagan and continued to worship stones and trees. (1)

1. Saint Gregory, IV, 23, 27; VIII, loc. cit, Mésnage, Le Christianisme en Afrique /Christianity in Africa/, vol. I, p. 75.

On the other hand, Procopius tells us that about 548, under Emperor Justinian, the Nasamonians from Ghadames were converted and that in 569 the Garamantians from Fezzan concluded a peace treaty with the empire and were also converted. "Never was the faith so widespread in Africa," says Father Mesnage.

114 "The conversion of these new peoples spread the influence of the
175 church or the empire quite deeply into the interior of Africa. But was it solid? Religious propaganda was for a long time one of the favorite forms of Byzantine expansion. It follows from this that the conversions which it caused were especially political and were made without previous instruction in the catechism, consequently without conviction on the part of the converts. It lasted, alas, only as long as political interest remained in agreement with personal interests." (2)

2. Le Christianisme en Afrique, vol. II., p. 72.

The Arab author Ibn Khaldoun said in the fourteenth century, while speaking of the Islamization of the Sanhadja Berbers, that this pagan people had never adopted the Christian religion.

Thus it seems probable that the Tuareg were never Christians.
[531] Nothing in their present mores betrays the least trace of it. The cross found on the bucklers, weapons, saddle articles, and jewelry has no typically Christian character; it is a decorative motif to be found in ornamentation used among peoples who have nothing to do with Christianity. Only the Latin words introduced into the
[192 Tamashek language may indicate /303/ that the Tuareg must have
174] been in more or less distant relations with the Christian peoples, but they cannot vouch for the early Christianization of the Tuareg by themselves alone.

175 Judaism. -- Although Christianity certainly no more than
797 grazed the North African Berbers and by repercussion the Saharian nomads, it is perhaps quite different with Judaism. Indeed, the Jews settled early in North Africa, where paganism was then professed, and they made many adepts among the Berber peoples. Entire tribes were converted, and when Christianity came to take root in its turn, it found before it numerous groups, both Judaic and Judaized. The position of the followers of Israel was

175 continually strengthened by the constant arrival of new subjects
797 from Egypt. Therefore, a few years later under the Byzantine Empire, their influence was so great, in the cultural as well as in the political sphere, that it offended the established authorities, and Emperor Justinian undertook to drive them out. Many of them fled to the interior of the continent and even took refuge in the Sahara, where they formed numerous active communities. So it is that a Jewish state was formed at the Touat, as we have already pointed out.

When the Arabs appeared in their turn in North Africa, they also found many Jewish groups there. This was the occasion for violent persecutions and a new exodus, and many Israelite communities were forced to embrace Islamism.

In the fifteenth century there were still some Jews in the Sahara. They disappeared as Israelites under the pressure of the Moslem conquerors who abhorred them, and they must have merged with the peoples of the Niger loop.

[174] It seems that the tribes who gathered around Kahéna to defend the independence of the Berbers were Judaized. The very name of the heroine of Aurès -- Kahéna -- sounds Jewish, and could come from the Hebrew cohen (priest) which would mean "the priestess."

Father Mesnage has pointed out that several fractions of the Haouara /hawara/ were Judaized, particularly the Herreneha, who today live northeast of Aurès. (1)

1. Le Christianisme en Afrique, vol. III, pp. 95-107.

We have remarked elsewhere that the Jewish type was found
[173 /304/ in some Tuareg groups of the Niger loop, that the star of
53[] Solomon often decorated articles they used, and that legend attributes a Jewish origin to their artisans.

797 Islamism. -- According to Arab tales, the Islamization of the
173 Tuareg, and of the Ahaggar Tuareg in particular, was led by

797 173 Abd Allah Ed-Djafar, a lieutenant of Sidi Okba ben Nafi (died in 683), whose two companions died near a little Hirhafok village, at Tiokine exactly, where their tombs are still the objects of veneration to a certain degree.

In legends the natives even claim that Sidi Okba was killed by a Tuareg (Koceilata), thus confusing their history with that of the people from Aurès and the Kounta Dag Ech Cheikh who call themselves the descendants of Sidi Okba. This explains the ancestral hate which exists between them and the Tuareg. It has, however, been proved that Sidi Okba ben Nafi never penetrated into the Sahara, although perhaps it is a question of a confusion of names or a homonym.

[172] In addition to the Tiokine tombs, there is the rock inscription painted on the ceiling of a grotto at T-i-m-missao which testifies to the passage of the first Islamizers. This was pointed out for the first time by Duveyrier and followed up by Benhazéra. (1)

1. Six mois chez les Touaregs du Ahaggar, pp. 205-208. Since then, this inscription has been the subject of a detailed study by Th. Monod, Journal des Africanistes, vol. VIII, part 1, 1938, pp. 83-95.

[177] We must not believe that the Tuareg adopted Islamism right away, for although they accepted the Koran as a guide to their religious faith, they gave up nothing of their mores or their former pagan customs. The Arabs even claim that they apostasized as much as fourteen times, and they still consider them very lukewarm Moslems today. Furthermore, they probably belonged for a long time to the heretical sect of Wahabis, with whom they [169] were allied; this was just another way of rebelling against the conquerors.

The Imrad women are in charge of taking the flocks to pasture and water. Every two or three days they go to the wells, drawing water for the goats, who drink out of wooden bowls or out of skins used as containers by placing them on mounds of sand in the shape of a basin. They fill the waterskins which will be transported to the camp by asses.

771 They are little versed in the religion and are incapable of reading the Koran, with the exception of a few men among the Tăitok, [743 for example, or in the Sudanese tribe of the Kel es Souq. There 212] are very few marabouts among them, and those who are there, with a few exceptions, live there in a spirit more mercenary than anything else. Among the Tuareg there are no imam or mufti, and [346] /305/ mosques are reduced to simple prayer places formed of an alignment of stones.

[781] Many Tuareg do not follow the prescriptions of the Koran, and a few years ago some chiefs relied on the marabouts "to make their prayers for them!" Those who practice do it ostentatiously. 795 A great number are affiliated with religious orders, but they are 175 usually ignorant of the meaning of the rites. Thus, in the middle of the nineteenth century, the brotherhood of the Tijaniyyah was powerful among them. The majority of the people that the explorer Foureau met during his voyages in the Tassili were members, but he points out that there were also a few Qādiriyyah. Chief In Guéddassen and a certain number of nobles of the Ghat region were Senusi /Sanusiyyah sect. Ed./. So long as the Oulad Sidi Cheikh, who were the most important groups of the Tijaniyyah, fought France, the majority of the Tuareg remained attached to that brotherhood, but afterwards many of them adopted Senusism. The principal representatives of the Tijaniyyah in Tuareg country were the Tassili Ifôra, whose zāwiyah of Témaçinine had been founded by one of them, El Hadj el Foki. His son Moussa acquired very great renown as a holy man, and so his tomb, located near the little palm grove, is honored by all the northern Tuareg.

The Tuareg of the Ădrar des Ifôras are affiliated with the Qādiriyyah and received the ouerd from Cheikh Bay, a former Kounta marabout from Teleya; he died a few years ago, and his renown extends over the whole Sahara. Among the Ioullimmiden, some tribes are Qādiriyyah (Kel es Souq) and others Tijaniyyah (Daoussahak).

771 The religious lukewarmness of the Tuareg is such that they do
781 not always profess great respect for marabouts and very few of them
[788] make the pilgrimage to Mecca. When Duveyrier made his trip to Ghat (1860) there were some thirty pilgrims among the northern Tuareg (1); at the present time there are probably only three men

1. Op. cit., p. 413.

among the Ihăggaren who can be honored with the title of El Hadj.

But this tepidity does not always exclude fanaticism. Barth already mentioned that he had to face it during his trip and that he was assailed by questions and had to discuss different religious dogmas with some Tuareg; he extricated himself from this by a perfect knowledge of the Koran and of Moslem mores. /306/ Their
[669 religious ignorance makes them, at the same time, easy instru-
773] ments in the hands of marabouts who have often profited from this to stir up hate for the Christians and to push them into a holy war, as was the case for the revolts of 1915 - 1916 - 1917. In spite of the bitter failures which resulted, their confidence in their thaumaturgy was not at all diminished.

871 At the present time there are several Koranic schools in the
783 Ahaggar conducted by Arab marabouts and set up in the agricultural centers. They are mainly attended by Harratin children, for Tuareg children, who stay in their parent's camps, cannot go to them because they are too far away. A marabout family, originally from Cheurfa d'Aoulef (Tidikelt) settled in the Ahaggar some forty years ago and enjoys a great veneration. Not long ago it was fixed in the little center of Dar-Mouli, where it enhanced the value of the place, but as a result of the dryness of the spot it was moved to Esselissekine. There each year a great alms feast takes place,
[796 and all the Ahaggar Tuareg come. Its present chief, Moulay el
554] Ouafi ben Moulay abd Allah is an example of piety, although still quite young, and he is surrounded by great respect.

797 In speaking of the Islamization of the Tuareg, Henri Basset said that the latter had taken almost nothing from Islam, except

797 sometimes the Koran as an amulet, but that they had kept its fatalism. (1) Many authors also take pleasure in pointing out

1. Essai sur la littérature des Berbères /Essay on the Literature of the Berbers/, p. 388.

their more than superficial polish in matters of Islamism.

781 In spite of all this, we must not exaggerate the degree of
797 irreligion of the Tuareg. Since the French occupation, the
177 action of marabouts who cross the country trading is growing
648 slowly but surely. The state of lethargy into which the suppression of their life of brigandage has thrown them is gradually pushing them toward religion, and it is becoming more and more common
[517 to see young nobles kill time by reciting in front of a small
565] Koran board.

771 Superstition is very strong in them. They have not succeeded in breaking away from their ancient beliefs, and they wear a
[789] quantity of amulets which are often pagan in origin (jackal's foot, lizard's head, hyena skin, etc.).

[776] One observes certain noble families /307/ that, along with orthodox saints, invoke mysterious personages who can only be ancient minor gods they never got rid of. (1) In the old legends

1. Gautier, La conquête du Sahara, in Vermale, op. cit., p. 184.

of the Ahaggar, Father de Foucauld has found the names of some of them: Tamâres, Bourdân, Tâssoud, Ouerdaz, Noulana, Radès. The Ihaggaren used to call on them to make their wishes come
[177 true, but today these personages have fallen into oblivion, and
782] only a few old people still remember their names. (2)

2. In Vermale, op. cit., p. 184.

177 Some Tuareg scrupulously practice fasting, and the different
785 Moslem holidays are now followed punctually. But along with that
795 they keep the ahal, monogamy, and matriarchy.

774 Pagan survivals. -- Ten centuries of Islamism have not completely rid the Tuareg of their former beliefs. They still believe in the existence of an animated world peopled by elements acting visibly or invisibly, living in minerals, vegetables, water, etc. To be sure, these beliefs are growing blurred, dwindling and losing their intensity, but the Tuareg still live with them, even going so far as to practice certain rites, just as in the country in France.

Their belief in supernatural matter is more than we could possibly imagine. They believe in genii (ahinnen or imdounen) who
776 inhabit the mountains, springs, steep places, and some trees. They
[755] protect themselves from them by numerous talismans, which they beg from the marabouts, or by the practice of exorcizing. The women are even more credulous than the men on this point. They
769 consult the dead by going to pray on their tombs and ask them news
787 of those who are absent.

778 Petrographic cults are still very much alive among the Tuareg.
782 They believe that some stones are haunted, and to gain the good will of the spirits they place votive offerings in the form of pebbles nearby. Therefore, at the crossing of some mountain passes and some unavoidable paths one often finds enormous piles of stones imitating tumuli, or else many little piles placed on both sides of some camel trails. Some ancient tombs are the object of a quite peculiar worship, for example the one discovered at Tazerouk a few /308/ years ago by Captain Niéger. This tomb, on which lay several stone statuettes, polished axes, and numerous Neolithic objects, was still visited in recent years until the time when it was excavated by the French. The Tuareg deny this, of course, but the discovery of objects placed there recently (fragments of cloth,
773 beads, etc.) proves it. The stone statues represented the Tibaradines,
778 that is, "the maidens." They were supposedly a highborn woman
782 and her servant who were turned into stone because the mistress

773 had asked God to escape a raid which was coming to pillage her
778 camp. After the raid had passed, however, God kept the women
782 in the state of stone in spite of their entreaties, and it was so that life might be returned to them that the Tuareg came to leave different objects every time they passed near the tomb. The worship
[174] of the Tibaradines is certainly a trace of pre-Islamic and perhaps Neolithic beliefs which must have been deformed through the centuries. One of the statuettes represents a cow and is clearly related to the one found at Silet.

771 The remains of totemism are still affirmed by food taboos.
260 The nobles refuse to eat fish or bird flesh, as well as birds' eggs; only the ostrich escapes this interdiction. On the other hand, a
[825 legend even reports that the uran, or great sand lizard, is the
773] maternal uncle of all the Tuareg.

Some trees are also the object of worship. The Maerua
824 crassifolia which the Tuareg call agar is supposed to be inhabited by a genie which they chase away by striking the tree with stones every time they want to get in its shade. As we have already pointed out, repudiated women who do not wish to stay in the prescribed retirement as imposed by custom and want to take up the state of free living, rely on the tree to take over this retirement which bothers them so much.

754 Sorcery. -- Divination. -- Besides these more or less religious beliefs the Tuareg practice sorcery, divination, and the interpretation of dreams.

Some men, often blacksmiths, are known as sorcerors and make potions intended to cast spells; these are generally made of animal skins /309/ and are given to people who wish to cast a spell
[825] on someone, with the intention of taking him by surprise. The uran lizard plays a large part in the making of these sorceries.

787 Divination, practiced especially by women, is done in several ways and always aims to ask news of absent ones.

We have already mentioned divination through tombs. There is also what the Tuareg call tachilet (the viper). It is done either

787 with a mirror or else with a lizard, which are questioned following different forms and which must answer the questions asked.

Dreams are interpreted in different ways. If a man dreams of black, it is a bad sign; of white, he will receive money; of dates, some one around him or he himself will be wounded; of a viper, some one will cast an evil spell on him, etc. (1)

1. Cf. Vermale, op. cit., pp. 185 and 186.

We shall add that the Tuareg also believe in omens and interpret the unexpected presence of animals, crows, gazelles, and sparrows. Certain days or certain months, certain even or uneven numbers, are considered good or bad omens.

## Relations With the Outside World

### Chapter 1

### Trade, Caravans, Caravan Trails, and Transport

680 As far back as one goes into the past, one notices that the Sahara has always played the role of bridge between North Africa and Africa below the equator, and that there has never been a watertight bulkhead erected between the two regions.

The North Africans have always given their attention to the wealth of the Sudan. We have several proofs of this, among others the periplus of the Carthagenian Hanno, who was instructed to explore the African coast west of the Pillars of Hercules, and the voyage of the three young Nasamononians who tried to cross the desert in the time of Herodotus.

The subtropical zone is Negro country. The Egyptians were well aware of that, and they drew much profit from this distant neighbor. Their Pharaohs did not hesitate to send military expeditions to bring back gold, ivory, ostrich plumes, and human livestock! The North African inhabitants were not ignorant of it either, and soon the riches of the Sudan were a fact known by all. Great caravan routes grooved the whole Sahara from north to south.

Their trail seems to have bypassed the Ahaggar. We do not know the real reasons for this, but we can guess them. The mountain must have been avoided because of the obstacles it presented, its altitude and the rocky nature of the ground. The shortest trail which follows a north-south direction therefore cannot pass through the Ahaggar but can run along beside it. That is what happened. The reputation as brigands and highway robbers which the Tuareg enjoyed is perhaps not irrelevant to this turning away of the caravan trails either.

/311/ The great arteries which furrow the immediate approaches of the Ahaggar tie important oases together. They were able to prosper because of the fact that these oases participate directly in the life of the Tuareg and because the Tuareg need them to ensure their food supplies.

The largest and most frequented trail is the one connecting the oases of the Touat and Tidikelt to the city of Agadez. For the Ihăggaren this is the granary route: dates at the Tidikelt, millet in the Sudan. It takes 40 days to go from Akabli to Agadez, and the Ahaggar is halfway between. There is a mountain near the guelta /well? Ed./ of Outoul located 18 kilometers west of Tamanrasset which the Arabs call Ounous and which marks exactly half the way. This trail is, in fact, used by the Arabs, for whom the Sudan is an attraction. They gain very great benefits from these transactions, and everyone's dream is to be able to take a caravan to the Sudan, whence he hopes to return a rich man.

After leaving In-Salah the trail crosses the Ahaggar through the Arak gorges, reaches Lower Koudia at I-n-Ămegel, passes to

487 Tamanrasset, crosses the Tanezrouft through In Guezzam, and reaches the Sudanese zone either by the well of In Abangarit or by the well of Taket-n-koutat.

From Agadez the caravaneers usually go toward Zinder, Kano, or Sokoto.

Another trail, less frequented today but which formerly played a very important role, is the one connecting the oases of Ghadame and Ghat to Timbuktu or Gao. This is the route which the Sonrhai pilgrims used to take to go to Egypt. It was then much more a religious route than a trade route, for transactions between Fezzan and Timbuktu were very little developed and centered around the gold which came from Bambouk.

The trail, leaving Ghat crossed the plain of Xdmer, cut across Xdrar Xnahef, reached Aïtoklane, Xbalessa, and Silet, and crossed the Tanezrouft either by Tin Rerhoh or T-i-m-missao to end up at Tin Zaouaten. Then, crossing Xdrar des Iforas it arrived either at Gao by following the hollow of the Tilemsi, or at Timbuktu.

It is by this trail that the Arab traveler Ibn Batouta returned home from Gao. He left the trail after having crossed the Tanezrouft and entered the Ahnet to reach Touat.

There used to be another trail, Ghadames-Ghat-Timbuktu, /312/ which completely avoided the Ahaggar and went from Ghat to In-Salah by crossing Tassili-n-Ajjer. This detour obviously made the route longer, but it was much safer for the caravaneers than the Ahaggar route, for it was entirely under the control of the Tassili Tuareg, who were on good terms with the people of the oases of Ghat and the Touat. It takes 25 days to go from Ghat to In-Salah by this itinerary, and one months from In-Salah to Gao.

The road from In-Salah to Gao is still very much frequented at the present time, not only by Arabs from the Touat, but also by [439] the Ahaggar Tuareg and the Tuareg from the Xdrar des Iforas. This is the "sheep" trail, the one used by the caravaneers who are engaged in trading in livestock on the hoof and who supply meat to

487 the oases of the Tidikelt and Touat which have none. Thanks to
[439] the wells of T-i-m-missao and In Ziza, the sheep succeed in crossing the Tanezrouft without too much suffering.

484 This trace movement is evidently engaged in only during
221 the coolest months of the year, that is, from October to April, and it demands great precautions from the caravaneers.

312 Here is a list of the wells, starting from Timetaouine (Ădrar
484 des Iforas), where the animals are watered, as well as the number
487 of days of march between them, according to the information furnished us by El Bak el Fassi, the Amrar of the Kel Ăhnet.

| | | |
|---|---|---|
| Timetaouine (well, watering place) | | |
| I-n-Gezzal | 1 day | Ădrar des Iforas |
| Efenargh | 1 " | |
| In Ouzzal | 1 1/2 days | |
| Tirek | 3 " | Tanezrouft |
| Ti-m-missao | 2 " | |
| Tin Senatet | 5 " | Ăhnet |
| In Torha | 1/2 day | |
| Aleg'nenou | 5 days | |
| Tin Khalifa | 2 " | |
| In Belret | 1 day | |
| El Khenig | 1 1/2 days | Immidir |
| In-Salah | 3 " | Tidikelt |

Or 26 1/2 days' march.

484 /313/ Depending on whether pasture is more or less abundant,
439 caravaneers suffer more or less losses in their flocks. Sometimes this loss is complete, sometimes it is none at all.

We saw a Kel Ăhnet make the trip at the end of the month of April, a period which is not favorable, with 35 sheep and not have to kill more than one of them on the way.

487 When one speaks of a caravan trail, one must banish the idea of a route more or less arranged to facilitate traffic. The Saharian trails are simply marked on the ground by the tracks which the camels make, passing there in the same place for centuries. In the Ahaggar they look like a long, light ribbon running through the middle of the black rocks. The trail may be made up of two, three, or six ribbons which run parallel to each other, depending on its importance and the lay of the land.

Trails always follow the sides of valleys, naturally linking one well to the other and passing from one valley to another through the most accessible passes. They are never marked out. Of course in some places there are a few redjem, a kind of pile of pebbles to mark the passes or the nearness of certain wells, but these are rare and on the whole recently constructed, for the Ihaggaren have always strived to hide the routes through their country from strangers.

[648 312 20]

In sandy places and in regolith terrain where the ground is always more or less transformed by the action of the wind, the trail often becomes invisible, and the caravan must then trust to the knowledge of a guide or a man who has already traveled over the road several times and knows it.

Secondary trails. -- There are within the Ahaggar numerous secondary trails which are used for local needs. They all go from one well to another. All the agricultural centers are connected by a network of well-marked trails which are easy to follow without any great knowledge of the country. There are also pasture trails, little routes marked by the repeated trampling of goats going from one valley to the other and winding around the mountains; the animals follow them every day. This network is unbelievably extensive, and one might say that every mountain and every plateau is furrowed by several of these little paths. /314/ They are to be found in the most inaccessible and barest places, which shows that the Ahaggar used to be traversed in all directions.

[174]

174 in its remotest regions, the result of more intensive goat raising
487 and proof that pastures used to be more numerous than they are today.

492 There are very appreciable differences in the way Tuareg and
484 Arab caravaneers travel. The Arabs always push their camels in front of them; these camels march in a line freely, without any bridle or /head/ rope. The Tuareg, on the other hand, always advance in file, the camels attached one behind the other and guided by a man who takes the head of the convoy by holding one of the animals by the bridle, or else by riding it.

These different methods are imposed for two reasons, both connected with the structure of the terrain. The Arab Sahara is generally a flat country where it is easy to move about and where no natural obstacle opposes the animals' walking. In mountainous country, however, as in the Ahaggar, the narrowness of some trails, particularly going through certain passes, forces them to take precautions to control the camels' march, unless they want to see them crowd up on one another to the detriment of the baggage with which they are loaded. Moreover, pastureage also occurs under different conditions. In the northern Sahara, where the soil consists mainly of calcareous formations, vegetation is always diffuse, which forces the camels to move about a great deal, browsing from one tuft to another. Thus the Arabs have got in the habit of never putting their animals on a leash in order to let them gather tufts of vegetation which are within their reach, all the time they are moving.

In the Ahaggar, as we have had occasion to say, vegetation is, on the contrary, concentrated and sheltered in the valleys where water is hidden under the sandy alluvial deposits. Therefore there is no point in leaving any liberty to the camels; quite the opposite, they must not lose a minute on the trail but must reach

492 484 the pasturing place as rapidly as possible, and so they assure a strictly disciplined march for the caravan.

From this come the two systems of proceeding used respectively by the Arabs and the Tuareg.

486 643 648 /315/ Caravans which used to cross the country of the Ihaggaren were obliged to place themselves under the latter's protection by paying a toll agreed upon in advance. The duty went to the amenokal, but protection was ensured only within the bounds of his authority, which quite often did not go beyond the limits of his own tribe. And so the caravaneer was subject to continual solicitations from the people living on the land he crossed, and it was often very difficult to escape them. A guide was sometimes placed at his disposal and received remuneration in kind.

When the boundary of the territory was reached, the protection stopped there, and the greed of the Tuareg was so great [579] that they sometimes did not hesitate to go pillage outside their territory the caravan they had just protected. This often brought on conflicts from tribe to neighboring tribe, but in the final analysis everything was settled at the expense of the caravaneer.

427 492 Sometimes the Tuareg rented out their camels. Some Tassili tribes made a specialty out of transport between Ghademes and Ghat, while the Issekkemaren agreed to rent their animals between In-Salah and the Sudan. They derived considerable profits from this work.

As a result of these continual deductions in advance, the caravaneer could transport only goods whose trade was very remunerative.

484 674 Caravaneers have a custom of placing provisions needed for their return in the rocks or in sheltered places. These provisions are left without a guard, and nobody would think of taking them.

484 This was observed by Duveyrier, Captain de Bonnemain, and
674 Bou Derba on the Ouargla-Ghat itinerary. We have witnessed similar actions ourselves, but the goods stored in this way belonged to some Ihaggaren, and no one would have dared lay a hand on
[609] them. The thing is less safe in the case of a stranger's property.

When a camel dies en route, the load that it was carrying is left [illegible] spot and put under public protection. The caravaneer is always certain to find his property, even six or eight months later. In this regard, it is well to say that the Tuareg, raiders though they must be, are not thieves. When a theft has been committed in their /316/ country, the guilty party is generally a Negro, but rarely a Tuareg of the white race.

439 What were the products transported? Manufactured goods, for the most part, generally made in Europe. There were fabrics and silks which the Tuareg and the Sudanese eagerly sought, and there were knickknacks, unmounted sword blades, sugar, and coffee
[177 272] (tea only recently made its appearance in the Sahara).

All these goods were resold or exchanged for ten times their value. On the return trip the caravaneers brought back ostrich plumes, gold dust, ivory, and little Negro girls and boys bought as slaves and resold for very high prices in the cities of Algeria. Leather was also the object of an intensive traffic, as well as medications of plant or animal (ostrich fat) origin which were part of the Sudanese pharmacopoeia and much appreciated by the Arabs.

177 Today, except for gold and ivory, which have become rare
439 and whose traffic is in the hands of Europeans, and except for the sale of slaves, which has been forbidden since the French
[486] occupation, trade has remained the same. But the routes have become free and the Tuareg can no longer count on their former profits. There was one resort left, that of making themselves caravaneers in their turn and using their many camels in that way. This is what they have done.

439 [437] Sheep trading, which has grown greatly in these last few years, is largely carried on by barter. It is especially done by Arab caravaneers from the Touat who go to the Sudan with dates, tobacco, fabrics, and blankets, which they exchange not in the markets but in the camps. Tuareg from the Adrar des Iforas and Kounta Arabs also do the opposite and take their sheep to the Tidikelt and Touat.

439 435 In 1939 the sale price of sheep on the market at In-Salah was from 75 to 100 francs. The purchase price in the Sudan varied from 35 to 45 francs, but as we said, barter was most often the basis for all transactions.

And so for a camel that they received the Adrar Tuareg gave 120 sheep. One sheep alone was exchanged for 12 or 15 cubits of cloth or /317/ 10 guêcâa of dates. A dokkali, a large blanket from the Touat which the Tuareg hold in high esteem, was worth 10 sheep in the Sudan and 7 in the Adrar.

436 [177] The camel served as a basis of exchange. The Tuareg have never used money, although they did accept the Maria Theresa dollar which circulated in the Sudan and the Turkish livre which was widespread in Tripolitania. Sudanese tribes negotiated with toukourdi, the band of material serving as a veil, and with kori [825] (Cypraea moneta), a little seashell native to the Indian Ocean.

648 439 Since the French occupation we have seen a certain number of native merchants settle at Tamanrasset, the administrative capital of the Ahaggar. They are for the most part Mozabites and a few Arabs from Metlili who have constructed shops and have merchandise sent them by their correspondents in the Algerian Tell.

This recent state of affairs tends to grow more and more [305] extensive, and the postal agency at Tamanrasset records several million transactions every year.

439 These transactions are chiefly centered around tea, sugar, cloth, perfumes, hardware, carbide, and blankets from the Touat. They cause quite an appreciable movement of camels from which the Ihaggaren benefit, along with the Arabs from In-Salah who rent their camels to traders.

Transport. -- We need not repeat that without the camel the 492 Sahara would be uninhabited today. Indeed, it plays a capital role in transport between oases; it is the mount used by warriors and people who are moving and the vehicle for baggage. People would not be able to do without its services the moment it is a question of crossing a hundred or so kilometers in a region not supplied with watering places.

The ass also plays a big role, but its use is more localized. [312] It is confined to the edges of the massif, where it is rare not to find water during a day's march. The ass really assures all internal transport -- that necessitated by moving camps, transport of water [565] and even of persons -- for although the Imochar never travel except on camels, the Imrad /318/ commonly make use of the ass, and their wives know no other mounts. Its role is even more appreciated because it saves camels which, in the Ahaggar, must be submitted /only/ to moderate labor. In addition, it is always handy, for it lives near the camps while camels are often several days' march away because of pasture needs.

Meharists have a special harness: light saddles which are placed on the animal's withers and which are designed to receive the different bags of salt and waterskins.

The Ahaggar Tuareg have several kinds of saddles: 1) the tarik, with the pommel in the shape of a cross and covered with [261] red leather; 2) the tamzak, shaped the same way, but much more [531] luxurious, with the outside of the pommel and the back decorated with little perforated metal plates and copper studs; 3) the tahiast, [531] a coarse saddle with a palette-shaped pommel, either in bare wood [322] or covered with leather-decorated with geometric designs.

492 The tarik is the saddle commonly used by the Ahaggar Tuareg, the one which is peculiar to them and which they must have known from time immemorial. The tamzak, which is a decorated variant [177] of the tarik, owes the origin of its decoration to Hausa influence. In fact, the peculiar technique of applying perforated metal bands [171] enhanced by colored leather fabrics is found in horses' saddles of the

[531]

Fig. 54.. 1 2

The camel saddle called tamzack. Detail of the back of the saddle.

Hausa from the Damergou, Sokoto, etc., and there is no doubt that that art, which is unrelated to that of the Tuareg, is much more developed among those peoples.

438 The two saddles are usually made in Aïr, indeed even at Agadez, but the old Tuareg blacksmiths manufacture only the 326 tarik. The tamzak is the work of artisans, who are usually settled 492 at Agadez and more or less crossed with artisans of Hausa origin. 492 Ahaggar blacksmiths make only the tahiast, which is the saddle 171

492 adopted by all the Tuareg of the Ydrar des Iforas, which the
171 Chaamba Arabs also use, and which is derived from the saddle of the Moors of the western Sahara.

492 Ahaggar noblewomen, who travel only on meharis, have
[565] special saddles resembling the basour of the Arabs but without the arch covered in cloth. These saddles are called akhaoui; they
[322] are made /319/ of wood and ornamented with large pommels in front and small plaques trimmed with copper nailheads on the side.
[531] For long moves these saddles can be provided with a wicker cage covered with cloth, but this is not a common practice.

Saddles hold leather bags which contain either a change of
[415] clothes or food reserves as well as the waterskins constituting the necessary provision for crossing regions without wells.

For transport, camels are provided with a special packsaddle made of palm fibers which literally crowns their backbone. Most of these packsaddles are made in the Tidikelt. For caravans which last a long time the animals are loaded with about 100 kilograms, plus the waterskins that are generally added to the baggage. The servants, who accompany the animals and do not have personal mounts at their disposal, /320/ ride on top as excess weight and make the whole trip under these conditions.

[481] The Tuareg are very poor walkers and cannot conceive of a person's going on foot, even to spare the mount for a few kilometers.

Asses, which as we have said are used for transport within the massif, are provided with a little packsaddle serving as a saddle at the same time. When camp is moved, they are loaded with the tent, tent stakes, and bags containing food reserves. They also
[312] assure the carrying of water from the well to camp.

484 When an Amrid travels alone on a voyage, he takes an ass to
492 carry his water, his small baggage, and his blanket. Pushing the
[481] ass before him, he walks behind carrying his lance over his shoulders. He mounts on it only during the hot hours of the day.

177 In the last few years a number of notables, including the
492 aménokal, travel on horseback, but only when they travel in the
643 Lower Ahaggar which is furrowed by wide valleys, allowing them
133 to avoid rocks.

101 The Ihaggaren never travel on zebus and never use them for
492 transportation. In the Sudan, however, this animal is used as a saddle animal and a beast of burden.

/321/ Chapter 2

## War and Raiding

721 The Tuareg distinguish two kinds of warring expeditions: war declared between fractions or peoples, which they call annemensi or amdjer; and raids, edjen or egen, which aim to pillage a camp or a herd by surprise.

Although war was rather rare, raids were, on the contrary, quite frequent. They were caused by the atavistic taste of the Tuareg for this sort of expedition. For the occasion they gathered together the most disparate elements, all moved by the same spirit of adventure and battle.

182 When an expedition against a camp was decided upon, those
221 present tried to gather the suitable number of men. They were
361 most frequent in summer, for, since the camps were forced to
721 spread out in the pastures, it was easier to surprise them.

War, on the other hand, was waged in winter, when the caravans had returned and the provisions necessary for the life of the tribe had been assured for the long months; this relieved the warriors of any material preoccupation about the lot of their families.

727 Each man had to procure arms for himself, and if he did not
426 own his own mehari, he found someone to lend him one; in case
714

727 of captures, however, he had to give half of the captured animals
714 to the lender. In case of failure and death of the camel, he did
426 not have to reimburse him.

721 The men met, discussed the planned expedition, and uttered
726 a ritual formula (narhal allar) which bound them together for the duration of the expedition, during which time they were to give mutual assistance to one another.

Then they named a chief who was not necessarily an Amajer /sing. of Imochar - Ed. / but a man renowned for his courage, his /322/ suitability, and his experience on expeditions of this kind. Then the group left, preceded by scouts.

726 All baggage was left behind. Everyone mounted on camel back, taking only the bare necessities for the road, for it was necessary to go quite fast and try to keep the animals in good condition. Before sunrise, the raid was already on its way, and the rapid pace was maintained without stopping until evening. The men ate only
[262 a few dates at noon, did not take their siestas, and ate a meal
264] only in the evening -- all was sacrificed to the speed of the march, which was the key to success.

Nearing their goal, the raiders forced their march even more if that were possible, and they often divided into two parties; one was entrusted with seizing the animals and bringing them to a specified point, the other created a diversion in the enemy camps to sidetrack them.

The surprised enemy was attacked with gunshots by a few men
[411] deployed as riflemen, while meharists swooped down on them, hurled their javelins, and then soon came to hand-to-hand fighting. The people who were attacked, for their part, tried to find out the strength of the assailants, and depending on the case they retreated or themselves attacked.

In spite of this martial deployment and the vigor of the attack, these combats were not very deadly, in general, and did not always cause deaths.

721 When raids were led against Sudanese camps, they were as in-
727 terested in the Negroes and Negresses as they were in the camels.
567 The kidnappers kept some of them to serve as servants and sold the others on the markets of In-Salah and the Touat.

726 Once the booty was stolen, the raiders went by forced march to the point agreed upon in advance, where they rejoined the other group of meharists.

The raided people, on the other hand, organized themselves, but they did not try to overtake the raiders immediately and did not wear themselves out in vain pursuit. As the return route of the raiders was known, they tried to reach a well where they had to pass; if they were successful in arriving before them and cutting them off from water, the real combat began, this time fierce and often quite deadly.

411
531
326
281

Fig. 55. Tuareg lance. The iron blade is decorated with copper inlays. The part where the hand is put is covered with leather, and a little leather loop placed behind is intended to hold the index finger which gives greater propulsion to the lance when it is thrown.

Hard pressed, the Tuareg formed in a square behind their camels and defended themselves under cover of their bucklers; /323/ when they saw it was impossible to take possession of the well, they abandoned their loot. The battle came to an end, and the raiders were rarely pursued. In the opposite camp, a certain number of men were left as sentries to guard against return offensives, and the others tried to gather up their animals and lead them back to the douar /encampment/.

727 When the raiding party was safe, the men divided up the booty in more or less equal parts, depending on each person's merits during the fight. But in some tribes, customs related to the tioussé demanded

727 that the Amrid paid part of it to the Imochar. The lender of arms or meharis was compensated in his turn, and that part of the booty was called abellag.

726 The Tuareg had the reputation of acting treacherously in battle and not always following the rules of chivalry for Saharian war.

In battle a man who threw himself at the feet of his conqueror and touched his clothes placed himself under his protection and
727 had a right to live; but the Tuareg did not always value this rule and often killed their prisoners.

When a tribe had been pillaged illegally, that is, when there had been no previous acts of hostility authorizing reprisal, a delegation of warriors from that tribe came to the opposing camp to try to negotiate for the return of the captures. This is what the Arabs call the myad, a term which has been adopted by the Tuareg. There again the Tuareg did not always show themselves to be very chivalrous, and they often savagely massacred the defenseless ambassadors.

726 During wars and raids, women enjoy the rare privilege of
562 being respected by the combatants. During the operations of the French occupation, men were often seen fleeing the camps, abandoning the women /324/ and children to the conquerors.
[648] This conduct has often caused the Tuareg to be accused of cowardice. This was a false intepretation of the facts, for the Tuareg acted that way prompted by the immunity which women enjoyed.

184 It is shameful during a raid to forget this rule of protection
726 and do violence to women, strip them of their clothes, or
562 penetrate into their tents. The infractions committed were often the acts of unscrupulous persons without honor. Most of the Imrad and Iklan, it appears, are in the habit of stripping women of their clothes and their jewels, going so far as to leave them completely nude, and it even happens that they rape them. The

184 more chivalrous Imochar and a few rare Imrad try to oppose this,
726 but in warlike escapades the Iklan and people with few morals are
562 often more numerous than the others.

721 Abuses of women always called for vengeance, which the
adversaries usually received before long. Acts of this kind were
628 enough to raise up entire tribes against one another. And so, in the Sudan, the exactions of Marabout Abidine's people on the Kel Ádrar Tuareg, at the time of the murder [411] of their amenokal Safikroum in 1912, made irreconcilable enemies of these two fractions.

[648] At the beginning of the French occupation, when lieutenants Cottenest and Guilho-Lohan carried out their reconnaissance missions in the Ahaggar, they found women abandoned in the camps by their husbands. The good care which was taken of them made it easier to make peaceful contact later with the Ihaggaren.

Fig. 56. The tacouba, or sword.

411 Tuareg weapons include iron lances, javelins with wooden staff, swords, daggers, and a buckler.

[177] /325/ Even before the French occupation the Tuareg knew how to use firearms and possessed a certain number of guns. They [439] were for the most part projectile weapons or archaic models of the

Lefaucheux type. But their prices were high for Tuareg pocket- 411
books, and it was difficult to procure powder and bullets, which 439
made firearms uncommon and often the prerogative of the chiefs. 554

Tuareg weapons vary according to the circumstances. The
Imochar carries the arms he likes: they include the sword 184
(tacouba), which is the 411
weapon par excellence 565
of the nobles; the iron
lance (allar') carried by
nobles and vassals; [531]
javelins with iron shoulder
and point and wooden
staff (tarda), which are
set aside for vassals and
slaves; and the forearm
dagger (télak) provided
with a leather ring so that
it may be hung from the
wrist. In the Sudan slaves
also carry wooden clubs
(tabouri), heavy branches
with a knot at one end.

Fig. 57. Old type arm dagger.

The Tuareg have only
one defensive weapon,
the buckler (ahrer) which
is made of oryx antelope
skin. It was generally the prerogative of the nobles, and only
they had the right to carry it. It recalls the coat of arms by its [531]
shape and the ideology which surrounds it; the decorative motifs
which it bears have a magic character.

The Tuareg are adroit fencers, fighting hand /326/ to hand 411
with their swords while protecting themselves with their bucklers, 714
which cover their bodies and which they handle with a great deal
of dexterity in spite of the volume and weight. The sword cuts

411 and, if it is of good quality, it is liable to split a buckler in two.
714 The hand is protected by a little rectangular iron guard which gives the shape of a cross to the upper part of the sword.

Duveyrier, the explorer, noted that the Tuareg used the bow.
114 We have not found this weapon among them, nor any evidence as
411 to what it used to be used for.

[714 281]

Fig. 58. Tuareg buckler made of oryx antelope skin.

411 All of these weapons have become very archaic in view of the arrival of rapid-firing weapons. The Ahaggar Imochar still
[554] hold to their sword, which they always wear over their shoulders, and which seems to be used more to indicate their social rank than for warring action. In the Sudan almost all the Tuareg still carry lances, and some of them carry forearm daggers. In Aïr one may still see a buckler hung from the saddle of a mehari. But in a few years all these objects will be good for filling trophy cases.

# *AVANT-PROPOS*

La littérature, les récits de voyages, les reportages journalistiques ont fait, ces dernières années, connaître au Grand Public le Hoggar et ses habitants, les Touaregs. Le goût de l'exotisme, comme une connaissance plus approfondie des populations indigènes placées sous notre drapeau, se sont faits de plus en plus sentir et au moment où le Sahara entre dans une phase nouvelle de son histoire, il était désirable que le grand public pût trouver une documentation succincte sur le mystérieux pays de l'Atlantide et ses non moins mystérieux hommes voilés.

Le dernier ouvrage d'ensemble sur les Touaregs du Hoggar remonte à 1908. Il est l'œuvre de l'officier interprète Benhazéra. A l'occasion de cette publication, le général Laperrine, alors lieutenant-colonel, tint à signaler toute son importance, sa valeur documentaire et les services qu'elle était appelée à rendre, en particulier aux officiers des Affaires Indigènes destinés à administrer les Touaregs.

Il souligna également le fait qu'elle faisait suite à l'ouvrage célèbre de l'explorateur Duveyrier, lequel fut publié en 1865 et intitulé *Les Touareg du Nord.*

Trente-cinq ans ont passé depuis et ces deux ouvrages sont introuvables, même dans beaucoup de bibliothèques. D'autre part, bien des événements se sont produits depuis 1908 et nos connaissances du désert et des Touaregs se sont notablement augmentées. Beaucoup d'officiers des Affaires Indigènes d'Algérie, stimulés par l'esprit toujours en éveil du général Laperrine, ont écrit des rapports pleins d'intérêt, malheureusement enfouis dans les archives des postes et qui restent inaccessibles à la plupart des travailleurs.

A côté de ces travaux, plusieurs missions importantes : mission du Transsaharien (capitaines Nieger, M.M. Cortier, Chudeau, Dubuc, Némorin) ; mission Olufsen (Bourcart) ; mission de Prorok ; mission Augiéras-Draper (Th. Monod, Besnard) ; mission du Hoggar organisée par M. le Gouverneur de l'Algérie Carde (MM. Foley, Leblanc, Maire, de Peyerimoff, Seurat, Reygasse, P. E. Dubois) ; des explorateurs isolés parmi lesquels Chudeau, E. F. Gautier, C. Kilian, Th. Monod, R. Perret, ont apporté, chacun dans leurs disciplines, des documents nouveaux pour notre connaissance du Grand Désert.

De plus, ces dernières années, d'importantes découvertes archéologiques ont été faites, qui bouleversent l'idée que l'on se faisait autrefois du passé du Sahara. C'est ainsi que l'on possède à l'heure

1: Lhote MS25 Tuareg

actuelle les relevés de milliers de gravures et de peintures rupestres qui jettent une lueur nouvelle sur la préhistoire saharienne. A celles-ci, le nom du capitaine Brenans restera attaché pour avoir fait connaître les importantes stations de l'oued Djorat qu'il a découvertes et qui sont les plus curieuses du genre. Enfin, grâce aux travaux méthodiques de René et André Basset, qui ont publié les notes linguistiques laissées à sa mort par le Père de Foucauld, les chercheurs, linguistes et ethnographes, possèdent une mine inépuisable de documents de grande valeur.

A l'issue de toute cette documentation, il était possible de tenter un ouvrage d'ensemble en rapport avec nos connaissances actuelles. C'est ce que je me suis efforcé de réaliser et cru autorisé de faire par neuf années de séjour chez les Touaregs.

J'ai cru bien faire en ajoutant à la partie scientifique deux chapitres historiques, l'un sur la pénétration européenne au Sahara, l'autre sur l'occupation de l'Ahaggar et l'histoire de la soumission des Touaregs, qui sont assez peu connues, et qui mettent en relief le courage des premiers explorateurs et l'héroïsme de nos militaires des Compagnies sahariennes vis-à-vis desquels la France a contracté une dette de reconnaissance. Le Sahara ne s'est pas conquis tout seul et son épopée restera une des plus belles pages de l'histoire coloniale française, car elle synthétise tout à la fois le cran et l'âme généreuse de notre race.

On peut dire à ce sujet que pas une goutte de sang ne fut versée inutilement ; c'est avec leur cœur plus qu'avec leurs armes que nos chefs militaires, dressés à l'école de Laperrine, ont imposé la France aux plus grands des pirates du désert, au point de forcer leur estime et d'obtenir leur amitié. De cela, nous pouvons nous enorgueillir et en citer l'exemple aux jeunes générations qui, dans la France rénovée, auront à poursuivre l'œuvre de leurs aînés.

Je ne saurais terminer cet avant-propos sans remercier ici Monsieur le Gouverneur Général de l'Algérie, Monsieur le Gouverneur Général de l'A. O. F., pour l'intérêt bienveillant qu'ils ont accordé à mes missions, Monsieur le Général Meynier, ancien Directeur des Territoires du Sud, le commandant Lehuraux, ainsi que MM. les Officiers des Affaires Indigènes, les Officiers et Administrateurs des postes soudanais, qui ont facilité mon séjour dans le sud.

Je ne saurais, non plus, oublier d'évoquer le nom d'un homme qui m'a fortement encouragé à écrire cet ouvrage et qui fut enlevé trop tôt à ses nombreux amis et à l'affection des indigènes à qui allait toute sa sollicitude. Je veux parler du colonel Carbillet, Commandant du Territoire des Oasis, mort à Ouargla pendant la guerre par suite de surmenage, dont l'œuvre administrative et politique fut immense, qui fut le protecteur des faibles et des humbles et qui encouragea tous les chercheurs désintéressés.

Octobre 1942. Henri LHOTE.

# AVERTISSEMENT AU SUJET DE L'ORTHOGRAPHE DU MOT "*TOUAREG*"

Le mot *Touareg* est d'origine arabe, il est le pluriel de *targui*. Dès lors, s'il devait suivre les règles grammaticales de cette langue, il ne devrait jamais porter d'*s*. C'est toutefois la règle adoptée par les dictionnaires français.

Pourtant un grand nombre d'auteurs et non des moindres ont cru mieux faire de franciser complètement le mot Touareg en lui faisant suivre les règles grammaticales de notre langue. Parmi eux, on peut citer : Deniker, E. F. Gautier, Henri Basset, Chudeau, etc...

L'application des règles grammaticales arabes aurait obligé à dire la langue *targuia*, les femmes *targuiat*, alors que ces règles n'ont même pas été appliquées pour le mot *arabe* que l'on devrait écrire *arab*, et que l'usage a adopté les termes *arabe*, pour *arbi*, en parlant d'un homme, et *arabe*, pour *arbia*, en parlant de la langue ou d'une femme.

Nous appliquerons donc les règles grammaticales françaises et nous dirons la langue touarègue, les femmes touarègues, les techniques touarègues, etc....

Par contre, pour les autres mots touaregs et arabes dont l'usage n'est pas encore entré dans notre vocabulaire, nous suivrons les règles touarègues et arabes. Dans la mesure où les difficultés actuelles de l'édition nous l'ont permis, nous avons suivi, pour les noms propres touaregs, l'orthographe du dictionnaire des noms propres du Père de Foucauld, publié par M. André Basset.

## *LIVRE PREMIER*
## *GÉOGRAPHIE PHYSIQUE*

*LE PAYS — SON CLIMAT — SA FLORE — SA FAUNE*

### INTRODUCTION

Par ses diverses richesses en eau, en végétation, la montagne a toujours joué le rôle de refuge pour les populations environnantes, et dans un pays où l'assèchement est poussé à un degré extrême, on conçoit que ce rôle ait une grande importance. Elle est un îlot au milieu d'un océan, où l'on aborde avec joie après une longue navigation. C'est ce qui fait que l'on trouve aujourd'hui au Hoggar, massif montagneux situé au centre du Sahara, une population bien vivante, et d'autant plus curieuse qu'elle a vécu presque en vase clos depuis des siècles, séparée du reste du monde par des bandes désertiques atteignant par endroits 6 et 700 kilomètres.

Le nom de « Hoggar », employé communément pour désigner ce pays, est une altération arabe du nom targui « Ăhaggar », dérivé du mot Ăhag, plur. Ihaggen, qui veut dire bosse aplatie surmontée d'une crête, terme usité pour désigner la bosse du chameau surmontée de poils.

Le pays d'Ăhaggar ne comprend pas seulement cette partie caractéristique de la montagne, mais ses abords assez étendus, toute la région occupée par les Touaregs Ihaggaren approximativement entre les 21e et 25e parallèles de l'hémisphère nord, donc à cheval sur le tropique du Cancer, et les 3e et 6e degrés Est du méridien de Greenwich.

Il couvre une superficie d'à peu près 530.000 kilomètres carrés. A titre de comparaison rappelons que la superficie de la France est de 551.000 kilomètres carrés.

L'Ăhaggar est resté, jusqu'à la moitié du siècle dernier, parfaitement ignoré des géographes du vieux monde et la « Terra Incognita » des vieux atlas antérieurs à cette époque

1: Lhote MS25 Tuareg

était sensée être un affreux désert de sable, plat, dénudé, s'étendant uniformément jusqu'à la Nigritie, très loin, au bout d'un autre monde également mystérieux.

C'est en 1849, qu'un document cartographique intéressant nous est fourni par le géographe Mac Carthy, de l'Université d'Alger, qui, d'après des renseignements recueillis par Messieurs Daumas et Aussone de Chancel [1], avait dressé une esquisse du Sahara. On voit, sur cette carte, un important massif montagneux occuper le centre du Sahara, et des parties vertes laissant entrevoir un pays nullement désertique. Les massifs de l'Aïr et de l'Ăhaggar étaient confondus en un tout et étaient sensés être l'habitat des Touaregs « Haggar, Azkar et Kyl Ouy ».

La construction était un peu fantaisiste, mais pourtant un examen approfondi et raisonné fait concevoir le bien-fondé, sinon de l'ensemble du travail, tout au moins du détail. Si le massif était assez inexactement représenté au point de vue de sa forme, et mal localisé, les pistes, et c'est là chose capitale au Sahara, étaient bien tracées, en particulier celles allant d'In Salah à « Aghedès » et à « Ghrat ». Ce détail indique que les renseignements avaient été fournis par des caravaniers qui avaient traversé la région et ne connaissaient pas l'arrière-pays.

La carte de l'Afrique Septentrionale publiée en 1863 par l'explorateur allemand Henri Barth, après son voyage à travers l'Afrique, porte un massif dénommé « Hogar » ou « Hagara », nettement séparé de l'Aïr. Quoique plus proche de la réalité que la précédente, elle présente encore de grosses inexactitudes.

C'est au géologue français, Henri Duveyrier, que l'on doit une conception plus exacte de l'important massif central saharien. Parti en 1861 de Tripoli, il réussit à pénétrer jusqu'au milieu des Touaregs Ăjjer, parvint à Rhât, et effleura les falaises du Tassili.

L'Ăhaggar était son but secret. Mais pour des raisons d'insécurité, il dut renoncer à l'atteindre. Grâce à la perspicacité de ses informateurs, il put rapporter un croquis du massif, ainsi qu'une foule de renseignements que, de nos jours, on consulte encore avec fruit.

La première mission Flatters (1879) devait confirmer en

1. *Le Grand Désert*, Paris, 1849. Nous verrons au Livre II, chapitre II, qu'il existe des cartes plus anciennes mais dont la lecture est difficile.

1: Lhote MS25 Tuareg

partie les renseignements de Duveyrier, mais elle ne put pénétrer jusqu'à l'Ăhaggar.

En 1888, le capitaine Bissuel, du Bureau des Affaires Indigènes d'Alger, dressait la carte du massif de l'Ăhnet, qui est un district de l'Ăhaggar, de la façon la plus curieuse. Il avait profité de la présence, dans les prisons d'Alger, de plusieurs pillards touaregs capturés par les Chaamba, au cours d'un contre-rezzou. Mettant devant les Touaregs des petits tas de sable, il les avait invités à reproduire leur pays, et ceux-ci s'en acquittèrent très bien. Bissuel fournit alors aux géographes une carte des plus originales.

De 1890 à 1900, Fernand Foureau entreprit, avec une ténacité remarquable, l'exploration du Sahara central. Ses raids l'amenèrent jusqu'aux abords du Tidikelt et il pénétra même dans le Tassili des Ăjjer, remontant l'oued Imirhou jusqu'aux premiers points d'eau, mais il dut battre en retraite devant l'attitude agressive des Touaregs.

Cette ténacité devait d'ailleurs entraîner la formation de la mission Foureau-Lamy qui parvint, la première, à traverser l'Ăhaggar et à nous rapporter des relevés exacts (1899).

Désormais, l'Ăhaggar nous était connu, et grâce à l'activité des officiers du général Laperrine, dix ans plus tard nous en avions un levé parfait au millionième.

# CHAPITRE PREMIER

## APERÇU GÉOLOGIQUE ET GÉOGRAPHIQUE

Le relief de l'Ăhaggar apparaît en zones bien distinctes, correspondant à des terrains d'origine différente.

Grâce aux travaux récents de plusieurs géologues[1], les grandes lignes de sa structure nous sont bien connues ; le terrain étant presque partout à nu, les recherches en ont été grandement facilitées. Seulement la rareté des fossiles a paralysé le travail pendant plusieurs années et fait commettre, au début, quelques erreurs d'interprétation.

L'Ăhaggar proprement dit n'a jamais été immergé. Ce qui fait l'originalité de la structure géologique de cette région est la présence au Nord et au Sud de terrains semblables s'opposant symétriquement. La description géologique s'en trouve donc énormément simplifiée.

Le centre du pays est de formation vraisemblablement archéenne, composé de schistes métamorphiques (argilo-cristallins) où le gneiss et les micaschistes dominent ; cette structure ancienne a été percée par places par des roches granitoïdes qui se présentent ordinairement en dôme et qui donnent à certaines régions un aspect très particulier. Il faut ajouter des roches d'origine volcanique qui ont été déposées sur le massif soit par épanchement, soit par projection, les plus anciennes, très probablement à la fin du tertiaire, les autres au début du quaternaire.

Cette masse rocheuse se prolonge par une pénéplaine désertique, de formation également cristalline, qui l'isole des falaises du Tassili ; c'est ce que les géographes ont appelé la pénéplaine post-tassilienne.

Les Tassili sont formés de strates de grès très épaisses, d'âge primaire, dévono-siluriens. Ils s'étendent en arc de cercle, au nord et au sud du massif de l'Ăhaggar, formant vis-à-vis de lui un véritable bouclier. On doit une belle étude du Tassili

1. Gautier, Chudeau, Bourcart, C. Kilian, Th. Monod, Savornin, Perret.

1: Lhote MS25 Tuareg

du Nord au géologue C. Kilian, qui en a donné une coupe très détaillée [1] dont nous nous sommes inspirés pour établir le schéma du profil Ăhaggarien (fig. 1).

Le Tassili se présente sous forme de deux falaises gréseuses, l'une en assise sur l'autre, d'où la division en Tassili externe et Tassili interne.

Les grès du Tassili externe sont éodévoniens, formation continentale qui jusqu'à présent ne s'est pas révélée fossilifère. Ils reposent sur des schistes siluriens à graptolithes qui ont permis de dater ces différents terrains.

Les grès du Tassili interne appartiennent au silurien supérieur et n'ont pas livré de fossiles.

Fig. 1. — Coupe schématique nord-sud de l'Ahaggar.

La détermination de l'origine de ces grès, de formation continentale, puisque ne possédant pas de fossiles dans l'ensemble, a soulevé des problèmes très délicats. Pour Gautier, il s'agirait d'anciennes dunes consolidées [2]. Cette hypothèse permettrait alors de dire que le Sahara aurait déjà connu dans son histoire un climat désertique, que ce climat lui serait même familier si l'on tient compte du fait que les grès albiens que l'on trouve plus au nord auraient la même origine que les grès siluro-dévoniens sur lesquels ils reposent.

Les falaises du Tassili sont précédées d'un reg désertique, de formation dévonienne (méso et néo-dévoniennes), de largeur variable auquel on a donné le nom de pénéplaine prétassilienne.

Les plissements des montagnes de l'Ăhaggar sont dans leurs grandes lignes orientées S-SE, N-NO, et ce massif aurait donc

1. *Au Hoggar*, 1925.
2. *Le Sahara*, p. 61.

1: Lhote MS25 Tuareg

été altéré par le mouvement hercynien qui a formé la grande dorsale Médéa, Laghouat, Tadmaït, Tăfedest, Ăhaggar.

Le pays est extrêmement bouleversé et il doit ce caractère à de multiples émissions volcaniques qui l'ont littéralement truffé de roches éruptives récentes, le surélevant notablement en de nombreux endroits. L'étude de ce volcanisme est encore à faire en détail. Mais déjà le géographe Perret a démontré le processus de formation de l'Ăhaggar. En compagnie de A. Lombard, avec qui il a parcouru la Koudia en 1931, il a établi que les émissions de phonolithe étaient antérieures à celles d'andésite et de trachytes comme à l'Ăkarakar [1]. C'est ainsi que le Pic Ilâman, qui est formé de phonolithe, émerge au milieu d'une masse de basalte.

Le volcanisme n'est d'ailleurs pas localisé dans la Koudia. On en connaît également d'importants centres dans le bas Ăhaggar (Silet) sur le bord est de la dépression d'Ămadror, dans le Tassili où le massif de l'Ădrar (Ăzéo-Settefen) déborde sur le pays cristallin, dans la plaine d'Admer, dans le Ténéré, aux abords d'In Ezzan, ainsi qu'à I-n-Ziza dont l'appareil a plus de 30 km. de diamètre, et au Djebel Nahalet, dans le Tanezrouft.

Dans l'étude qu'il a faite, M. Perret distingue d'abord un vieux socle granitique soulevé d'un bloc qui fut altéré par des émissions volcaniques violentes, nous ayant laissé ces curieuses aiguilles, ces dykes altiers qui donnent un profil si dantesque à la haute Koudia où dominent la phonolithe, les andésites et les trachytes, et qui peuvent être rattachées au système pelléen.

Ce premier phénomène volcanique fut suivi d'une période d'érosion assez longue, puis d'une nouvelle période d'activité plutonienne avec formation de foyer d'émission, d'appareils de type *hawaïen*, provoquant des coulées de laves à l'état fluide qui couvrirent les plateaux.

L'Ăhaggar aurait alors bénéficié d'une période de pluviosité intense et les eaux auraient violemment entaillé les basaltes, creusant de profondes vallées. Il devait ensuite connaître une nouvelle période de volcanisme avec formation d'appareils de type *strombolien*, provoquant des coulées de laves très épaisses qui s'épanchèrent dans les vallées.

Enfin suivit une période de stabilité qui dure encore.

# CHAPITRE II

## LES RÉGIONS NATURELLES

La partie centrale de l'Ăhaggar, qui en est en même temps la plus élevée, est l'axe orographique du Sahara. Elle forme une masse assez compacte et tabulaire d'où émerge une pléiade de pics et de « gada ».

L'absence de toute formation forestière sur les montagnes donne au pays un aspect très particulier, revêche, inhospitalier. Toutes les roches sont noires, luisantes comme du charbon. Les crêtes sont démantelées, déchiquetées et, devant tant de grandeur naturelle, le voyageur est saisi, étreint, incapable de trouver les termes qu'il faudrait pour décrire un pays si fantastique, où se mêlent tout à la fois le merveilleux et le sinistre.

Les Arabes ont donné à l'Ăhaggar, le surnom de « Pays de la Peur ». On a raillé parfois cette appellation romanesque un peu trop employée par les reporters en mal de créer une ambiance d'épouvante. Pourtant nous imaginons facilement, pour l'avoir nous-même ressentie, l'impression écrasante qui devait saisir le voyageur au temps de l'insécurité lorsqu'il traversait sur son chameau les gorges d'Ărak ou de Takoumbaret et qu'il apercevait le Targui à l'air sinistre, tout de noir habillé, juché sur son méhari, la lance au poing.

L'Ăhaggar est vraiment un pays à la tonalité extraordinaire. Les masses « charbonneuses » sont coupées par des oueds aux sables blancs qui contrastent violemment avec elles. Dans les lits de ces oueds, quelques touffes de végétation, quelques épineux rabougris, tout en jetant une note plus claire, accentueraient, si possible, l'âpreté du pays. Ce n'est que dans la basse Koudia qu'apparaissent, dans de larges vallées, de belles taches vertes formées par d'énormes tamaris.

Les Kel Ăhaggar distinguent dans leur domaine six massifs principaux : l'Ătakor, la Tăfedest, l'Immidir ou Mouydir, l'Ăhnet, l'Ănahef et les Tassili.

L'Ătakor et ses dépendances. — L'Ătakor est le plus élevé et le plus important de tous ces massifs et c'est lui qui

[p. 17]

1: Lhote MS25 Tuareg

conditionne tout le réseau hydrographique du Sahara central. Il culmine à 3.000 mètres (pic Tăhat). Son socle se trouve entre 900 et 1.000 mètres et s'étend sur environ 130 km. de long et 90 à 100 km. de large. Deux sous-régions le flanquent : ce sont l'*Arefsa* et le *Tazôulet*.

L'Ătakor proprement dit, ou « crâne » de l'Ăhaggar, forme la partie centrale et son altitude moyenne est de 2.200 mètres. Surmontée d'aiguilles volcaniques qui lui donnent un profil en dents de scie, cette partie est la plus pittoresque du pays. Son accès est toujours difficile et l'altitude s'y élève très rapidement, sur de très courtes distances, par des décalages brusques et violents.

Les Touaregs distinguent dans l'Ătakor un pays long (haut)

Fig. 2. — Panorama des environs de l'Ilâman, vu du Pic Tahat.

l'Ăhaggar-oua-hegrin, et un pays court (bas) l'Ăhaggar-ouagezzoulen.

C'est le premier, en effet, qui supporte les plus hautes aiguilles et « gada », le Tăhat (3.000 m.), l'Ilâman (2.900 m.), l'Ăsekrem (2.780 m.) ; ce dernier célèbre par l'ermitage qu'y avait installé le Père de Foucauld et d'où l'on découvre un panorama unique.

L'Igezoulen est beaucoup moins tourmenté. Ce haut pays est le domaine du volcanisme. Les coulées de basalte recouvrent les vieux socles primaires et ont nivelé les dépressions anciennes formant de larges plateaux.

L'Ărefsa est contigû à l'Ătakor et s'abaisse en direction sud-sud-est jusqu'aux abords de la pénéplaine de reg. C'est dans l'ensemble un énorme massif granitique, aux formes arrondies dans la partie sud (Ădrar Ăzrou-n-Fad), plus bouleversé dans la région nord.

De larges vallées s'infléchissent vers le S-SO parallèlement à l'orientation générale du massif. La traversée Est-Ouest

1: Lhote MS25 Tuareg

s'opère par le passage d'un oued dans l'autre, en franchissant de petits cols peu élevés. Deux importantes montagnes dominent toute la région : l'Ilamane Outiline et le Tanarouatine.

Le Tăzôulet doit son nom à l'existence dans la région de petits gisements de fer (tazôuli). Le relief y est moins accidenté que dans les régions précédentes, les vallées sont plus larges, les cols moins abrupts. Aux granits verdâtres de l'Ărefsa se substituent des quartzites aux formes arrondies, très caractéristiques du pays cristallin. Un important massif au profil dentelé, le Seddereg, orienté NO-SE, forme la charnière entre l'Ărefsa et le pays du Serkout.

Les massifs sont de forme allongée et à dôme arrondi, ou

FIG. 3. — Paysage du Haut Ahaggar (Région du Tazoli) vu du Pic Serkout.

bien constituent par place des amas de gros blocs superposés les uns aux autres. Les régions intermédiaires entre deux dômes ne sont jamais complètement plates, mais toujours ravinées, formant des bassins de réception en éventail largement étalé; les roches désagrégées laissent sur le sol d'énormes grains de quartz qui rendent la marche pénible et provoquent parfois la chute des chameaux. Dans toute cette région, la végétation est rare, hormis dans quelques oueds où le *talha* s'est adapté et se maintient. C'est le pays de prédilection d'un curieux petit animal, très craintif, qui ressemble à la marmotte — le daman — et que les Touaregs appellent akaokao.

Le volcanisme a joué également un rôle important dans cette région. On y trouve de nombreux cratères et certains sols sont couverts de scories, de laves cordées de teinte rougeâtre qui leur donnent un aspect tourmenté.

Au nord du Tăzôulet s'étend un grand plateau qui, du sommet du Serkout, apparaît comme une vaste plaine ravinée,

où des pitons, la Takasint, l'Oul, l'Oukasi, l'Elakel, le Tăzôuli et l'In Tifar, émergent comme autant de doigts levés.

Le Tăzôulet, avec le Mont Ăleksod, à sa pointe nord, marque la ligne de partage des eaux entre les bassins de l'Igharghar et du T-i-n-Târabine, deux fleuves importants qui coulaient respectivement vers le nord et vers le sud. Mais au nord du petit centre de Bloumet cette démarcation est souvent indécise et l'on observe des phénomènes de capture visibles en plusieurs endroits. Le pays est bien pourvu d'eau et c'est ainsi que des terrains de culture irrigués ont pu être créés dans la vallée, entre Bloumet et Tazerouk, sur près d'une dizaine de kilomètres.

C'est ce bloc de l'Ătakor que les Touaregs Ihăggaren habitent de préférence tant que l'état du pâturage le permet, et qu'ils ne quittent qu'à regret pour des contrées plus favorisées. Les autres régions sont des annexes, le domaine de tribus plus ou moins récemment inféodées au groupe principal.

L'Ănahef. — A l'est, on trouve le massif de l'Ănahef, longue série de collines orientées N-NO-S-SE, donnant au nord sur la cuvette de Sérouanout qui marque la limite entre le terrain de parcours des Ihăggaren et celui des Touaregs Ăjjer, alors qu'au sud il s'ennoie dans le Ténéré.

La Tafedest. — Au nord-ouest de la Koudia, séparé de celle-ci par l'étranglement de l'Ărechchoum, s'allonge le massif de la Tăfedest, imposante chaîne montagneuse orientée Nord-Sud. Elle s'élève progressivement du sud au nord, et se termine par une énorme montagne en dôme, l'Oûdan, surmontée d'un clocheton au nom de légende, la Garet-ed-Djenoun, ou montagne des Génies.

La Tăfedest, d'environ 1.100 mètres d'altitude moyenne, n'est en fait que le prolongement de la Koudia, dont elle a été séparée à l'époque des grands plissements.

Les granits roses, souvent injectés de pegmatites, dominent dans sa constitution, qui semble assez homogène, à en juger par la similitude des formes qui se répètent constamment, et l'aspect général du pays.

Les coulées basaltiques de la Koudia ont atteint la partie sud-est du massif ; au-dessus du petit village d'Hirhafok, on peut voir de belles chaussées de basaltes verticaux qui limitent à certains endroits le lit de l'oued Gif-Aman. Aucun système

1: Lhote MS25 Tuareg

volcanique n'a été reconnu jusqu'à ce jour dans la Tăfédest même, et il n'en existe vraisemblablement pas.

Il a été signalé au nord, entre le Mont Edjeleh et l'Oûdan, des coulées basaltiques établies en nappes [1], mais l'Oûdan lui-même que l'explorateur Henri Duveyrier, et après lui, R. Chudeau et E. F. Gautier avaient supposé être volcanique, ne l'est pas. C'est une énorme masse granitique aux flancs abrupts qui en interdisent l'ascension avec les moyens rudimentaires dont on dispose au Sahara [2]. Son altitude, estimée primitivement à 2.770 m., n'est en réalité que de 2.375 m. [3]. L'intérieur du massif est d'un accès assez difficile, car les vallées et les cols praticables sont peu nombreux. Il ne peut être traversé transversalement qu'en quelques points et, ordinairement, les voyageurs le longent sur ses versants.

La Tăfedest est favorisée par la présence de points d'eau assez nombreux et, dans les oueds, l'eau se présente souvent à fleur de terre, coulant parfois en surface sur plusieurs centaines de mètres. Si la région a bénéficié de quelques pluies, un abondant pâturage couvre les hautes vallées, ce qui permet à plusieurs fractions de Touaregs Issekkemâren d'y nomadiser.

Tout autour des régions qui viennent d'être sommairement décrites, s'étend un véritable désert de reg, sans végétation, sans puits. C'est un pays usé, sénile, où pointent encore quelques rochers de granit, qui restent là comme des témoins des périodes reculées où les éléments n'avaient pas encore fait leur œuvre formidable de destruction.

Nous avons déjà parlé des Tassili, de leur nature géologique et du bouclier qu'ils forment tout autour de l'Ăhaggar.

Le Tassili-n-Ăjjer. — L'« enceinte tassilienne » se subdivise en plusieurs régions bien distinctes : Tassili-n-Ăjjer, Immidir, Ăhnet, et les petits Tassili qui, au sud, ferment incomplètement la barrière gréseuse que les Touaregs désignent sous le nom de Tassili-ta-n-Ădrar, Tassili-oua-n-Tin Rerhoh, Tassili-oua-n-Ăhaggar.

1. C. Kilian, *Au Hoggar*, 1925, p. 91.
2. La Garet-ed-Djenoun a été escaladée pour la première fois par les membres de la mission française alpine au Hoggar le 20 avril 1935 ; dans l'intéressant compte rendu qu'il en a donné, le capitaine Coche fait allusion en parlant de la Garet-ed-Djenoun, à un « formidable butoir de granit », mais ne signale pas de volcanisme.
3. Capitaine Coche, *la Montagne*, déc. 1935. C'est à quelque chose près la hauteur que lui avait accordée le Dr Maire (Mission du Hoggar, 1928).

1: Lhote MS25 Tuareg

Avec eux, nous pénétrons dans une région très uniforme d'aspect, particularité due à l'homogénéité géologique.

Les deux étages de grès déclinent l'un sur l'autre, en pente douce, sur la périphérie de l'Ăhaggar, pour aller s'immerger dans le reg de la pénéplaine prétassilienne.

Le Tassili-n-Ăjjer s'étend de la Tripolitaine à la vallée de l'oued Igharghar. C'est le plus compact, le moins tourmenté des Tassili. Il ne fait pas partie politiquement de l'Ăhaggar proprement dit ; mais géographiquement, il est difficile de l'en séparer. Son altitude moyenne est de 1.200 mètres ; il est coupé par de nombreux oueds qui ont créé des vallées encaissées, des cañons très profonds.

Le massif de l'Ădrar, situé sur le rebord sud, n'est autre qu'un très puissant appareil volcanique qui a surélevé la région de plusieurs centaines de mètres, couvrant le pays de laves, de scories et de bombes dans un rayon de 50 km. Grâce à sa haute altitude (2.300 m.) l'Ădrar draine chaque année une certaine quantité d'eau de pluie qui s'infiltre entre les blocs de basalte pour réapparaître à quelque distance de là sous forme de source et même de véritable rivière comme à Ihérir.

Le Tassili-n-Ăjjer est très probablement la partie la plus riche en eau du Sahara ; il est de tous les Tassili le plus élevé ; il s'étend sur plusieurs centaines de kilomètres, et ce sont ces conditions qui lui ont certainement valu d'être favorisé en humidité.

La végétation des Tassili est concentrée dans les cuvettes, comme dans la plaine de Dider et surtout dans les vallées. De nombreuses mares, plus ou moins persistantes, nous ont conservé les témoins d'une faune aquatique ancienne, d'énormes poissons-chats, des barbeaux ; et c'est dans la même région que fut retrouvé, il y a quelques années, l'un des derniers crocodiles qui aient vécu au Sahara central.

L'Immîdir. — L'Immîdir est le prolongement vers l'ouest du Tassili-n-Ăjjer. Incliné vers le N-O il est remarquable par sa forme oblongue, concavo-convexe. On y rencontre également des cañons pittoresques et de superbes torrents. C'est à Hâssi-el-Khenig que furent trouvés par Voinot, les premiers schistes à graptolithes qui s'intercalent entre les deux falaises gréseuses et ont permis de dater ces terrains. L'énorme massif de l'Ifetesen préside à la répartition des eaux qui vont

rejoindre le collecteur oued Myia ; son sommet, l'Iref-n-Ăkli culmine à 1.680 m., alors que l'altitude moyenne de l'Immidir est d'environ 550 m., donc beaucoup moins élevée que celle du Tassili-n-Ăjjer. Les points les plus pittoresques en sont certainement les gorges de Takoumbaret et d'Ărak, profonds cañons encombrés d'éboulis énormes. La traversée de l'Immidir, par la piste automobile de l'oued Ărak, entre les hautes falaises abruptes avec leurs clochetons ruiniformes, provoque l'émerveillement de tous les voyageurs.

Le pays est riche en eau et on a pu relever les traces d'anciennes cultures aujourd'hui abandonnées par suite du manque de main-d'œuvre. Il possède plusieurs sources sulfureuses, à Joraf, en particulier, où la température de l'eau s'élève à 40 degrés.

L'Ăhnet. — L'Adrar Ăhnet prolonge vers l'ouest les falaises de l'Immidir sans toutefois qu'il y ait continuité entre ces deux massifs qui sont séparés par l'oued Tésaret ; sur les autres faces, il confine au Tanezrouft.

Ce pays est maintenant bien connu. Monod et Bourcart nous en ont donné une monographie très complète.

L'Ăhnet n'est, en somme, que la pointe occidentale de l'enceinte tassilienne, mais l'homogénéité de cette enceinte ne s'y retrouve pas comme dans le Tassili-n-Ăjjer. Le plateau est torturé, et les masses gréseuses plus ou moins écartelées, coupées en de nombreux endroits, sont séparées par des « blancs » qu'a noyés le reg (à Alegn'ou, en particulier, d'après Monod).

L'Ădrar Ăhnet culmine vers 650 m., et son altitude moyenne avoisine 350 m. ; cette faible hauteur, alliée au voisinage immédiat du Tanezrouft, a une influence défavorable sur le climat du massif, nettement déshérité quant à l'humidité, comparativement à l'Ăhaggar, au Tassili-n-Ăjjer, et même à l'Immidir. On n'y observe aucun lieu de culture et, dit Monod, « il n'y a rien dans l'Ăhnet de comparable aux couloirs humides, voire aux marécages des régions voisines avec leur exubérante végétation » [1].

L'Ăhnet a la forme d'un fer à cheval au centre duquel on trouve l'erg Ennefous.

L'est du système est constitué par l'Ădrar Ăhnet propre-

[p. 25]

1: Lhote MS25 Tuareg

ment dit, et les reliefs moins importants de l'Ădrar Tarit et des monts Ădoukrouz.

L'Ădrar est une longue falaise tombant à pic, inaccessible ; les cols qui permettent la traversée du massif ne sont pas nombreux ; Foum-ez-Zgag, Imméden, Igliten, Mérédou, sont ceux employés par les principales pistes qui le coupent.

Au sud de l'Ăhnet, à une centaine de kilomètres dans le Tanezrouft, se trouve l'Ădrar I-n-Ziza, d'origine éruptive, avec sa belle marmite creusée dans la ryolithe, où viennent boire tous les moutons qui, de l'Ădrar des Iforas, sont conduits au Touat par les caravaniers.

Il y a d'ailleurs plusieurs points d'eau dans l'Ădrar I-n-Ziza qui, avec celui de Ouallen, à la limite sud-ouest de l'Ăcedjerad, ont une grande importance militaire et commerciale, car ils commandent le Tanezrouft.

Un peu au sud, à une vingtaine de kilomètres, se dresse un autre bloc volcanique, l'Ădrar Nahalet dont l'intérieur est d'un accès très difficile. Les quelques cañons qui y sont creusés sont encombrés d'éboulis énormes qui barrent la route aux chameaux. Plusieurs points d'eau y ont été reconnus, situés assez haut dans la montagne.

Tassili du Sud. — Au sud de Nahalet se trouve le petit Tassili-ta-n-Ădrar, infléchi en direction NE-SO, apparenté au Tassili de Tin Rerhoh que l'on trouve au SE. Situé dans le reg du Tanezrouft, long d'une soixantaine de kilomètres, il peut avoir 25 à 30 km. de largeur et ses falaises dominent la pénéplaine d'une cinquantaine de mètres.

Il forme un bloc compact où serpentent quelques ravins de peu d'importance ; il possède à l'heure actuelle trois points d'eau qui peuvent être considérés comme permanents : le *tilmas* [1] d'In Ăzaoua sur le versant NO, le puits de Ti-m-missao et l'aguelmame de Tamada sur le versant NE.

Une piste chamelière traverse le massif qui ressemble à une hammada ; le vent du Tanezrouft déferle sans cesse sur le Tassili et l'ensable par place, au grand avantage des chameaux, d'ailleurs, qui y trouvent un peu de pâturage (had) dans les endroits ensablés.

L'oued Ti-m-missao menace, par contre, de disparaître sous les dunes, et son puits est souvent obstrué par le sable. Ce

1. Le tilmas est un trou creusé à peu de profondeur dans le lit sablonneux d'un oued ; c'est un terme tamahak, équivalent de l'arabe *rédir*.

1: Lhote MS25 Tuareg

petit Tassili n'est pas un lieu d'habitat, mais son intérêt militaire est très grand : c'est un des « ponts » entre l'Ădrar des Iforas et l'Ăhaggar où passent également les caravanes allant sur I-n-Ziza, lorsqu'elles veulent éviter la grande chaleur du Tanezrouft.

Le Tassili de Tin Rerhoh est beaucoup plus déchiqueté que celui de Ti-m-missao et l'érosion a découpé ses grès, par place, en blocs aux formes étranges ressemblant parfois à des cheminées de fées, ou les a élimés considérablement à la base. L'épaisseur du massif ne dépasse jamais une vingtaine de kilomètres. Assez compact au sud du puits de Tin Rerhoh, il s'abaisse dans son prolongement vers le Tassili ta-n-Ăhaggar, et présente alors de nombreuses déchirures. Vers In Guezzam, il n'est plus marqué que par quelques buttes-témoins, perdues dans le sable du reg.

Il est assez curieux de constater à quel point l'enceinte tassilienne du sud est démantelée et érodée comparativement à celle du nord. Plusieurs voyageurs ont signalé ce phénomène sans trop en approfondir les raisons. C'est sa situation dans la zone inter-tropicale nord, soumise à l'action ininterrompue des vents alizés, qui est la raison de cette érosion intense. Elle confine à la zone soudanaise et, à ce titre, a dû recevoir dans le passé beaucoup plus de pluies que la barrière tassilienne du nord, ce qui n'a pas dû être sans conséquence sur l'érosion. Il suffit d'avoir séjourné un peu dans les deux régions pour se rendre compte de l'importance que joue actuellement le vent et comment celui-ci a une action beaucoup plus destructive au sud qu'au nord.

A part le Tassili-n-Ăjjer, et l'Immidir, les Tassili ne sont pas habités régulièrement par les nomades. Toutefois, nous devons signaler que l'Ăhnet, aujourd'hui déserté de plus en plus, était, il y a un demi-siècle, beaucoup plus fréquenté et constituait le fief d'une tribu qui, en raison de la sécheresse, tend à se fixer aux confins soudanais.

## CHAPITRE III

## HYDROGRAPHIE DU MASSIF CENTRAL SAHARIEN

Le caractère propre du Sahara actuel est son état désertique poussé à l'extrême, grâce à l'absence totale de rivières ayant encore une vie normale.

Il y a bien dans certains endroits du Sahara Central quelques mares persistantes et des filets d'eau coulant en surface, mais ils sont rares.

L'exploration du Sahara a révélé l'existence d'anciens fleuves puissants, aux affluents nombreux, mais remontant à des périodes très reculées et dont les restes se cachent bien souvent sous le sable, au point d'être parfois totalement invisibles.

Des cañons profondément creusés, des vallées largement entaillées, sont les témoins d'un régime fluvial intense. Mais pour trouver de l'eau d'une façon permanente, dans ces fleuves puissants, il faudrait remonter au début des temps quaternaires.

Nous avons vu que Perret, en étudiant les différentes manifestations volcaniques dans l'Ăhaggar, avait séparé plusieurs stades d'évolution du relief, et avait montré qu'après les coulées de basalte qui avaient recouvert les plateaux, une période d'érosion intense, due aux eaux, avait fortement entaillé les premières coulées.

Il n'est pas possible d'établir une chronologie certaine, ni de définir les différents stades de creusement des vallées; mais, d'après ce que nous connaissons de l'Égypte; d'après ce que nous apprennent les différents gisements paléolithiques reconnus au Sahara, les grandes glaciations quaternaires qui affectèrent l'Europe auraient eu comme contre-coup en Afrique septentrionale une période de grande humidité. C'est l'avis de tous les géographes qui se sont attachés à résoudre la question.

La haute altitude de l'Ăhaggar a donné naissance à la for-

[p. 28]

1: Lhote MS25 Tuareg

mation d'importants bassins : au nord, le bassin de l'Ighargar, au sud, le bassin du Tāmanrasset, et au sud-est, les bassins de l'In Ăzaoua et du Taffassasset.

Le caractère commun de ces bassins, sauf en ce qui concerne celui de l'oued d'In Ăzaoua, est de se terminer dans des cuvettes fermées, les rivières n'ayant pu atteindre leur exutoire naturel : la mer.

Ce fait, propre à toutes les régions sahariennes, démontre péremptoirement que le régime des pluies au Sahara a été dès le quaternaire assez régulier ; suffisamment fort pour que les fleuves creusent de longues vallées, pas assez cependant pour leur permettre de franchir les principaux obstacles qui leur barraient la route. Et ce caractère a eu sur l'avenir des fleuves et du climat, une influence considérable, car les matériaux de démolition, provenant des grandes hauteurs, étaient déposés dans le cours inférieur des fleuves, ce qui surélevait progressivement leur lit, finissait par l'obstruer, modifiait constamment le niveau de base, et les empêchait de trouver un profil d'équilibre normal. Par ce phénomène, les fleuves se sont détruits eux-mêmes en partie, livrant leurs eaux, par épandage sur de grandes surfaces, à l'évaporation et en privant d'autant le sous-sol et la végétation génératrice d'humidité. C'est par ce processus de surélévation et d'épandage que E. F. Gautier explique l'existence de beaucoup de regs qui seraient, pour certains, des alluvions déposées et plus ou moins égalisées par les vents. Cette interprétation, toutefois, ne doit pas être généralisée, car, comme l'a signalé Th. Monod dans le Tanezrouft [1], certains plateaux où il n'y a jamais eu de rivières, portent des alluvions dues à la désagrégation d'anciens conglomérats.

La disposition du réseau hydrographique de l'Ăhaggar est dominée par la nature volcanique des parties les plus élevées, et comme on l'observe toujours près des anciens volcans, les vallées sont disposées comme les rayons d'un cercle. Les anciens cratères ont été démolis par l'érosion, des barrancos se sont formés sur leurs flancs, faisant disparaître les parties meubles, s'arrêtant aux roches compactes plus résistantes. La présence de basaltes autour des principaux systèmes a protégé le relief, mais là où il n'en existait pas, la roche a été violemment attaquée par les eaux de ruissellement.

Les oueds ont un cours très irrégulier et, en montagne, toujours un caractère torrentiel. Les pluies, lorsqu'elles se pro-

1. Th. Monod, *Bull. Soc. Géol. de France*, t. V, 1935, pp. 513-518.

1: Lhote M525 Tuareg

duisent, provoquent des crues violentes, mais les roches dans lesquelles est entaillé le thalweg étant de dureté variable, l'érosion n'a pas joué régulièrement et le profil d'équilibre a été rompu en de nombreux endroits, aggravant encore le caractère torrentiel des crues. Dans la moyenne Koudia, les marmites de géants sont assez communes là où les roches granitoïdes dominent immédiatement les schistes argileux ou lorsqu'il y a accident tectonique.

Dans la basse Koudia, les vallées s'étalent largement dans les schistes, franchissant les derniers contreforts dans des cavées profondes en profil de V, et gagnent ainsi la pénéplaine où elles ne tardent pas à aller se perdre sous les sables des ergs ou des regs.

FIG. 4. — Profil de l'oued Tamanrasset. L'échelle en altitude a été exagérée 200 fois par rapport à celle en longueur. On voit donc que la pente de l'oued, au sortir de la partie montagneuse, est presque nulle.

Dans les Tassili de nature gréseuse, quoique le régime des eaux y soit à quelque chose près aussi irrégulier que dans l'Ăhaggar, le profil des oueds comporte beaucoup moins de ruptures, dues alors à des accidents tectoniques. Le profil, transversal et longitudinal, des oueds tassiliens est assez différent de celui des oueds de l'Ăhaggar.

Dans l'oued Djorat, en particulier, on distingue plusieurs terrasses superposées, l'inférieure étant composée de gros galets pris dans un ciment très dur, la supérieure d'alluvions meubles de moindre taille. Dans le fond de l'oued, qui coule directement à même sur la roche tassilienne, un cañon s'est creusé, profond et étroit.

On distingue donc là deux stades de creusement qui correspondent à deux périodes de grande activité, et le petit cañon est le travail récent des filets d'eau, qui coulent parfois plusieurs semaines après des pluies exceptionnelles entraînant

de grandes crues. Ces crues ne dépassent jamais à l'heure actuelle la première terrasse, comme en témoignent les fragments de troncs d'arbres ou de branches déposés par les eaux sur cette dernière.

Un caractère très marquant de l'Ăhaggar est l'absence presque totale de puits, en dehors, bien entendu, de ceux qui peuvent exister dans les terrains de culture ; c'est ce qui fait souvent l'admiration des Arabes habitués, dans leur Sahara calcaire, à aller chercher l'eau à une grande profondeur. Ils envient pour cela le pays des Touaregs qu'ils disent favorisé par la nature, car dans celui-ci l'eau se présente sous plusieurs

Fig. 5. — Coupe transversale de l'oued Djorat (Tassili-n-Ajjer).

formes : la source, le *rédir* ou *tilmas*, la *guelta* ou *aguelmame*, toujours situés dans le lit des oueds.

Les sources de surface sont peu nombreuses et se trouvent généralement dans les hautes altitudes, coulant suivant les saisons sur une longueur très variable, pouvant atteindre plusieurs centaines de mètres. Si dans le Tassili, à Ăhérir certaines peuvent prendre l'allure de petites rivières, elles ne forment, pour la plupart, qu'un tout petit filet d'eau. Dans la Koudia, l'oued Issekkerâsen, encaissé dans les basaltes, roule en surface pendant 5 ou 6 kilomètres, alimenté par une série de *guelta*, mais celles-ci finissent par tarir partiellement lorsque la période de sécheresse se prolonge.

L'eau disparaît alors sous le sable, dans le lit même de l'oued. Pour l'atteindre, les indigènes enlèvent le sable sur une profondeur de 30 à 40 cm., et trouvent la nappe phréatique : c'est le *tilmas*, le point d'eau pas excellence de la montagne touarègue, beaucoup plus courant que la source ou la guelta, mais

1: Lhote MS25 Tuareg

dont la persistance est liée aux pluies qui peuvent se produire à des périodes plus ou moins éloignées. Le tilmas est, si l'on peut dire, ubiquiste ; on le trouve aussi bien aux plus hautes altitudes que dans les parties basses de la Koudia.

Les *guelta* ou *aguelmame* sont des cuvettes naturelles creusées dans la roche, marmites plus ou moins profondes qui se remplissent d'eau au moment des crues ; elles sont presque toujours en relation avec une rupture de pente, et situées au pied de cette dernière.

Ces cuvettes peuvent atteindre jusqu'à 35 ou 40 mètres de diamètre. Ce sont elles qui ont permis la conservation de ce que l'on a appelé la *faune relique aquatique*, constituée par des poissons, des batraciens, des sauriens même, des insectes dulcaquicoles, des crustacés et des mollusques.

L'ennemi de la guelta est le soleil et ces grandes surfaces d'évaporation ne peuvent souvent se maintenir que grâce à l'existence de seuils de retenue qui conservent l'eau dans les sables à un niveau supérieur ; cette eau finit par suinter à l'étage inférieur, alimentant ainsi la guelta. L'évaporation est tellement sensible que le niveau d'eau est toujours supérieur en hiver où la chaleur est moins forte, qu'en été, même s'il n'a pas plu entre temps. Le phénomène d'évaporation joue également sur les rochers, formant réservoir d'eau, comme dans l'Ădrar du Tassili-n-Ăjjer et sur les sables des oueds ; un des cas les mieux connus est celui du petit village de Ăhérir où le niveau maximum des eaux est atteint vers janvier pour baisser ensuite progressivement, au fur et à mesure que l'on avance dans la saison chaude.

On connaît au Sahara central quelques résurgences thermales : près du massif de l'Ădrian, au sud de l'Ădrar Tedjaren, dans l'Ăhaggar, à Jôraf dans l'Immidir, à Tihoubar dans le Tassili-n-Ăjjer.

Bassin de l'Igharghar. — L'Igharghar est le plus important des oueds du Sahara français et s'étend du 23e au 34e parallèle, soit sur une longueur de 1.400 km. Ce serait l'ancien Nigris de Pline, le fleuve Triton d'Hérodote. Ses sources ne sont pas dans l'Ătakor proprement dit, mais dans le Tazôulet. La tête de l'Igharghar est représentée par l'oued Tarouda qui prend ses sources vers 1.900 mètres d'altitude. La ligne de partage des eaux est formée par l'Ădrar In Taraïne à l'ouest, les crêtes qui dominent le petit centre de culture de

PL. 1.

Type de paysage dans le Haut Ahaggar. Nous voyons ici le massif granitique du Serkout. La végétation disséminée dans l'oued, faite d'acacia et de chebrok, donne un aperçu de la densité des plantes dans les hautes vallées de la montagne.

Aguelmame d'Issekkerasen après une crue récente de l'oued. Ces mares plus ou moins pérennes abritent parfois une faune résiduelle, poissons, batraciens, insectes, etc. Le crocodile qui a été découvert dans le Tassili-n-Ajjer, n'existe pas dans l'Ahaggar.

[p. 30 A]

PL. II.

L'oued Imirhou, paysage type du Tassili-n-Ajjer avec ses hautes falaises à pic surplombant les vallées de plusieurs centaines de mètres. On aperçoit dans le fond de la vallée la piste chamelière que suivent les gens et les caravanes.

Certaines régions du Tassili sont très démantelées et les roches présentent souvent de profondes alvéoles où les Touaregs trouvent abri contre la chaleur et y construisent de petits enclos de pierres pour parquer les chevreaux. C'est sur les parois de ces alvéoles que l'on a découvert des peintures rupestres millénaires abritées ainsi des agents d'érosion et de destruction.

[p. 32 B]

1: Lhote MS25 Tuareg

Bloumet d'une centaine de mètres, l'Ădrar Edekel, et au nord-est, le Djebel Ounane. Il ne collecte donc qu'une faible partie des eaux de la Koudia ; pourtant, dès le petit centre de culture d'Idelès, son lit prend une ampleur considérable qui ne fait que s'accentuer en allant vers le nord, car les massifs de la Tăfedest, de l'Edjereh, du versant est de l'Ifétessen, viennent lui apporter leurs eaux ; avant qu'il ait quitté l'Ăhaggar, l'Igharghar est vivifié par plus de 130 sources. Une fois passé le Tassili à Ămegid, il reçoit à travers et sous les dunes d'Issaouane toutes les eaux du versant nord du Tassili-n-Ăjjer. Suivant le synclinal oriental de la grande dorsale hercynienne Ăhaggar, Laghouat, Médéa, l'Igharghar devient le collecteur de toute cette immense région, mais malgré cela il ne put jamais franchir le seuil de Gabès pour gagner la mer, et vient mourir au pied de l'Atlas saharien, dans la dépression des grands Chotts, à un niveau inférieur à celui de la mer.

Bassin de l'oued Tamanrasset. — L'oued Tămanrasset, originaire de la Haute Koudia, prend ses sources au pied du massif de l'Ăsekrem (2.780 m.). Il coule en direction sud-ouest entre le 23e et le 21e parallèles ; son lit n'est plus visible après le 1er degré Est de Greenwich, et le fleuve, comme l'Igharghar, doit aller mourir dans un bassin fermé. Dans le Tanezrouft, il reçoit plusieurs affluents provenant de la partie occidentale de la Koudia, ainsi que le Tekouiat dont les tentacules glanent des eaux depuis les contreforts du pic Ilaman jusqu'aux abords de la Tăfedest.

Son bassin de réception est formé, au nord de la Koudia, par les montagnes d'Hirhafok, le versant sud-ouest de la Tăfedest, à l'ouest par l'Asegrad et le versant sud de l'Ădrar Ahnet, au sud par l'Ăkarakar et l'Ădrar Haggérène.

L'oued Tămanrasset est torrentueux jusqu'à la cuvette de Tămanrasset et accuse plusieurs ruptures de pentes très sensibles ; au sortir des montagnes, c'est-à-dire dans le Tanezrouft, son lit ne se signale plus que par la présence d'un lacet argileux sur lequel poussent encore, par ci, par là, quelques touffes de graminées. Ces crues se font pourtant encore sentir jusqu'aux abords de Ti-m-missao.

Bassin de l'Ăzaouak. — L'Ăzaouak est la seule rivière qui au quaternaire put atteindre l'océan ; son débit fut certainement beaucoup plus considérable que celui de ses voisins, et cette force peut s'expliquer par le fait qu'en dehors des eaux

1: Lhote MS25 Tuareg

de l'Ăhaggar, il reçoit également celles du versant occidental de l'Aïr, du Tégama, de l'Ădrar Tahoua, du Damergou, etc... car l'Ăzaouak n'est pas autre chose que la tête primitive de l'actuel Niger. On a longtemps supposé que l'oued Taffassasset était le même oued que celui qui passe au puits d'In Ăzaoua ; des explorations récentes ont démontré qu'il n'en était rien, qu'une ligne de hauteurs séparait le Taffassasset de l'In Ăzaoua, qui forment deux bassins différents, l'un allant vraisemblablement vers le Tchad, l'autre vers l'Atlantique. Les véritables sources de l'In Ăzaoua sont situées dans le Ténéré, et des eaux, venues très certainement du versant oriental de l'Ănahef ainsi que du versant nord de l'Aïr, viennent grossir son cours avant le puits d'In Ăzaoua. Plusieurs grands oueds issus du versant sud de l'Ăhaggar, le Ti-n-Tărabin, l'Irarrer, le Zazir, le rejoignent aux environs d'In Guezzam, et les indigènes lui donnent alors le nom de T-i-m-Mersoï. Il forme, un peu au sud, une vaste dépression connue sous le nom de Tessellamane ; arrêté à cet endroit par les falaises crétacées, il y fut peut-être retenu un certain temps, formant un vaste lac, jusqu'au jour où il put franchir la falaise et continuer vers le sud. Cette dépression du Tessellamane a été visitée par la mission du Transsaharien en 1912 et le géologue Chudeau la comparait alors au « glint » scandinave.

C'est sur les bords de cette dépression et aux alentours que fleurit une des plus belles civilisations sahariennes connues jusqu'à ce jour : celle de Taferjit-Tamaïa, qui nous a laissé une industrie osseuse pleine d'intérêt.

L'Ăzaouak entre ensuite dans la zone sahélienne qui est encore vivifiée annuellement par des chutes d'eau importantes, et son lit, taillé dans les argiles, est profondément marqué.

Le Niger actuel serait le fruit d'une capture relativement récente, et il devait primitivement se perdre au nord ou au nord-ouest de Tombouctou ; ce n'est qu'après avoir franchi le seuil de Tosaye qu'il put rejoindre l'Ăzaouak et s'unir à lui, revivifiant le cours inférieur de ce dernier, alors que son cours supérieur, comme celui du Niger saharien, était la proie de la sécheresse et de l'érosion éolienne.

Bassin du Taffassasset. — Le Taffassasset a ses sources dans le Djebel Ounane, qui domine la dépression de l'Ămadror, et c'est par conséquent un oued ahaggarien, mais il doit son importance aux eaux qui lui sont fournies par le versant

sud du Tassili-n-Ăjjer et en particulier par le massif de l'Ădrar. La confusion, qui eut lieu pendant longtemps à propos des cours respectifs des oueds Taffassasset et In Ăzaoua, a été éclaircie. En 1935, une reconnaissance put remonter le cours de l'In Azaoua jusqu'aux sources et constater l'existence de deux bassins différents [1].

Le caractère du Taffassasset est de couler de bout en bout sur un terrain de reg presqu'entièrement cristallin. Il a un profil d'équilibre de pente douce et régulière, sans que son cours soit marqué par des décalages de niveau brusques et c'est pourquoi il a été très facilement la proie du vent et du sable.

A une vingtaine de kilomètres de ses sources, son lit est représenté par des touffes de graminées presque complètement ensablées. Au puits d'In-Ăfaleleh on trouve encore une belle forêt de tamarix, et les berges de l'oued, entaillées dans des affleurements gréseux, sont nettement conservées. On peut encore le suivre très facilement pendant 150 km., après quoi il disparaît sous le sable ; pourtant le lit se révèle, de loin en loin, par une très vague dépression à fond argileux, dans laquelle on trouve des coquillages d'eau douce, des ossements de poissons, et surtout beaucoup d'outils préhistoriques, qui sont autant de témoins des habitats humains anciennement fixés sur ses bords.

La dépression argileuse suit une direction Nord-Sud jusqu'à hauteur de Bilma, et plusieurs vallées de moindre importance, issues du massif de l'Aïr, d'une part, et du Tassili oriental, d'autre part (région de Ahola-Er-Roui), viennent la rejoindre.

Sur l'itinéraire Achegour-Aïr, il existe une vaste cuvette qui peut atteindre 80 km. de large. S'agit-il d'une cuvette terminale, ou bien, comme nous le pensons, du lit de l'oued qui poursuit son cours plus au sud pour aller vraisemblablement rejoindre le Tchad ?

A ces bassins très importants il faut ajouter la dépression fermée des Sebkra Mekerrhane, et Azzel Matti, qui reçoivent plusieurs oueds, issus des versants nord de l'Ăsegrad et de l'Ăhnet, et de la pointe nord-ouest de l'Immirdir (oued Ăsouf Mellen, Tessaret et el Djaret). Les oueds, issus du versant sud de l'Ăhnet, vont se perdre sous les sables du Tanezrouft, pour rejoindre peut-être l'oued Tămanrasset.

1. Capitaine Arnould, lieutenant Florimond, Henri Lhote.

# CHAPITRE IV

## CLIMATOLOGIE

Le caractère désertique du climat saharien est connu depuis la haute antiquité, et tous les auteurs anciens ont décrit les régions se trouvant au sud de l'Afrique du Nord comme impénétrables à cause de leur aridité.

L'étude géologique du Sahara semble démontrer qu'au cours des différentes époques il connut déjà des périodes d'assèchement, et c'est ainsi, comme nous y avons déjà fait allusion, que les grès albiens, d'une part, les grès siluro-dévoniens d'autre part, ne seraient pas autre chose que des dunes consolidées.

Il y eut également de grandes périodes d'humidité. L'ancienne faune de l'Afrique du Nord ainsi que celle que nous ont révélée les gravures rupestres du Sahara et quelques gisements préhistoriques attestent nettement l'existence d'un climat beaucoup plus humide que l'actuel. Il ne faut pas croire cependant que ce climat pouvait être semblable à celui qui règne de nos jours sur les régions équatoriales.

La faune, en effet, semble avoir toujours eu des affinités avec celle que nous observons dans les steppes, ce qui correspond à un climat d'humidité moyenne, avec une somme annuelle de précipitations s'établissant autour de 1.000 m /m.

L'état désertique du Sahara devait être un fait accompli à l'époque romaine.

Les causes directes et indirectes de la formation du désert sont le climat et la structure. Par sa situation à la limite de la zone intertropicale, cette grande masse continentale est le centre d'une aire de hautes pressions continues que l'absence de barrière rocheuse sur la côte Atlantique n'a pas atténuée, comme cela s'est produit sur la côte ouest de l'Amérique. Le sol, privé des précipitations atmosphériques qu'éloignent les zones de haute pression, soumis à une succion ininterrompue de l'air sec toujours en mouvement, sous une latitude où la chaleur solaire est encore très élevée, a fini par refuser la vie à la

1: Lhote MS25 Tuareg

végétation. Il y a eu déséquilibre entre l'humidité relative du sol et le pouvoir d'absorption des vents au bénéfice de ces derniers.

Le climat désertique, d'après les manuels de géographie [1], est caractérisé par une somme annuelle de précipitation inférieure à 250 millimètres. Au Sahara cette somme dépasse rarement 100 millimètres et, certaines années, elle n'est pas atteinte. L'Ăhaggar, par sa haute altitude, est un peu privilégié. On peut dire qu'il ne se passe pas une année sans que le massif ne reçoive quelques pluies, ce qui ne veut pas dire qu'il pleuve alors partout. Tămanrasset est resté plusieurs années sans recevoir une goutte d'eau et la sécheresse dans le massif est parfois si forte que les Touaregs sont obligés d'aller transhumer sur les confins du Soudan.

C'est naturellement sur les hauts pics qu'on enregistre le plus de précipitations : les orages éclatent généralement en été, alors que la zone des basses pressions équatoriales s'étend parfois jusqu'au désert. En hiver, sous l'influence de vents d'ouest, la pluie peut survenir. Au cours de l'année 1929, nous n'avons pas enregistré moins de onze journées de pluie, en mars, avril, mai, juin, juillet et août ; mais à part trois grosses pluies qui ont entraîné des coulées d'oueds, il s'agissait de petites averses fines qui marquaient à peine le sol.

On observe parfois des chutes de grêle, et certains hivers, particulièrement rigoureux, la neige recouvre, pour quelques heures, les pics de l'Ătakor.

L'Ăhaggar suit, au point de vue des saisons, le régime des zones tempérées, c'est-à-dire un cycle divisé en quatre périodes dont le milieu correspond, à quelques jours près, aux solstices et aux équinoxes, mais le passage d'une saison à l'autre est beaucoup plus brusque que chez nous. Le printemps est frais, agréable, l'automne est d'abord chaud comme l'été (influence du passage du soleil au zénith), puis brusquement froid comme l'hiver ; ce dernier est très accusé.

Les Touaregs distinguent quatre saisons : *Aouellen*, *Amaouane*, *Tadjreste* et *Tafçite*.

*Aouellen* correspond à l'été et s'étend de la mi-mai à la mi-août. C'est la période où le cœur bat, disent-ils, où l'on est oppressé par la chaleur, où les tilmas sont généralement taris. Ils définissent cette saison en précisant que c'est celle de la vie active dans les terrains de culture.

1. DE MARTONNE, *Traité de Géographie Physique*, 2e éd., p. 220.

1: Lhote MS25 Tuareg

*Amaouane* va de la mi-août à la mi-novembre ; c'est la saison où l'on n'a pas besoin de boire beaucoup, où il n'y a pas beaucoup d'eau dans les tilmas. C'est au cours de cette saison que sont célébrés les mariages ; par extension, c'est la période où l'on revêt de beaux vêtements et pendant laquelle on s'amuse beaucoup.

*Tadjreste* va de la mi-novembre à la mi-février. Le nom de cette saison est synonyme de « se recroqueviller ». C'est la saison froide où l'eau est abondante dans les tilmas, où le beurre reste consistant dans les récipients. Les Touaregs en profitent pour entreprendre de grands voyages.

*Tafçite* va de la mi-février à la mi-mai. La chaleur fait couler le beurre, qui est conservé liquide dans les récipients.

La température de l'Ăhaggar est celle des régions désertiques chaudes ; l'amplitude thermique annuelle est considérable et peut atteindre 46° (— 4 + 42) [1] ; cette amplitude est malgré cela très inférieure à celle du bas Sahara, pays plat avec ses dunes et ses Tanezroufts. La mission Foureau-Lamy a enregistré — 14° le 29 décembre 1899 à une journée de Tiressoutine. Il a été noté — 8° en janvier 1935 dans l'erg d'Admer pour + 52 à l'ombre l'été, aux abords de l'Immidir, ce qui fait une amplitude de 66°. On enregistre une moyenne de 6 à 8 jours de gelée par an, à Tămanrasset, mais il va de soi qu'aux hautes altitudes il faut doubler ou même tripler ces chiffres.

Les amplitudes journalières sont également très accusées, plus fortes l'été que l'hiver (28 et 22). Ce qui est remarquable, c'est l'abaissement de la température en montagne à la tombée du soleil ; en l'espace de 20 minutes, de 17 h. à 17 h. 20, le thermomètre descend de 8° à 10° (observation faite en septembre 1931 à Tămanrasset).

Par suite de la grande sécheresse de l'air, la nébulosité du Sahara est très faible et on peut compter au Nord de l'Ăhaggar jusqu'à 220 journées de ciel pur par an [2]. L'Ăhaggar ne bénéficie pas d'un ciel si pur et un chapeau de nuages recouvre souvent les hautes montagnes de la Koudia, hiver comme été. L'été, le contre-coup des tornades soudanaises entraîne une nébulosité plus forte qu'en hiver, et l'on compte une moyenne de 8 jours de ciel pur en juillet pour 13 jours en janvier. Cette

1. Ces chiffres n'ont pas été relevés à Tamanrasset, mais à différentes altitudes du massif.

2. Voir à ce sujet le tableau VII dans l'aperçu météorologique par Lasserre in : *Les territoires du Sud de l'Algérie*, t. 1, pp. 177-262.

1: Lhote MS25 Tuareg

nébulosité est plus forte le matin, diminue avec les heures chaudes de la journée ; les nuits sont par contre d'une grande luminosité et, comme l'a fait remarquer Perret, on comprend mieux lorsqu'on a vu les merveilleuses nuits étoilées de l'Afrique que les Égyptiens et les Arabes aient été des astronomes remarquables [1].

Le vent est l'élément climatique le plus gênant du Sahara et de l'Ăhaggar, car il est pour ainsi dire de tous les instants.

Il trouve une prise facile dans les éléments désagrégés des roches, et se transforme alors en vent de sable qui oblige, gens et animaux, à se mettre à l'abri. Dans les Tanezroufts, il acquiert toute sa violence et, du matin au soir, particulièrement l'été, il souffle avec une force insoupçonnée, transportant une quantité prodigieuse de poussières sablonneuses et de petites boules de quartz qui viennent aveugler le voyageur osant affronter ces régions à des époques si peu propices. Il ne permet pas de voir à plus de quelques mètres devant soi, et son action est désastreuse pour le caravanier car il active, avec une vitesse inouie, l'évaporation de l'eau de réserve contenue dans les outres en peau de bouc.

Le brassage des couches d'air atténue et aide à supporter, en certaines circonstances, l'action thermique du soleil.

Le climat de l'Ăhaggar est, en fait, à considérer comme sain, mais la sécheresse extrême de l'air le rend malgré tout très anémiant et déprimant pour les Européens dès qu'ils dépassent un certain temps de séjour.

Pour les Touaregs qui ne savent pas se protéger contre les changements brusques de température, il est un agent de sélection puissant dans le bas-âge, les enfants chétifs et malingres disparaissent, et chez les adultes les bronchites et les pneumonies font tous les ans un grand nombre de victimes dans les campements.

1. Le climat du Sahara, *Ann. de Géog.*, t. XLIV, 15 mars 1935.

# CHAPITRE V

## LA FLORE

Un pays montagneux n'est pas seulement un refuge pour les hommes, mais aussi pour les animaux et les plantes que l'homme ne fait que suivre. C'est le cas de l'Ăhaggar, comme celui de tous les massifs montagneux du Sahara. Lorsqu'on parle à un caravanier arabe du pays des Touaregs, son visage resplendit, et il évoque immédiatement les oueds à la végétation luxuriante, les « forêts » denses aux arbres merveilleux, les pâturages d'une richesse inusitée. Pour tout cela, aux yeux d'un Arabe, l'Ăhaggar est un pays riche. Ce jugement est un peu fantaisiste et exagéré, mais bien dans l'esprit des descendants du Prophète qui aiment à tout enjoliver. La vérité, c'est que le massif central saharien possède une flore beaucoup plus variée que tous les pays avoisinants, que cette flore acquiert, lorsqu'elle existe, une certaine densité inconnue du Sahara arabe.

L'Ăhaggar assez bien pourvu en eau, avec ses vallées et ses flancs de montagne abrités, a permis à certaines essences de se maintenir, et même de prospérer, tout au moins lorsque les pluies sont abondantes.

C'est de cette végétation que dépend, en fait, la vie des Touaregs, car la rareté des puits peut limiter le rayon d'action de l'homme ; la vie des animaux qui le nourrissent et le transportent est liée aux pâturages et l'on s'aperçoit que les déplacements des campements sont beaucoup plus en relation avec le tapis végétal qu'avec les points d'eau.

Mais pour subsister au Sahara et même dans l'Ăhaggar, la flore a dû faire des prodiges d'adaptation pour résister à la sécheresse parfois prolongée et à la forte chaleur. On peut même dire que les plantes qui n'ont pas su s'adapter ont dû disparaître, ont été éliminées d'office. L'on s'aperçoit aussi que par le changement de climat, un monde entier meurt alors qu'un autre naît.

Parmi les caractères les plus saillants de la flore désertique, on observe une disproportion anormale de la taille entre les

1: Lhote MS25 Tuareg

organes souterrains et les organes aériens. Les premiers sont extrêmement développés en longueur et rayonnent de façon à augmenter la surface d'absorption d'humidité, alors que les seconds sont généralement réduits à leur plus simple expression de façon à présenter le moins de surface possible à l'évaporation. D'autres artifices permettent à la plante de résister à la sécheresse de l'air : couvrant l'épiderme, une fine pellicule de sel, tirée du sous-sol, fait fonction de capteur d'humidité, ou bien encore des poils masquent ses pores et les protègent de l'action trop violente du soleil, tout en formant autour d'eux une petite chambre à atmosphère intermédiaire entre celle de l'extérieur et celle de la plante.

Dans certains cas, ce sont les racines qui sont enfermées dans un étui calcaire de sable agglutiné qui les protège de l'échauffement du sol.

Ce sont là des caractères bien faits pour frapper l'imagination et surtout attirer l'attention des biologistes et des savants.

Ces phénomènes d'adaptation ne sont pas très anciens, car la flore saharienne n'a pas toujours eu ce caractère désertique et l'Ăhaggar, grâce à sa haute altitude et à son climat plus tempéré, a conservé ce que l'on peut appeler une flore relique.

Cette flore recèle aux hautes altitudes des plantes d'origine méditerranéenne, alors que le bas pays possède des arbres essentiellement soudanais. Tout cela confirme le passé humide du Sahara, en est plus ou moins le vestige.

Quelle était alors l'allure de la végétation de ce passé ? Elle devait avoir un caractère steppique et ressembler à celle que l'on trouve de nos jours dans la zone soudanaise, caractérisée par les mimosées et les graminées. La montagne devait posséder des essences particulières et constituer des îlots où le mélange des flores devait être courant.

On a pu penser que cette flore saharienne avait eu un caractère plus « forêt tropicale ». L'existence de lianes comme « salvadora persica » qui ont évolué en arbres, réalisant une adaptation fort curieuse, peut le faire supposer, mais les témoins actuels sont beaucoup plus steppiques que forestiers.

Il se peut que cette steppe ait eu par endroits un caractère de savane, comme on l'observe dans certaines régions du Soudan, et qu'elle ait possédé des marécages assez étendus et permanents. Le professeur Chevalier a décrit des graminées de

1: Lhote MS25 Tuareg

marais découvertes dans l'Ădrar des Iforas [1], ce qui confirme ce dernier point de vue.

Le Docteur Maire, professeur de botanique à l'Université d'Alger, a dressé ces dernières années un inventaire complet de la flore du Sahara central, qui peut être considéré comme définitif. On est stupéfait de constater qu'il a pu établir la liste de 616 plantes différentes dans un pays au caractère désertique bien marqué.

Le Saharien averti, sans être botaniste, est lui-même frappé par la diversité de la flore et son attention est retenue par le grand nombre d'espèces représentées, mais, par contre, par le petit nombre de représentants de chacune. Le Docteur Trabut a bien mis ce caractère en relief et fait ressortir surtout que ce phénomène ne peut être que le résultat d'un déboisement énorme dont l'homme, en particulier le nomade, destructeur éternel de la végétation, est peut-être aussi responsable que le changement de climat.

Le Docteur Maire a défini dans l'Ăhaggar trois étages botaniques différents : étage tropical, étage méditerranéen, étage méditerranéen supérieur.

1° Étage tropical. Pénéplaine, et jusqu'à 1.700-1.800 mètres d'altitude. Étage le plus riche au point de vue végétal, sinon pour la densité des espèces, du moins pour le nombre de variétés puisque l'on en a identifié jusqu'à 511. La végétation est surtout caractérisée dans les vallées par des épineux (Acacia tortilis et Acacia seyal) associés à une graminée (Panicum turgidum) et à un grand nombre d'arbres et arbustes de types soudanais : l'*Irak* (Salvadora Persica), le *Téborak* (Balanites Egyptiacus), le *Tagart* (Maerua crassifolia), le *Tourha* (Calotropis procera), l'Acacia blanc (acacia albida).

2° Étage méditerranéen, qui va de 1.800 à 2.300-2.400 m. Compte 209 espèces, en comprenant celles existant à l'étage inférieur qui montent au-dessus de 1.800 mètres. A cet étage la végétation change complètement d'aspect ; les arbres d'affinité soudanaise ont disparu pour faire place à une végétation d'affinité méditerranéenne dont certaines espèces, comme l'olivier sauvage (Olea Laperrini) et le pistachier (Pistacia atlantica) sont considérées comme de véritables

1. Aug. Chevalier, Sur une plante fossile de la période fluviale saharienne, *Bull. du Muséum*, t. V, n° 1, 1933, pp. 83-87. Nous avons trouvé nous-même des graminées fossiles du même genre, au sud de l'Ahaggar et dans le Ténéré, souvent associées avec des bois d'acacias.

1: Lhote MS25 Tuareg

reliques. L'Oléa (l'*oléo* des Touaregs) ne se reproduit plus dans l'Ăhaggar. On ne voit pas de jeunes pieds, mais au contraire des vieilles souches noueuses ne portant que quelques ramures vertes ; la floraison et la fructification en sont des plus irrégulières ; l'arbre végète doucement. Il descend jusqu'à 1.400 mètres (O. Outoul, bas Tarhananet), et est souvent associé au *Télokat* (Ficus Salicifolia), bel arbre qui fleurit et fructifie régulièrement et dont les Touaregs mangent la petite baie. Mieux adaptés, de beaux peuplements de *Télokat* descendent plus bas que l'Oléa et trouvent leur plein épanouissement vers 1.800 mètres. L'arbre le plus commun de tout cet étage est le *Tahounek* (Rhux oxyacantha), à tronc noueux, et dont les branches portent de longues épines. Il ne monte pas si haut que l'oléa et descend plus bas. Il en existe de superbes groupements dans les oueds In Daladj, Ilâman, Tarhananet, Eferer.

Il y a dans l'Ăhaggar un arbre également très commun ; c'est le *defla*, ou laurier rose (Nerium Oleander) qui remonte très haut, jusqu'à 2.000 mètres, et vit dans tous les endroits humides où la nappe aquifère est à peu de profondeur ; les chameaux qui se laissent tenter par ses fleurs roses, lorsqu'ils ne les connaissent pas, meurent empoisonnés [1].

3° Étage méditerranéen supérieur, qui va de 2.300 à 3.000 mètres, c'est-à-dire jusqu'aux plus hautes cimes. Ici, la flore est purement méditerranéenne comme l'indique la présence de *Clematis flammula*, et on ne compte pas plus de 36 espèces. L'olivier se rencontre encore, mais on sent que cet arbre, plus que partout ailleurs, n'est plus dans son élément naturel.

La végétation ne se tient plus uniquement dans les vallées, mais elle envahit volontiers les flancs des montagnes, les éboulis et plateaux basaltiques, formant un tapis aux couleurs délicates où viennent se repaître chèvres et chameaux.

Parmi les plus grandes curiosités botaniques du Sahara, il faut citer un conifère dont l'espèce s'est maintenue au Tassili des Ăjjer, un magnifique cyprès, (Cupressus dupreziana), pouvant atteindre plus de 10 mètres de haut et 6 à 8 mètres de circonférence dont les représentants, aujourd'hui réduits à

1. Il est curieux de constater que les chameaux nés dans l'Ahaggar ne mangent jamais de laurier rose. Ils en connaissent d'instinct le danger et leurs maîtres s'efforcent de les en dégoûter en leur frottant le nez avec des feuilles. Ce sont surtout les chameaux nés au Soudan, où cet arbre n'existe pas, et transportés dans l'Ahaggar, qui en sont les victimes.

1: Lhote MS25 Tuareg

une vingtaine, sont tous groupés dans la région de Tamrit (1.200 m. d'altitude) exactement dans l'oued Inaléouen. C'est là un témoin éloquent d'un climat tempéré.

La plupart des arbres et plantes de l'Ăhaggar sont comestibles pour les chameaux et les chèvres, et sont d'autant plus nutritifs que, grâce à la nature du terrain, ils sont tous assez riches en sel. Ces qualités ont été mises à profit par les indigènes qui se font les agents directs du déboisement en abattant, à coup de hache, les grosses branches des arbres, en particulier des acacias, pour les mettre à la portée de leurs animaux.

C'est le cœur serré que l'on parcourt certaines vallées de la Koudia en avançant au milieu de peuplements importants, complètement décimés, dont les troncs sont sectionnés à un mètre du sol.

Pour la végétation arboricole, l'absence de jeunes sujets est quasi totale, ce qui permet d'envisager la disparition complète des arbres dans un temps relativement court, si l'on n'y remédie pas. Jusqu'à ce jour personne ne s'en est soucié. Une lutte à mort est déclarée entre la chèvre et l'acacia, où les deux antagonistes ont bien des chances de n'en sortir vivants ni l'un ni l'autre, et ces régions qui, grâce à leur altitude et par conséquent à leur climat privilégié avaient pu conserver un certain nombre d'espèces végétales rendant encore possible la vie, risquent d'être réduites à l'état de désert absolu avant qu'il soit longtemps.

# CHAPITRE VI

## LA FAUNE

La faune d'un pays aussi désertique que le Sahara, dont le climat s'est desséché depuis des siècles, présente logiquement des caractères très spéciaux. Elle ne peut comprendre que des formes résiduelles d'espèces anciennes ayant pu s'adapter à un état de fait nouveau.

C'est aujourd'hui une faune très pauvre par les espèces comme par les individus.

Faune antique. — Nous avons vu, dans les chapitres qui précèdent, par quels stades physiques le Sahara est passé ; l'état d'humidité dont il bénéficia longtemps, en provoquant une vie végétale active, devait avoir des conséquences semblables sur la faune.

En fait, on a retrouvé des ossements d'éléphants antiques, de buffles antiques, de zèbres, de poissons datant de la période pléistocène, des ossements d'hippopotames, de rhinocéros, de girafes, de crocodiles, de poissons, etc... de la période néolithique.

Des hommes ont même bien connu cette période, puisqu'ils se sont complus à nous laisser sur les rochers de multiples gravures représentant des animaux qui leur étaient contemporains.

Lorsqu'on se trouve devant un tas d'ossements considérable d'où émergent des dents d'hippopotames ou des mâchoires d'éléphants, qu'alentour il n'y a que du sable à perte de vue, l'on croit volontiers rêver !

Pourtant les faits sont là.

Cette période n'est d'ailleurs pas très éloignée de nous.

L'Afrique du Nord carthaginoise a connu les éléphants, et les animaux dont se servait Annibal pour décimer les légions romaines étaient capturés sur les marches du Sahara, dans la région des chotts, peut-être dans les régions encore humides des pentes sud de l'Atlas.

Cette ancienne faune du Sahara était nettement d'affinités

[p. 45]

soudanaises, elle se rapportait à ce que les naturalistes appellent la faune éthiopienne.

C'est celle que, à peu de choses près, on retrouve de nos jours dans la zone de la savane à 1.500 km. plus au sud.

Mammifères. — Établir la liste des mammifères actuels du Sahara, et particulièrement de l'Ăhaggar, n'est pas bien difficile : quelques ongulés, deux ou trois carnassiers, quelques rongeurs et insectivores. L'originalité de ces animaux est leur parfaite adaptation au milieu désertique. Tous sont capables de franchir rapidement de grandes distances. Ils sont coureurs ou sauteurs, aptes par conséquent à de grands déplacements pour la recherche de leur nourriture ou pour une fuite rapide devant des ennemis dont ils seraient sans cela facilement la proie, les éléments où normalement ils pourraient se dissimuler étant absents. Certains autres sont fouisseurs, ce qui est une autre façon de résoudre le problème et se mettre en même temps à l'abri des rayons du soleil.

On remarque aussi chez eux la teinte uniformément isabelle du pelage qui les identifie au sable, et un développement anormal des conques auditives qui sont autant d'éléments d'auto-défense bien propres au milieu.

Tous ces mammifères ont un caractère nettement éthiopien.

Parmi les ongulés, on compte cinq antilopes, un mouflon et un curieux petit animal, le daman, qui s'est réfugié dans tous les massifs montagneux du Sahara central.

Le plus commun est la gazelle. C'est une variété de *gazella dorcas*, propre à l'Ăhaggar, la *gazella dorcas neglecta* qui vit dans les vallées du massif et remonte dans l'Ătakor jusqu'à 2.500 mètres. A côté d'elle, beaucoup moins commune, vit la *gazella leptoceros*, facilement reconnaissable à la bande noire qu'elle porte sur le flanc.

Une autre espèce, surtout répandue au Soudan, *gazella dama*, fait encore quelques incursions dans l'Ăhaggar. Elle est surtout localisée dans la région de Silet, et peut-être en existe-t-il encore quelques individus dans la Tăfedest, où nous croyons l'avoir aperçue. Ce sont là des bêtes de taille petite ou moyenne. Les grandes antilopes ont un habitat beaucoup plus localisé : l'Addax, dans les dunes, l'Oryx, sur les confins saharo-soudanais.

L'addax *Addax nasomaculatus* était autrefois un animal

1: Lhote MS25 Tuareg

très répandu au Sahara. A la suite de chasses inconsidérées des militaires de nos compagnies sahariennes, il est en voie de complète disparition. On le trouve encore dans l'Ăhaggar, isolé ou par groupes de quelques individus, dans les ergs d'Ămegid, de Tihodaïne et d'Ădmer. Au nord, il habite encore la région de Ohanet, et au sud, le Ténéré, où les difficultés d'accès de cette région le mettent encore, pour un temps, à l'abri de la destruction.

Quant à l'oryx *oryx leucoryx*, on ne le rencontre qu'à la limite sud de l'Ăhaggar. C'est surtout un animal de la steppe à qui il faut une abondante nourriture que le désert ne saurait lui fournir.

Le mouflon *ammotragus lervia* Pall. est le gibier typique des montagnes des pays touaregs. Il habite l'Ăhaggar et ses dépendances, l'Aïr, l'Ădrar des Ifôras. C'est la bête de choix des chasseurs, car il unit à la finesse, la ruse, l'agilité, la résistance et la force. Il tient pour cela une grande place dans le folklore des Touaregs.

Les fauves sont devenus rares. Il devait y avoir autrefois des lions dans l'Ăhaggar, à en croire les gravures rupestres qu'on y a retrouvées, mais ils en ont disparu devant le peu de nourriture qu'ils pouvaient s'y procurer. L'hyène rayée ne l'habite plus non plus, et la présence de l'hyène tachetée, *Hyaena crocuta*, n'est pas bien établie.

Le seul fauve vraiment digne de ce nom est le guépard, *Acinonyx jubatus guttatus* Herrm, animal d'erg qui vit surtout derrière les troupeaux d'Addax, mais que l'on trouve encore dans les montagnes de la Tăfedest.

Il y a quelques chats sauvages, probablement *Félix ocreata*, qui font des dégâts dans les poulaillers des centres de culture.

Parmi les petits fauves, surtout mangeurs de charogne, citons le chacal, *Vulpes pallida harterti*, qui est ubiquiste, et le fennec, *Fennecus zerda*, ce dernier localisé dans les dunes.

Parmi les rongeurs, plusieurs variétés de gerbilles et de gerboises et surtout une curieuse petite bête qui vit dans les rochers, le ctenodactyle, *ctenodactylus gundi*, le *telout* des Touaregs que les enfants de ces derniers chassent pour le manger.

Le lièvre, *Lepus harterti. T.*, est commun dans toutes les vallées et remonte jusqu'aux plus hautes altitudes.

Parmi les insectivores existent quelques chéiroptères et le hérisson.

1: Lhote MS25 Tuareg

On a beaucoup parlé de deux mammifères qui auraient été les hôtes de l'Ăhaggar : un loup et un âne sauvage. C'est l'explorateur Henri Duveyrier qui en parla le premier et les désigna respectivement sous les noms d'Adjoulé et d'Ahoulil.

L'adjoulé a été identifié depuis. C'est le *Lycaon pictus* ou loup peint dont un individu a été tué dans le nord de l'Adrar des Iforas par le capitaine Augiéras en 1928. Cet animal n'est pas à proprement parler ahaggarien, mais il peut faire parfois des incursions dans le massif, comme ce fut certainement le cas en 1928, d'après ce qu'ont rapporté les Touaregs qui s'en plaignirent à la suite de dégâts dont leurs troupeaux firent les frais. Il fut certainement beaucoup plus commun autrefois, et c'est ainsi que plusieurs points d'eau portent son nom, Tin Tirès, dont un au nord du massif de la Tăfedest.

Quant à l'âne sauvage, il s'agit d'une confusion, l'ahoulil étant un âne de l'espèce domestique, devenu sauvage à la suite de son abandon dans la montagne.

Oiseaux. — L'avifaune saharienne est surtout composée de rapaces, de passereaux et de quelques gallinacés. Elle se rattache à la faune paléoarctique avec des caractères d'adaptation aux terrains sahariens, comme chez les mammifères. L'homochromie avec le sol est flagrante dans la plupart des espèces.

Parmi les rapaces, on a signalé le gypaète, mais il est rare, le faucon, *Falco biarmicus abyssinicus*, l'épervier, *Accipiter nisus punicus*, la crécerelle, *Falco tinnunculus*. Il se peut que le busard fréquente l'Ăhaggar. D'une façon générale, ces oiseaux sont peu nombreux. Ils font des dégâts dans les terrains de culture où ils s'emparent des poulets qu'élèvent les cultivateurs. Le percnoptère est très commun et procède au nettoyage des chameaux et des animaux morts.

Parmi les rapaces nocturnes, nous ne connaissons que le hibou ascalaphe qui est une forme saharienne du grand-duc d'Europe.

Ce sont les petits passereaux qui tiennent la plus grande place. Le nombre des espèces se compte par plusieurs dizaines, parmi lesquelles se trouve une grande quantité d'alouettes. Ils vivent sur les regs et la rocaille, faisant leur nid sous les cailloux des plateaux.

Dans les oueds, le traquet deuil anime la solitude et égaie le voyageur par sa familiarité. Dans les centres de culture, on observe l'existence de plusieurs fauvettes.

PL. III

L'oued Taffassasset à 25 kilomètres de ses sources, au nord du puits de Serounout. Le lit est complètement ensablé et marqué par place de touffes de mrokim (panisettum turgidum).

Les arbres, déjà rares dans l'Ahaggar, sont souvent mutilés par les bergers touaregs qui abattent les branches maîtresses pour mettre le feuillage à portée des chèvres et des moutons. Des peuplements entiers sont souvent livrés de cette manière à la dévastation.

[p. 48 A]

PL. IV.

Type de tumulus à grande soutache (Région tassilienne).

Tumulus en margelle de puits avec soutassement (Haute Koudia).

[p. 48 B]

1: Lhote MS25 Tuareg

Signalons les autres espèces, la pie-grièche, le moineau blanc, l'hirondelle de rivage, le martinet, l'engoulevent, le grand corbeau, la huppe.

Les pigeons et gallinacés sont représentés par le pigeon biset *Columba livia targuia* Geyr. et la tourterelle *Strepto pelia turtur hoggara* Geyr. qui fréquente surtout les centres de culture où il existe des palmiers (Idelès, Ăbalessa, Sîlet, Tahart), ainsi que par plusieurs espèces de canga dont *Pterocles coronatus coronatus* Licht.

Parmi les oiseaux d'eau, seul l'ibis noir habite l'Ăhaggar et niche dans les centres de culture.

Les regs de la pénéplaine prétassilienne sont souvent jonchés de débris de coquilles d'œufs d'autruche, mais cet oiseau n'habite plus l'Ăhaggar depuis longtemps et il a pratiquement disparu du Sahara.

Le naturaliste Lavauden a signalé que l'Ăhaggar n'était pas sur la route des oiseaux migrateurs qui traversent le Sahara. D'après lui, ils suivraient les côtes de Mauritanie ou bien la vallée du Nil. La vallée de la Saoura avec son chapelet d'oasis constituerait une voie de deuxième ordre et les oiseaux que l'on rencontrerait dans les autres endroits seraient des isolés, des dissidents, des égarés.

Pourtant, nous avons observé régulièrement dans l'Ăhaggar des vols importants d'oiseaux migrateurs qui passent toujours à la même époque. C'est le cas des chasseurs d'Afrique, des canards et des cigognes. Tous les automnes, les maisons des centres de culture sont remplies d'hirondelles de rivage et des hérons envahissent les seguia. Beaucoup d'entre eux sont à bout de souffle et meurent quelques jours après leur arrivée. Le fait est constant, et l'on peut se demander s'il s'agit d'individus atteints par la vieillesse ou épuisés par les rigueurs du voyage.

Reptiles. Batraciens. — La faune des reptiles est peu nombreuse. Elle comprend une dizaine d'espèces de lézards, huit d'ophidiens, dont trois venimeuses, et une de batraciens.

Parmi les lézards, le groupe des agames tient la plus grande place. Certains sont adaptés aux terrains de reg, d'autres à la rocaille de la montagne. Tous appartiennent à la faune tropicale.

Huit espèces d'ophidiens ont été jusqu'à ce jour identifiés dans l'Ăhaggar, mais deux ou trois ont dû échapper à l'investigation des chercheurs. Quelques-unes qui habitent la Kou-

1: Lhote MS25 Tuareg

dia sont méditerranéennes alors que les autres sont apparentées aux formes tropicales.

Le serpent venimeux le plus commun est le *Cerastes cornutus*, très répandu dans tout le Sahara ; mais dans l'Ăhaggar, on ne rencontre que sa forme « mutila » c'est-à-dire sans cornes. Le naja, que l'explorateur Duveyrier avait signalé d'après des renseignements indigènes, n'a jamais été trouvé dans le massif central saharien et n'y existe sûrement pas.

Les batraciens ne sont représentés que par le crapaud vert *Bufo viridis*, espèce purement méditerranéenne et qui est un témoin des plus caractéristiques de la faune résiduelle. Il est venu là par le canal de l'oued Igharghar et on le retrouve près de tous les points d'eau de surface permanents de l'Ăhaggar où il se reproduit à presque toutes les périodes de l'année. Il n'y a pas de grenouilles, comme dans le Tassili-n-Ăjjer [1] et on n'a pas retrouvé le *Bufo* mauritanien commun dans ce dernier pays.

On peut compter, à juste titre, le crocodile comme étant un des hôtes du Sahara. Deux exemplaires ont été capturés dans le Tassili-n-Ăjjer, près du petit centre de Ăhérir, construit sur un affluent de l'oued Emirhou (Mihéro, des anciens auteurs). A l'heure actuelle, l'espèce semble éteinte dans cette région, et des recherches récentes sont restées sans résultats. Il existe encore en Mauritanie et au Tibesti, mais il est absent de l'Ăhaggar, et s'il y a existé autrefois, ce qu'affirment les indigènes, il y a de grandes présomptions qu'il n'y soit plus.

Poissons. — Parmi les éléments de la faune relique du Sahara, ce sont les poissons qui ont le plus étonné les naturalistes. Ce pays était celui où l'on pouvait le moins supposer leur existence.

Dans l'Ăhaggar proprement dit, une seule localité a livré des poissons. C'est le point d'eau d'Issekkerâssen, situé à 2.000 mètres d'altitude, au centre de la Koudia. Ces poissons ont été signalés pour la première fois par la mission Coche, en 1935, et nous avons pu les identifier nous-mêmes en 1940. Ce sont des *Barbus desertii* Pelleg., espèce déjà connue du Tassili-n-Ăjjer, trouvée pour la première fois à Ifédil, en 1909, par le capitaine Cortier.

1. La grenouille a été signalée à In-Amegel mais malgré toutes les recherches que nous avons faites dans cette localité, il nous a été impossible de la trouver. Elle a été récemment importée d'In Salah à Tamanrasset, mais nous ne savons pas si elle s'est adaptée.

1: Lhote MS25 Tuareg

Deux autres localités, Ămegid, dans le Tassili, et Ărak dans l'Immidir, ont livré respectivement le *Barbus biscarensis* et *Tilapia zilli*, *Barbus desertii*, *Astatotilapia desfontainesi*.

Le *Barbus de Biskra* est apparenté au type européen, ce qui est assez curieux, tandis que le *Barbus desertii* est proche du *Barbus ablabes* Bleeker de l'Afrique occidentale.

Les silures, communs dans le Tassili-n-Ăjjer, n'ont pas été signalés dans l'Ăhaggar.

La faune aquicole de l'Ăhaggar groupe donc, à la fois, des éléments méditerranéens, venus par le canal de l'Igharghar, et des éléments soudanais, le massif marquant la ligne de partage entre les eaux des rivières du versant septentrional et les bassins du Niger et du Tchad.

Insectes. — Les insectes sont relativement peu nombreux, situation logique en étroite relation avec le peu de densité de la végétation et la rareté de l'eau.

Ils sont, comme partout, dispersés en fonction des conditions naturelles offertes à leurs différents types de vie. On ne compte, au Sahara central, que 402 coléoptères, alors que par exemple le massif de Mouzaïa, en Algérie, en possède 2.102 ! Ces deux chiffres donnent un aperçu exact de la disproportion qu'il y a entre la faune désertique et celle des pays tempérés.

Dans l'Ăhaggar, les Phytophages représentent environ 36 % des espèces, les Hygrophiles 28 % et les Terricoles 19 % [1]. C'est parmi ces derniers que se retrouvent les coléoptères les plus typiquement désertiques : les Ténébrionides Mélasomes, dont 43 espèces se rencontrent au Sahara central.

Comme nous l'avons observé pour les mammifères et les oiseaux, les formes sahariennes présentent différents types d'adaptation. Les coureurs ont des pattes très allongées (Pimelia) terminées en pioche ou en houe. Chez les fouisseurs, fixés au contraire au sol, les membres se raccourcissent et les tarses disparaissent parfois entièrement.

Ces mélasomes, typiquement sahariens, appartiennent à deux groupes distincts : 1° ceux d'origine africaine peuplant toute l'Afrique et l'Asie antérieure (*Erodiinae*, *Zophosinae*, *Adesmiinae*) ; 2° ceux d'origine asiatique, peuplant l'Asie centrale et occidentale et la moitié nord de l'Afrique (*Akidinae*, *Platyopinae*, *Pimelinae*).

1. De Peyerimhoff. Physionomie de la Faune entomologique (coléoptères) au Sahara. La vie dans la région désertique nord tropicale de l'ancien monde. *Société de Biogéographie*, Paris, 1938.

1: Lhote MS25 Tuareg

Au point de vue général, d'après Peyerimhoff, on peut donc dire que sur une faune désertique, fixée depuis longtemps, ont déferlé deux courants opposés, l'un tropical, l'autre méditerranéen. Le courant tropical, datant probablement de la fin du tertiaire, a amené des éléments dont certains vivent encore au bord de la Méditerranée. Le courant méditerranéen est plus récent et date probablement du glaciaire. Il a amené des formes froides dont de nombreuses reliques se retrouvent dans les parties montagneuses où elles forment l'essentiel de la faune. La période de dessèchement actuelle tend à détruire les colonisateurs aussi bien tropicaux que méditerranéens.

Mollusques. — Le climat actuel du Sahara ne favorise pas la vie des mollusques. On en rencontre pourtant vivant dans les eaux des sources ou des gueltas du Tassili-n-Ăjjer et de l'Ăhaggar. Ce sont des planorbes, des melania et des ferussacia.

Mais il est intéressant de retrouver également des espèces subfossiles, et cela au centre de l'Ătakor-n-Ăhaggar. Il n'est pas rare de recueillir sous les pierres des petites volutes qui sont autant de preuves d'un climat très humide du Sahara. Dans des tumuli de type tronconique du Tassili-n-Ăjjer que nous avons été amenés à fouiller, nous avons trouvé des quantités de coquilles subfossiles sous les pierres. Il ne s'agissait pas de coquilles ayant servi de bijoux ou de parures, mais d'animaux venus mourir là.

# *L'HOMME*

## *LE PASSÉ DU SAHARA, SON PEUPLEMENT*

---

## CHAPITRE PREMIER

## L'ĂHAGGAR PRÉ ET PROTO-HISTORIQUE

Par ce qui précède, nous avons vu que le Sahara avait connu un climat beaucoup plus humide que l'actuel, qu'une végétation et une faune plus nombreuses y avaient prospéré. C'étaient là des facteurs propres à faciliter la vie de l'homme.

Pourtant l'existence de ce dernier au Sahara, dans les temps préhistoriques, fut longtemps sujette à caution, et beaucoup de savants en doutèrent. Aucun fait précis ne venait, en effet, apporter des éléments décisifs, soit squelette, soit gisement archéologique bien en place.

Les premiers voyageurs qui pénétrèrent au Sahara furent frappés par la grande quantité d'outils, d'armes en pierre, qui jonchaient les regs, le fond des vieilles vallées et les fonds de cuvettes de certains ergs. Pêle-mêle on pouvait ramasser des objets de facies paléolithique, des « coups de poing » chelléens, des haches polies, des pointes de flèches finement retouchées. Tout cela reposait à même le sol, sans ordre, sans juxtaposition d'une industrie sur une autre et il était pratiquement impossible de classer et surtout de dater ces objets.

Mais un fait était malgré tout certain : c'est que le Sahara avait connu, antérieurement à ses habitants actuels, une civilisation très développée de la pierre qui avait utilisé presque tous les types « industriels » d'Europe.

Les outils en pierre n'étaient d'ailleurs pas les seuls éléments archaïques laissant supposer un habitat très ancien. Des tumuli de formes diverses s'accrochent aux flancs des montagnes, sur le bord des vallées et certains dans des endroits si éloignés de toute région habitée qu'il ne peut s'agir de monuments récents.

[p. 53]

1: Lhote MS25 Tuareg

Enfin, il existe sur les rochers et dans les grottes des massifs montagneux des gravures et des peintures extrêmement curieuses qui furent signalées par les premiers explorateurs, Barth, Henri Duveyrier, Erwin von Bary et, après eux, par Foureau. Mais là aussi, il était impossible de donner une date à ces documents devant l'absence de stratigraphie.

Après l'occupation française, la prospection de l'Ăhaggar se fit progressivement, et beaucoup d'officiers des Compagnies Sahariennes s'improvisèrent archéologues, faisant parvenir dans les laboratoires de la métropole ou de l'Algérie des séries d'objets. Certains fouillèrent des tumuli, comme le capitaine Voinot (1909), et la richesse du matériel recueilli attira l'attention des spécialistes.

T. E. Hamy publia des notes sur les objets rapportés par la mission Foureau-Lamy ; Verneau, son successeur à la chaire d'Anthropologie du Muséum, guida dans ses recherches le capitaine Cortier et analysa ses collections. Th. Monod, d'abord comme membre de la mission Augérias-Draper, ensuite comme militaire de la Compagnie Saharienne du Hoggar, fit faire un grand pas à nos connaissances sur l'homme préhistorique au Sahara. Il ramena d'Ăsselar un squelette archaïque découvert par les militaires du poste et publia une monographie très complète de l'Ădrar Ăhnet, qui est un district du bas Ăhaggar.

Le squelette d'Ăsselar fut étudié par Boule et Vallois qui définirent sa haute antiquité, le considérèrent comme datant du paléolithique supérieur et le placèrent au point de vue somatique entre l'Homme de Grimaldi et les Bushmen de type ancien. Mais il n'y a malheureusement aucune faune ni aucun outil qui accompagnent ce squelette.

L'exploration du Sahara central a été suffisamment poussée ces dernières années pour que l'on puisse avoir un aperçu sur les populations anciennes qui l'habitèrent. Malgré des lacunes inévitables, on a tenté d'établir une classification typologique rationnelle ainsi que l'aire de répartition de chaque outillage connu, avec la réserve que l'exploration détaillée de certaines régions doit encore être faite, et apportera certainement de nouveaux éléments qui modifieront peut-être ou confirmeront nos connaissances actuelles.

Les Industries lithiques. — Si l'industrie de la pierre est répandue sur toute la surface du Sahara, il est à remarquer

1: Lhote MS25 Tuareg

qu'elle l'est beaucoup plus abondamment dans les régions des dunes, dans les Tanezroufts et surtout le long des anciennes vallées des grands fleuves quaternaires. On constate sa rareté dans les massifs montagneux, et c'est le cas de l'Ăhaggar en particulier. Le massif de l'Ăhnet fait un peu exception à la règle et a livré de nombreux objets de facies très divers, allant du moustérien au néolithique. Cela tient peut-être à la proximité du Tanezrouft qui lui, comme nous l'avons dit, est fort riche en outillage de toute sorte.

Dans l'Ăhaggar proprement dit, beaucoup de pièces chelléo-acheuléennes ont été recueillies isolément dans la région de Sîlet, dans l'Ătakor et aux abords du puits de Sérouanout. On connaît enfin deux beaux gisements de levalloisien avec quelques pièces sbaïkiennes, l'un à Tiguelguemine [1], l'autre à Esselesikine [2].

L'Ădrar des Ifôras et ses abords immédiats ont livré un outillage très important, des bifaces chelléo-acheuléens et du néolithique qui semble être particulier aux régions soudanaises, où l'on retrouve beaucoup de haches à forme allongée, plus ou moins cylindriques, qui leur ont valu le surnom de hache en forme de boudin. Ces instruments sont accompagnés de meules dormantes, de pilons, de broyeurs ; certains ont l'axe de frappe transversal et légèrement incurvé, ce qui laisse supposer qu'ils étaient utilisés comme houe. C'est fort possible et il est indéniable que ces pièces reposent toujours près des anciennes vallées qui devaient être des lieux propres à l'agriculture.

Au Tidikelt, sur le rebord nord-ouest de l'Ăhaggar, on a trouvé, ainsi qu'en Mauritanie, des pièces en silex et en quartzite taillées, qu'on a rattachées à l'atérien (facies nord africain du levalloisien) suivant les uns, au néolithique dit « berbère », suivant les autres. Ces pièces, en particulier des pointes à pédoncules qui gisent sur le sol, mélangées à des lames et des grattoirs de type néolithique, ne peuvent être datées avec précision, car si dans les gisements découverts à Bir el Ater, dans le département de Constantine, la stratification les place incontestablement dans le paléolithique moyen, leur juxtaposition au Sahara avec des pièces néolithiques peut laisser supposer que dans cette région, le paléolithique moyen s'est prolongé sans discontinuer jusqu'au néolithique.

1. Découvert par Reygasse.
2. Découvert par l'auteur.

1: Lhote MS25 Tuareg

Au nord de l'Ăhaggar, au delà de la ceinture tassilienne, s'étend l'Erg Oriental, où l'on trouve d'énormes bifaces chelléens, des amandes moustériennes, des pointes atériennes, des haches en boudin et surtout une multitude de pointes de flèches à pédoncule et à ailerons auxquelles on a donné le nom de « pointes de Ouargla ». L'aire de répartition de cette industrie englobe les deux ergs ainsi que la Mauritanie. Elle a pénétré dans l'Ăhaggar par la vallée de l'Igharghar, mais n'a pas franchi le massif.

L'outillage du type de Ouargla, que l'on trouve dans les régions de dunes, sur le reg, souvent à de grands distances des vallées principales, devait être utilisé par des nomades chasseurs, comme l'indiquerait l'abondance des pointes de flèches, des grattoirs et des petits silex à dos rabattu qui devaient servir au travail des peaux, alors que les haches épaisses, les meules dormantes de grand diamètre qui abondent au sud dans la région du moyen Niger, laissent supposer que les populations vivaient beaucoup plus de culture que de chasse.

Plusieurs découvertes faites ces dernières années viennent apporter quelques précisions sur les différents stades de la préhistoire saharienne, d'autant plus intéressantes que l'on se trouve cette fois devant des gisements où l'industrie est associée à une faune abondante et déterminable.

L'erg d'Ădmer et l'erg Tihôdaïn ont livré chacun, à quelques mois d'intervalles, deux gisements de paléolithique inférieur.

Situés sur les hautes terrasses d'anciennes vallées quaternaires qui disparaissent aujourd'hui, en partie, sous les dunes, les gisements contenaient un grand nombre de gros bifaces de types acheuléens en quartzite de l'Ăhaggar, ou en calcaire très dur. Parmi ces pièces, il faut signaler la présence d'un grand nombre de hachereaux, semblables à ceux que l'on connaît en Afrique du Sud, et à ceux trouvés ultérieurement à Ti-m-missao en plein Tanezrouft.

Ce matériel reposait au milieu d'ossements d'éléphants antiques, de buffles antiques et de zèbres, et de milliers d'arêtes de poissons de grande taille.

La zone située juste au sud de l'Ăhaggar et qui confine au Soudan, a livré des documents d'un intérêt également considérable se rapportant à des industries néolithiques. Ce sont d'immenses amas de débris de cuisine, des tas « d'ordure » comme on en trouve de nos jours autour des lieux habités par

1: Lhote MS25 Tuareg

des sédentaires et que les préhistoriens désignent sous le nom de « kjökkenmöddings ».

Au milieu d'un magma de cendres charbonneuses, il y a des coquilles de bivalves, des fragments d'os à demi carbonisés, des débris de poterie et des outils de toute sorte, brisés ou intacts. A côté de pointes de flèches à base concave et convexe, de hachettes plates en schiste, on trouve des harpons en os, des anneaux de bras et des perles également en os.

Parmi les espèces animales qui ont pu être déterminées d'après les ossements, on trouve des hippopotames, des rhinocéros, des antilopes, des girafes, des phacochères, des crocodiles, etc....

Les gisements sont toujours situés sur les bords des anciennes vallées, et les rejets de cuisine, par l'abondance des coquilles et des arêtes de poissons dont ils se composent en majeure partie, démontrent qu'il s'agit là de l'habitat d'anciennes populations de pêcheurs.

Entre les vallées, sur les flancs de petits dunes mortes, il existe également des stations de bien moindre importance dont l'industrie lithique est sensiblement la même, mais où les harpons en os font complètement défaut. Il n'y a pas, non plus, parmi les rejets de cuisine, ni arêtes de poissons, ni coquilles de mollusques, et l'impression qui se dégage de ces gisements est qu'ils ne sont pas tout à fait de la même époque et appartiennent à des populations dont les genres de vie étaient différents.

Les deux principaux gisements sont ceux de Taferjit et de Tamaïa Mellet. D'autres ont été trouvés à Tazerzaït, à In Tékébrine, et à In Guezzam. Leurs industries présentent beaucoup d'analogie avec celle du Fayoum étudiée en Égypte par Miss Caton Tompson, où les facies des pointes de flèches et des harpons sont sensiblement les mêmes.

L'intérêt de ces découvertes est encore augmenté par la présence au milieu des ossements d'animaux, de plusieurs squelettes humains en partie silicifiés, laissant supposer une longue immersion dans l'eau.

Malgré la fragmentation des crânes qui rend les déterminations difficiles, le Professeur Leblanc, doyen de la Faculté de Médecine d'Alger, a pu faire l'examen de l'un d'eux et déterminer ses caractères négroïdes. Fait important qui précise les différents stades de la préhistoire saharienne et nous montre que l'habitat septentrional des noirs, aujourd'hui confiné aux

régions soudanaises (sauf en ce qui concerne les oasis qui peuvent être considérées comme des îlots artificiels), s'étendait beaucoup plus au nord à la période néolithique.

Ces gisements « in situ » confirment donc pleinement l'existence de l'homme préhistorique au Sahara et permettent de considérer l'outillage lithique saharien comme très archaïque.

Malgré l'absence de faune, les gisements de Tiguelguenine (Immidir), d'Essélesikine (à la base de l'Ătakor-n-Ăhaggar), de Ohanet (au sud-est de l'Erg Oriental), à facies levalloisien, complètent utilement les découvertes dont nous venons de parler et laissent entrevoir l'existence, au paléolithique moyen, de populations dont l'habitat semble beaucoup plus rapproché des régions montagneuses que celui des « chelléens » ou des néolithiques.

L'immense plaine désertique du Ténéré, aujourd'hui inhabitable pour l'homme, recèle des milliers de vestiges d'industries humaines, mais, jusqu'à ce jour, de facies essentiellement néolithique. Un type très particulier et bien localisé s'en dégage au milieu de pièces communes à d'autres régions. C'est une industrie en roche verte, comprenant des haches polies globuleuses, des lames, des pointes à base concave et surtout des pointes de grande taille finement retouchées sur les deux faces, à base rectiligne formant ciseau. Il existe aussi, et c'est le trait le plus caractéristique de cette industrie, des disques finement retouchés sur les deux faces et sur les bords, dont l'usage est des plus énigmatiques. Elle occupe le bassin de l'oued In Ăzaoua et celui du Taffassasset ; elle n'a pas atteint l'Ăhaggar proprement dit.

Cette même région a livré aussi de nombreuses haches polies à gorge, d'un fini remarquable, qui constitue le stade le plus évolué du néolithique saharien. La forme de ces haches établit une sorte de transition entre la hache néolithique classique et les haches de bronze de l'Égypte, à large tranchant, semi-circulaire. Ces pièces recueillies le plus ordinairement isolées, sans autres pièces constituant l'outillage industriel, grattoirs, lames, etc... ont peut-être été utilisées simultanément avec le métal, et peuvent être, par présomption, attribuées à l'énéolithique. Reygasse a donné à ce type particulier le nom de Ténéréen. Des pièces isolées ont été recueillies au sud de l'Ăhaggar, mais le « centre industriel » semble être beaucoup plus oriental et le désert de Libye en a livré des séries nombreuses.

GRAVURES ET PEINTURES RUPESTRES. — Des gravures et des peintures rupestres viennent à leur tour jeter une vive lumière sur le passé du Sahara.

Tout au début de l'occupation française de l'Algérie, le Sud Oranais attira l'attention des archéologues par la présence de gravures rupestres particulièrement abondantes.

Dans l'Ăhaggar, les premières reconnaissances en découvrirent dans les districts de l'Immidir et de l'Ătakor, et d'autre part, les explorateurs Barth, Duveyrier, Von Bary avaient signalé dans le Tassili et au Fezzan des gravures représentant

FIG. 6. — Gravure d'époque préhistorique représentant la capture d'un buffle antique (Oued Djorat, Tassili-n-Ajjer).

des grands animaux et des hommes armés de boucliers et de javelots.

L'avenir devait nous révéler que tous les massifs montagneux en recèlent un grand nombre. Leur répartition des extrêmement étendue et embrasse l'Atlas saharien, le Sahart central, l'Ădrar, l'Aïr, le Tassili, le Fezzan, le Tibesti et la Mauritanie, mais c'est le Tassili-n-Ăjjer, massif essentiellement gréseux, qui possède les plus riches stations rupestres que l'on connaisse jusqu'à ce jour au Sahara.

Les gravures sont loin de présenter toujours la même facture ; l'art est plus ou moins sûr, et elles sont souvent si différentes, qu'il est facile d'y distinguer plusieurs étages.

L'étude du trait, des patines, du style, à défaut d'autres critères plus décisifs, a apporté des éléments de sélection qui ont été renforcés par l'étude de la faune et des figurations

1: Lhote MS25 Tuareg

humaines représentées. La présence de caractères alphabétiques — libyco-berbères et tifinagh — associés à un certain nombre de ces gravures, permet de donner à celles-ci une limite inférieure dans le temps, ce qui élimine l'idée qu'elles puissent être considérées comme préhistoriques.

Les gravures, qui ont un caractère artistique, sont généralement de grande taille, souvent de la grandeur naturelle de l'animal représenté. Le trait du contour est creusé profondément et poli ; il est, de plus, fortement patiné, ce qui ne le fait distinguer que difficilement de la roche encaissante.

Au Tassili, où ce genre de gravures est largement représenté, la faune reproduite comprend l'éléphant, l'hippopotame, le rhinocéros, le bubale, la girafe, l'autruche, des antilopes, des fauves, le python, le crocodile, etc.... Les figurations humaines, généralement de grande taille, sont casquées ou à tête zoomorphe, le plus ordinairement dotées d'un fourreau phallique, avec stéatopygie souvent prononcée.

Les espèces animales représentées dans ce groupe, toutes actuellement disparues du Sahara sauf le crocodile [1], attestent la haute antiquité de ces gravures qui, d'après ce que nous savons de leur point de gisement sur les terrasses supérieures de certains oueds, sont au moins néolithiques.

Ces belles gravures, dont certaines pleines de vie et admirables de conception, dénotant de la part de leurs auteurs la possession d'un art réel, voisinent avec d'autres d'un trait moins sûr, où les bovidés dominent et où les hommes sont souvent armés de l'arc. Enfin, il y a une multitude de dessins de petite taille, plus ou moins schématiques, qui peuvent être divisés en deux étages, l'un où le cheval prédomine, l'autre où cet animal est remplacé par le chameau.

L'étude du trait a montré que si celui des gravures du premier groupe était généralement régulier, large, profond, la teinte de la patine différant peu de la roche encaissante, celui des gravures des autres groupes est martelé, creusé irrégulièrement et la patine en est souvent claire, d'autant plus claire que la gravure est plus récente.

L'étude de ces patines a été faite par le géologue G. B. M. Flamand, qui a expliqué la formation de cette espèce de vernis, qu'on appelle communément vernis du désert, et qui n'est pas seulement formé par la calcination solaire et l'action

1 Il a été retrouvé au Tassili des Ajjer, en Mauritanie et dans l'Ennedi.

1: Lhote MS25 Tuareg

éolienne, mais surtout par l'oxydation en surface des produits, généralement ferrugineux, attirés par capillarité à la suite de l'évaporation, qui forment, suivant les roches, un enduit silico ou calcaréo-ferrugineux, comme l'indique sa couleur rouge foncé plus ou moins atténuée.

La seule classification des patines ne peut suffire à déterminer l'âge respectif des gravures, car l'on voit des inscriptions tifinagh extrêmement patinées, l'être autant que certaines gravures anciennes, sans qu'il soit possible pour cela de les considérer comme contemporaines. Il faut considérer que l'oxydation et la patine ne se produisent pas uniformément

Fig. 7. — Gravure d'époque plus récente que la précédente, mais vraisemblablement d'âge préhistorique également. Dans ce groupe les bovidés remplacent les animaux sauvages (Oued Tadjerdjert, Tassili-n-Ajjer).

sur des roches dont la composition varie ; il ne faut donc pas exagérer l'importance de ce facteur de détermination.

Le classement basé sur la faune, puis sur les figurations humaines, fournit des éléments plus appréciables, la patine n'intervient qu'en troisième lieu.

On distingue de prime abord deux grands groupes de gravures. Les pré-camelines, ou gravures anciennes, et les camelines ou gravures récentes. Le premier peut lui-même se subdiviser : 1° en grandes gravures à faune éthiopienne, 2° en gravures moyennes avec prédominance des bovidés, 3° en petites gravures, avec chevaux.

Voici donc trois étages pour le groupe pré-camelin, qui donnent un aperçu du peuplement ancien du Sahara. Le premier appartiendrait à un néolithique ancien, avec une population composée essentiellement de chasseurs.

1: Lhote MS25 Tuareg

Cette classification, qui peut nous satisfaire en gros, ne correspond pas en détail à trois groupements humains homogènes. Il y a dans chaque groupe des diversités d'école, de style, qui démontrent la pluralité de chacun, mais qu'il est très difficile de définir dans l'état actuel de nos connaissances. Cette difficulté est d'autant plus grande que l'on s'aperçoit, à l'étude, que chaque district saharien a ses styles propres.

A côté des gravures, il existe des peintures rupestres découvertes ces dernières années par centaines. Elles se trouvent dans des abris sous roches qui les ont protégées des injures du

Fig. 8. — Différents types de peintures rupestres de l'oued Djorst. 1° Femme de style boschiman ; 2° femme de style espagnol ; 3° personnage avec bâton coudé (boomerang ou akfa) ; 4° homme masqué (d'après calques originaux d'Henri Lhote, cf. R. Perret, Recherches archéologiques au Tassil des Ajjers, *Journal de la Société des Africanistes*, 1936, t. VI, fasc. I, Pl. XV).

temps. Leur synchronisation avec les gravures n'a pas été tentée, car leur diversité locale est encore plus complexe que celle de ces dernières. On possède quelques points de repère, et certaines ne sont que la réplique peinte de figurations gravées. A Mertoutek, dans le petit massif de la Tâfedest attenant à la Koudia de l'Ahaggar, la mission alpine française a découvert des stations extrêmement intéressantes appartenant à l'étage des bovidés.

De même, pour l'époque « chevaline », il existe un groupe de documents peints et gravés, que l'on a désigné sous le nom de garamantiques où figurent des chars de guerre. Pour ce

1: Lhote MS25 Tuareg

dernier, il est évident que l'on ne se trouve plus devant des documents préhistoriques, mais protohistoriques. Quant à l'étage des bovidés, il y a tout lieu de le considérer comme

FIG. 9. — Peinture rupestre de la grotte de Tamajjart (Tassili) (d'après un relevé du Cap. Brenans). Figurations humaines à style filiforme.

ancien, plus exactement comme néolithique. Nous avons vu personnellement les stations de Mertoutek, et nous avons pu faire des fouilles à la base des rochers peints. Nous y avons

FIG. 10. — Peinture à l'ocre de l'abri de Tiror (Tassili-n-Ajjer) (d'après un calque d'Henri Lhote), représentant un char de guerre attelé de trois chevaux.

trouvé des fragments de haches polies, des broyeurs, des fragments de meules et de poteries. Étant donné l'état d'isolement et les difficultés d'accès de ces stations, il est bien improbable que ces documents ne soient pas issus d'un même groupement humain. Ce n'est pas hier que les bœufs pouvaient paître dans

1: Lhote MS25 Tuareg

le Sahara, et la faune représentée ainsi que les haches polies semblent bien être contemporaines.

L'étage de la cavalerie et de la charrerie est capital pour l'histoire de l'ancien peuplement de l'Ăhaggar. Il constitue l'un des chaînons qui nous manquaient entre les périodes néolithique et actuelle. Nous sommes même, avec ces peintures, entre gens de connaissance, car les scènes qu'elles représentent sont justement celles qu'a décrites l'historien grec Hérodote. On pouvait douter des textes que cet écrivain a laissés, mais le plus extraordinaire est de pouvoir constater la véracité de

Fig. 11. — Peinture à l'ocre violacé de l'abri de Tadjerdjert (Tassili-n-Ajjer), d'après un calque d'Henri Lhote, dont le style des personnages rappelle celui de l'Assyrie.

ces écrits, car peu de savants auraient admis, avant la découverte des peintures et des gravures représentant des chars de guerre, que de pareils véhicules aient circulé au Sahara, cinq siècles avant J.-C. Parmi ces documents, l'existence de deux types humains, l'un svelte, l'autre stéatopyge, toujours opposés l'un à l'autre dans les scènes de guerre, nous raconte les épisodes de la lutte entre blancs et noirs, pour la conquête du Sahara. Nous avons ainsi une précision nouvelle sur l'état physique du Sahara à cette époque, car comment imaginer l'utilisation du cheval, en tant que monture guerrière, sinon par l'existence d'un climat plus humide, de points d'eau plus nombreux que de nos jours. Peut-on admettre que ces chars aient été tout simplement représentés de mémoire par des artistes ? Cela n'est guère possible. Nous croyons, au contraire,

1: Lhote MS25 Tuareg

qu'ils ont véritablement roulé au Sahara, car comment expliquer leur reproduction aussi sincère et en si grand nombre en des points aussi éloignés que la Tripolitaine et l'Ădrar des Ifôras, où l'on en a trouvé. Faut-il admettre aussi comme une coïncidence, que l'aire de répartition de ces manifestations rupestres corresponde justement à la zone où les auteurs anciens nous situaient l'Empire des Garamantes que traversait l'ancienne route des caravanes qui reliait le Fezzan avec l'Ădrar des Ifôras, et où l'on retrouve, par hasard, les ruines de Tădemeka qui fut l'antique capitale des Berbères soudanais ?

Un problème se pose, celui du roulage, car devant l'état cahotique de certaines régions du Sahara, en particulier de celle du Tassili, on peut se demander comment pouvaient se comporter des chars dans un pays sans routes. Les peintures font justement bien ressortir qu'il s'agissait de chars très légers, et il n'y a aucune raison de ne pas admettre la possibilité d'utiliser le char au Sahara, lorsque l'on sait que son emploi a été largement mis à profit par les Égyptiens et par les populations de l'Afrique du Nord. Rappelons le texte d'Hérodote, qui dit que « les Garamantes font la chasse aux Éthiopiens Troglodytes sur des chars à quatre chevaux »[1]. Ces Troglodytes devaient être des noirs et le Tassili-n-Ăjjer a bien des chances d'être leur ancien habitat.

LES TUMULI. — Les populations sahariennes ne nous ont laissé aucune manifestation architecturale pouvant nous éclairer sur leur histoire, à part quelques tombeaux.

Ce trait est commun à tous les peuples nomades et pasteurs dont la vie errante et primitive, en leur donnant l'amour des grands espaces et de la liberté, leur enlève l'idée de s'attacher

1. St. GSELL, *Hérodote*, p. 22.

1: Lhote MS25 Tuareg

moralement à un point quelconque de la terre. Au Sahara, le manque de matériaux de construction n'a pu que développer ce sentiment, et les tombes ne sont, en fait, que des tas de cailloux.

Alors que dans l'Afrique du Nord ces tas de cailloux sont groupés en nécropoles, ce qui indique une vie rurale et des règles d'urbanisme, plus au sud, au delà du *limes*, ancienne limite de l'influence romaine, les tombes sont, au contraire, éparpillées au hasard, souvent isolées, jamais groupées au delà d'une dizaine. Leur aire s'étend sur tout le Sahara et sur la zone nord de la steppe soudanaise. Ces tumuli ne sont pas de même forme et de même grandeur, et il peut exister dans les mêmes parages des types différents, encore que certains d'entre eux puissent être localisés ou dominent dans certaines régions.

Les Touaregs, qui donnent le nom d'*idebnan* à ces tumuli, les attribuent aux populations Izzabaren, hommes légendaires, de grande taille, appartenant à la religion païenne et qui habitaient le Sahara avant eux.

Au Sahara central, on distingue huit types principaux de tumuli :

I. des tas de cailloux simples, de forme conique dont le diamètre peut aller de 1 m. 50 à 8 mètres,

II. des tas de cailloux tronconiques, plus ou moins évidés à l'intérieur, de même taille que les précédents,

III. des tombes en forme de margelle de puits, dont les parois sont montées avec des pierres plates, très régulièrement posées et dont le diamètre peut aller de 3 à 10 mètres,

IV. des tas de cailloux de taille moyenne, à cheval sur des bandes rectangulaires, formées par des pierres, précédés d'un alignement rectangulaire dont le côté interne est ouvert.

Ces tombes ont été surnommées à « anse de panier » ou à « soutache », cet appendice pouvant avoir de 5 à 9 mètres de long.

V. des tumuli coniques comportant deux empâtements formant un grand V ouvert, pouvant atteindre jusqu'à 76 mètres de long,

VI. des tumuli en forme de quartiers d'orange et à section en V retourné pouvant avoir jusqu'à 8 mètres de diamètre,

VII. des tumuli tronconiques avec un large encorbellement irrégulier et plus ou moins ovalaire ayant jusqu'à 25 mètres de diamètre.

Fig. 13. — Différents types des tumuli du Sahara Central :

I. Tumulus à forme conique.
II. » » à évidement intérieur.
III. » en margelle de puits.
IV. » à soutache.
V. » à empâtement en V.
VI. » en quartier d'orange.
VII. » à encorbellement.
VIII. » en quartier d'orange aux pointes prolongées.

(p. 67)

1: Lhote MS25 Tuareg

VIII. des tumuli semblables au n° VI, mais dont les extrémités sont énormément prolongées et peuvent atteindre jusqu'à 25 mètres.

On voit donc que, dans l'ensemble, il s'agit de monuments de grande taille qui ont demandé de gros efforts de construction, ce qui dénote des croyances religieuses étendues devant le fait de la mort. Jusqu'à ce jour, il a été impossible d'en faire un classement systématique et de les dater. Les fouilles n'ont donné que des résultats partiels et disparates. Tout ce que l'on peut dire c'est qu'ils sont pré-islamiques. Certains sont protohistoriques et d'autres, peut-être, néolithiques.

Il existe des variantes et des formes de transition entre la période protohistorique et islamique, car certaines tombes de forme ancienne sont dotées à l'intérieur de pierres témoins, comme dans les tombes musulmanes, ou de « msella » formant lieu de prière.

Le premier type est le plus primitif de construction. Dans l'Ăhaggar, il est commun dans les parties basses du massif, mais ne remonte pas sur les hauts sommets. Pourtant, nous l'avons vu dans les hautes vallées de la Tăfedest à proximité des stations de peintures de Mertoûtek. Par contre, c'est lui qui prédomine dans le Tanezrouft, dans le Ténéré, dans les régions qui accusent le maximum d'état désertique. Il est commun dans tout le Sahara. D'après Chudeau [1], la limite sud de cette forme de tombe serait entre Tahaoua et Matankari. Nous en avons rencontré à 15 km. au nord du village de Dabnou dans l'Ădrar Doutchi. Étant donné leur architecture primitive et leur situation en région désertique, il y a tout lieu de supposer que ces tas de cailloux sont très anciens, les plus anciens de toutes les formes que nous connaissons et qu'ils appartiennent vraisemblablement à l'époque néolithique.

Le type II est une forme évoluée du type I. On le rencontre également dans les parties les plus reculées du Tanezrouft, mais il pénètre à l'intérieur des massifs montagneux et sur les bords des vallées de la haute Koudia.

Le type III, auquel les indigènes de l'Afrique du Nord ont donné le surnom de « chouchet », semble être localisé dans les massifs. On en a bien aperçu dans le Tanezrouft, mais le fait est assez exceptionnel, alors que l'on peut en observer d'importants groupements dans l'Ăhaggar, en particulier aux

1. Chudeau, *Bull. Soc. Anthr.*, t. VIII, 1907, pp. 138-146.

abords des centres de culture. Il en existe à Tămanrasset, près de Tît, près d'I-n-Ămegel, près de Silet, près de Tazerouk, près de Tahart, près d'Ăbalessa, près d'Iglène, etc... ainsi que sur les pentes de la Koudia. Cette forme est également commune dans l'Ăhnet, dans le Tassili-n-Ăjjer, ainsi que dans l'Ădrar des Iforas. D'après Chudeau, on la trouverait également en Mauritanie. En Aïr, elle est très rare. M. Reygasse a fouillé plusieurs des tombes de ce type qui se trouvaient autour de l'enceinte fortifiée de Tăfârit, près d'Ăbalessa, au centre de laquelle a été découvert le squelette d'une femme qui, d'après la légende, serait l'ancêtre des tribus nobles actuelles, Ti-n-Hinân, femme berbère de haute lignée, venue du Tafilalet. Il a exhumé plusieurs squelettes qui ont été étudiés par le Docteur Leblanc, doyen de la Faculté d'Alger, lequel les a identifiés en majorité comme étant ceux de nègres. M. Reygasse considère ces tombes comme étant tout au plus du haut moyen âge.

Le type IV, dit à anse de panier ou à soutaches, est très courant dans l'Ăhaggar. Il y en a souvent près des centres de culture, et nous en avons aperçu dans la haute Koudia où l'alignement des pierres est souvent remplacé par d'autres tumuli (jusqu'à 6). C'est une forme commune dans le Tassili-n-Ăjjer, que nous avons également rencontrée dans l'Ădrar des Ifôras et moins communément en Aïr. On ne saurait rien dire sur l'origine de ces monuments. Les Touaregs les attribuent aux Beni-Hilal.

Le type V, ou tumulus à empâtements, est rare dans les hautes montagnes de l'Ăhaggar. Il en a été observé vers Tahart, au nord d'Idelès, près d'Ămegid ainsi que dans l'Ăhnet. Certains alignements de pierre sont tellement longs que l'on a l'impression d'avoir à faire à des murettes effondrées, et qu'il faut souvent un certain recul pour pouvoir saisir toute l'architecture du monument. Les branches de celui qui fut fouillé par Voinot, à Ămegid [1] avaient 76 mètres. La bissectrice de l'angle formé par les deux branches est ordinairement orientée à l'est ou au sud-est. Nous avons observé un grand nombre de ces tombes dans la partie orientale de l'Ădrar des Ifôras, qui couronnaient le sommet de petites montagnes et dont les bras jalonnaient les flancs.

Il existe un modèle dérivé du tumulus, dont les branches sont réduites à la plus simple expression. C'est le quartier

1. Notes pour servir à l'étude de l'Ethnographie ancienne du Sahara Central. *Soc. de Géog. et d'Arch. d'Oran*, déc. 1908, p. 335.

1: Lhote MS25 Tuareg

d'orange (type VI) que Chudeau a signalé à Taoudéni et Monod dans l'Ăhnet [1] et que nous avons observé nous-même en abondance sur les flancs du Tassili de Ti-m-missao, aux abords de Tin Rerhoh, dans l'Ănahef (vers Isolane), et dans la vallée du Ti-m-mersoï avant et après In Guezzam.

Le tumulus à enclos ou à encerclement (type VIII) comporte souvent, à proximité du tumulus central, un second tumulus de plus petite taille. Des fouilles faites dans les deux tumuli ont souvent donné des résultats positifs. Chacun abritait des ossements humains, et les deux tombes peuvent être considérées comme de même époque. Cette forme est orientale, commune au Tassili-n-Ăjjer, et rare dans l'Ăhaggar. Nous avons observé des monuments de ce genre au nord-est de l'Ănahef, aux environs d'Idelès ; au sud du massif, il en existe vers Tin Rerhoh et dans la partie nord-est de l'Ădrar des Ifôras.

Avec les monuments lithiques, nous nous trouvons en présence de tombeaux typiques, et si dans le nombre de ceux qui ont été fouillés plusieurs ont été trouvés vides, dans les 7/10 des cas les fouilles ont été positives, ce qui ne veut pas dire que les trois autres dixièmes n'aient jamais servi de sépulture, car la vétusté de certains squelettes démontre leur mauvaise conservation.

Sur le mode d'inhumation, il semble que quelquefois le cadavre ait simplement été placé sous le tas de pierres mais, par contre, l'on observe souvent des fosses ovalaires creusées en puits, parfois dallées, profondes en moyenne de 50 cm, mais pouvant atteindre 1 m. 50, comme à Ti-n-Esekfou (Imeldir) [2]. Dans l'Ăhnet, Th. Monod a trouvé à différentes reprises plusieurs squelettes dans le même tombeau (du type à margelle de puits), en particulier deux fois deux, et une fois trois.

Ces squelettes ne sont pas des facteurs déterminants permettant d'avoir des données précises sur les anciens habitants du Sahara. Certains sont négroïdes, d'autres europoïdes, et ce que l'on peut dire, c'est qu'à ces époques reculées, les deux races vivaient déjà côte à côte, phénomène que nous observons actuellement chez les Touaregs ou dans les oasis.

On peut retenir le mode d'ensevelissement qui paraît avoir été constant, en particulier l'attitude du cadavre, qui était toujours déposé dans la position latérale. C'est la règle presque absolue pour tous les tombeaux de l'Ăhnet fouillés par Monod.

1. Th. Monod, *l'Adrar Ahnet*, p. 48.
2. Th. Monod, *ouvr. cité*, p. 53.

1: Lhote MS25 Tuareg

Dans les tombes de Tăfârit, Reygasse signale que la plupart des squelettes étaient dans une position légèrement repliée, mais plus près de l'allongement que du repliement complet.

On peut noter que l'ensemble des tombes de Tăfârit appartient au type chouchet et date du moyen âge saharien postérieur au IVe siècle, mais antérieur à l'introduction de l'Islam au Sahara. L'ensemble des tombes de l'Ăhnet est au contraire du type tronconique à évidement central qui est à notre sens beaucoup plus ancien. C'est lorsque des fouilles systématiques auront été faites que l'on pourra espérer avoir des éclaircissements plus précis et une classification plus méthodique.

Le mobilier funéraire relevé dans les tombes n'est pas riche. Une seule fois il a été trouvé une pointe de flèche en silex taillé [1] ; on a relevé aux abords des sépultures des débris de poteries, ce qui peut faire supposer que des récipients étaient déposés sur les tombes comme cela se fait encore à l'heure actuelle dans certaines tribus berbères chez les Zénata du Tidikelt, du Touat et du Gourara. Nous avons exhumé une poterie entière dans un tumulus, près de Djanet. On a trouvé des colliers en coquilles d'œufs d autruche, des perles de verre d'un modèle classique de l'antiquité méditerranéenne, des débris de cuir, restes probables de vêtements, enfin quelques anneaux de cuivre et un bracelet en fer. Si ces dernières trouvailles font repousser l'idée d'une civilisation néolithique, il n'en est pas moins vrai que l'oxydation de certaines pièces indique un climat beaucoup plus humide que l'actuel. Ceci est confirmé par la présence entre les pierres de coquilles de mollusques dont les espèces sont actuellement éteintes au Sahara.

Monuments lithiques. — D'autres monuments lithiques ont également attiré l'attention des voyageurs. Ce sont des cercles de pierres posées sur une ou plusieurs rangées, atteignant souvent un grand diamètre (jusqu'à 12 mètres). Ils sont le plus généralement isolés, sans qu'il y ait de tumuli aux abords. Les pierres sont généralement très enfoncées dans le sol et il faut être dessus pour les apercevoir. L'origine et la signification de ces cercles sont assez mystérieuses. Quoique plusieurs aient été fouillés dans l'Ăhaggar, l'on n'a jamais

1. Fouille Voinot. Tombeau en V de Tin Felki. Notes pour servir à l'étude de l'ethnographie ancienne du Sahara central. *Bull. Soc. Géogr. et Arch. d'Oran*, déc. 1908, p. 336.

1: Lhote MS25 Tuareg

trouvé de squelettes ou d'ossements [1], mais par contre, l'humus semblait contenir un peu de cendre, ce qui porterait à croire que ces cercles avaient une destination rituelle, soit pour l'incinération de cadavres, soit pour le sacrifice d'animaux. L'explorateur allemand Henri Barth, qui avait vu des cercles de ce genre pendant son voyage, leur supposait le caractère religieux de cercles sacrés où les victimes expiatoires étaient sacrifiées. Les Touaregs disent que ce sont des cercles autour desquels les méharistes tournaient à l'occasion des fêtes de mariage, alors que les femmes se tenaient au centre, comme cela se fait aujourd'hui dans la cérémonie de l'*Iloujan* [2].

Fig. 14. — Cercle de pierres à double rangée.

En fait, on ne peut bâtir que des hypothèses sur la destination de ces monuments.

On a parlé de pierres dressées dans l'Ăhaggar, à Tit, dans la Koudia, dans l'Immidir. Certaines sont des marques de frontière entre tribus, telles celles que l'on peut voir au nord d'Idelès et qui marquaient l'ancien terrain de parcours des Ibaradjen (Kel Bardjen). Nous ne les mentionnons ici que pour mémoire.

On a signalé des ruines de constructions à Tit, à Silet, aux Ăjjer, dans l'Ămadror, et même dans le Ténéré, où d'anciennes cartes du service géographique portent interrogativement le terme de « Ruines Garamantiques ».

Les ruines que nous avons pu voir dans le Tassili sont des vestiges d'habitations construites en argile, fait qui éloigne toute idée d'ancienneté bien reculée. Quant aux ruines garamantiques, elles sont encore à découvrir ! Il semble qu'il s'agisse là de renseignements indigènes sans fondement.

Kasba de Ti-n-Hinân. — Il nous reste à parler du célèbre tombeau situé près du petit centre de culture d'Ăbalessa. En 1925, la mission de Prorok, dont faisait partie M. Rey-

1. Il y a une exception connue à la règle. Entre Zénaga et Beni-Ounif, c'est-à-dire très au nord de l'Ahaggar, un squelette a été trouvé par Frobénius. Cit. Monod, *L'Adrar Ahnet*, p. 41.
2. Voir page 323.

1: Lhote MS25 Tuareg

gasse, se rendait à Ăbalessa où les légendes touarègues situaient le tombeau d'une femme de haut rang que les Touaregs considéraient comme leur ancêtre et qu'ils désignaient sous le nom de Ti-n-Hinân. Construit sur la rive gauche de l'oued Ăbalessa, au lieu dit Tăfârit, il donne l'impression d'un tumulus d'une quinzaine de mètres de relief, au sommet duquel se trouverait une dizaine de tombeaux. Le centre de l'édifice fut fouillé et révéla l'existence de plusieurs murs en pierre formant des pièces adjacentes. Au fond de l'une de ces pièces plusieurs grosses dalles recouvraient un caveau qui livra un squelette féminin bien conservé, ainsi qu'un mobilier funéraire fort important : plusieurs bracelets d'or et d'argent, une statuette de pierre, une écuelle en bois et l'empreinte d'une pièce de monnaie à l'effigie de l'empereur Constantin, ce qui date la tombe, *a quo*, du IVe siècle de notre ère.

Au début de 1933, M. Reygasse entreprit de fouiller complètement le mausolée, mais après un travail de déblaiement assez considérable dans lequel aucune tombe, aucun squelette n'avaient été mis à jour, il s'aperçut qu'il se trouvait devant un petit fortin composé de huit salles. Entre différentes découvertes, il exhuma une petite lampe romaine en argile, des pointes de flèches, de très longs clous en fer.

Il y a une mode chez les savants, nous nous excusons de le dire. C'est ainsi qu'au Sahara, il fut une période où l'on voyait partout des vestiges romains ; quelques années plus tard, la mode fut en faveur des Garamantes, puis des influences byzantines. Avouons que dans la majorité des cas, cette mode cache pas mal d'ignorance, masque la complexité de découvertes qui ne sont pas bien signées.

Nous nous refusons, pour nous-même, à voir dans les ruines de Tăfârit un fortin romain ou un refuge d'étapes sur une route caravanière problématique dont ces ruines seraient les seuls vestiges.

Il s'agit vraisemblablement d'une construction fortifiée, résidence d'un chef de haut rang, ayant eu des rapports avec la région méditerranéenne. La légende de Ti-n-Hinân, rapportée par les Touaregs, suffirait, le cas échéant, pour expliquer l'origine et la destination de ce monument.

Elle dit que cette reine vint du Tafilalet en compagnie de sa servante Takamat, et s'installa dans l'Ăhaggar où toutes deux engendrèrent les tribus actuelles des Kel Rela et des Dăg Mertemek. Cela suppose évidemment une migration de

tribus berbères primitivement fixées dans le sud marocain, région où l'on s'explique très bien la présence de monnaies romaines, de lampes d'argile de même origine qui auraient donc été transportées dans le voyage.

Nouveaux installés dans le pays, les chefs éprouvèrent peut-être le besoin de construire une résidence pour mettre leurs richesses et eux-mêmes à l'abri des coups de main des autochtones, à qui, par la suite, ils s'imposèrent.

Quant au fait que le squelette trouvé à Tăfârit soit du sexe féminin et que la légende fasse remonter toute l'origine et l'histoire des Tribus Ihăggaren à deux femmes, ils s'expliquent d'eux-mêmes lorsqu'on sait que l'organisation sociale des Touaregs repose entièrement sur le matriarcat.

Influence carthaginoise ? C'est fort possible, mais acquise au Tafilalet. La présence d'une lampe près du squelette de Ti-n-Hinân n'est-elle pas la survivance d'une coutume punique qui consistait à placer une lampe allumée à côté du mort ? Dans les tombes puniques on rencontre à peu près partout des lampes. Jusqu'à une époque assez voisine de la destruction de Carthage, elles étaient munies d'une mèche et allumées dans la tombe [1]. De même que dans les tombes carthaginoises postérieures au IVe siècle, l'on trouvait des pièces de monnaie ainsi que des statuettes en pierre tendre « qui étaient destinées à tenir compagnie au mort » [2].

Aucune trace d'occupation romaine n'a été découverte jusqu'à ce jour au Sahara central. L'empreinte de monnaie retrouvée dans le tombeau de Ti-n-Hinân est le seul élément se rapportant à cette époque. Des pièces en bronze ont été trouvées dans le Grand Erg, aux environs de Fort-Flatters, mais là encore il doit s'agir d'objets transportés.

D'après ce qui précède, on voit que les éléments préhistoriques et protohistoriques que nous possédons de la région qui nous intéresse dans cette présente étude ne sont pas d'une grande netteté. Pourtant, après les avoir analysés tous, on peut tenter un essai sur le peuplement ancien de l'Ăhaggar.

Nous nous efforçons de le faire très succinctement.

Pour la période du *paléolithique inférieur* (outillage chelléo-acheuléen) on constate :

1° que les gisements en place sont situés sur les parties

1. Step. Gsell, *Histoire ancienne de l'Afrique du Nord*, t. IV, p. 458.
2. Step. Gsell, *Histoire ancienne de l'Afrique du Nord*, t. IV, p. 459.

1: Lhote MS25 Tuareg

supérieures des berges des anciennes rivières, et comportent une faune à caractère fluviatile ;

2° qu'il n'existe pas de gisements dans le massif proprement dit, mais sur les abords ; que seules des pièces isolées ont été recueillies dans la montagne. On peut donc en conclure que les hommes de cette époque reculée fréquentaient les plaines actuellement désertiques qui entourent le massif, et que ce dernier était visité par des individus ou des campements isolés.

Pour la période du *paléolithique moyen* (outillage levalloisien) l'homme avait pénétré dans la montagne, mais semble avoir limité son occupation aux étages inférieurs.

On ne sait rien des périodes du *paléolithique supérieur* ou du *mésolithique*.

Pour la période *néolithique*, on est amené à adopter les mêmes conclusions que pour le paléolithique inférieur, à savoir que la montagne a été délaissée au profit de la plaine, mais surtout à celui des grandes vallées qui devaient fournir des ressources alimentaires considérables. Les populations ont dû atteindre une très grande densité, se livrant à des occupations diverses : pêche, chasse, agriculture, élevage. On doit pouvoir rattacher à cet étage les tumuli coniques et les grandes gravures rupestres.

Les populations, pasteurs, éleveurs de bœufs, couvrirent alors tout le Sahara. Les peintures rupestres de Mertoûtek évoquent les bergers et bergères peuls que nous trouvons aujourd'hui dans la steppe soudanaise à la limite sud du pays touareg, et il n'est pas déplacé de les attribuer à des proto-hamites, venus de la Haute-Égypte comme les Peuls. Les pasteurs durent émigrer vers des régions meilleures par suite du caractère désertique que prenait alors le Sahara, et furent remplacés par les cavaliers de l'Empire des Garamantes. C'est la période protohistorique. Le Sahara est encore relativement humide, mais la plaine commence à s'assécher et les populations cherchent un refuge dans la montagne où les points d'eau sont plus nombreux. La diversité de forme des tumuli évoque l'idée de populations d'origines diverses et l'Ăhaggar semble avoir été un centre d'attraction pour les tribus à la recherche d'un site hospitalier. La période qui suit, celle des Libyco-berbères, marque l'envahissement du pays par les populations berbérophones d'origine africaine qui couvrent le vieux fond Garamante, en sont peut-être issus et contribuent vraisemblablement à fonder avec lui la nation touarègue actuelle.

# CHAPITRE II

## LE PEUPLEMENT DU SAHARA CENTRAL ET L'ORIGINE DES TOUAREGS

Nous ne nous méprenons pas sur les difficultés que représente la tâche de reconstituer l'histoire des Touaregs et de rechercher leurs origines. Les documents sont rares et à travers les siècles, il y a des périodes d'obscurité complète qui rendent les recherches très délicates. Le peuple targui n'est d'ailleurs pas une unité somatique bien déterminée, mais est fait de composantes multiples qui se sont groupées à travers les âges.

Ce n'est pas auprès des Touaregs que l'on peut avoir des renseignements sur leur origine. Ils sont sans culture et ils n'ont pour l'histoire de leur passé que la plus grande indifférence.

A l'explorateur Duveyrier, qui leur demandait d'où ils venaient, ils répondirent : « Nous sommes Imohagh, Imocharh, Imajirhen et notre langue suivant les tribus s'appelle tamâhaq ou tamâchek ; tous ces mots dérivent de la même racine, le verbe iohargh qui signifie : il est libre, il est franc, il est indépendant, il pille. Et si tu nous demandes de mieux préciser les origines de chaque tribu, et de distinguer les nobles des serfs, nous te dirons que notre ensemble est mélangé et entrelacé comme le tissu d'une tente dans lequel entre le poil du chameau avec la laine du mouton. Il faut être habile pour établir une distinction entre le poil et la laine. Cependant nous savons que chacune de nos nombreuses tribus est sortie d'un pays différent [1]. »

A 80 ans d'intervalle, nous n'avons pas pu obtenir de meilleure réponse.

Les légendes, que l'on peut recueillir au Sahara, n'ont jamais un caractère historique. Qu'elles soient rapportées par les Touaregs ou par leurs voisins, elles sont toujours plus ou moins déformées pour les besoins de la cause, les premiers

1. *Les Touareg du Nord*, p. 319.

1: Lhote MS25 Tuareg

veulent se donner une origine chérifienne ou yéménite, les seconds, les Arabes en particulier, leur attribuent, comme il va de soi, une origine peu flatteuse. On ne peut en tirer raisonnablement parti.

On ne connaît, jusqu'à présent, aucune relation en écriture tifinagh, et tout ce que rapportent quelques vieillards, est plus ou moins tiré de l'auteur arabe Ibn Khaldoun, qui écrivit au XIVe siècle une histoire très documentée sur l'origine des Berbères.

Un manuscrit aurait, paraît-il, existé chez l'ancien aménokal de l'Ăhaggar, Moussa ag Ămâstan. Il aurait été rédigé en tifinagh suivant les uns, en arabe suivant les autres. Mais il n'a pu être retrouvé. D'après certains passages qui nous ont été cités, il doit s'agir d'un fragment ou d'une citation d'Ibn Khaldoun, rapporté par le « Tarik Kounta ».

Les Touaregs Soudanais, en particulier les Kel es Souq, qui sont les chapelains des Ioullimmiden, possédaient quelques chroniques dont les plus célèbres étaient la propriété de Mohamed Ouguinat ; la bibliothèque de ce marabout fut malheureusement détruite par un incendie, lors du combat d'Ăghiar, en juillet 1916.

Ce qui frappe avant tout chez les Touaregs, c'est leur unité ethnique.

Par leur langue, ils s'identifient aux Berbères, qui sous bien des rapports de mœurs et de coutumes ressemblent beaucoup aux Touaregs. On est obligé de remarquer entre eux une parenté qui est manifeste. Les linguistes ont l'habitude de réunir les unes et les autres sous le vocable de « famille berbère », encore que cette appellation englobe une multitude de groupements disparates, physiquement et culturellement.

Mais on ne peut parler des Berbères sans penser aux origines de tout le peuplement Nord-Africain. C'est donc là qu'il faut essayer de rechercher celle des Touaregs.

Beaucoup de savants, dont Hamy, H. de Mortillet, Labarowsky, Maspéro, Berthelot, croient à l'unité ethnique des populations autochtones de l'Afrique septentrionale.

Mais d'autres reportent en Asie le berceau de la civilisation pharaonique, et la Bible donne elle-même une origine asiatique aux anciens Égyptiens. La question est extrêmement controversée.

L'unité fondamentale de la civilisation nord-africaine n'est

1: Lhote MS25 Tuareg

pas en contradiction avec ce que l'on connaît de la préhistoire saharo-algéro-égyptienne. Cette unité semble avoir été facilitée par la structure même du pays, car l'Afrique du Nord a constitué ce que les géographes et les préhistoriens appellent un « asile », c'est-à-dire une région qui a été isolée, en même temps qu'elle a échappé aux cataclysmes physiques (glaciations, inondations, bouleversements tectoniques), ce qui a facilité la survivance d'une flore, d'une faune et où des civilisations ont pu se développer sans à-coup.

Un savant géographe, M. Berthelot, qui s'est efforcé, ces dernières années d'éclaircir l'histoire ancienne de l'Afrique du Nord [1], distingue deux foyers de civilisation, l'Égypte et la région hispano-maure, procédant l'un et l'autre d'une civilisation néolithique déjà perfectionnée connaissant l'élevage, la culture, la poterie.

C'est déjà d'ailleurs l'impression d'Hérodote qui pensait que les Berbères étaient des autochtones de l'Afrique du Nord, à peu de chose près, des régions où nous les retrouvons aujourd'hui.

Documents tirés de l'histoire de l'Ancienne Égypte. — Les plus anciens documents que nous possédons sur l'histoire de l'Afrique septentrionale sont égyptiens. Le nom des Libyens s'y retrouve souvent. C'est donc à la lumière de l'histoire d'Égypte que nous devons essayer de voir un peu clair dans le passé des peuples de l'Afrique du Nord.

Nous procéderons chronologiquement sans vouloir tirer des textes plus qu'ils ne nous donnent.

D'abord l'on peut se demander de quelle origine étaient les tribus et les peuplades qui contribuèrent à former la civilisation égyptienne. Sans entrer dans les détails des différentes civilisations néolithiques (Tasienne, du Fayoum, de Merimde) et énéolithiques (Badarienne, Amratienne) qui se succédèrent sur les bords du Nil, on observe au début une certaine unité ethnique qui sera légèrement modifiée ultérieurement par l'arrivée de nouveaux éléments humains venus du Sud, du Nord, peut-être de l'Est. Mais le fond semble être purement africain, formé par des populations pratiquant essentiellement l'élevage, y associant la chasse et la pêche, les-

1. Voir *L'Afrique Saharienne et Soudanaise* », un vol. in-8, Payot, Paris, 1927.

1: Lhote MS25 Tuareg

quelles populations étaient venues de l'intérieur des terres, des plateaux libyens et du Sahara.

Plus tard, avec la civilisation du Fayoum, la culture naîtra en Égypte, en particulier sur les bords des lacs, vestiges d'inondations du Nil, ensuite sur les bords du Nil même lorsque le fleuve aura été discipliné, que les cultivateurs plus au courant des procédés de culture sauront tirer parti des périodes de crues et de décrues. Ce sont ces premières installations de sédentaires qui formeront les grandes villes égyptiennes dans lesquelles naîtra l'organisation urbaine et avec elle les dynasties pharaoniques.

Dès l'Amratien, nous voyions l'art se manifester dans la poterie par des marques de propriété imprimées sur les vases, représentant des animaux, des plantes, parmi lesquels beaucoup s'apparentent au style des gravures rupestres sahariennes. Cet art, d'après Gordon Childe, serait dû à l'arrivée de populations typiquement sahariennes qui, sous l'influence du climat, fuirent leur pays qui devenait désert pour envahir la vallée du Nil et se mêler aux gens de la civilisation badarienne. Et c'est cette rencontre « de civilisations opposées et de traditions divergentes qui aurait provoqué le grand pas en avant qui marque l'avènement de la première culture prédynastique »[1].

Dès lors les nomades installés à l'ouest du Delta que le Égyptiens appelleront les Temhou, les Tehenou et plus tard les Lebou, dont les Grecs feront les Libyens, joueront constamment un rôle dans l'histoire de l'Égypte.

Sur les plus vieux documents archéologiques, en particulier sur un couteau en silex à manche d'ivoire retrouvé au Djebel el Araq et datant de 3500 env. (S. D. 63 de Petrie) on voit un combat où figurent des hommes vêtus d'un pagne court, portant un étui phallique, présentant une grosse tête, assénant des coups de massues à leurs adversaires, lesquels ont des têtes plus fines surmontées d'une mèche de cheveux qui pend sur l'épaule, signe distinctif de populations libyennes. Un autre combat, figuré sur une autre face où plusieurs bateaux sont en présence, nous montre les bateaux libyens couchés sur le flanc, vaincus par leurs adversaires qui semblent être des étrangers. Mais ces bateaux étrangers portent les emblèmes de Letopolis et étaient au service du chef du Delta, si bien

1. Gordon CHILDE, *L'Orient préhistorique*, Paris, Payot, 1935, p. 86.

1: Lhote MS25 Tuareg

que l'on peut interpréter cette scène, soit comme un groupe d'Égyptiens du Nord utilisant des bateaux étrangers, soit d'étrangers envahisseurs de la Basse-Égypte subjuguant les Libyens installés à cette époque dans le Delta [1].

Une palette dite « des Chasseurs », datant du même âge, représente le vêtement et l'armement des Libyens de l'époque. Ils sont vêtus de pagnes serrés à la taille par une ceinture à queue d'animal, ils portent une chevelure nattée, une longue barbe et une plume placée en arrière de la tête. L'armement consiste en casse-têtes et boomerangs, en haches doubles emmanchées par le milieu rappelant par la forme la double hache crétoise [2].

L'emploi du fourreau phallique est en usage dès cette époque comme on le voit sur un autre document représentant un taureau foulant à ses pieds un Libyen [3].

Le portrait du Libyen sera dorénavant toujours le même : nattes, plumes dans les cheveux, pagne serré à la ceinture, fourreau phallique ou *Karnata* boomerang au poing, portrait, comme on peut s'en rendre compte, singulièrement proche de celui de certaines figurations humaines rupestres du Tassili-n-Ăjjer.

C'est deux siècles plus tard que commence l'histoire « écrite » de l'Égypte.

Avant que se constitue la première dynastie pharaonique nous voyons les populations de la Haute et de la Basse-Égypte en venir aux mains. C'est le combat mythique de Seth et d'Hôrus, qui devait se terminer par la victoire du dernier et par l'unification de l'Égypte sous sa couronne. Mais au cours des longues luttes qui mirent aux prises les deux partis, les Libyens intervinrent souvent et sous le roi Narmer, l'un des prédécesseurs du premier pharaon, les Tehenou s'allient aux Égyptiens du Delta, avec lesquels ils ont probablement de nombreux liens de parenté, contre les Égyptiens du Sud. Narmer les combattit victorieusement, envahit la Marmarique et en rapporta des milliers d'animaux domestiques.

Dès ces temps reculés, les nomades venaient déjà en Égypte pour y commercer, apporter les produits de leur pays en échange des graminées de la vallée du Nil. Ces produits étaient

1. Voir Moret, *Histoire de l'Orient*, t. I, p. 90.

3. Capart, *ouv. cit.*, fig. 166.

1: Lhote MS25 Tuareg

le bétail et les sous-produits du lait, lait caillé, beurre, fromage et une essence aromatique fort prisée des Égyptiens qui était appelée « essence de Libye ».

La lutte se continua sous Menès, le premier pharaon de la première dynastie Thinite, mais les Libyens et leurs alliés sont vaincus si bien que le pharaon peut unifier l'Égypte et transporter le siège de la ville royale à Memphis. Mais bientôt, mettant à profit l'éloignement du pharaon, les Égyptiens du Nord soutenus par les Libyens et des Asiatiques essayent de reconquérir sans succès leur indépendance. Dans tous les monuments de l'époque de Menès on voit toujours les Libyens des oasis ou du Sud (Nehesiou) [1] figurer dans les défilés des vaincus [2].

Au cours de la deuxième dynastie memphite, sous le pharaon Neferkarâ, les Libyens de Nubie, qui étaient peut-être des Éthiopiens, inquiètent à nouveau l'unité de l'Empire mais sont battus, comme l'indique une stèle trouvée à Hiérakonpolis.

Sous la Ve dynastie les Libyens, toujours tentés par les richesses et la prospérité de l'Égypte, se lancent à nouveau contre le delta, malgré des fortifications établies à l'Est par les pharaons las des attaques constantes des pillards. Le pharaon Sephrès (d'après les tables de Manethon) les repoussa, les poursuivit en Marmarique pour les punir et s'empara « de 123.400 bœufs, 223.400 ânes, de milliers de moutons et de chèvres qui furent ramenés en Égypte par les chefs libyens prisonniers » [3].

A la suite de cette victoire, un compromis s'établit entre les pillards et les pharaons et les Libyens entrèrent dans la garde de ces derniers comme mercenaires rétribués, ce qui était une façon comme une autre de détourner de l'Égypte un danger permanent, en utilisant leur instinct batailleur.

A partir de cette Ve dynastie on voit le pouvoir pharaonique diminuer, évoluer, de la monarchie divine qu'il était jusqu'alors, à la monarchie oligarchique au profit des prêtres, des hauts fonctionnaires et des chefs des nomes. Une lente

1. Le nom de Nehesiou qui, à l'origine, désignait essentiellement des populations libyennes, finit par s'appliquer, après le milieu du IIIe millénaire, aux nègres africains aussi bien qu'aux Libyens.

2. Moret, *Histoire de l'Orient*, tome I, p. 193.

3. Borchardt, *Grabdenkmal des Königs Sahure*, II, p. 13. Ce chiffre de 123.400 bœufs semble quelque peu exagéré et est d'ailleurs mis en doute par de nombreux auteurs, entre autres Moret.

évolution de la plèbe s'accomplit, sous la VIII^e dynastie on assiste à une révolution totale et tout ce qui représente la classe dominante est détruit. L'Égypte dès lors vit en régime féodal jusqu'à la XI^e dynastie Thébaine, fondée par Antef, chef du nome de Thèbes qui règne sur la Haute-Égypte.

Pendant toutes ces périodes les arts et les sciences sont délaissés et l'histoire de l'Égypte est assez obscure, mais il est certain que les Libyens durent profiter de l'absence d'autorité et de forces militaires régulières pour pénétrer en Égypte et piller. Ils s'étaient en particulier installés en Basse-Égypte et n'en furent expulsés que sous Mentouhetep IV (2060) qui rétablit l'unité de l'Empire à son profit. Mais l'Égypte devait alors connaître une invasion bien plus dangereuse que celle des Libyens, qui devait bouleverser sa vie pendant plusieurs siècles et transformer par contre-coup toute celle de l'Afrique du Nord : c'est l'invasion des Hyksos.

Les Hyksos firent leur apparition en Égypte à la fin de la XIII^e dynastie, s'en emparèrent de vive force, sans toutefois rencontrer une bien grande résistance et installèrent leur chef à Memphis. Les Égyptiens leur donnèrent le surnom de « Hegou Shasou », ce qui voudrait dire « les chefs de voleurs », suivant les uns, ou « Rois Pasteurs » suivant les autres, et qui fut traduit par les Grecs : Hyksoussos.

Qui étaient les Hyksos ? On a dit qu'ils faisaient partie du peuple de Pount, par conséquent d'origine chaldéenne. Il y aurait eu parmi eux des individus sémites, d'autres qui avaient ni le type sémite, ni le type égyptien et ils formaient en somme un ramassis de peuplades les plus diverses unies en la circonstance pour l'aventure. D'après une stèle découverte récemment à Napata, ils seraient en fin de compte des Mitaniens [1].

Ce qui donna aux Hyksos une supériorité considérable sur les Égyptiens, c'est qu'ils possédaient — outre d'excellentes armes telles que lances, épées, boucliers, cuirasses de bronze et de fer — des chevaux que les Égyptiens ignoraient jusqu'alors, et qu'ils connaissaient l'emploi des chars de guerre qui jetèrent la panique dans les armées pharaoniques. C'est de cette époque que date l'introduction du cheval en Afrique (env. 1750) et cet événement à lui seul suffit à faire comprendre les modifications profondes qui apparurent ultérieurement dans le peuplement de l'Afrique Septentrionale.

1. MORET, *Hist. de l'Orient*, t. I, p. 475.

1: Lhote MS25 Tuareg

Pendant la domination des Hyksos, les rois égyptiens se réfugièrent en Haute-Égypte, probablement avec le secours des Libyens de la région de Saïs, mais ils durent néanmoins reconnaître la suzeraineté des souverains Hyksos d'Avaris et leur payer tribut.

Pendant toute cette période nous ignorons quelle fut l'attitude des Libyens, quelles furent leurs relations avec les envahisseurs. La supériorité militaire de ces derniers dut les inciter à rester tranquilles.

Les Hyksos furent rejetés d'Égypte par les princes thébains qui, après leur départ, fondèrent la XVIII^e dynastie et firent refleurir en Égypte les arts et les lettres, que les Hyksos avaient tant soit peu délaissés. Cette période porte le nom de Nouvel Empire et va de 1580 à 1085. Les Égyptiens ont adopté à leur tour les chevaux et les chars et cette arme nouvelle aidera les pharaons à rétablir rapidement leur autorité. Nous savons qu'ils firent la conquête du couloir syro-palestinien pour mettre l'Égypte à l'abri de nouvelles incursions d'envahisseurs venant de l'Est, qu'ils refoulèrent les Nubiens jusqu'en amont de la 4^e Cataracte, et qu'ils recevaient des droits de souveraineté des Libyens.

A cette époque apparaît sur les monuments égyptiens un nouveau type de Libyen à yeux bleus, à cheveux et à teint clairs, alors que précédemment les populations nomades de la rive gauche du Nil étaient toujours représentées avec le type hamitique, c'est-à-dire, avec le teint rougeâtre, les cheveux abondants et tressés et la barbe en pointe. Ces nouveaux venus sont appelés : Tembou.

Cette modification importante dans la représentation des Libyens implique l'arrivée de populations nouvelles, de type physique très différent pour que les artistes égyptiens en aient si bien accusé les traits, et c'est là un problème qui fut très discuté, car il pose l'origine du type à cheveux blonds et à yeux bleus jusqu'alors inconnu en Afrique, ou tout au moins en Égypte.

Le dernier avis en date sur l'origine des Libyens blonds qui fasse autorité est celui de Moret qui considère cet élément ethnique nouveau comme d'origine nordique, venu d'Europe « par le Sahara et les Oasis » [1]. A notre sens cela est peu probable. Qu'il s'agisse de populations d'origine européenne, dans le sens qu'elles habitaient l'Europe avant de venir en

1. MORET, *Histoire de l'Orient*, t. II, p. 487.

Afrique, cela est très plausible ; mais qu'elles soient venues d'Europe en passant par le Sahara, ce qui implique une migration par l'Espagne, on peut poser là un point d'interrogation, car aucun élément ne permet, dans l'état actuel de nos connaissances, de déceler le moindre mouvement de migrations allant de l'Ouest en Est à travers le Sahara. Aucun squelette ancien, aucun élément archéologique n'a été découvert permettant d'apporter la moindre lueur sur ce point. Par contre, on peut admettre facilement que des éléments blonds venus de Crète ou de Grèce et débarqués en Marmarique se soient glissés à travers les anciennes tribus libyennes jusqu'au contact de l'Égypte.

D'ailleurs, plus tard, et ceci confirme notre hypothèse, sous la XIX^e dynastie thébaine, des bas-reliefs de Karnak, non datés, mais se rapportant certainement à l'époque de Sethi I^er (1318-1298) nous montrent le pharaon combattant des Libyens aux yeux bleus, aux cheveux blonds, qui attaquent l'Égypte *en relation avec les Peuples de la Mer*, lesquels s'efforcent de s'installer en Marmarique.

Qu'étaient ces nouveaux arrivants, d'où venaient ces « Peuples de la Mer » ?

Vers 1232 les migrations européennes venues des Balkans et des plaines du Nord de la Mer Noire provoquent un bouleversement dans le bassin méditerranéen oriental. En Grèce les Achéens sont écrasés par un peuple nouveau, les Doriens, armés de lances en fer, et passent en Crète, ruinant les foyers de civilisation mycénienne, dont une partie des populations se réfugia en Asie Mineure. Vainqueurs, vaincus se bousculent les uns les autres et comme poussés par un instinct grégaire, sont à la recherche de terres nouvelles. L'Égypte, en face d'eux, est bien tentante. Alors que certains exécutent leur mouvement vers l'Asie Mineure, d'autres cherchent à débarquer en Marmarique où sont déjà installés les Shardanes, les Loukou, les Sheklal, de même origine qu'eux. Un texte retrouvé à Karnak nous décrit deux peuplades nouvelles, les Lebou et les Akaïouasha. Les premiers sont des hommes à peau blanche, à cheveux blonds, à yeux bleus, portant des cuirasses et des armes de bronze et ils donneront leur nom, qui venait de l'hébreu *loubim* ou *loubahim*, à la région située à l'Ouest de l'Égypte, la Libye.

Cette migration n'est pas essentiellement guerrière, c'est tout un peuple en marche qui vient non seulement avec son

1: Lhote MS25 Tuareg

attirail guerrier, en particulier de nombreux chars de guerre, mais aussi avec ses femmes, ses enfants, ses serviteurs, ses trésors, son mobilier [1].

Tehenou, Temhou, gens de la mer, semblent s'entendre à merveille, ce qui peut, peut-être, s'expliquer par des affinités d'origine.

Dès la deuxième année du règne de Ramsès II (1297), les Peuples de la Mer, Shardanes (d'origine indo-européenne) et Mashaouasha (qui sont des Libyens Tehenou, les Maxyes des Grecs, nom dans lequel on retrouve celui des Imajeurcn Touaregs) aidés des Temhou attaquent l'Égypte. Mais ils subissent un échec cuisant et un grand nombre sont faits prisonniers. Ces prisonniers intégrés dans l'armée pharaonique participeront quelques années plus tard avec succès à la bataille de Kadesch (1294) gagnée par Ramsès II sur les Hittites.

Ces premiers assauts des Peuples de la Mer contre l'Égypte étaient le prélude d'autres beaucoup plus puissants, coïncidant avec l'arrivée de nouveaux envahisseurs.

Une alliance se forme groupant les Tehenou, les Temhou, les Shardanes, les Toursha, les Sheklal et tous, sous le commandement du roi libyen Merjej, fils de Did, se lancent sur le Delta au nombre de 30.000, en l'an V du règne de Mer-n-Phtah (1227).

Le moment est critique pour l'Égypte. Le pharaon Mer-n-Phtah, fils de Ramsès II, rassemble rapidement tous ses guerriers et ses chars disponibles, livre bataille à Per-irt, bouscule les confédérés, leur tue des milliers de guerriers, fait 9.000 prisonniers et s'empare d'un nombreux butin. Les Libyens déçus par cet échec, demandent la paix, en même temps que l'autorisation de vivre comme autrefois sur le sol de l'Égypte, ce qui leur est accordé ; mais sitôt cette autorisation reçue, ils s'efforceront de se dérober aux obligations de vassalité qui leur sont imposées.

L'Égypte subit alors une crise. Le joug du pharaon semble avoir pesé lourdement sur ses administrés, si bien qu'il se produit un soulèvement général des peuples soumis, Mag, Sémites, Éthiopiens auxquels se joignent naturellement les Libyens. Le manque de cohésion de la part des insurgés ruine leurs efforts. Une attaque des Mashaouasha, des Temhou, sur le Delta, échoue et ils sont rejetés au désert par Ramsès III.

1. MORET, *Histoire de l'Orient*, t. II, p. 580.

Quelques années plus tard, en 1195, nouveau débarquement des Peuples de la Mer, venus d'Asie Mineure où ils s'étaient introduits auparavant et d'où ils sont rejetés par les Philistins. Cette nouvelle vague d'envahisseurs entraîne une nouvelle coalition des Lebou, Shardanes, Toursha et autres et, sous le commandement du chef Mashouasha, Kapour, se jette encore une fois sur le Delta. Ramsès III les arrête sur les frontières de son territoire et parvient à les battre grâce à ses milices locales, lesquelles, par un curieux état de chose, sont composées pour beaucoup d'anciens prisonniers Shardanes et Toursha auxquels ont été adjoints des Éthiopiens, des Philistins, des Zakal. Sur un mur du temple de Médinet Kabou, près de Thèbes, on voit encore gravée la scène des prisonniers libyens enchaînés, que Ramsès III présente au Dieu Ammon et à la Déesse Moût. Leur manière de se vêtir est toujours la même et ils portent sur le côté de la tête une longue tresse ou une boucle recourbée tombant sur l'épaule qui rappelle la coiffure actuelle des Touaregs.

Une autre vague des Peuples de la Mer venue cette fois de l'Est, et composée en partie de Philistins, attaque à son tour l'Égypte mais n'est pas plus heureuse et un grand nombre de Philistins sont faits prisonniers et internés dans les citadelles égyptiennes. Cette tentative des émigrés de l'Est, semble avoir été faite en accord avec les envahisseurs de l'Ouest, avec lesquels ils étaient apparentés, dans un but commun de s'emparer de l'Égypte par tous les moyens.

Ces échecs successifs ruinent définitivement les ambitions guerrières des peuples de la mer vis-à-vis de l'Égypte et, dès lors, ils ne seront plus cités dans les textes égyptiens. Ramsès III sûr de sa force accordera la vie aux prisonniers et les embrigadera dans ses milices.

Mais les Libyens, qui semblent décidément ne pas pouvoir trouver dans leur pays les moyens de subvenir à leur existence, s'avancent pacifiquement vers l'Est, se font tolérer sur le sol de l'Égypte, et comme leur poussée qui se fait au long des années est insensible, ils s'infiltrent jusque dans le Delta, en le colonisant virtuellement.

Pendant cette période, l'Égypte subit une nouvelle crise politique qui favorise l'action des Libyens. Les prêtres thébains et les rois de Tanis sapent l'autorité pharaonique qui devient de plus en plus chancelante et qui est obligée de faire des concessions à toute une foule de petits seigneurs qui règnent

1: Lhote MS25 Tuareg

dans les villes. Grâce à cette demi-anarchie, les chefs Libyens s'érigent en féodaux et l'un d'eux, Sheshonq, vers 1070, en épousant une reine veuve se haussera au titre de prince royal ; son petit-fils, qui portera le nom de Sheshonq I, fondera la XXIIe dynastie, désignée sous le nom de Bubastite dans la chronologie égyptienne [1].

Dès 950, le Delta est partagé en principautés militaires commandées par des chefs libyens qui sont représentés sur les monuments, coiffés de plumes. C'est en somme la « libyennisation » de l'Égypte et « les contes populaires du temps, nous dit Moret, sont des romans de chevalerie tout retentissants de défis, de guerres entre chefs, de passes d'armes, de tournois où paradent des preux libyens aux belles armures » [2].

On ne peut mieux comparer cette littérature à celle des Touaregs, que l'on connaît grâce aux travaux du Père de Foucauld.

Une certaine anarchie dans le commandement suivra l'installation des Libyens et l'on voit se créer plusieurs dynasties superposées, à Tanis, et à Saïs. « Ces pharaons, nous dit encore Moret, sont des Libyens Temhou venus du désert libyque, bien après les Tehenou et les Mâ du Delta. Enterrés dans des fosses rectangulaires surmontées de tumuli, des pointes de flèches en silex, une céramique pauvre, des perles d'or, tel est le mobilier de ces nomades très en retard sur la civilisation thébaine [3]. » Dans des tumuli on a retrouvé inhumés près du guerrier ses chevaux d'armes par groupe de 4, ou de 6, ou de 8, ce que, d'après Moret, on n'a jamais vu en Égypte, et qui indiquerait une coutume libyenne.

Un demi-siècle plus tard (750) on trouve traces d'une dynastie libyenne à Napata, capitale du pays de Kousch, sur le Haut-Nil, qui sera la XXVe dynastie des rois éthiopiens, parallèle aux XXII, XXIII, XXIVe dynasties des rois régnant dans le Delta. Ces rois de Napata s'imposeront plus tard sur le Delta et, vers 725, le pharaon Piânkhi marchera sur Thèbes dont il s'emparera après avoir obligé les roitelets du Nord à reconnaître sa suzeraineté. A peine de retour dans sa capitale, l'un des chefs du Nord, Tafneknt, prend le cartouche royal et règne sur Saïs, Héliopolis et Memphis. Son fils, Borchoris qui lui succède est capturé plus tard par Shabaka, frère et

1: Lhote MS25 Tuareg

successeur de Piânki qui, après cette victoire, quitte Napata pour s'installer définitivement à Thèbes.

Les Assyriens, qui s'étaient déjà présentés en 720 devant l'Égypte pour l'attaquer et qui avaient été repoussés par Borchoris, reviennent en 671 avec une armée puissante, traversent le désert du Sinaï, grâce aux chameaux prêtés par leurs alliés arabes qui transportent l'eau, les vivres et le matériel nécessaires, et s'emparent de Memphis et de la Basse-Égypte. Leur roi, Asaraddon, mettra à profit les discussions traditionnelles des roitelets libyens pour tenir en main le pays en se servant tour à tour des uns et des autres.

Le pharaon Taharga reprend Memphis aux Assyriens (669), mais Assourbanipal reconquiert la ville, grâce à l'appui que lui fournissent les Libyens du Delta restés fidèles et qui sont, par surcroît, les ennemis de Taharga dont la force est faite d'éléments éthiopiens.

Le successeur de Taharga, Tanoutamon, reprend Memphis à son tour, fait mourir les chefs libyens alliés des Assyriens, mais échoue devant les forteresses du Delta, ce qui donne le temps à Assourbanipal d'envoyer une armée contre lui qui l'oblige à battre en retraite et à rentrer à Napata (663). Dès lors la dynastie éthiopienne se repliera sur elle-même, coupera toute relation avec l'Égypte, s'africanisera de plus en plus et transportera même sa capitale plus au sud, à Meroé, perdra la pratique de l'écriture hiéroglyphique ainsi que celle de la langue égyptienne pour adopter un dialecte africain [1].

En Basse-Égypte, Psamétik, fils de Néchao, chef libyen qui régnait à Saïs pour le compte d'Assourbanipal, réduit à sa merci les autres petits roitelets du Delta avec l'aide de Cariens et de mercenaires ioniens et, fort de ces premiers succès, parvient à libérer l'Égypte du joug assyrien.

Psamétik et ses successeurs, peu sûrs des éléments libyens toujours prêts à faire défection et à épouser la cause d'un prétendant adverse, constituent une garde avec des éléments ioniens et cariens, leur allouent des terres et l'on assiste alors à l'hellénisation de l'Égypte. Des fonctionnaires grecs remplacent les Libyens, la langue grecque se répand de plus en plus, si bien que devant cet état de fait, les troupes libyennes se révoltent et émigrent au nombre de 240.000 ? (d'après Hérodote) chez les Éthiopiens où elles reçoivent un bon accueil.

1. Moret, *Histoire de l'Orient*, t. II, p. 697.

1: Lhote MS25 Tuareg

Les Grecs s'implantèrent de plus en plus en Égypte et en Marmarique où le chef dorien Battos vint fonder Cyrène (631), ce qui provoqua une réaction des Libyens qui voyaient leur commerce leur échapper. Ils firent appel au pharaon Apriès. Celui-ci envoya contre les Grecs des contingents égyptiens qui furent battus par Battos près d'Irasa, en Cyrénaïque. Ces contingents égyptiens se révoltèrent alors contre Apriès qui fut tué tandis qu'il marchait contre eux et nommèrent à sa place leur général Amasis qui sera le dernier des pharaons (525).

Dès lors, l'Égypte pharaonique a vécu. En 525, l'armée perse conduite par Cambyse traverse le désert du Sinaï, attaque les défenses du Delta gardées par des mercenaires cariens et ioniens, pénètre en Égypte et s'empare de Memphis.

Ici disparaissent les documents égyptiens écrits susceptibles de nous éclairer sur le passé des Lybiens.

Cet aperçu succinct de l'histoire de l'Égypte, ou plus exactement du rôle que les Libyens y jouèrent, pourra sembler long au lecteur et peut-être un peu éloigné du sujet de l'ouvrage. Il a permis de voir pourtant que la civilisation pharaonique a été constituée par des éléments importants venus des régions situées à l'ouest du Nil et probablement du Sahara.

Ces tribus « libyennes » que la nécessité contraignit à s'infiltrer constamment vers l'Égypte pour s'emparer de ses richesses, comme de notre temps les Touaregs vis-à-vis des oasis, jouèrent ultérieurement, comme on a pu le voir, un rôle considérable en Égypte, au point de s'emparer à un moment donné du pouvoir. Leurs mœurs, leurs coutumes, leurs noms présentent de telles affinités avec ceux de nos Touaregs, qu'il est impossible de ne pas voir en eux la souche des tribus sahariennes actuelles. Dans ce remue-ménage des peuples qui bouleversa l'Orient pendant trois millénaires, nous voyons également d'autres éléments ethniques — en particulier les Peuples de la Mer — s'infiltrer en Marmarique, en Cyrénaïque, se fondre avec les anciens éléments libyens, leur apporter des éléments culturels nouveaux, lames en fer, boucliers ronds, chevaux, chars, etc.., modifiant également les types physiques, le costume, les mœurs. Et ces faits à eux seuls expliquent les différentes influences artistiques que l'on observe dans les gravures et les peintures rupestres du Sahara Central qui se trouvait lui-même en dehors des sphères d'influence politique de l'Égypte, mais qui était le refuge, le déver-

1: Lhote MS25 Tuareg

soir des populations de la Marmarique et de la Cyrénaïque toujours en mouvement.

Toutes ces tribus libyennes nous les retrouverons quelques siècles plus tard à l'ouest du Nil où la conquête d'Alexandre les aura rejetées et où le climat qui a bien dû changer entre le quatrième millénaire, date à laquelle commence l'histoire de l'Égypte, et le v^e siècle avant J.-C., les aura obligées à s'essaimer le long de la côte ou à l'intérieur des terres.

Documents tirés des auteurs grecs et latins. — Parmi ces historiens anciens, le premier en date et le plus remarquable est le Grec Hérodote, que l'on surnomme très justement le « Père de l'Histoire ». C'est avec lui que commence véritablement l'histoire « écrite » de l'Afrique septentrionale et à qui l'on doit le premier aperçu sur les populations du Sahara Central.

Hérodote était né à Halicarnasse en 484 av. J.-C. et il aurait écrit son ouvrage vers 430 à Thuriès, en Italie, où il mourut quelques années plus tard. Il avait, paraît-il, bénéficié des travaux de deux géographes célèbres, Thalès de Millet et surtout Hécatée, auteur du premier traité de géographie, qui avait beaucoup voyagé pour recueillir la documentation de son ouvrage.

Hérodote visita lui-même l'Égypte, remonta le Nil assez loin, mais il ne visita pas la Libye. C'est par des Égyptiens, et surtout par de nombreux voyageurs grecs, qu'il obtint ses renseignements concernant les populations qui vivaient dans cette région.

Dans la description des pays eux-mêmes, des distances les séparant les uns des autres, il a certainement commis des erreurs d'appréciation inévitables si l'on tient compte qu'il devait la plupart de ses renseignements à d'autres personnes, et aussi de l'absence de mesures angulaires. Ces sources d'erreurs ont fait que l'orientation des côtes a été faussée et que, partant de là, tous les lieux cités dans l'arrière-pays se sont trouvés plus ou moins déplacés et cela a été, bien entendu, une source de divergences de vue entre ses commentateurs modernes.

Nous avons, grâce à lui, une description de toutes les peuplades qui habitaient depuis l'Égypte jusqu'au delà de la Petite Syrte et en suivant ses descriptions, et en tenant surtout compte de la forme des côtes, on obtient la carte ethno-

1: Lhote MS25 Tuareg

graphique (carte II) qui permet d'embrasser d'un coup un schéma des plus intelligibles et qui a de grandes probabilités d'être exacte.

Nous n'entrerons pas ici dans tous les détails des textes d'Hérodote, que l'on trouvera d'ailleurs commentés très judicieusement dans un ouvrage de St. Gsell[1], car cela nous entraînerait à des discussions longues et fastidieuses. Partant du delta égyptien, Hérodote nomme successivement les Adyrmachides, les Giligames, les Asbytes, les Auschises, les Nasamons, les Psylles, les Macès, les Guidanes, les Lotophages, les Machlyes, les Auses. Puis, au-dessus d'eux, à l'intérieur des

II. Carte du peuplement des Syrtes, du Fezzan et de l'Ahaggar au Ve siècle av. J.-C., d'après les textes d'Hérodote.

terres, c'est-à-dire au Sud, se trouve la Libye des bêtes sauvages. A dix jours de marche, précise-t-il, sont les Ammoniens, puis à dix jours d'une oasis nommée Aujila (l'Aoudjila actuelle) sont les Garamantes qui font la chasse aux Éthiopiens troglodytes, sur des chars à quatre chevaux, puis à dix autres jours des Garamantes habitent les Atarantes, enfin à dix jours encore se trouve le mont Atlas qui a donné son nom aux gens qui habitent autour : les Atlantes.

A cette énumération, Hérodote a joint de nombreux détails de mœurs sur l'alimentation des indigènes, la façon de se vêtir, de se coiffer, d'ensevelir les morts, de célébrer certaines fêtes, etc..., qui font de cet auteur le premier ethnographe.

1. *Textes relatifs à l'histoire de l'Afrique du Nord, Hérodote*, Alger Jourdan, 1915.

1: Lhote MS25 Tuareg

Nous ne connaissons pas l'origine des noms des tribus qu'il a énumérés et qui sont certainement dus aux gens de sa nation et appliqués peut-être d'après des détails de mœurs, tel celui des Lotophages qui veut dire mangeurs de lotus.

Dans celui des Nasamons, on retrouve le nom sémitique de Nas-Ammon, ou gens d'Ammon, c'est-à-dire adorateurs du dieu Ammon, qui doit avoir la même signification qu'Ammoniens mais qui désignait peut-être exclusivement les habitants de l'oasis d'Ammon.

Un autre nom doit retenir tout particulièrement notre attention, celui de Macès, qui deviendra plus tard Maxyes, Makes [1], Mazikes [2], etc.... Peut-être vient-il des tribus Mâ ou des Mashaouasha que nous avons vus se jeter sur le Delta pendant les périodes pharaoniques. En tous les cas, il apparaît à des époques diverses en des lieux très différents, dans le golfe des Syrtes pour Diodore de Sicile, vers le Sersou pour Ptolémée, et nous le retrouvons de nos jours au Maroc dans la tribu berbère des Imazighen, dans le nom même que se donnent aujourd'hui les Touaregs de classe suzeraine.

L'auteur arabe Ibn Khaldoun qui, suivant les habitudes des chronologistes de sa nation, a essayé, pour établir l'origine des Touaregs, de dresser leur généalogie, leur donne pour ancêtre un certain Mazigh, fils de Canaan, fils de Cham, dans lequel on retrouve également la racine M.X.S.

Au XVIe siècle, au temps de Léon l'Africain, le mot Amazigh désignait les populations et la langue des Berbères, et si l'on se réfère aux travaux du Père de Foucauld, Mazies, Mazigh, Tamzigh, Imohar, Imajeuren n'ont qu'une seule et même racine : iohargh.

Ces analogies linguistiques, qui se retrouvent à travers les siècles, ne peuvent pas être fortuites et l'on doit pouvoir conclure que les Macès constituaient une tribu libyenne qui a contribué à la formation des Berbères et en particulier des Touaregs.

Dans les mœurs qu'attribue Hérodote aux différentes populations qu'il a décrites, un grand nombre sont à rapprocher de celles des Touaregs. Les Nasamons, par exemple, chassaient les sauterelles, les faisaient sécher au soleil, les pilaient, versaient du lait dessus et se nourrissaient de ce mélange. C'est là un plat bien connu des Touaregs de l'Ăhaggar que nous

1. Diodore de Sicile.
2. Ptolémée.

1: Lhote MS25 Tuareg

avons souvent partagé avec eux dans leurs campements. Les mêmes Nasamons se rendaient le soir près des tombes de leurs ancêtres pour prier et interroger l'avenir ; cette coutume est encore pratiquée par les femmes touarègues lorsqu'elles veulent obtenir des nouvelles des personnes absentes ou être fixées sur le sort des personnes qui leur sont chères. Le rite funéraire décrit chez les Nasamons, qui consistait à enterrer leurs morts dans la position assise « en prenant soin, quand un homme rend l'âme de le tenir sur son séant et d'empêcher qu'il ne meure sur le dos », semble s'être maintenu au Sahara jusqu'à la période islamique comme tendent à le prouver les squelettes repliés dans la position fœtale retrouvés dans les tumulis anciens.

Cette coutume a d'ailleurs dû être beaucoup plus généralisée que ne l'indique Hérodote et d'autre tribus que les Nasamons devaient procéder de même. L'aire de répartition des tumuli à squelette à position fœtale s'étend à toute la zone occupée aujourd'hui par les berbérophones, et ce n'est certainement pas là une simple coïncidence.

Dans les descriptions des façons différentes de se coiffer des tribus de la Marmarique, Hérodote nous a donné des précisions qui permettent d'identifier ces tribus avec les Libyens de la période égyptienne. Les Macès, par exemple, laissaient subsister une crête de cheveux sur le dessus de la tête, les Machlyes les laissaient pousser sur le derrière et les Auses sur le devant. Tout en constatant qu'il n'est jamais fait allusion au port du voile, on peut rapprocher ces différentes façons de se coiffer de celles des Touaregs qui gardent les cheveux longs et les tressent de manières différentes suivant les tribus, les rasent sur le devant et les côtés, ou bien encore ne laissent susbister qu'une crête ou qu'une touffe sur le dessus de la tête.

Dans les descriptions vestimentaires, Hérodote signale à plusieurs reprises que les Libyennes portaient des jupes en peau de chèvre, agrémentées de franges également en peau et teintes en rouge. Cette façon de se vêtir des femmes libyennes est encore celle des femmes des Eklan Ioullimmiden, en particulier de la région de Tombouctou, qui portent des jupes en peau faites en deux parties, celle du devant étant teinte en jaune ornementée de dessins rouges, celle de derrière étant teinte uniformément en rouge et garnie de longues lanières de peau qui sont animées, lorsque la femme marche, d'un mou-

1: Lhote MS25 Tuareg

vement ondulatoire du plus joli effet. Si de nos jours l'on ne voit ces vêtements portés que par des femmes de classe servile, les autres préférant des jupes en tissu de coton, il est certain que cette préférence ne date pas de longues années et le souvenir est même resté où toutes les femmes sans distinction s'habillaient de peau. Dans une des fouilles qu'il a pratiquées dans l'Ădrar Ăhnet, Th. Monod signale la trouvaille d'un fragment de cuir teint en rouge qui semble avoir appartenu à un vêtement [1]. Cette découverte établit donc la tradition de l'emploi des jupes de cuir entre les Libyennes et les femmes Touarègues en même temps que leur parenté.

Nous examinerons maintenant les descriptions géographiques qui nous ont amené à placer les Atlantes d'Hérodote dans l'Ăhaggar, car l'Atlas de l'historien grec ne peut être la région montagneuse du Maroc qui porte ce nom aujourd'hui, quoique cette façon de voir ait été admise par plusieurs savants.

Le Professeur Berlioux, que Pierre Benoit a rendu célèbre dans son roman sous les traits du Professeur Le Mège, a consacré aux Atlantes un ouvrage entier dont on ne peut plus faire beaucoup cas aujourd'hui. Il a contribué à donner naissance à de multiples hypothèses sur l'existence de l'Atlantis et à faire prendre en considération le mythe de l'Ile Atlantide submergée par les flots. Il faisait des Atlantes des gens d'origine européenne et on retrouverait aujourd'hui les traces de leur civilisation non seulement en Afrique, mais aussi en Amérique, et, quoiqu'il ait serré les textes d'Hérodote de très près, emporté par son idée, il n'a pas vu les divergences qui existaient entre cet auteur et ceux qui lui ont succédé. Car, en effet, Hésiode, Phérécyde, Eschyle, Diodore de Sicile, Agrippa, Pomponius Méla, Pline, ont tous situé l'Atlas sur les bords de l'Océan, à l'extrême occident des terres connues. Mais comme aucun d'eux n'avait, en fait, visité la région, il y a bien des chances qu'ils se soient tous répétés et qu'une erreur initiale se soit ancrée au point de devenir un jour une vérité. Cette divergence entre Hérodote et ses successeurs a été notée par St. Gsell, mais sans que celui-ci ait identifié l'Ăhaggar comme le pays des Atlantes.

L'origine du mot Atlas est encore très vague. Pour Platon, d'après les prêtres égyptiens, Atlas était un roi, fils de Poséi-

1. Th. Monod, *L'Adrar Ahnet, Étude archéologique d'un district saharien*, p. 24.

1: Lhote MS25 Tuareg

don ou de la mer, et pour Diodore un dieu mythique, frère du Caucase, qui à eux deux gardaient les deux colonnes qui soutenaient le ciel. Plusieurs savants se sont demandé s'il ne s'agirait pas d'une altération grecque du mot Ădrar, qui est le nom berbère de montagne [1], et Hérodote de son côté qui, sauf erreur, a été le premier à parler de l'Atlas, ne fait aucune allusion à propos de son nom à un personnage mythique. Pour lui c'est simplement le nom de la montagne à laquelle les habitants doivent le leur : les Atlantes.

Hérodote a eu une connaissance géographique relativement juste de l'intérieur des terres et de l'Ăhaggar et nous ne pouvons mieux faire que de citer les textes mêmes qui s'y rapportent : « A dix jours de marche des Garamantes, dit-il, il y a un autre tertre de sel et de l'eau ; autour habitent des hommes nommés Atarantes (XLIX). Puis à dix autres journées de marche existe un autre tertre de sel, de l'eau et des hommes qui habitent autour. Auprès de cet amas de sel, se trouve la montagne qu'on nomme Atlas (XXII). Elle est étroite et ronde de tous les côtés, et si haute, dit-on, qu'il est impossible d'en voir les sommets, car les nuages ne s'en écartent jamais, ni pendant l'été, ni pendant l'hiver. Les gens du pays disent qu'elle est la colonne du ciel. C'est à cette montagne que ces hommes doivent leur nom, car ils s'appellent Atlantes (XLIX). On assure qu'ils ne mangent rien de ce qui a eu vie (LX), qu'ils ne font pas de rêves. » Les Garamantes habitant, de l'avis de tous, la région que l'on appelle le Fezzan, l'habitat de leurs voisins les Atarantes devait être le Tassili-n-Ăjjer et ce tertre de sel, les salines d'Ămadror que les Touaregs exploitent encore aujourd'hui. A une dizaine de jours de marche, l'on trouve l'Ăhaggar ce qui permet donc d'identifier l'Atlas d'Hérodote avec les montagnes du Sahara Central. Berlioux, qui admettait que les Atarantes (qui, d'après lui, étaient une fraction détachée des Atlantes, en quoi il avait peut-être raison) habitaient la région de Rhâdamès, a identifié l'Atlas, on ne comprend plus pourquoi, avec les montagnes de l'Aurès [2]. Il a pourtant constaté comme un fait curieux qu'Hérodote ait laissé de côté le littoral même de la Petite Syrte et les régions situées au nord de l'Atlas pour suivre les pays de l'intérieur [3], ce qui aurait dû l'amener naturelle-

1. Voir Gsell, *Hérodote*, p. 108.
2. *Les Atlantes*, p. 64.
3. *Ouvr. cit.*, p. 68.

1: Lhote MS25 Tuareg

ment à chercher l'Atlas au sud-ouest du pays des Atarantes.

On fera remarquer que les 50 jours de caravane qu'indique Hérodote, pour se rendre d'Égypte aux Colonnes du Ciel, correspondent à peu près à la distance des oasis du Nil à l'Ăhaggar, alors qu'il faudrait en compter près du double pour atteindre l'Atlas marocain.

On peut s'assurer de l'identité de l'Atlas et de l'Ăhaggar en suivant le texte d'Hérodote qui dit encore : « Jusqu'à ces Atlantes, je puis énumérer les noms de ceux qui habitent sur l'élévation (de sable), mais non au delà. L'élévation s'étend presqu'aux Colonnes d'Héraclès et même en dehors (XII-XXIII). On y trouve à des intervalles de dix journées de marche, une mine de sel et des habitants. Les maisons de tous ces hommes sont construites avec des blocs de sel (LXI). Ces parties de la Libye ne reçoivent pas de pluie, car s'il pleuvait, les murs étant en sel ne pourraient pas tenir debout. Le sel qu'on extrait de ces lieux est d'un aspect blanc et rouge (XXIII). Au-dessus de cette élévation, vers le midi, et à l'intérieur de la Libye, le pays est désert, sans eau, sans animaux, sans pluie, sans bois et dépourvu de toute humidité (XXVI). » Or, au delà de l'Ăhaggar, c'est-à-dire vers l'Ouest, dans la direction des Colonnes d'Héraclès, nous trouvons le Tidikelt, si l'on part de l'Immldir, ou le village de Taodeni, si l'on part des points d'eau extrêmes de la zone de nomadisation des Touaregs Kel Ăhnet. Dans l'un ou l'autre lieu il existe des salines et les villages sont construits en terre très chargée de sel (à In Salah) ou complètement en barre de sel (à Taodeni), si bien que lorsqu'il y a des pluies un peu violentes les maisons s'effondrent comme châteaux de cartes, complètement diluées par l'eau. Le sel de Taodeni se présente en couches, les unes très pures, les autres plus ou moins chargées d'argile, si bien que là encore l'on peut trouver une justification au texte d'Hérodote [1]. Vers le midi, c'est le Tanezrouft, véritablement le pays désert, sans eau, sans animaux, sans pluie, sans bois décrit par le célèbre historien grec.

M. Berthelot, à qui l'on doit la compulsion des textes de tous les auteurs anciens et l'ouvrage le plus moderne et le plus sérieux traitant des connaissances africaines des Anciens

1. Les salines de Taodeni ont été exploitées tardivement (xv^e siècle), mais auparavant il existait d'autres points d'extraction du sel tout proche, en particulier à Teghaza, dont l'exploitation remonte dans la nuit des temps.

et dans lequel nous avons beaucoup puisé, a conclu que l'Atlas d'Hérodote était sans nul doute possible dans le Sahara Central et il le situe au Mont Oudan, à la pointe nord du Massif de la Tăfedest, lequel est coiffé de la légendaire montagne des Génies (Garet-ed-Djenoun). Mais pour qui connaît l'Ăhaggar, cette identification de l'Oudan ne peut être retenue. Cette montagne est certes très imposante, mais nullement comparable à l'Ătakor dont les cimes sont constamment entourées d'un chapeau de nuages et qui la dépasse de plus de 625 mètres. L'Ătakor est, dans l'ensemble, presque rond et évoque parfaitement un de ces piliers susceptible de supporter le ciel, comme le croyaient les anciens ; c'est lui qu'il faut identifier plutôt que le Massif de l'Oudan.

Les convergences ethnographiques et géographiques nous permettent donc de conclure avec M. Berthelot, réserve faite pour l'Oudan, que l'Atlas d'Hérodote correspond bien à l'Ăhaggar et que les Atlantes sont bien les anciens habitants de ce pays, sinon les ancêtres des Touaregs. Les Atarantes, de leur côté, ont dû participer à la formation de la nation targuie, de même que les Garamantes. La découverte des célèbres peintures rupestres du Tassili-n-Ajjer, ainsi que les fouilles pratiquées à Garama par les archéologues italiens, ont fait ressortir l'importance considérable de cet empire garamantique qui régna au Fezzan et sur son pourtour pendant les cinq siècles (?) qui précédèrent l'ère chrétienne et les cinq siècles qui suivirent.

Que sont devenues ces populations depuis ? Il est impossible de répondre à cette question, mais ce qui est certain, c'est que c'est de cette souche archaïque que sont sorties la plupart des tribus berbères et en particulier les Touaregs.

Les Atlantes, que nous venons d'identifier comme les anciens habitants de l'Ăhaggar, ont été rendus plus célèbres par les textes de Platon — dans le *Critias* et le *Timée* — que par ceux d'Hérodote. Il n'est pas besoin d'insister pour dire combien ces textes ont fait couler d'encre et le crédit tout relatif qu'on doit leur accorder. L'œuvre de Platon est postérieure d'un peu moins un siècle à celle d'Hérodote, cet auteur ayant vécu de 429 à 347. Il est plus que probable que la fantaisie tienne dans son œuvre, en ce qui concerne les Atlantes, une plus grande place que les faits historiques. L'époque à laquelle il fait vivre ses héros, 9.000 ans avant la date où il vivait lui-même, d'après le récit que lui en avait fait le prêtre

1: Lhote MS25 Tuareg

égyptien Solon [1], est manifestement fausse, puisqu'alors Athènes existait déjà et que les batailles qu'il relate ont eu lieu entre le règne de Cécrops et de Thésée [2]. D'ailleurs il n'y avait pas besoin de chercher si loin, puisque moins d'un siècle avant lui Hérodote signalait leur existence au cœur du Sahara. Nous relèverons simplement quelques détails dans les textes de Platon qui, à eux seuls, devraient contribuer à détruire plus d'une légende, ceux concernant la présence du cheval chez les Atlantes et l'armement de ces derniers, qui comprenait des chars de guerre, des javelots, des arcs, des frondes, des pierriers, de petits boucliers [3]. Or nous savons que le cheval a été introduit en Afrique par les Hyksos, vers 1800 avant l'ère, et que ce sont eux qui ont probablement introduit également les chars, que par conséquent les faits rapportés par Platon ne pouvaient pas remonter au delà de cette date. Quant aux javelots et au petit bouclier, c'est l'armement même qui est figuré dans de nombreuses gravures et peintures rupestres du Sahara Central où le char de guerre est souvent représenté, documents qui, dans l'ensemble, ont été attribués à la période dite égéo-garamantique qui peut se situer entre 1200 et 400 avant l'ère. On serait donc tenté d'affirmer que les Atlantes de Platon sont les mêmes que ceux d'Hérodote, qu'ils habitaient les mêmes lieux et que le reste est vaine littérature.

. . . . . .

Au milieu du IVe siècle av. J.-C., Scylax de Coryanda confirme la situation des tribus libyennes sur les côtes méditerranéennes. Nous y trouvons les Adirmachides, les Marmariques, les Nasamons, les Makes, les Lotophages s'échelonnant comme au temps d'Hérodote du delta du Nil jusqu'au golfe de la Petite Syrte.

Scylax, qui avait accompli le périple de la Méditerranée, n'apporte aucun renseignement nouveau sur l'intérieur des terres et en particulier sur le Sahara Central.

. . . . . .

Vers 280 av. J.-C., le navigateur carthaginois Hannon accomplit un périple autour de l'Afrique. Son récit ne nous apprend rien non plus sur les habitants de l'Ăhaggar, mais il nous dit que des nomades habitaient de l'autre côté de Gibral-

3. *Critias*, p. 118 *d*.

1: Lhote MS25 Tuareg

tar sur le fleuve Lixos, qui est l'oued Draa ou la Seguiet el Hamra suivant Berthelot, ou l'oued Sous, suivant Vivien de St-Martin. Les nomades Lixites y faisaient alors paître leurs troupeaux, ce qui montre l'homogénéité culturelle des populations qui habitaient le Sahara et que le nomadisme était répandu sur ces terres bien avant les grandes invasions (les nomades chameliers de Gautier) qui devaient apporter de nombreuses perturbations dans l'habitat primitif des Berbères.

. . . . . .

Avec le géographe Strabon, 54 av.-21 après J.-C., nous entrons, si l'on peut dire, dans la littérature romaine. Cet auteur ne connaissait l'Afrique que par l'Égypte où il avait séjourné plusieurs années ; de la Libye il ne savait pas grand chose et il l'avoue lui-même car, dit-il, « la plupart des peuples qui habitent la Libye sont inconnus, car il n'y a pas pénétré beaucoup d'expéditions militaires, ni d'étrangers et les indigènes qui sont venus chez nous font des récits peu croyables et incomplets ». Dans les quelques descriptions qu'il donne, il place les Garamantes au Fezzan, au nord de ces derniers, les Gétules, puis le long de la côte, en partant de l'Égypte, les Marmarides, des Psylles, les Nasamons, puis les Asbytes, et les Byzakes, ces derniers confinant à Carthage. Plus à l'ouest se trouvent les Maurusiens, ultérieurement les Maures, les Massesyliens et les Massyliens. Ces deux dernières tribus devaient devenir célèbres dans le rôle qu'elles jouèrent pendant les guerres puniques et l'occupation romaine. Strabon nous a laissé une description de l'armement des Libyens, peuple de cavaliers — il ne parle plus de chars dont l'usage avait dû disparaître — qui se composait d'un glaive, d'une petite lance et de boucliers en peau d'éléphants ou d'autre animal. Nous retrouvons donc aux environs de l'ère chrétienne un armement sensiblement analogue à celui qui nous avait été décrit par Hérodote et par Platon, et que l'on reconnaît dans les gravures rupestres de la période « chevaline » comme nous l'avons déjà signalé, moins toutefois le char.

L'intérieur du Sahara, et surtout la région ouest confinant à la côte Atlantique, était mieux connu qu'au temps d'Hérodote. C'est ainsi que Strabon parle des Gétules qui habitent au sud de l'Atlas. C'est la première fois que les populations Gétules, qui seront citées ultérieurement par d'autres auteurs, sont signalées. Ce nom, que l'on doit prendre dans un sens étendu,

1: Lhote MS25 Tuareg

doit désigner un ensemble de tribus libyennes, différentes ethniquement des tribus de l'Est. Au sud, dit encore Strabon, habitent les Pharusiens et les Nigrites, lesquels, comme les Éthiopiens, combattent avec des flèches. D'après Vivien de St-Martin, il faudrait placer les Pharusiens dans le Maroc méridional, mais Berthelot croit meilleur de les situer dans l'actuelle Mauritanie.

Pharusiens et Nigrites sont des populations complètement différentes des Libyens orientaux. Il s'agit de populations plus ou moins négroïsées et l'emploi de l'arc tend à le confirmer. Nous voyons donc que le Sahara était à cette époque-là complètement habité et que le peuplement, comme de nos jours, était loin d'être uniforme.

. . . . . .

Pomponius Méla a consacré également quelques chapitres à l'histoire des peuples du Sahara Central. Partant du delta, il décrit les Libyégyptiens, c'est-à-dire les Libyens égyptianisés, les Leucoéthiopiens, c'est-à-dire les Éthiopiens blancs, nom que l'on peut interpréter comme désignant un groupement humain métissé de noirs et de blancs, puis les Gétules.

Dans le même ordre, mais certainement plus au Sud, il signale les Garamantes, puis les Augiles et les Troglodytes, — enfin plus vers l'occident les Atlantes. A l'intérieur du Sahara se retrouveraient encore les Aegipans, les Blemyes, les Gamphasantes, les Satyres, nomades qui sont des demi-bêtes, errant de pâturages en pâturages. Les Blemyes seraient acéphales et les Aegipans auraient un corps de chèvre ! Peut-être dans ces Blemyes acéphales doit-on voir les premiers porteurs de voile qui se dissimulaient la figure au point de faire penser qu'ils n'avaient pas de tête ? Explication peut-être fantaisiste, mais qui peut avoir aussi sa valeur, car comment expliquer la légende de l'existence d'hommes sans tête ?

Outre ces appellations nouvelles de Libyégyptiens et de Leucoéthiopiens qui définissent deux groupements humains différents des autres Libyens, il est intéressant de retrouver, cinq siècles après Hérodote, les Atlantes dans la même région où ils avaient été signalés pour la première fois. Mais d'après Berthelot, on ne doit tenir qu'en médiocre estime les descriptions africaines de Pomponius Méla qui n'aurait fait que de reprendre médiocrement les textes d'Hérodote [1]. Pourtant

1. Berthelot, *ouv. cit.*, p. 251.

1: Lhote MS25 Tuareg

l'introduction de noms nouveaux indiquerait des connaissances nouvellement acquises.

. . . . . .

Diodore de Sicile, qui écrivit aux environs de l'ère chrétienne un volumineux ouvrage d'histoire et qui visita lui-même l'Égypte, nous donne quelques renseignements sur les peuples de la Libye. Il désigne à l'est de l'Égypte quatre groupements humains : les Marmarides, qui occupent la zone du littoral, au sud les Nasamons, à l'ouest les Aushises, puis les Makes. Mais il ignore le nom des peuples qui se trouvent à l'intérieur de la Libye, qui sont simplement connus pour les mœurs anarchiques et leurs pratiques du pillage. Lui aussi a connu le nom des Atlantes — descendant d'Atlas, dit-il, qui était fils d'Ouranos et frère de Kronos (Saturne), lesquels étaient apparentés aux Nasamons par Rhéa, femme d'Ammon et sœur de Saturne, mais Diodore ne situe pas leur habitat et se contente de les faire guerroyer avec des populations habitant dans la région du lac Tritonis. Ce détail laisse supposer que Diodore n'a fait que reprendre lui aussi les textes de ses prédécesseurs, en particulier Hérodote et Platon, en y introduisant les personnages de la mythologie grecque.

. . . . . .

Avec Pline l'Ancien, 23-79 après J.-C., nos connaissances du Sahara Central s'augmentent notablement, non seulement parce que cet auteur a compilé d'une façon que l'on peut appeler scientifique, les ouvrages de tous ses prédécesseurs, mais aussi parce qu'entre-temps eurent lieu plusieurs expéditions militaires qui poussèrent fort loin au sud et qui rapportèrent de nombreux renseignements. Ce sont surtout des connaissances géographiques, car Pline ne nous apprend pas grand chose sur le peuplement du Sahara Central.

Nous retrouvons dans son œuvre, avec quelques modifications, les peuples énumérés par Hérodote en Marmariquè et en Fezzanie. Le pays des Syrtes est décrit comme des terres désolées sans eau ni végétation, et au sud se trouve le peuple des Garamantes, puis à 12 jours d'eux les Augyles qu'il faudrait donc placer au sud du Fezzan, au delà des monts de Tummo ou vers Djado, comme le voudrait Berthelot [1]. Depuis Hérodote, ils auraient donc exécuté une migration vers le S.-O. Au nord des Augiles, se trouvent les Psylles. Sur le littoral

1. *Ouvr. cit.*, p. 271.

1: Lhote MS25 Tuareg

il place les Marmarides, puis les Araraucèles, nom cité pour la première fois dans l'énumération des anciennes populations libyennes, puis les Nasamons, les Asbytes et les Macès. Au delà, vers l'occident, les Amantes qui construisent leur maison en sel, et à sept jours d'eux, les Troglodytes.

Si nous suivons le récit de Pline, les Asbytes sont transposés du milieu de la Cyrénaïque dans la Petite Syrte. Les Amantes, que nous trouvons seulement sous la plume de Pline, doivent être placés vers Rhadamès, un peu au nord de l'ancien domaine des Atarantes dont il n'est plus fait mention, mais qui sont peut-être les mêmes. Le Fezzan, grâce aux expéditions du général romain Cornélius Balbus, est alors bien connu, car un grand nombre de villes, de fleuves, de nations sont cités dans son triomphe : Matelgae, Debris, Garama, Cydamus, Tabidium, Rapsa, Thapsagum, Mons Giri, Mons Ater, etc.... Dans les noms cités on peut identifier Rhâdamès (Cydamus), Rhât (Rapsa), nom que l'on retrouve dans celui de la tribu touarègue des Kel Rapsa ou des Kel Rafsa, Djerma (Garama). Berthelot a identifié le Tassili pour le Mons Ater, et croit devoir situer Matelgae et Debris à l'intérieur du Tassili [1]. Nous croirions plus volontiers que le Mons Ater correspond mieux au Baten de Tinghert. En effet, Pline dit qu'à partir de Cydamus, une montagne que les Romains nomment « montagne Noire », s'étend du levant au couchant, qu'au delà de cette montagne s'étendent des déserts. Cette description correspond exactement au Baten qui s'allonge vers l'ouest un peu au sud de Rhâdamès jusqu'au delà du méridien d'In Salah et qui est caractérisé par sa couleur noire. Au sud du Baten se trouve un erg désertique coupé de larges regs qui s'étend sur plusieurs centaines de kilomètres.

Quant à Matelgae peut-être s'agit-il d'Ăharir, comme le propose Berthelot, encore qu'il soit bien improbable que les expéditions des Romains aient pu découvrir cette petite palmeraie située dans un endroit presque inaccessible et qui, encore de nos jours, n'a été vue que par un petit nombre d'Européens. L'identification de Debris avec les Sources de Tihoubar-n-Afella est problématique, car en ce dernier lieu, ou aux environs, il n'existe aucune ruine laissant supposer une agglomération de quelque importance. Le texte de Pline au sujet des villes conquises par Cornélius Balbus n'aide d'ailleurs nulle-

1. Cette identification du Tassili avec le Mons Ater de Pline avait déjà été faite par Duveyrier (*Les Touaregs du Nord*, p. 461.)

ment à l'identification de toutes ces localités, car on ne sait pas où ce général conduisit ses légions et si les noms cités dans son triomphe coïncident chronologiquement avec sa marche.

Les connaissances du Sahara Central de l'auteur de l'*Historia Naturalis* semblent s'arrêter là, car pour le reste il a dû reprendre les textes d'Hérodote et de Pomponius Méla. Il raconte, en effet, que les Éthiopiens ont des villes bâties dans le désert, que près d'elles vivent les Atlantes qui n'ont pas de noms propres, dont les usages humains ont dégénéré, qu'ils injurient le soleil qui les brûle et détruit leur champ (coutumes attribuées aux Atarantes par Hérodote), que les Aegipans sont des demi-bêtes aux formes inhumaines, que les Gamphasantes vivent nus, ne se battent jamais et fuient les autres hommes, que les Blemmyes n'ont pas de tête, qu'ils ont le visage et les yeux à hauteur de la poitrine, que les Himantopodes avancent à la manière des serpents ! etc....

Pline, par contre, a eu connaissance du Niger, et sauf erreur, c'est lui qui a donné le premier son nom au grand fleuve soudanais. Il parle, en effet, du fleuve Niger « qui sépare l'Afrique de l'Éthiopie » et auxquelles confinaient les différentes tribus Gétules. Ce détail est plein d'intérêt car le Niger sépare effectivement notre Afrique du Nord et le Sahara (Afrique des Anciens) habités par des Blancs, de l'Éthiopie (pays des Noirs des Anciens) habitée par des Nègres. On voit donc que dès cet époque des populations de race blanche, vraisemblablement d'origine libyenne, avaient déjà atteint le Soudan, et ceci réduit donc l'hypothèse de tribus libyennes cherchant une issue vers le sud sous la poussée des invasions arabes. Les Gétules habitaient, en effet, le sud marocain et la bande sahélo-soudanaise qui va de l'Atlantique jusqu'au méridien de Tombouctou.

. . . . . .

Après Pline, les connaissances de l'intérieur du désert s'augmentent notablement, en particulier pour le Fezzan et le Sahara Central, grâce aux deux expéditions militaires qu'y menèrent les Romains, celles de Septimus Flaccus et de Julius Matternus. Septimus Flaccus partit de Garama, se rendit au pays des nègres et y parvint après 3 mois de marche — quant à Julius Matternus, il choisit Leptis Magna pour point de départ de sa colonne et, guidé ensuite par le roi des Garamantes qui était devenu l'allié des Romains, il se dirigea surtout vers le sud et atteignit un pays qui s'appelait Agy

1: Lhote MS25 Tuareg

simba, dans lequel vivaient des rhinocéros, et qui semble correspondre aux montagnes de l'Aïr.

Ces connaissanees furent mises à profit par le géographe Ptolémée qui, dans son ouvrage général sur l'Afrique, consacre un important chapitre à la Libye. Si aucune reconnaissance militaire ne semble avoir atteint l'Ăhaggar, ce pays était toutefois connu sous le nom de Ousargala, que l'on retrouve d'ailleurs plus tard sous la plume de Léon l'Africain et sur la carte de Henricus Martellus Germanus datée de 1489 déposée à la bibliothèque du British Museum [1]. Dans les monts Ousargala plusieurs fleuves importants prenaient leurs sources : le Bagradas, qui était l'Igharghar, et le Gir, que l'on peut identifier avec le Taffassasset. Au nord-est des monts Ousargala se trouvaient les monts Girgiri qui sont notre Tassili-n-Ăjjer, et peut-être le mont Giri de Pline, lequel donnait naissance au fleuve Cinyps qui peut être le faisceau d'oueds connu aujourd'hui sous le nom de Ighargharen quoique, d'après Berthelot, le Cinyps est en réalité l'oued Kam qui débouche à la mer près de Leptis Magna. Les sources de l'oued Kam n'étant pas encore connues, peut-être les anciens croyaient-ils qu'elles étaient situées dans le Tassili.

Parmi les populations décrites par Ptolémée l'on retrouve un grand nombre de tribus citées par les auteurs anciens, mais aussi une quantité de noms nouveaux.

Ces modifications, quoique inexplicables dans l'état actuel de nos connaissances, ne sont peut-être pas fortuites et, d'une façon générale, on observe dans la plupart des cas un déplacement assez sensible vers l'est. Faut-il admettre l'arrivée de populations nouvelles, une poussée de peuples envahisseurs ? Il est impossible d'y répondre. Si les Marmarides habitent toujours la région qui confine à l'Égypte, on trouve les Lotophages près de Leptis Magna, les Nasamons dans l'oasis de Djerboub, les Makès au sud de la Syrte, les Asbytes, les Psylles également plus à l'est qu'aux lieux où les situait Hérodote. Quant aux Auschises, ils sont maintenant dans le désert. Parmi les populations aux noms nouveaux, Ptolémée cite les Astacures, dans le Djebel Néfousa, les Nigitimes, de la Petite Syrte au Cinyps, les Sammamyciens et les Cinyphiens, sur le bord occidental de la grande Syrte, d'autres encore : Éropées, Dolopes, Erebides, Tidamenses, Nygbènes, Nycpiens, vers

1. Cf. Ch. de la Roncière, *La découverte de l'Afrique au Moyen Age*, t. II.

1: Lhote MS25 Tuareg

l'oasis de Bondjem, etc..., dont les noms ne nous éclairent aucunement sur les origines de nos tribus touarègues. Les Garamantes sont décrits comme le peuple le plus important de la Libye dont le domaine occupe tout le bassin du Cinyps (Vallée des Ighargharen) jusqu'au lac Nouba (qui peut être le lac Tchad), ce qui était notablement leur aire de répartition depuis l'époque d'Hérodote. Il semble donc occuper vers l'ouest l'ancien domaine des Atarantes dont il n'est plus question. On ne trouve plus trace non plus des Atlantes, et Ptolémée nous apprend qu'au nord et au sud de l'Ăhaggar vivent respectivement les Natembes et les Soubourpores.

Au sud-est du Tassili vivaient les Lynxamates et les Samamykes dont Berthelot fait les habitants, soit des oasis de Djado, soit du Tibesti.

. . . . . .

On peut donc résumer rapidement quel a été le peuplement du Sahara Central entre les v^e siècle avant et II^e siècle après J.-C. Toute la région comprise entre le Nil et l'Ăhaggar était le domaine de populations libyennes dont l'histoire égyptienne nous a antérieurement décrit les mœurs. Ces populations qui semblent fortement apparentées entre elles, appartenaient à une même souche ethnique à laquelle sont venus s'agréger des envahisseurs d'une part peut-être asiatiques, d'autre part sûrement méditerranéens. L'identité de mœurs de certaines de ces tribus libyennes avec les Touaregs, l'analogie de certains noms de tribus, laissent supposer que les populations actuelles du Sahara Central descendent plus ou moins de ces tribus libyennes. Parmi ces dernières la tribu des Atlantes constitue l'élément humain le plus anciennement connu, mais à côté d'elle, celle des Garamantes semble avoir joué un rôle considérable dans l'histoire du Sahara Central et avoir étendu progressivement son domaine vers l'ouest, au point d'avoir vraisemblablement absorbé les Atarantes, les Atlantes d'Hérodote, les Natembes et les Soubourpores de Ptolémée. Leur nom restera célèbre en Europe bien des siècles plus tard où il désignera encore les populations du désert, sur des cartes du XV^e siècle, où il voisine avec celui des Monts Usargala qui est l'Ăhaggar. Après les siècles qui suivirent, on entre dans une période mieux connue de l'histoire de l'Afrique du Nord, celle de Carthage, des guerres puniques et de la domination romaine. Mais cette histoire, en dehors de quelques expéditions militaires dont nous avons parlé, est désespérément muette au

1: Lhote MS25 Tuareg

sujet du Sahara et cette situation se maintiendra de nombreux siècles après. C'est qu'entre le IIe siècle de notre ère et le haut moyen âge l'exploration du continent africain se ferme aux Européens, qui seront alors forcés d'emprunter aux auteurs arabes les connaissances géographiques nouvelles. En dehors de ces derniers, il faudra attendre le voyage et la narration de René Caillé qui marqueront le début d'une ère nouvelle et décisive, celle de l'exploration scientifique du Sahara. D'autre part, entre le IIe siècle de notre ère et les premiers auteurs arabes (Xe siècle) subsiste un vide immense dans nos connaissances, d'autant plus regrettable qu'il semble s'être passé des événements très importants dans le peuplement de l'Afrique septentrionale qui ont dû avoir leurs répercussions au Sahara Central. C'est cette période que le Professeur Gautier a appelé très justement « les Siècles Obscurs du Maghreb ».

Éléments apportés par les gravures et les peintures rupestres du Sahara Central. — Mais avant d'aborder cette nouvelle phase de l'histoire de l'Afrique du Nord et des Berbères, peut-être est-il bon de faire un retour en arrière pour essayer d'accorder les textes avec les documents rupestres du Sahara.

Nous avons adopté le point de vue de Th. Monod et de C. Kilian sur la division des gravures en précamelines ou analphabétiques, et en camelines ou alphabétiques. Celles du premier groupe sont, à notre avis, pour la plupart néolithiques.

Les découvertes des magnifiques stations de l'oued Djorat (Tassili-n-Ăjjer) ont apporté de nouveaux éléments d'appréciation et la preuve d'un habitat important du Sahara Central aux époques néo et énéolithiques. Le Professeur Gautier, qui les a vues lui-même, a jugé utile plus tard, lorsqu'il s'est agi de rééditer son ouvrage sur « les Siècles Obscurs du Maghreb » de faire précéder le texte ancien, d'un nouveau chapitre où, avec son génie intuitif, il a analysé les différents groupes de gravures et de peintures.

En ce qui concerne les gravures, il remarque que cet art rupestre est unique en Afrique septentrionale. Il voit dans certaines figurations humaines à tête animale, les motifs favoris de l'art égyptien *mais qui sont antérieurs à cet art*. Certaines portent des queues postiches et le « karnata » qui sont des attributs courants dans les figurations humaines antérieures à la 1re dynastie, soit 4000 ans avant notre ère. Et il en

1: Lhote MS25 Tuareg

vient à penser que la civilisation égyptienne, n'étant pas née toute seule sur les bords du Nil, qui ne possède pas de gravures préhistoriques, peut bien avoir eu des sources au Sahara central.

L'origine saharienne de la civilisation égyptienne a déjà eu des partisans et en particulier de Morgan. Plus récemment, Georges Poisson, traitant de l'origine des Égyptiens pré-pharaoniques, conclut qu'au mésolithique le dessèchement progressif du Sahara provoqua un refoulement de ses populations sur le Nil; que l'Égypte, quoiqu'ayant reçu les grands éléments de la civilisation de l'Asie, fut l'enjeu de deux courants, l'un venu d'Asie avec le culte d'Osiris, l'autre de Libye avec celui de Seth. La lutte de ces deux groupes se termina après le triomphe passager de Seth sur Osiris et la mort de celui-ci, par le triomphe du fils de la victime, Horus [1].

Ajoutons l'opinion émise par plusieurs savants, en particulier des anthropologues, sur le caractère autochtone des peuples de l'Afrique du Nord et non venus de l'Est, comme d'aucuns l'affirment [2].

M. de Chasseloup-Laubat [3] a émis une idée semblable en analysant les peintures de Mertoutek et voit en elle les vestiges d'une civilisation hoggarienne qui aurait rayonné sur toute l'Afrique septentrionale. Mais nous ne pensons pas être d'accord avec lui car il s'appuie, pour établir sa thèse, sur des documents presque historiques beaucoup plus récents que les grandes gravures de l'O. Djorat. En fait s'il a existé au néolithique ancien un mouvement centrifuge, avec l'Ăhaggar et le Tassili pour point de départ, ces régions ont dû être, des siècles plus tard, l'objet de migrations centripètes.

Parmi les peintures rupestres, Gautier discerne plusieurs types différents.

Le premier s'apparente aux peintures néolithiques espagnoles du style hispano-cantabrique. Le Professeur Breuil, qui a bien voulu examiner les documents que nous avons rapportés de l'oued Djorat, est net sur ce point, et cette parenté ne doit pas être fortuite, car des échanges certains se sont produits au néolithique et au mésolithique entre la Berbérie et l'Espagne.

1. *Le Peuplement de l'Europe*, p. 122.
2. On verra à ce sujet : Maspéro, *Histoire ancienne des peuples de l'Orient*, p. 46 ; A. Wildemann, Les modes d'ensevelissement dans la nécropole de Négadah et la question de l'origine du peuple égyptien, in de Morgan, *Recherches sur les origines de l'Égypte*, Paris, Leroux, 1897.
3. *L'art rupestre au Hoggar*, Paris, Plon, 1938.

Le deuxième type s'apparente aux peintures actuelles des Boschimans de l'Afrique du Sud. On retrouve la stéatopygie caractéristique de cette race, et il y a concordance dans la polychromie, emploi simultané de l'ocre, du blanc et du noir. Pour Gautier, les Boschimans ont été refoulés de l'Afrique centrale et septentrionale qu'ils devaient occuper entièrement. Dans un passé lointain, il fut un moment où ils ont occupé le Maghreb [1].

Il est certain que le squelette d'Asselar possède des caractères buschménoïdes et que les squelettes néolithiques de Taferjit et de Tamaïa Mellet sont négroïdes, mais sont-ce là des éléments suffisants pour affirmer un ancien peuplement bushman au Sahara ?

Le troisième type de peintures est celui où dominent des chars que Gautier appelle égéens non sans raison [2]. Ces chars n'ont en effet rien de commun avec ceux des monuments égyptiens ou chaldéens et leur style est bien connu : « le galop volant », celui des Peuples de la Mer, Lyciens, Shardanes, Tyrsènes, auxquels nous avons fait allusion précédemment et qui ont envahi l'Afrique du Nord vers 1235-1225 avant J.-C. Les charreries, nous dit Gautier, ont disparu du bassin méditerranéen à la fin du IVe siècle avant J.-C. pour faire place à la cavalerie. Dans la littérature des Berbères, on ne parle plus d'eux après le IVe siècle, ce qui constitue donc une date *ad quem* alors que l'on peut placer le terminus *a quo* huit siècles plus tôt.

Pour les gravures anciennes à faune éthiopienne, qu'il appelle faune du Zambèze, Gautier propose la date de 7000 avant J.-C. Il insiste particulièrement sur la présence d'animaux à sphéroïdes, béliers et bœufs. Les premiers ont une aire de répartition qui couvre toute l'Afrique septentrionale alors que les seconds sont essentiellement limités au groupe rupestre oriental. Ce culte des bovidés est confirmé par la découverte de deux statuettes en pierre polie, celle trouvée à Silet, actuellement au Musée du Bardo à Alger, et celle de Tazerouk, recueillie par le général Niéger [3]. Il était en pratique chez les Berbères de l'Afrique du Nord, au temps du poète Corripus, qui nous a

2. On trouvera un lumineux exposé sur la question des chars dans PERRET : Recherches archéologiques et ethnographiques au Tassili des Ajjers, *Journ. Soc. des Afric.*, t. VI, 1936.
3. Une nouvelle statuette représentant un petit mammifère a été trouvée récemment, près de Djanet, par le Cap. Brenans.

1: Lhote MS25 Tuareg

transmis le nom du dieu Taureau : Gurzil. Gautier, donnant ainsi une origine saharo-maghrébine aux vieux dieux de l'Égypte, voit dans le bélier l'ancêtre du dieu de Thèbes Ammon Râ, dans le bœuf celui de la déesse égyptienne Hathor.

Sur l'origine même des Berbères, Gautier dit ceci : « La supposition la plus raisonnable les ferait progresser d'est en ouest ; il semble bien que, à l'extrémité occidentale, les massifs montagneux du Maroc aient été peuplés tardivement. Mais une supposition chimérique, peut-être, et par cela même séduisante, associe les Berbères à l'Atlantide, ce qui impliquerait une poussée d'ouest en est. Ce sont là de pures vues de l'esprit, qui ne reposent sur rien [1]. »

Mais ce savant ne nous dit pas où il place l'Atlantide. Le fait qu'il invoque l'autorité du Professeur L. Germain, laisse entendre qu'il admet son existence en temps qu'île océanique. Pour nous, le pays des Atlantes, ceux d'Hérodote, nous l'avons déjà dit, est l'Ăhaggar.

Aux influences hispano-cantabriques, boschimanes, égéennes et égyptiennes que voit Gautier dans les gravures et les peintures rupestres du Sahara, il faut en ajouter d'autres. Tous les documents n'ont pas encore été publiés par leurs découvreurs, et beaucoup n'appartenant pas aux styles classiques ne sont pas de ceux que les archéologues pouvaient étiqueter aisément. Que dire, en effet, des figurations humaines filiformes trouvées à l'oued Tamajert par le Cap. Brenans ? (fig. 7). Comment interpréter ce bœuf harnaché monté par un dignitaire barbu auquel un autre personnage non moins barbu rend hommage, ensemble qui évoque l'Assyrie ? (fig. 9). Ce sont des produits artistiques qui appartiennent à d'autres éléments ethniques que ceux cités plus haut, qui attestent des multiples influences dont le massif central saharien a été l'objet.

E. F. Gautier n'a pas parlé des stations rupestres de Mertoûtek. Elles méritaient à elles seules un examen spécial. Nous possédons des reproductions remarquables de ces peintures grâce à M. de Chasseloup-Laubat.

Lorsque nous étions nous-même à Mertoûtek, un rapport immédiat s'est imposé à notre esprit entre les scènes que nous avions sous les yeux et celles vues chez les populations peules de l'Issa Ber, de Bandiagara, de l'Adamaoua.

1. E. F. Gautier, *Le passé de l'Afrique du Nord*, p. 41.

1: Lhote MS25 Tuareg

Les figurations humaines, en particulier les danseuses et les petites gardiennes de bœufs, évoquent à s'y méprendre les silhouettes des jolies femmes peules, aux formes élancées, graciles, aux membres bien moulés et surtout à la coiffure en cimier ou en crête de coq. Le rapport est complété par l'association de ces figurations avec celles de bovidés, car les Peuls sont essentiellement des éleveurs de bœufs dont la vie est intimement liée à celle de leurs troupeaux [1].

Cette ressemblance des Peuls avec les personnages de Mertoûtek, M. de Chasseloup-Laubat l'a signalée avant nous. Mais il fait des Peuls une race essentiellement hoggarienne qui, sous les effets de l'assèchement, aurait gagné le Niger par le canal de l'oued Tămanrasset [2]. Nous ne pouvons être d'accord avec lui à ce sujet.

L'origine des Peuls est encore bien controversée. Mais si nous nous référons aux travaux de Tauxier [3], nous constatons que l'avis général fait d'eux des Kamito-Kouschites, des populations apparentées à celles de la Haute-Égypte et de la Nubie. C'est aussi l'avis des anthropologues Tautain, Verneau et Chantre.

Ils seraient les descendants du peuple de Phout qui habitait la Basse-Égypte, 600 ans avant notre ère. Ils auraient ultérieurement gagné le Soudan en suivant la lisière nord du Sahara d'est à ouest, puis le Sud-Marocain, auraient longtemps séjourné dans la région de Tischit-Oualata et se seraient installés au Fouta-Toron vers le VIIIe siècle.

Pourquoi les auteurs supposent-ils que les Peuls ont contourné le Sahara pendant leurs migrations ? Il n'y a aucun document qui permette une interprétation dans ce sens. Mais comme il faut bien qu'ils soient passés quelque part, cette route septentrionale a été désignée comme la plus plausible et il semble bien que les Pyrrhy-Aethiopiens — voire les Leuco-Aethiopiens — de Ptolémée soient les ancêtres des Peuls. Aucun écrivain n'a supposé qu'ils aient traversé le Sahara, car la sécheresse légendaire de ce pays en a éloigné l'idée, d'autant plus qu'on ne sépare jamais les Peuls de leurs bovidés que l'on ne voit pas très bien s'aventurer dans le désert : mais maintenant que nous savons que ce Sahara

1: Lhote MS25 Tuareg

ne fut pas toujours un désert, la question se pose différemment.

Nous avons dit que des fouilles pratiquées à la base de la grande fresque à bovidés de Mertoûtek nous avaient livré des haches en pierre polie, des broyeurs, des fragments de meules et de poterie de facies néolithique. Cela nous autorise à considérer les peintures comme d'époque néolithique, ce qui correspond bien à la faune représentée qui s'intercale, chronologiquement, entre les grands animaux de la faune éthiopienne et le cheval de la période égéo-garamantique.

Si la station de Mertoûtek nous a livré des documents peints qui sont encore les seuls du genre que nous connaissions au Sahara, elle nous a fait connaître aussi le *style gravé* qui correspond à celui des peintures. Et nous nous apercevons alors, qu'il est répandu sur tout le Sahara, depuis le désert de Nubie jusqu'à la Mauritanie. La « civilisation du bœuf » a couvert toute cette vaste région et il n'y a plus aucune raison d'imaginer une « race hoggar ancienne » plus ou moins apparentée avec les Peuls actuels, comme le suggérait M. de Chasseloup-Laubat, car si les Peuls ont habité le Sahara, aucun élément ne milite pour leur donner l'Ăhaggar comme pays d'origine.

Un détail important, qui n'a pas été suffisamment relevé, c'est que les animaux représentés à Mertoûtek sont des *bœufs* et non des *zébus*. On ne peut pas dès lors ignorer l'avis des zoologistes qui ont identifié en Égypte une race ancienne de bœufs probablement domestiquée sur place.

C'est d'Égypte qu'ont dû partir les bovidés de Mertoûtek et les multiples gravures nous indiquent que leur espèce a essaimé dans tout le Sahara. Quels étaient les pasteurs qui les conduisaient ? Peut-on évoquer les Peuls, ne serait-ce que de nom ?

L'analogie entre les figurations humaines à coiffure en cimier accompagnées du bœuf, d'une part, et les Peuls, éleveurs de bovidés, d'autre part, est tellement frappante qu'il doit y avoir un rapport racial entre ces deux groupes, et l'on doit pouvoir prononcer le mot de proto-peul pour qualifier ces anciens éleveurs sahariens [1].

1. Cette coiffure en cimier a été interprétée de plusieurs façons. Chasseloup-Laubat y voit une déformation cranienne alors que certains archéologues en font une auréole ou un disque à caractère religieux. Chasseloup-Laubat avait pourtant remarqué que chez les Peuls on observe une silhouette analogue (ouvr. cit., p. 26). Il suffit d'avoir vécu au milieu des Peuls de la boucle du Niger pour en être convaincu.

1: Lhote MS25 Tuareg

Cette ancienne vague kamito-kouschite sur le Sahara a dû laisser une empreinte chez certaines tribus berbères du Fezzan et de l'Afrique tellienne, et il n'est pas extraordinaire de trouver entre eux des rapports linguistiques, culturels et somatiques.

C'est le moment de dire, comme le Professeur Gautier, que la formation de la nation touarègue est un archaïsme ethnographique [1].

Reprenons maintenant la suite des origines des Berbères à la période où nous l'avons laissée précédemment, c'est-à-dire « aux siècles obscurs du Maghreb ».

Période Post-islamique. — Il y a en effet une grande période obscure entre la fin de la période romaine et la conquête arabe où l'histoire reprend une consistance intelligible. Cette obscurité s'applique à l'histoire du Maghreb, mais que dire alors de celle du Sahara où il faut, pour avoir des éléments nouveaux, attendre les récits des voyageurs arabes après que l'islamisation du pays fut faite ?

Il semble que pendant ces huit siècles d'obscurité une transformation considérable se soit effectuée dans la vie au Maghreb. Et cette transformation serait due à l'arrivée du chameau en Afrique du Nord. On a pu constater qu'il était absent dans les gravures rupestres sahariennes anciennes [2], qu'il ne figurait que dans le groupe des « graffiti » libyco-berbères, d'époque relativement récente.

Les opinions ne concordent d'ailleurs pas toutes à ce sujet. Le Ct Cauvet, qui est un chercheur méticuleux, a consacré deux gros volumes à la question du chameau [3], et il conclut à son archaïsme en Afrique. Des ossements ont été retrouvés dans des gisements néolithiques. Mais depuis, il aurait disparu, et ce ne serait que vers le IIe siècle qu'il aurait fait sa *réapparition*, d'après ce qu'affirme Gautier.

Il faudra trancher la question, et c'est là un sujet digne d'intéresser les zoologistes, car jusqu'à présent, ces derniers ne nous ont pas dit pourquoi le chameau du nord (chameau arabe) avait 34 dents, alors que le chameau soudanais (chameau targui) en avait 36.

1. Gautier, *La Conquête du Sahara*, p. 190.
2. Il y existe pourtant, mais à un seul exemplaire. Il a été trouvé à l'oued Djorat. R. Perret en possède un beau cliché et nous avons nous-même le calque original grandeur naturelle.

1: Lhote MS25 Tuareg

Cette différence anatomique peut être simplement fortuite, comme elle peut cacher deux espèces distinctes. Pour qui a vu les bêtes trapues, rablées, poilues des caravaniers telliens et les méhara élancés aux attaches fines et aux poils ras des Touaregs soudanais, il ne peut s'agir d'une même espèce. Cette croyance s'affirme d'autant plus pour qui sait les difficultés d'adaptation du chameau targui aux steppes du Sahara septentrional où il finit toujours par périr s'il n'est pas l'objet de soins attentifs. Ce qui nous amène à dire que le chameau a bien pu exister au Sahara méridional antérieurement au IIe siècle, mais que ce n'est qu'à cette époque qu'il fit son apparition en Afrique du Nord. Pour le Sahara central, nous rappellerons d'après les légendes des Touaregs que ce sont ces derniers qui ont amené le chameau, ce qui pourrait confirmer la thèse de Gautier. Ce même savant nous apprend que le texte le plus ancien où il soit question du chameau est un passage des commentaires de César : à l'issue de sa victoire sur le roi Juba l'armée romaine s'empara de 22 chameaux.

Pline, postérieur d'un siècle à Juba, nous parle du chameau de la Bactriane qui a deux bosses et du chameau qui n'en a qu'une ; jusqu'alors le dromadaire est rare en Afrique du Nord et est encore un phénomène que l'on note méticuleusement.

Mais au IVe siècle tout change. Le chameau est la monture de guerre des grands nomades, remplaçant presque partout le cheval, si bien que le général Romanus peut exiger des habitants de Leptis Magna (Tripoli) 4.000 chameaux à titre de contribution de guerre. Il y a donc eu, en l'espace de trois siècles, une transformation radicale dans le cheptel nord-africain.

Le chameau serait un nouveau venu, non seulement en Afrique du Nord, mais encore en Égypte. Les civilisations pharaoniques n'auraient jamais connu le chameau et cet animal n'est jamais figuré sur les monuments égyptiens. Localisé en Asie et particulièrement en Arabie, le chameau n'aurait pénétré en Afrique qu'à partir de l'invasion assyrienne, et surtout au moment de l'invasion persane [1]. Mais il mit plus d'un siècle à s'acclimater chez les Berbères du Maghreb [2].

Dès lors, c'est un remue-ménage sans fin dans toute l'Afrique du Nord et les tribus chamelières continuellement en déplacement vont bouleverser le vieux Maghreb citadin. Si bien que, lorsque l'histoire reprend son cours avec les récits d'El

1. Gautier, *Les Siècles Obscurs du Maghreb*, p. 205.
2. Gautier, ouv. cit., p. 206.

Bekri et d'Ibn Khaldoun, les populations se trouvent divisées en deux groupes : celui des ruraux cultivateurs ou petits nomades moutonniers, et celui des grands nomades chameliers, duquel la Gétulie, c'est-à-dire le pays situé au delà du limes romain, devient le domaine.

Qu'étaient les Sahariens jusqu'à l'Empire romain ? Des nègres, répond Gautier [1]. On est étonné de trouver cette réponse si affirmative et si généralisée sous la plume de cet écrivain si averti, encore qu'il aimât employer des exemples tranchants pour mieux faire ressortir les contrastes. Des nègres il y en avait, comme il y en a encore de nos jours, mais il y avait surtout ces multiples tribus libyennes et en particulier les Garamantes dont E. F. Gautier nous a vanté lui-même le vaste empire à base militaire [2] et qui furent soumis par le général romain Cornélius Balbus, au début de l'ère chrétienne. Mais ces tribus réfugiées dans le désert n'avaient peut-être plus la force de faire parler d'elles. Leur nom, en tous cas, disparaît de l'histoire quelques siècles plus tard.

Si le chameau est venu tardivement, nous ne savons pas par qui il a été introduit en Afrique du Nord. Si nous en croyons Gautier, ce serait là l'œuvre de Rome [3]. Mais si Rome a favorisé l'extension du chameau, ce n'est pas sans le secours accidentel de tribus chamelières donc de nomades sahariens, et d'où ces derniers les tenaient-ils ?

Documents tirés des auteurs arabes. — A ce sujet les textes de l'historien arabe El Bekri suggèrent bien des choses. D'après lui, les Berbères seraient originaires de Syrie où ils étaient autrefois établis en « Filistin ». Après que leur roi Thalout (David) eut tué Djalout (Goliath) ils se rendirent dans le Maghreb en passant par l'Égypte occidentale [4].

Plus loin il dit que les Zénata, les Méghila et les Darisa se fixèrent dans la partie montagneuse du pays et les Louata occupèrent le territoire de Bargah (Barca) ; les Hoouara s'installèrent dans le pays de Tripoli de Barbarie.

Nous ignorons quelle valeur il faut attribuer à cette origine syrienne des Berbères (ou d'une partie des Berbères), mais nous devons signaler l'existence dans le folklore targui de la légende

de David et de Goliath. A-t-elle été conservée depuis les temps immémoriaux ou a-t-elle pris racine après le texte d'El Bekri venu à la connaissance des Touaregs par quelque lettré arabe ?

Cette croyance à l'origine syrienne des Berbères est encore répandue chez les lettrés sahariens. C'est ainsi qu'un marabout targui de la tribu des Kel es Souq remit, en 1907, au capitaine Cortier, une note sur l'origine des Ioullimmiden, où il est dit que les ancêtres de cette tribu sont venus d'Asie Mineure, qu'ils sont issus des Phéniciens, qu'ils auraient quitté leur sol 313 ans avant l'apparition d'Alexandre de Macédoine, qu'ils passèrent en Afrique où ils fondèrent Tunis, Tripoli, Kairouan, qu'ils furent refoulés dans le Sahara par les Romains, où ils bâtirent des villes comme Ăgadez, Gao [1].

Décrivant les peuples de l'Afrique du Nord, l'écrivain arabe Ibn Khaldoun divise ceux-ci en deux groupes : les Berbères et les Zénata. Les Berbères, d'après Gautier, sont localisés dans les parties montagneuses alors que les Zénata occupent les plaines méridionales et le Sahara septentrional depuis la Cyrénaïque jusqu'aux rives de l'Atlantique.

Pour Ibn Khaldoun, les Berbères et les Zénata ne sont pas gens de même race. Les Zénata parlent une langue différente de celle des Berbères [2], et, en se référant à l'avis d'un généalogiste de son temps, il donne pour ancêtres éponymes, aux premiers, un nommé Bernès, et aux seconds, un nommé Madghis. « Comme ce dernier était surnommé El-Abter, on appelle ses descendants Botr, de même que l'on désigne par le nom de Beranès les familles qui tirent leur origine de Bernès [3]. »

Les Botr étaient composés en partie de tribus tripolitaines, les Hooaara, les Néfouça, les Louata, les Matmata. Parmi les Bèranès, il y avait les Sanhadja (qui sont nos Kabyles actuels), les Masmouda, dans l'Atlas marocain et les Auréba dans l'Aurès.

Mais pour les populations qui habitaient l'intérieur du Sahara, les renseignements d'Ibn Khaldoun sont moins précis.

Un détail vestimentaire lui a particulièrement sauté aux yeux : « Ils se voilent la figure avec le litham, objet d'habillement qui les distinguait des autres nations [4] ». Il les appelle les Lemta et les Lemtouna. Mais il y a un cas d'espèce. Ces voilés

4. Ibn Khaldoun, ouv. cit., t. II, p. 116.

se subdivisent en deux groupes, les occidentaux et les orientaux. Les deux tribus Lemta et Lemtouna appartiennent aux occidentaux ; quant aux orientaux, dit Gautier, ce sont les Hoggars, dans le nom desquels on retrouve celui de Hoouara, tribu bien connue des premiers conquérants arabes ; ces Hoouara, sans contestation possible, sont venus de Cyrénaïque, de Tripoli ; ils ont joué un rôle en Tunisie, dans l'Aurès. C'est l'avis aussi de Mercier [1] et de Benharéra [2]. Ce seraient donc des Botr, frères des Néfouça et des Louata [3].

Ibn Khaldoun donne à tous les porteurs de litham une ancêtre commune : c'est Tiski la Boiteuse ! Ce renseignement n'est déjà pas si sot, dit Gautier, qui y voit une justification du matriarcat encore en usage chez les Touaregs [4]. Mais avouons que c'est bien peu de choses pour qui cherche à débrouiller les origines de nos Sahariens, de savoir qu'ils eurent pour ancêtre une boiteuse !

Il n'y a plus de nos jours de « voilés » dans le Sahara occidental mais, par El Bekri et par Ibn Khaldoun, nous savons qu'il y en a eu, et nous savons par les Touaregs que l'ancêtre de la tribu des Kel Rela, Ti-n-Hînân, dont le squelette a été exhumé près d'Ăbalessa était venue du Tafilalet. Ti-n-Hînân appartenait-elle aux Hoouara ou aux Lemta? Ce qui ne fait aucun doute, c'est que cette femme était une Zénète, et les textes d'Ibn Khaldoun s'accordent donc bien avec la légende touarègue.

La date d'arrivée de Ti-n-Hînân au Ăhaggar est assez imprécise, entre le IVe et le IXe siècle, ce qui peut concorder avec ce qu'a dit Ibn Khaldoun.

La légende attribue un frère et une sœur à Ti-n-Hînân. Le frère serait l'ancêtre des Touaregs Tăděmaket. Quant à la sœur, elle se serait fixée au Touat où elle aurait engendré la tribu actuelle des Tégéhé Mellet [5]. Ti-n-Hînân, pendant son voyage, était accompagnée par une « dame de compagnie » du nom de Takamat. Or les vivres vinrent à manquer et le sort de la petite caravane était gravement compromis, lorsque cette

2. *Six mois dans l'Ahaggar*.
3. GAUTIER, *Le Passé de l'Afrique du Nord*, p. 240.
4. Ouv. cit., p. 241.
5. Y a-t-il eu deux courants de migrations, l'un venant de Tripolitaine et l'autre du Tafilalet, ou bien le mouvement parti de Tripolitaine aurait-il abouti à l'Ahaggar en passant par le Tafilalet ? Ibn Khaldoun a situé les Hoouara dans les deux régions.

suivante eut l'idée de fouiller des fourmilières dans lesquelles elle trouva des petites provisions de grains qui sauvèrent les voyageuses. Arrivée dans l'Ăhaggar, Ti-n-Hinân affecta le centre du pays, c'est-à-dire l'Ătakor, à Takamat et à sa descendance, les Dăg Mertemek, que nous y retrouvons encore aujourd'hui dans les tribus Dăg Râli et Kel Ăhnet. L'Ăhaggar, à cette époque, était habité. Les Touaregs nous disent par qui : par les Isebeten.

Qui étaient les Isebeten? Les Isebeten, suivant les légendes touarègues, étaient des gens sans culture, qui parlaient en aboyant comme des chiens, qui ne connaissaient pas le chameau, qui n'avaient comme animaux domestiques que des ânes et des chèvres. Ils se battaient avec des pierres et passaient leur temps à chasser. Leur chef était Akkar. C'était un géant qui avait la folie de la chasse et pourchassait tous les moutons de l'Ăhaggar. Un jour, il fit faire par ses gens, une battue générale dans la montagne pour rassembler tous les moutons dans la région d'Ăbalessa où il avait l'intention de chasser. Mais les Isebeten interprétèrent ce projet comme un signe de folie. Son désir de chasse, dirent-ils, va si loin qu'un jour il finira par nous tuer nous-mêmes. Et ils décidèrent de le mettre à mort. Pour être sûrs qu'il ne revint pas à la vie, ils l'enterrèrent sous un énorme tas de cailloux que l'on peut encore voir aujourd'hui et qui se trouve à la tête de l'oued Taroumout, au pied de la montagne Ăsékrem.

Cette légende est bien connue de tous les Touaregs de l'Ăhaggar et les Isebeten ont encore des représentants qui ont été intégrés dans la tribu des Dăg Râli.

Les Touaregs insistent toujours sur la médiocrité intellectuelle des Isebeten. Ils ne disent pas si l'occupation de l'Ăhaggar entraîna des batailles, mais il semble que leur installation ne souleva pas de grandes difficultés.

Ce qui est intéressant à retenir c'est, d'une part, que les Isebeten ne possédaient pas de chameaux, d'autre part, qu'ils se servaient encore d'un outillage de pierre. En étaient-ils encore au stade néolithique? S'il en était ainsi, on devrait retrouver beaucoup plus d'objets en pierre qu'on en a recueillis jusqu'à ce jour. Cependant, on doit pouvoir admettre que l'emploi de certains outils en pierre s'était maintenu chez eux. Le tombeau d'Akkar (Azzaka-n-Akkar) est un tumulus de type préislamique, de forme conique et de grande taille, et c'est là l'une des formes funéraires des anciens habitants de l'Ăhaggar.

1: Lhote MS25 Tuareg

Les Isebeten devaient donc être, tout à la fois, les vestiges de populations préhistoriques et libyennes.

Leurs descendants actuels sont encore renommés comme de bons chasseurs et cette activité devait être à la base de leur condition de vie.

Ils possèdent encore des terrains de chasse sur lesquels ils ont des droits de propriété absolus. C'est ainsi que le massif du Tăhat était le fief d'un nommé Mahaoua ag Mohamed qui est mort il y a quelques années et qui le laissa à son jeune fils.

Il semble qu'il y ait eu également une autre influence au Sahara central, celle des Beni Hilal.

Les Beni Hilal, ou Arabes Hilaliens, furent jetés sur le Maghreb en 1051 par le sultan Fatimide du Caire, qui voulait tout à la fois se débarrasser d'une tribu particulièrement turbulente et se venger du sultan de Kairouan qui s'était rebellé contre lui. Campés autrefois en Arabie septentrionale, ils passèrent sur le continent africain où ils s'installèrent entre la Mer Rouge et le Nil, puis plus tard, sur la rive gauche du Nil.

Pour gagner le Maghreb ils durent emprunter la route de la Cyrénaïque, mais on peut supposer que certaines fractions, parties de Haute Égypte, furent tentées par la route saharienne. Au temps de Léon l'Africain, « les Beni Hilal habitaient aux frontières du royaume de Télensin et d'Oran, errant de çà et de là par les déserts de Tégorarin » (T. I, p. 56). Or Tégorarin est le pluriel de Gourara, région qui se trouve située à la limite du pays targui actuel. Toujours est-il que leur passage est resté en mémoire dans l'Ăhaggar. Les tumuli avec anse de panier leur sont attribués par les Touaregs, mais ils n'ont pas dû faire souche dans le pays et aucune fraction Ihăggaren ne les revendique dans sa généalogie. Cependant on retrouve au Soudan une tribu vassale des Ioullimmiden, les Rattafanes, qui a pris part aux invasions hilaliennes, s'est fixée sur le bord du Niger dans la région de Tillabery, et s'est complètement targuisée [1].

Nous trouvons le nom de Hoggar pour la première fois sous la plume du voyageur arabe Ibn Batouta qui fit un voyage au Soudan vers 1350. Après avoir gagné Sidjimessa, ancienne capitale du Tafilalet, il se rendit aux mines de sel de Teghaza qui étaient encore exploitées, puis de là, parvint à Iwalaten (Oualata) où après un séjour de 50 jours il se mit en route pour Melli, capitale d'un empire puissant. Il gagna le « Nil », c'est-à-

1. Richer, *Les Oulliminden*, p. 41.

1: Lhote MS25 Tuareg

dire le Niger [1], passa à Kabara, à Tenboktou (Tombouctou) et à Koukou (Gao-Gao). Puis avec des caravanes originaires de Rhâdamès il alla, à chameau, à Takedda [2] le pays des *Berdama*, qui, dit-il, sont des Berbères de teint très blanc, vivant sous des tentes de cuir. Il signale l'embonpoint remarquable des femmes Berdama qui grossissent volontairement en absorbant du lait de vache et de la farine de dorra [3] (farine de mil mélangée de fromage sec pilé). Ibn Batouta raconte aussi que lorsqu'un étranger épouse une Berdama, il doit s'établir dans leur pays. Cette coutume est encore en usage chez les Touaregs.

Les Berdama sont évidemment les Touaregs qui habitaient à ce moment là l'Adrar des Ifôras, Tăděmaket, Kel Aïr, Kel Ădrar, et les Soudanais les désignent souvent sous le nom de Bourdames dans lequel il n'est pas difficile de retrouver le mot Berdama.

A Takedda, Ibn Batouta séjourna chez le caïd nommé Abou Ibrahim Isahc ed Djanati, c'est-à-dire, originaire de Djana, indique le traducteur (de Slane) ; nous croirions plus volontiers de Djanet, ce qui fait voir qu'il existait alors des relations entre Rhât, Rhâdamès et le Soudan, détail confirmé par le fait que les compagnons d'Ibn Batouta étaient originaires de Rhâdamès. Cette route était d'ailleurs à cette époque celle que suivaient les pèlerins originaires de la région de Tombouctou pour se rendre à La Mecque.

De Takedda, Ibn Batouta se rendit à Kaher, affronta ensuite « le désert inhabité et dépourvu d'eau qu'il fallut trois jours pour traverser », puis il marcha pendant 15 jours jusqu'à un endroit où la route se partage en deux, l'une allant sur le Touat, l'autre sur l'Égypte, en passant par Rhât.

« C'est là que se trouve le pays des Heggar [4]. C'est une tribu berbère qui porte le litham et qui est très pauvre. Les gens demandèrent des vêtements comme droit de passage. »

« Leur pays, a-t-il noté, est pauvre en herbe et plein de cailloux qui rendent la vie très difficile. » Il rencontra une

1. Le Niger fut longtemps confondu avec le Nil par les auteurs arabes qui n'avaient pas reconnu les sources de ce dernier fleuve et les croyaient d'une part dans les monts de la Lune (Kilimandjaro) et, d'autre part, dans le Fouta Djallon.

2. Takedda a été identifiée comme étant la saline de Tegguidda-n-Teçumt, à l'ouest de la ville d'Agadez.

4. Ouv. cit., p. 54.

1: Lhote MS25 Tuareg

autre tribu de Berbères voilés comme les premiers qui nomadisait au sud du Touat, mais dont il ne donne pas le nom. Ibn Batouta fixe donc la position des voilés au XIVe siècle et nous donne des détails de mœurs qu'il est facile de reconnaître pour celles des Touaregs.

Vers la même époque, l'Ăhaggar était venu à la connaissance des géographes européens et c'est ainsi que la mappemonde de la cathédrale de Hereford (Angleterre), datant de la fin du XIIIe siècle, porte au centre du Sahara les monts Uzarae (Euzarée).

Un autre planisphère dû aux frères vénitiens Pizzigani, datant de 1367, porte à la même place les monts Urgalem, qui deviendront Uuggar dans les planisphères majorquins de Mecia de Viladestes dessinés en 1413, et Ugar sur une carte catalane, également du XVe siècle, déposée à la Bibliothèque Nationale de Naples. (Les cartes sus-nommées ont été reproduites dans : *L'exploration de l'Afrique au moyen âge*, par Ch. DE LA RONCIÈRE, Le Caire, 1925.)

Si par ailleurs nous avons dit qu'il fallait attendre le voyage de René Caillé pour avoir sur le désert des renseignements géographiques précis, il semble que le Sahara ait été visité à plusieurs reprises par des Européens. Nous devons en particulier à M. Ch. de la Roncière la découverte récente et le déchiffrement d'une relation de voyage très ancienne, datant de 1447 et décrivant minutieusement le Touat ainsi que les pays circumvoisins. Cette narration, due à un certain Antonio Malfante et adressée à un Gênois, fait par ailleurs mention des Touaregs que le voyageur a côtoyés dans les oasis et qu'il désigne, tout comme El Bekri, sous le nom de Philistins.

« Innombrables, dit-il d'eux, ils règnent en maître sur la terre de Gazola depuis les confins de l'Égypte jusqu'à l'Océan, jusqu'à Messa et Sofi, et sur toutes les villes nègres qui les avoisinent. De race superbe et de haute mine, ces blancs sont d'incomparables cavaliers qui montent sans étriers avec de simples éperons. Des lois les gouvernent, mais leur législation offre cette particularité que l'héritage passe aux fils de leurs sœurs. Ils ont la bouche et le nez couverts d'un voile. J'en ai vu plusieurs ; comme je leur en demandais, par un interprète, la raison : « Telle est la coutume héritée de nos ancêtres » dirent-ils. Ce sont les ennemis acharnés des juifs qui n'osent passer chez eux : ils ont la religion des nègres. Leur nourriture est faite de lait et de viandes, sans blé ni orge, mais avec beau-

coup de riz. Leurs troupeaux de brebis, de bœufs et de chameaux sont innombrables. Certaine espèce de chameaux, blanche comme la neige, couvre en un jour la distance qu'un cavalier mettrait quatre jours à franchir. Grands batailleurs, ces peuples se battent continuellement entre eux. Les États qui sont sous leur domination sont aux confins du pays des nègres. » Et Malfante cite parmi les principales agglomérations, Teghidda (Tegguidda-n-Téçumt), Es Souq, Koukiya, Tombouctou, Dienné [1]. Cette relation, quoique très courte, nous fait voir quelle était l'influence politique des Touaregs au xv^e siècle, en particulier celle des Ihaggaren, lesquels, comme de nos jours, fréquentaient les oasis du Touat. Elle nous révèle, d'autre part, l'existence de cette colonie juive de Tamentit dont nous parlerons ultérieurement.

Le voyageur Léon l'Africain, qui commença à voyager en Afrique du Nord et en Égypte vers 1507 nous précisera la position des voilés sahariens parmi lesquels se trouvent les Terga et les Berdéoa, ces derniers campés entre le Fezzan et le désert de Barca [2]. Dans la transcription du mot Terga, d'origine arabe, il n'est pas difficile de voir une transposition d'accentuation et de reconstituer le mot targui.

Faisant la description du Sahara central, Léon l'Africain dit que le désert commence aux limites d'Ighidi (Iguidi) s'étendant presqu'aux confins de celui que le peuple Berdéoa a pris pour demeure. Au nord il se joint avec le désert de Techort, de Guargula (Ouargla) et de Gademis (Rhâdamès). Au midi, il va jusqu'au pays des noirs (Kano).

Quant aux Touaregs, il les situe entre l'Aïr et l'Iguidi (Haïr et Ighidi) alors qu'au nord leur pays est bordé par les déserts de « Tuathl Tegoram et Mezab » [3]. C'est exactement l'emplacement actuel des Touaregs Ăhaggar.

Léon l'Africain ajoute que le désert est sec et dangereux pour les marchands qui le traversent. Les habitants (les Touaregs) se prétendent des droits sur la Seigneurie de Ouargla dont ils pillent et dévalisent tous les marchands qui passent sur leur territoire et tuent quiconque vient chez eux.

« Les Berdéoa (les Toubou) habitent à la suite de ce désert qui confine au nord aux déserts de Fezzan et de Barca et au milieu

3. Ouv. cit., t. III, p. 270.

va jusqu'au désert de Bornah. Seuls peuvent le traverser les gens qui prennent des convoyeurs à Rhâmadès lesquels sont fort alliés et amis avec les habitants de ce désert. »

L'embonpoint traditionnel des femmes touarègues est également venu à sa connaissance : « Leurs femmes sont fort charnues, dit-il, mais aucunement brunes, ayant les parties de derrière fort pleines et mouffletées semblablement l'estomac..., etc... » [1] ; et il nous dépeint leur légèreté de mœurs et leurs coutumes particulières en termes très savoureux.

Les nomades sahariens vivaient alors comme de nos jours. Ils se nourrissaient frugalement de lait de chamelles, passaient leur temps en déplacements pour faire paître leurs bêtes, ainsi qu'à la chasse.

L'ignorance des lettres et des arts était flagrante, si on en croit Léon l'Africain, état qui n'a pas changé, et les tribus sahariennes vivaient en état d'anarchie, sans chef bien déterminé, sans assemblée de notables, de chambre de justice ou autre [2].

Léon l'Africain signale parmi les Hoouara une tribu qui porte le nom d'Azgar [3]. On peut supposer que ce sont les Ajjer actuels que certains auteurs nomment Asdjer, Asjer, Azgueurs, Azger, et qui vécurent longtemps avec les Ihăggaren dont ils se séparèrent politiquement vers le XVIIIe siècle.

L'écrivain arabe Edrissi avait déjà cité cette tribu dans la région qu'elle occupe aujourd'hui, sous le nom de Azgueurs.

Pour les autres tribus du désert, il est difficile de suivre Léon l'Africain et il suffit de jeter un coup d'œil sur la carte jointe à son ouvrage, pour se rendre compte de la confusion inextricable qui existait alors dans la géographie saharienne.

Il semble que les Lemtouna aient également participé à la formation de la nation touarègue. Certaines de leurs tribus, après avoir détruit l'empire du Melli se fixèrent dans la région de Tombouctou où, d'après Ibn Khaldoun, ils forcèrent les nègres à adopter la religion musulmane à laquelle ils étaient eux-mêmes récemment convertis.

Bien avant cette époque, des éléments berbères, encore païens, avaient acquis une influence prépondérante sur les peuples noirs de la boucle du Niger, s'étaient imposés à eux, et avaient fondé le premier empire sonrhaï de la dynastie des *Diâ* (670), qui se maintint jusqu'au XVIe siècle (cf. Tarikh el

1: Lhote MS25 Tuareg

Fettach)[1]. Cette dynastie fut évincée par des éléments sonrhaïs qui rejetèrent les Touaregs vers le Nord, détruisirent leur capitale Tădemeka (Es Souq), ce qui détermina la migration d'une partie des habitants de cette ville vers les pays d'Ăjjer et du Ăhaggar (VIIIe siècle de l'Hégire)[2].

On note donc deux grandes migrations berbères qui convergèrent à l'intérieur du Sahara.

La première qui serait très ancienne, bien antérieure à la venue des Arabes, peut-être même à l'ère chrétienne, composée d'éléments Lemta et Hoouara qui occupèrent l'Ădrar, descendirent jusqu'au Niger et poussèrent peut-être jusqu'à l'Aïr.

La seconde, plus récente, était issue des Hoouara[3], qui sous la poussée des Arabes seraient partis de la Tripolitaine et du Fezzan et auraient rejoint le premier groupe.

La dernière composante des Touaregs semble être celle de Sémites sahariens encore installés au Touat, en 1447, dans l'oasis de Tamentit[4] qui, un demi-siècle plus tard, en 1492, furent chassés du Touat par le réformateur musulman El Merhili. Beaucoup furent massacrés et un certain nombre purent s'enfuir au Soudan où ils reçurent l'hospitalité de l'Askia El Hadj Mohamed, empereur de Gao[5].

Delafosse a toujours vu dans ces Sémites sahariens qui seraient venus de Cyrénaïque en 115 après J.-C., à la suite de leur rebellion contre les autorités romaines, les ancêtres des Peuls. Cette hypothèse a été vivement combattue depuis[6]. Nous croirions plus volontiers que ces éléments sémitiques ont dû progressivement s'intégrer aux Touaregs. On donne souvent une origine juive à leurs artisans, forgerons et peaussiers. C'est toutefois ce que disent les légendes.

Il y aurait plus exactement une composante juive dans cette caste formée aujourd'hui d'autant d'éléments blancs que de noirs, mais il se peut que des groupes, après avoir embrassé l'islamisme, se soient fondus dans les tribus. Nous avons souvent été frappés du type sémitique très accusé de certains

1. Cette origine berbère des Diâ est controversée par H. Houdas, le traducteur du Tarikh es Soudan.
2. Duveyrier, *Les Touareg du Nord*, p. 326.
3. On verra à ce sujet Richer, *Les Oulliminden*, p. 58, qui était déjà arrivé à cette conclusion.
4. Lettre d'Antonio Malfante, commentée par Ch. de la Roncière. *Revue hebdomadaire*, n° 40, 5 octobre 1918, Paris, Plon.
5. Delafosse, *Haut-Sénégal et Niger*, t. I, p. 219.
6. Se référer pour ce sujet à *Mœurs et Histoire des Peuls*, de Tauxier, Paris, Payot, 1938.

Touaregs, en particulier chez les Icheriffen de la région de Gao. Richer a, de son côté, fait la même observation. Ces caractères ne ressortent pas dans les séries anthropologiques où ils se sont fondus avec quantité d'autres, mais des séries appropriées les mettraient probablement en valeur. Chez les Ioullimmiden on trouve de curieuses nattes de lit en sparterie où des motifs décoratifs sont formés d'étoiles de Salomon à six branches qui pourraient bien être les vestiges du judaïsme saharien.

Il y a chez tous les Musulmans actuels d'origine non arabe, Peuls, Berbères, etc..., tendance à se réclamer de la descendance du Prophète. C'est le cas également pour les Touaregs qui se donnent une origine chérifienne. Duveyrier eut connaissance d'une note rédigée par le Cheikh Brahim Oult Sidi, réputé l'homme le plus instruit parmi les Touaregs, destinée au Grand Maître de la Confrérie des Tidjanyia. Elle prétendait que les Ihăggaren descendaient des Edrissides de Fez, quelques-uns étant venus de Chinguit, d'autres de l'Adhagh [1]. C'est peut-être le cas de quelques hommes qui s'intégrèrent aux grandes familles touarègues, mais cette assertion ne peut être valable pour l'ensemble.

Notons que l'Ădrar revient toujours dans les légendes comme étant le foyer originel de dispersion des tribus touarègues, aussi bien chez les Ihăggaren que chez les Ioullimmiden.

L'Ădrar a dû jouer effectivement un rôle prépondérant dans le peuplement primitif. C'est là d'ailleurs que les historiens du moyen âge fixent l'habitat ancien des Lemtouna et des Sanhadja.

Et Duveyrier conclut qu'une extension politique avait porté les migrations touarègues du nord au sud, qu'une réaction des Soudanais les refoula du Sud au Nord [2].

On voit que les Touaregs forment un complexe ethnique inextricable, résultante de multiples métissages de peuples d'origines les plus diverses et dans lequel il est difficile de déterminer les proportions relatives des principales souches. Nous verrons un peu plus loin que c'est aussi ce que confirme leur étude anthropologique.

Mais ce qui est extraordinaire et ce qui surprend le plus l'ethnographe, c'est de trouver un groupement de nature si disparate présentant une aussi grande uniformité ethnique,

1: Lhote MS25 Tuareg

alors que nous savons qu'ils n'ont jamais formé une nation au sens propre du mot, et n'ont eu ensemble que des attaches politiques très lâches. Cette homogénéité peut s'expliquer par le mouvement des tribus qui, au cours des temps, sont passées d'un groupe à l'autre, de l'Ădrar à l'Ăhaggar, de l'Ăhaggar à l'Aïr, etc..., se façonnant les unes au contact des autres par les mariages inter-groupes qui furent très nombreux, également par des conflits qui les opposèrent constamment tribu à tribu, qui donnaient alternativement à l'une d'entre elles une suprématie temporaire sur les autres, favorisant l'interpénétration des différents éléments se rattachant au peuple targui.

## *DIVISIONS POLITIQUES. CARACTÈRES PHYSIQUES. LANGUE, ÉCRITURE ET LITTÉRATURE ORALE*

---

## CHAPITRE PREMIER

## DIVISIONS POLITIQUES

Les Touaregs occupent une vaste région qui étend ses limites à la fois sur le Sahara et le Soudan. Leur domaine commence à la lisière du Grand Erg Oriental et s'étend jusqu'au delà du Niger pour s'arrêter à peu près vers le 15e degré de latitude nord, embrassant toute l'aire comprise entre le 5e degré à l'ouest et le 10e degré à l'est du méridien de Greenwich.

Si la présente étude porte particulièrement sur les populations de l'Ăhaggar, il est bon de savoir que ces dernières ne comptent que pour une infime partie dans l'ethnie touarègue.

Les Touaregs se divisent en plusieurs groupements, plus ou moins inféodés à un chef, groupements auxquels nous avons donné le nom de confédérations. Ce terme a l'avantage pour nous de définir un ensemble déterminé de tribus, mais il ne peut être pris dans son véritable sens qui comporte une organisation hiérarchisée, une entente entre plusieurs états indépendants, liés entre eux par un pacte commun. Ce n'est pas tout à fait le cas, chez les Touaregs, comme nous le verrons plus loin.

Dans l'état d'anarchie où nous avons trouvé les Touaregs, lors de l'occupation de leur pays, il est assez difficile de dire comment étaient composées ces différentes confédérations. Les définitions employées par les auteurs sont en réalité celles qui correspondent à l'organisation des Touaregs d'il y a plusieurs

[p. 126]

1: Lhote MS25 Tuareg

siècles, c'est-à-dire avant que d'importantes scissions ne se soient produites. Il semble qu'au moyen âge, il existait deux groupes : celui des Touaregs du Nord ou Ihăggaren, et celui des Touaregs soudanais, rassemblés sous le nom de la tribu chef des Tădemaket dont l'habitat initial fut l'Ădrar des Ifôras. Les tribus du Sahara formaient un seul groupement qui se scindait vers le XVIe siècle *en deux groupes différents*, celui des Kel-Ăhaggar et celui des Kel-Ăjjer [1].

La division des Touaregs Tădemaket date du XVIIe siècle à la suite du départ d'un groupe important, celui des Ioullimmiden, qui alla se fixer au nord de la boucle du Niger, alors que des tribus moins importantes en profitaient pour s'affranchir et allaient s'établir sur les rives du fleuve.

Le peuplement du massif de l'Aïr et de ses abords fut plus tardif et comprit des tribus issues des groupes précédents.

Avant l'occupation française, les Touaregs se divisaient en :

1° Ihăggaren ou Kel-Ăhaggar, habitant le massif de l'Ăhaggar et ses dépendances,

2° Kel-Ăjjer, habitant le Tassili-n-Ăjjer, le sud Tripolitain et la pointe sud-est de l'Erg Oriental, autour des villes de Ghât et de Rhâdamès.

On désigne quelquefois ces deux groupements sous le nom de Touaregs du Nord ou Touaregs sahariens.

3° Ioullimmiden, ou Oulliminden, localisés aujourd'hui dans la région de Ménéka et dont dépendaient les Touaregs de l'Ădrar des Ifôras, les Touaregs de l'intérieur de la boucle du Niger et les Kel Dinnik. Ces derniers, qui sont des Ioullimmiden, se sont séparés du groupe principal vers le XVIIIe siècle. Les Ifôras, de leur côté, avaient obtenu une indépendance presque complète.

4° Tenguéréguifs, descendants directs des Tădemaket, qui occupent tous les abords du lac Faguibine ; ils étaient les suzerains de Tombouctou.

Ces différents groupements sont souvent désignés sous le nom de Touaregs nigériens, Touaregs du Sud, ou Touaregs soudanais.

5° Kel-Aïr, ou Kel-Ăzben, comprenant les Kel Geres et les Kel Oui placés nominalement sous l'autorité du Sultan d'Agadez, d'ailleurs fort fictive. On les désigne quelquefois sous le nom de Touaregs du Sud-Est.

1. Le mot « Kel » veut dire « gens de... ».

1: Lhote MS25 Tuareg

On comptait donc cinq groupes différents. Aucun lien politique n'existait entre eux. Il n'y avait pas de chef suprême susceptible de rallier toutes les tribus pour une action commune. Ce besoin d'ailleurs semble ne s'être jamais fait sentir et, d'autre part, l'état d'anarchie a toujours été de règle chez les Touaregs. Leur valeur guerrière très élevée leur a suffi pour s'imposer aux peuplades noires voisines. Si pendant un certain temps les anciens groupements Tăděmaket durent accepter la suzeraineté de l'Empereur sonrhaï de Gao, celle-ci fut toute fictive et un compromis survint rapidement qui donna aux tribus touarègues un des rôles principaux dans l'armée sonrhaï.

L'indépendance des groupes n'exclut pas la possibilité d'ententes militaires et il n'est pas rare qu'un appel soit fait aux tribus voisines pour une défense contre un ennemi commun. Cet appel était d'autant plus entendu que les luttes étaient l'occasion de pillages et de profits éventuels dont les Touaregs sont toujours friands.

D'après des recensements qui remonteraient à 1933-1938, l'effectif des différents groupes touaregs serait celui-ci : Ihăggaren : 4.254 ; Kel Ăjjer : 1.508 [1] ; Kel Aïr (Kel Oui et Kel Geres) : 27.765 ; Tengueréguifs : 40.000 ; Kel Ădrar : 4.223 ; Ioullimmiden (y compris les Touaregs de la Boucle et les Kel Dinnik) : 161.160. Soit au total : 238.910.

Ce chiffre est très supérieur à celui donné par les recensements qui dataient d'avant 1920. Il faut défalquer, parmi les Ioullimmiden, environ 94.000 serviteurs qui ont été recensés avec les Touaregs. Il semble que pour des raisons d'impôts, faciles à comprendre, les effectifs avoués des tribus aient été volontairement réduits. Beaucoup de fractions n'ont d'ailleurs pas encore été recensées nominalement, ce qui fait que ces chiffres n'ont pas une autorité absolue.

Nous voyons donc que les Ihăggaren, qui nous intéressent particulièrement dans la présente étude, ne représentent que 1,78 % des populations touarègues.

1. Ce chiffre ne comporte pas celui des Touaregs soumis aux autorités italiennes qui doit être de l'ordre de quelques centaines, ni les Ksouriens de Djanet et des petits centres de culture qui sont sous leur autorité.

III. Carte de la répartition des différents groupements politiques touaregs.

## CHAPITRE II

## CARACTÈRES PHYSIQUES DES TOUAREGS

Lorsqu'un voyageur décrit les populations qu'il a visitées, il a une tendance à définir « un type » uniforme qui correspond en fait à une somme des caractères qui l'ont le plus frappé. Or, il est bien rare de ne trouver qu'un type dans un groupement humain de quelque importance.

En ce qui concerne les Touaregs, gens de race blanche, donc logiquement d'origine méditerranéenne, placés entre les Blancs de l'Afrique du Nord et les Noirs du Soudan, il aurait été bien extraordinaire qu'il n'en soit pas ainsi.

Pourtant presque tous les voyageurs qui les ont visités se sont efforcés de nous décrire un type targui, grand, élancé, aux hanches effacées, aux attaches fines, aux mains petites, aux yeux très grands et très foncés, aux cheveux longs, noirs et lisses ou légèrement ondulés.

Ce portrait ne correspond qu'en partie à la réalité. Il y a beaucoup de Touaregs très grands, mais il y en a beaucoup également de taille moyenne. Aussi a-t on voulu les différencier en castes, en nobles et en vassaux, les premiers présentant une pureté raciale mieux accusée que les seconds, ce qui peut être partiellement exact.

En ce qui concerne les Touaregs, une autre erreur d'appréciation a été commise, très compréhensible d'ailleurs : parce que les Touaregs du Nord ont été les premiers et les plus souvent visités, ce sont eux qui ont servi à faire le portrait type du Targui, alors que l'on ignorait les tribus soudanaises qui comptent pourtant un effectif en hommes vingt fois supérieur. Plus tard, lorsque d'autres voyageurs influencés par les premiers écrits, ont été en présence des Touaregs soudanais, ils ont conclu que ces derniers étaient de type moins pur et qu'ils devaient cette caractéristique raciale à des métissages nègres. Cette opinion est nettement exagérée car, par exemple, l'abaissement de la taille chez les Touaregs soudanais par rapport à

1: Lhote MS25 Tuareg

ceux de l'Ăhaggar, n'est pas dû à des influences nègres. Les populations noires environnantes sont, dans l'ensemble, d'assez grande taille, 170 cm. pour les Sonrhaïs, 173 pour les Dendi, les Boudouma et les Kouri, alors que les vassaux des Ioullimmiden n'ont que 167 cm. 8. C'est donc autre part qu'il faut chercher l'origine de cette taille moyenne. Et ce simple trait démontre que le type physique des Touaregs est loin d'être uniforme. Il doit y avoir des composantes multiples et le chapitre consacré à leur passé le laisse facilement entrevoir.

Nous possédons, à l'heure actuelle, un assez grand nombre de mensurations sur le vivant, recueillies par des voyageurs et des anthropologues.

De Zeltner a mesuré 143 individus appartenant aux Touaregs du Sud ; de Gironcourt, au cours de sa mission dans la région de Gao-Bourem, a effectué 63 mensurations, dont l'étude a été faite par le Professeur Verneau. Le Dr Leblanc, doyen de la Faculté d'Alger, en a étudié 50 au cours d'un séjour de plusieurs mois dans l'Ăhaggar. Nous-même, au cours d'une mission exécutée en 1934-35, avons pu mesurer 190 individus masculins qui comprennent 2 Kel Ăhaggar, 6 Kel Ăjjer, 22 Imrad de l'Aïr, 38 Ifôras, 116 Ioullimmiden.

Nous examinerons successivement ici la stature, la forme du crâne, et quelques données somatiques.

*Stature*

| | | |
|---|---|---|
| Kel Ăjjer suzerains | 156 | Lhote |
| Ioullimmiden Daoussak | 164,11 | » |
| » Debakkar | 167,42 | » |
| » vassaux | 167,8 | » |
| Kel Aïr vassaux | 169,33 | » |
| Ifôras suzerains [1] | 170,2 | » |
| Ifôras vassaux [1] | 172,32 | » |
| Kel Ăjjer vassaux | 173 | » |
| Ihăggaren | 174,4 | Leblanc |
| Ioullimmiden Ichadahanaren | 175,8 | Lhote |

Ces variations énormes dans la stature sont un signe de la

1. Il s'agit ici des Ifôras de l'Adrar. Leblanc a trouvé 174,1 chez les Ifôras de l'Ahaggar qui forment un groupe complètement différent de celui de l'Adrar.

1: Lhote MS25 Tuareg

diversité des composantes somatiques des Touaregs. En effet, plus une race est pure, c'est-à-dire moins mélangée, plus les chiffres de la stature des groupes mensurés séparément se rapprochent les uns des autres. Les Norvégiens, par exemple, qui sont parmi les plus purs des nordiques, ont une stature moyenne de 170,9 avec oscillation entre 168,1 et 171,6.

*Indice céphalique horizontal*

| | | |
|---|---|---|
| Ioullimmiden vassaux | 71,68 | Lhote |
| » suzerains | 72,24 | » |
| Kel Ahaggar suzerains | 73,37 | » |
| Ifôras suzerains | 74,32 | » |
| Kel Ăhaggar vassaux | 74,48 | » |
| Kel Dinnik suzerains | 75,91 | » |
| Kel Ăjjer suzerains | 76,9 | » |

L'indice céphalique horizontal est beaucoup plus homogène dans ses chiffres que la stature. Il va de 71,68 à 76,9, ce qui fait que tous les Touaregs sont dolichocéphales. Comparés aux autres populations berbères, ce sont même eux qui le sont le plus ; cependant quelques traces de brachycéphalie ont été trouvées chez ceux du Sud, et plusieurs individus mensurés par de Gironcourt ont donné un indice de 82,01. Le Professeur Verneau, qui a étudié les documents de ce voyageur, s'est demandé à quelle influence raciale était dû ce raccourcissement de la tête de ces individus aberrants, et il a songé aux Kabyles brachycéphales. Notons que le crâne de Ti-n-Hinân a un indice céphalique de 78,4, qui le fait classer parmi les brachycéphales. Il n'est donc pas impossible qu'il y ait eu autrefois des brachycéphales chez les Touaregs, mais à l'heure actuelle ils constituent des exceptions.

L'indice céphalique des vrais nègres (nègres soudanais) varie entre 73,43 (chez les Kouri) et 75,41 (chez les Baribas). Ces chiffres étant très près de ceux des Touaregs ne peuvent donc être d'aucun secours pour déceler une influence quelconque. Mais les Touaregs ont un front très étroit par rapport au diamètre transversal du crâne, et ce serait, d'après Verneau, un caractère propre au type targui. Presque tous le présentent.

*Indice nasal*

| | | |
|---|---|---|
| Kel Ăjjer suzerains | 63,02 | Lhote |
| Kel Ăhaggar suzerains | 64,81 | Leblanc |
| Kel Ăhaggar vassaux | 65,38 | Leblanc |
| Ioullimmiden Daoussak | 70,47 | Lhote |
| Ioullimmiden vassaux | 73,41 | » |
| Ifôras vassaux | 75,47 | » |
| Kel Aïr vassaux | 81,89 | » |

L'indice nasal est un des plus importants pour la détermination des races, surtout lorsqu'il s'agit de discerner les Blancs des Noirs, les premiers ayant toujours le nez étroit et long alors que les seconds l'ont large et court. Les variations que nous trouvons chez les Touaregs sont assez sensibles, et les Kel Aïr doivent certainement l'épaisseur de leur nez à des métissages négroïdes. Ces métissages sont d'ailleurs bien connus, en particulier chez les Kel Oui où la population est formée à parties égales de Touaregs et de Haoussa. Il n'en a pas fallu plus pour altérer le type de tous les Kel Aïr.

Mais dans l'ensemble des groupes, la leptorhinie est nettement supérieure à la mésorhinie (indice de 70). Verneau avait déjà signalé l'existence de deux types de nez chez les Touaregs ; l'un étroit, l'autre moyen. Mais il y a des variantes assez sensibles dans les formes. Parmi les leptorhiniens, la ligne du nez peut être droite ou courbe. Le Docteur Leblanc a fait, à ce sujet, sur les Kel Ăhaggar, des observations très intéressantes. D'après lui, le nez chez les Touaregs a une valeur anthropologique considérable, car il a une forme très particulière que l'on ne retrouve pas ailleurs, et qu'il considère comme un stigmate de la race touarègue ancienne.

Le nez targui est mince à la racine, long, légèrement aquilin, mais jamais convexe en totalité comme on le trouve dans les types sémites. L'arête légèrement courbe est coupée à la partie supérieure par une bosselure allongée. *Il se termine en pointe étroite et tombante.* Les ailes sont peu larges et les narines à direction oblique et légèrement ouvertes [1].

Les nez droits, que l'on retrouve chez les Kel Ăhaggar et en particulier chez les Ifôras, seraient la résultante de croisements éloignés avec des nègres. Nous dirons aussi avec des

1. Les Touaregs, *Revue Anthropologique*, janv. 1929, p. 20.

Arabes, et il y a également chez les Touaregs des individus présentant des nez aquilins à caractères plus ou moins arménoïdes. Quant aux mésorhiniens, ils sont nettement apparentés aux Kabyles et aux Chaoulas de l'Afrique du Nord.

Parmi les autres caractères anthropologiques des Touaregs, notons que la face est longue, avec les pommettes saillantes ; ils sont donc leptoprosopes et ne présentent jamais de prognatisme. Beaucoup accusent un facies caucasique assez marqué. Nous l'avons observé chez les Touaregs du Nord aussi bien que chez les Touaregs soudanais, et Duveyrier l'avait signalé parmi les Kel Ăjjer vus lors de son voyage au Tassili [1]. De même dans les fractions Ioullimmiden de la région de Gao, en particulier chez les Icheriffen, nous avons été vivement frappés par le facies sémitique de beaucoup d'individus ; nous y avons déjà fait allusion.

Les membres sont longs, effilés et les extrémités très fines.

Mais si le type qui frappe le plus communément le voyageur est grand et sec, il existe également des individus rablés et assez épais.

La peau, observée sous l'aisselle, est blanche, légèrement couleur d'ivoire, mais le hâle provoqué par le soleil ainsi que l'habitude de porter des vêtements indigotés qui déteignent, lui donnent un aspect foncé qui fausse facilement les observations.

Les cheveux sont noirs, très foncés, lisses ou légèrement ondulés ; ils sont portés longs et souvent tressés sur le sommet de la tête alors que le pourtour de celle-ci est rasé.

L'ouverture palpébrale est allongée et l'œil a une pigmentation brun foncé.

Plusieurs voyageurs ont signalé la présence de blonds à yeux bleus chez les Touaregs. Or, parmi les 446 individus qui ont été mesurés, il ne s'en trouvait aucun, et tous les auteurs, au contraire, insistent sur leur complexure brune.

Pourtant Duveyrier signale des yeux bleus chez les Touaregs de Rhât [2] et l'explorateur Largeau a parlé d'individus blonds [3]. S'agit-il de cas tout à fait aberrants ou bien d'individus étrangers ou récemment intégrés aux Touaregs ? Nous croirions d'autant plus à cette dernière hypothèse que ces sujets

1. *Les Touareg du Nord*, p. 382.
2. *Les Touareg du Nord*, p. 382.
3. C. Kilian nous a affirmé avoir vu également des blonds chez les Touaregs du Tassili.

1: Lhote MS25 Tuareg

semblent avoir été rencontrés sur les confins de la Tripolitaine, dans la région de Rhât et de Rhâdamès, où existe un brassage assez important de populations et, en particulier, des métissages avec des caravaniers berbères venant du Nord, dont quelques-uns ont peut-être pu se fixer chez les Touaregs.

Personnellement, parmi les 50 ou 60.000 Touaregs que nous avons été amenés à cotoyer au cours de plusieurs années de séjour dans leur pays, nous n'avons jamais aperçu ni blonds, ni yeux bleus.

Cette courte étude anthropologique laisse voir l'existence de deux types bien différenciés chez les Touaregs, tous deux dolichocéphales et à complexure brune, l'un de grande taille, leptorhinien, l'autre de taille moyenne, leptorhinien, mais avec tendance à la mésorhinie ; exclusion faite, naturellement, des individus marqués de négroïdisme. On est donc amené à faire des comparaisons avec d'autres types de race blanche, en particulier avec les populations de l'Afrique du Nord étudiées par Bertholon et Chantre, qui ont décelé trois types principaux :

Iº Type de petite taille, dolichocéphale, mésorhinien, à complexure brune ;

IIº Type de petite taille, brachycéphale, mésorhinien, à complexure brune ;

IIIº Type de grande taille, dolichocéphale, leptorhinien, à complexure claire (cheveux blonds et yeux bleus, peau rosée), donc type nordique.

Bertholon et Chantre distinguent une variété du type III, grands, dolichécéphales, mésorhiniens qui, d'après eux, devraient leur complexure brune à des métissages avec des nègres. Pour eux, il n'existe pas de grand dolichocéphale brun. Leblanc, d'après ses études sur les Touaregs de l'Ăhaggar, réfute cette opinion sur la possibilité de métissages avec des négroïdes, insuffisants à expliquer la substitution de la couleur foncée des cheveux et des yeux à l'ancienne couleur des Nordiques, alors que les autres caractères resteraient les mêmes que chez ces derniers.

D'après Bertholon et Chantre, comme le fait remarquer Leblanc, les Touaregs seraient donc des dolichocéphales blonds métissés de nègres. Cela est d'autant moins concevable qu'il n'existe pas de blonds chez eux, et qu'aucune population blonde n'habite à proximité.

Le type targui de taille moyenne, dolichocéphale, leptorhi-

nien, mais avec tendance à la mésorhinie, à complexure brune, s'apparente donc au type I de Bertholon et Chantre, alors qu'il n'y a pas de Touaregs présentant des rapports avec le type II de ces auteurs.

Le type targui de grande taille ne peut être comparé au type III de Bertholon et Chantre, et il faut reconnaître, avec Leblanc, l'existence d'un grand dolichocéphale brun dont *les origines et les affinités nous sont jusqu'ici inconnues.*

Si nous prenons maintenant les Touaregs de l'Ăhaggar qui nous intéressent plus particulièrement, nous nous reporterons à l'étude détaillée qu'en a faite le Dr Leblanc.

A l'encontre des autres chercheurs qui se sont contentés de calculer des moyennes sur un grand nombre de sujets, il s'est efforcé de déterminer un type pur, caractérisé par des signes constants, en éliminant des mensurations tout ce qui pouvait laisser supposer un mélange ou une influence étrangère possible.

Le procédé est très délicat, car il est très difficile de discerner sans erreur les caractères anciens des caractères acquis d'un type humain déterminé, alors que les Touaregs pris dans l'ensemble sont issus de composantes multiples. Mais d'un autre côté les moyennes d'une multitude de mensurations désordonnées peuvent donner des chiffres qui ne correspondent pas au véritable type racial, et entraîner à des confusions regrettables. C'est pourquoi le Dr Leblanc s'est efforcé de rechercher des types prédominants. « C'est, dit-il, la fixation anatomique des types avant l'anthropométrie, à l'encontre de l'autre méthode qui pratique l'anthropométrie avant de fixer les types [1] ».

Et d'après ce procédé, qui a évidemment sa valeur, le type le plus pur et le plus caractérisé des Touaregs de l'Ăhaggar serait le dolichocéphale de grande taille, à complexure brune. Il représenterait le Berbère ancien, spécial à l'Ăhaggar, et surtout bien conservé parmi les nobles et quelques imrad.

Il en fait le portrait suivant : taille debout, 174,4 ; dolichocéphale, 74,9 ; leptoprosope à pommettes saillantes, fortement écartées ; face triangulaire à partir des zygomas, menton étroit ; leptorhinien, 66 chez les Kel Rela et 69,5 de moyenne avec modelé très spécial de la courbure brisée et à pointe tombante du nez ; orthognathe à bouche petite, à lèvres minces ; grande envergure, supérieure à la taille debout.

1. Leblanc, *Revue Anthropologique*, janv.-mars 1929, p. 36.

1: Lhote MS25 Tuareg

Mais à côté de ce type bien caractérisé, Leblanc admet, chez les Kel Ăhaggar, l'existence du type I de Bertholon et Chantre, ce qui les apparente, pour une partie d'entre eux, aux différents groupes berbères de l'Afrique du Nord.

Les chiffres obtenus pour les Touaregs coïncident souvent avec ceux donnés pour les Berbères, et particulièrement avec ceux des Kabyles. Mais il serait imprudent, sur la seule foi de ces chiffres, de consacrer la parenté étroite des deux groupes.

Un élément capital sépare les Touaregs des Berbères de l'Afrique du Nord, dit très justement Leblanc, car il n'y a pas de blonds chez eux.

Il est évident que l'on peut trouver chez les Touaregs d'une part, chez les Kabyles, les Chaouïas, les Marocains et Tunisiens d'autre part, des analogies qui, quoique trop vagues pour faire accepter, en toute certitude, l'origine commune de ces différents groupes, sont, malgré tout, suffisantes pour y faire penser.

Il est intéressant de noter que le type berbère ancien, que Leblanc a situé par sélection, se trouve en proportion imposante dans les populations de l'Ăhaggar, ce qui est d'une valeur considérable et réduit la critique que certains pourraient adresser à sa méthode, car les 8.000 mensurations de Bertholon et Chantre n'arrivent pas à constituer un type aussi déterminé, aussi évident que celui des Touaregs.

L'opinion de Leblanc, qui considère le grand dolichocéphale brun de l'Ăhaggar comme un vestige de la race berbère ancienne, est d'autant plus plausible que « sauf métissage apparent, les Touaregs, nobles surtout, du fait de leur isolement géographique et de leur sélection de caste relativement rigoureuse, doivent être ce qu'étaient leurs ancêtres très éloignés [1] ».

Mais d'où vient alors ce type qui ne cadre avec aucune des données somatiques de l'Europe et du bassin méditerranéen ?

Il fait songer au type de Cro-Magnon, de grande taille, fort probablement à complexure brune, et dont les Canariens, d'après Verneau, seraient peut-être les vestiges les plus caractéristiques. Mais le crâne des hommes de Cro-Magnon, comme celui des Berbères dolichocéphales et leptorhiniens, est très souvent disharmonique, à face large et courte, à orbites presque carrées. Le crâne targui au contraire, est harmonique, la face

1. Leblanc, Les Touaregs, *Revue Anthropologique*, janv.-mars 1929, p. 39.

1: Lhote MS25 Tuareg

est longue, bien que large et à pommettes saillantes, comme nous l'avons déjà dit.

La conclusion de Leblanc est celle-ci : « le type targui de l'Ăhaggar a des analogies lointaines, celles des grandes catégories, avec d'autres types dits berbères, mais se séparant nettement d'eux, par des caractères morphologiques. La séparation remonte loin, et même Kabyles et Touaregs ne sont pas nettement distincts dès leur apparition en Afrique du Nord [1] ».

On voit donc qu'il existe dans l'Ăhaggar deux types bien déterminés, l'un de grande taille, tout à fait particulier, et l'autre de taille moyenne, apparenté aux Berbères de l'Afrique du Nord, qui se classe dans la grande famille des Méditerranéens.

A côté des Touaregs, il faut citer d'autres populations berbérophones moins pures. Ce sont les Issekkemâren issus de Touaregs et d'Arabes du Touat et du Tidikelt. Leblanc, qui les a étudiés également, leur a trouvé, malgré ces croisements, des caractères très proches de ceux des Kel Ăhaggar. Ils sont un peu plus dolichocéphales que ces derniers, le visage est un peu plus long, le front un peu plus étroit, les pommettes moins saillantes et *ils sont mésorhiniens*.

Nous compléterons cet exposé en disant un mot des femmes touarègues.

On ne possède d'elles que peu de mensurations. Seul le Docteur Leblanc en a donné. Elles portent sur un petit nombre de sujets, car il est toujours difficile de soumettre les femmes à un examen anthropologique. D'après lui, la femme touarègue est beaucoup plus petite que l'homme et n'a que 151 cm. de moyenne contre 174,1. Son crâne est moins allongé et nettement mésocéphale, sa face est moins longue, son front plus large que celui de l'homme, le rapport tête-taille debout est plus élevé que chez ce dernier. Le tronc est plus long et les membres inférieurs, quoique longs, le sont proportionnellement moins que chez l'homme.

Si nous nous plaçons maintenant sur un plan général, nous dirons que les Touaregs constituent une belle race, résistante, bien adaptée au désert, grâce à la sélection très sévère due au climat et aux conditions très dures de l'existence.

Les hommes sont secs, et moyennement musclés, avec des formes un peu saillantes dues à l'absence de graisse. Les

1. Leblanc, Les Touaregs, *Revue Anthropologique*, janv., mars 1929, p. 39.

femmes, au contraire, sont souvent potelées, caractère qu'elles doivent au régime lacté et au peu d'exercice physique que leur vie nonchalante sous la tente favorise. Certaines présentent un développement considérable des parties glutérales qui évoque la stéatopygie et qui peut être due à d'anciens croisements négroïdes ou au fait d'être, la majorité du temps, dans la position assise.

On ne peut pas parler de beauté physique chez les hommes. Tous les voyageurs ont été frappés de la vivacité de leur regard, de la beauté de leurs yeux. Mais le voile cache souvent un visage osseux, sans aucune finesse, sans aucune noblesse de traits, au point que les Arabes disent souvent que les Touaregs portent un voile pour masquer la grossièreté de leur visage. Inutile de dire que ce n'est pas là l'origine du voile, mais ce trait acerbe de leur ennemi ancestral est bien fait pour situer leur degré de beauté physique.

Seuls les Ifôras font un peu exception à la règle et ce détail est bien connu des Touaregs eux-mêmes, dont un des dictons est : « beau comme un Afaris ».

Les femmes ont le visage agréable, aux traits généralement plus réguliers que ceux des hommes, un « type » quelquefois plein de noblesse, mais le regard souvent dur, le front têtu et volontaire, leur enlèvent une certaine féminité qui aurait été loin de nuire à leur beauté.

Elles sont souvent affligées d'un prognatisme alvéolaire et d'un écartement des dents fâcheux. Par contre, elles ont une chevelure abondante et très belle, rehaussée par des coiffures très esthétiques formées de multitudes de tresses tombant harmonieusement sur les épaules. Les attaches sont fines, les mains petites et délicates, mais la jambe est généralement grêle.

Beaucoup cherchent un engraissement qu'elles s'efforcent de provoquer en absorbant de grandes quantités de lait ou des plantes médicinales telles que l'*afalezlez el bétina*, une jusquiame très commune dans certaines régions du bas Ăhaggar.

Mais cette coutume, du fait de la carence alimentaire qui est une règle presque générale dans l'Ăhaggar, tend de plus en plus à disparaître, sauf chez les femmes de chefs, alors qu'elle est encore très en honneur dans les tribus de la zone soudanaise.

Nous terminerons ce chapitre en disant qu'il se forme sous nos yeux un petit groupe ethnique nouveau dans l'Ăhaggar. C'est ainsi que d'anciens militaires chaamba des compagnies sahariennes ont pris leur retraite dans le pays. Ils ont épousé

des femmes touarègues, ont fondé des foyers et vivent maintenant au milieu des campements, à la manière des Touaregs. Leurs familles groupent, à l'heure actuelle, environ 70 individus susceptibles, dans l'avenir, d'apporter des éléments somatiques nouveaux aux Touaregs de l'Ăhaggar.

*Groupes sanguins*

On sait l'importance qu'a prise l'étude des groupes sanguins dans l'anthropologie biologique. A ce sujet, les Touaregs de l'Ăhaggar ont fait l'objet d'une enquête de la part de M. Kossovitch qui donne les chiffres suivants : [1]

| | O | A | B | AB | Indice |
|---|---|---|---|---|---|
| Touaregs nobles ..... | 55,8 | 34,2 | 8,2 | 2,0 | 3,62 |
| Touaregs imrad..... | 52,6 | 26,8 | 17,5 | 3,1 | 1,45 |

lesquels font ressortir d'une façon générale la prédominance du groupe O et la supériorité des éléments A (élément européen) sur les éléments B (élément afro-asiatique).

Les imrad révèlent par contre un pourcentage de B très élevé et inversement plus faible en A que chez les nobles, ce qui indique une plus grande proportion de sang noir. Kossovitch a traduit ce phénomène en disant que « le métissage des Touaregs « nobles » avec les éléments négroïdes a donné un nouveau groupe ethnique, dit « Touareg-Imrad ». Ce n'est pas exact, car s'il est vrai que les vassaux accusent un sang plus teinté que les suzerains, ce n'est pas à leur métissage qu'ils doivent leur vassalité, mais à un fait politique qui n'a rien à voir avec leurs alliances négroïdes qui sont dues à l'existence de lois sociales moins rigoureuses chez les Imrad que chez les Imochar.

On notera que ce chiffre 8,2 B des Imochar de l'Ăhaggar en fait les moins négroïdisés des Blancs de l'Afrique du Nord, sauf les Berbères tunisiens (7,8), alors que les Egyptiens ont 29,3 et les Juifs et les Arabes du Maroc 19,9.

On manque jusqu'à présent de données pour les Touaregs soudanais.

# CHAPITRE III

## LANGUE, ÉCRITURE ET LITTÉRATURE ORALE DES TOUAREGS

Langue. — La langue parlée par les Touaregs porte le nom de *tàmâhak* ou de *tàmâcheq* suivant que l'on a affaire à des tribus sahariennes ou soudanaises. Elle appartient au berbère et en est un des dialectes resté vraisemblablement parmi les plus purs.

Si l'on veut en rechercher les origines, nous voyons que le berbère appartient à ce que les linguistes ont dénommé le *chamito-sémitique*, qui comprend le *sémitique*, l'*égyptien*, le *libyco-berbère* et le *couchique*, c'est-à-dire à un groupe de langues qui avaient un ancêtre commun et qui sont actuellement répandues, dans leur forme moderne, en Arabie et sur ses limites nord, et dans toute l'Afrique du Nord. Par leur langue, les Touaregs appartiennent donc à la civilisation proche-orientale.

Le tămâhak descend du libyco-berbère, lequel était répandu au v^e siècle avant J.-C. sur tout le nord de l'Afrique, hypothétiquement sur une partie du Sahara, du Cap Juby aux rives du Nil. Le libyco-berbère se conserva longtemps parmi les tribus d'origine libyenne et malgré les invasions romaines, vandales, byzantines, qui se succédèrent en Afrique du Nord, il ne semble pas avoir été altéré par ces influences étrangères, sauf peut-être par le punique qui fit de grands progrès autour de Carthage. Dans sa forme moderne, c'est-à-dire le berbère, il devait céder du terrain devant la langue arabe, et cette dernière, par son caractère religieux, fit rapidement entrer les dialectes berbères en régression ; ce phénomène, commencé au VIII^e siècle, se prolonge encore sous nos yeux au point que le berbère semble avoir perdu toute chance de former une langue de civilisation. En Afrique du Nord, la langue berbère est encore parlée par 30 % de la population dont une grande partie comprend aussi l'arabe ; elle s'est maintenue dans l'Aurès, en Petite Kabylie, aux environs de Lalla-Marnia et chez

les Chleuhs du Maroc, autrement dit dans des pays de montagne où le nomade chamelier, vecteur de l'islamisme, ne pénètre pas, et chez les Touaregs.

Ce recul actuel du berbère peut s'expliquer par son manque total d'unité, d'écriture et de règles grammaticales bien établies. Les Berbères ont pourtant possédé un alphabet que l'on retrouve, sous une forme évoluée, chez les Touaregs — le tifinagh — mais on ne possède aucun manuscrit rédigé avec ces caractères et il paraît acquis que le punique, puis le latin leur ont servi de langue écrite, ensuite l'arabe qui est d'un usage courant chez les lettrés berbères qui y ajoutent certains signes propres à rendre certains phonèmes de leur langue, inexistants dans la langue arabe.

Le tămâhak se divise en plusieurs dialectes : celui parlé par les Touaregs de l'Ăhaggar et du Tassili ; celui des Touaregs de l'Aïr ; celui des Touaregs de l'Ădrar ; celui des Ioullimmiden et des Touaregs du fleuve et de la région de Tombouctou. Des noms locaux les distinguent les uns des autres, et c'est ainsi que le dialecte de l'Ăhaggar s'appelle le *Tahaggart*, celui de l'Ădrar, le *Tadrakt*, et celui des Ioullimmiden le *Taoullemet*. Ils présentent d'assez grandes différences entre eux, au point que les Touaregs de régions différentes, éprouvent souvent quelque difficulté pour se comprendre. Le propre du tămâhak, en effet, est de ne pas être fixé et la construction des phrases, qui est très inconstante, varie d'une fraction à une autre lorsque ce n'est pas d'un individu à l'autre.

Le dialecte de l'Ăhaggar, qui a été étudié par le Père de Foucauld, peut être considéré comme le plus pur, n'ayant fait que peu d'emprunts aux langues étrangères voisines. On y retrouve, ce qui est curieux, un certain nombre de mots latins se rapportant à des sujets religieux ainsi qu'à la division du temps, ce qui a fait songer à une ancienne christianisation des Touaregs. Ils les doivent certainement à d'anciens éléments qui habitaient autrefois l'Afrique du Nord et qui purent être plus ou moins légèrement christianisés, ou simplement en contact avec des tribus chrétiennes. L'introduction de la religion musulmane a provoqué de son côté l'adoption d'un assez grand nombre de termes religieux. Les dialectes des Touaregs du Soudan sont beaucoup plus touchés par les langues voisines, haoussa et sonrhaï, étant donné l'interpénétration qui se produit entre nomades touaregs et sédentaires soudanais.

Le tămâhak, comme le berbère, est difficile à comprendre

1: Lhote MS25 Tuareg

pour des étrangers. L'embarras devant lequel les auteurs anciens, grecs et romains, se sont trouvés pour comprendre les Libyens, s'est perpétué dans les temps modernes et si Corippus pouvait qualifier leur langage de « murmure », les Arabes, les Sonrhaï et les Haoussa du Soûdan désignent souvent les Touaregs par « ceux que l'on ne comprend pas ». Et c'est à juste titre, car les Touaregs parlent avec une rapidité déconcertante, sur un ton sans inflexion, que vient encore embuer le port du voile.

Il est intéressant de noter l'unité de la langue des Touaregs qui, ajoutée à leur unité culturelle, prouve que l'on se trouve en face d'un groupement humain qui s'est trouvé isolé du reste des Berbères depuis fort longtemps, duquel il diffère d'ailleurs sur beaucoup de points.

Écriture. — L'une des plus grandes surprises qu'eurent les voyageurs et les savants qui étudièrent les Touaregs, fut de retrouver chez eux l'alphabet tifinagh encore bien conservé.

Le tifinagh est un dérivé du libyco-berbère, lequel est considéré comme un dérivé du punique. Le phénicien-punique, introduit en Afrique du Nord avec les Carthaginois, fut employé dans tout le bassin méditerranéen. Les plus anciennes inscriptions connues remonteraient au IXe siècle avant J.-C. Quant aux inscriptions libyques elles leur sont très nettement postérieures et aucune ne semble être authentiquement antérieure au IVe siècle avant J.-C. Elles ont une aire de répartition très vaste et elles sont répandues du Mont Sinaï aux îles Canaries ; elles abondent particulièrement dans l'ancien domaine de Carthage.

Le libyco-berbère a succédé au libyque et les inscriptions qui se rapportent à cette écriture sont surtout répandues dans l'Afrique septentrionale, dans tout le Sahara et dans la bande sahélienne du Soudan qui y confine. Pour cette raison, elles sont parfois appelées libyco-berbères ou sahariennes. Le libyco-berbère constitue une liaison entre le libyque et le tifinagh.

Le tifinagh comprend 24 caractères, de formes géométriques simples, composés de points, de traits, de cercles, ou de figures dérivées. Ces 24 caractères sont essentiellement des consonnes et l'alphabet ne possède pas de voyelles, sauf un signe correspondant à *a*, mais qui n'est employé qu'au commencement et surtout à la fin des mots. La moitié de ces caractères

concorde avec le libyque dont six lettres de ce dernier s'apparentent au phénicien. Son emploi tombe de plus en plus en

| Caractères Tifinâgh | nom | VALEUR | LIBYQUE | Caractères Tifinâgh | nom | VALEUR | LIBYQUE |

FIG. 15. — Alphabet tifinagh et ses affinités avec le libyque.

désuétude et il n'est plus que très rarement employé pour la correspondance. Étant complètement phonétique, le tifinagh varie suivant les dialectes et ne peut donc contribuer à

1: Lhote MS25 Tuareg

la fixation de la langue. Il s'écrit de droite à gauche, de gauche à droite, de haut en bas, de bas en haut, quelquefois en colimaçon, et n'a aucun signe de ponctuation, de majuscules ou de signes secondaires pour séparer les mots ou les phrases, si bien que chaque individu l'emploie suivant son caprice. A l'heure actuelle il sert à envoyer de courts messages, à graver ou à inscrire des devises ou des vers amoureux sur les rochers, sur les bracelets de pierre des guerriers, sur les instruments de musique de leur maîtresse, ou plus simplement à marquer la propriété d'un objet. Certaines inscriptions de l'Ăhaggar indiqueraient des passages difficiles, la direction de certains points d'eau, d'anciennes délimitations de terrains de parcours ; on ne connaît pas, jusqu'à présent, de stèles funéraires gravées en caractères tifinagh.

L'usage du tifinagh est maintenant si peu courant qu'une inscription quelconque est souvent un véritable rébus pour un Targui connaissant lui-même cet alphabet. L'homme est obligé de se livrer à une véritable gymnastique intellectuelle, il épelle les signes les uns après les autres et c'est après plusieurs essais de ce genre qu'il arrive à deviner le sens de la phrase plutôt qu'il ne la traduit, si toutefois il y arrive. Les femmes touarègues semblent à ce sujet plus douées que les hommes, et dans l'ensemble, elles sont plus savantes, mais leurs connaissances ne vont jamais jusqu'à un emploi courant de l'écriture.

Il semble que cet état de choses soit très ancien, car, comme pour le libyque et le libyco-berbère, on ne connaît aucun manuscrit, aucun texte écrit en tifinagh.

Nous avons pu voir des messages très courts écrits sur peau, sur papier, gravés sur pierre ou sculptés sur bois.

Il n'existe pas de langage tambouriné chez les Touaregs, sauf les coups de tobol conventionnels pour appeler les hommes à la guerre. Ils emploient des bâtons-mémoires pour se souvenir de certains chiffres, en faisant de petites encoches dans une branche de bois, et ils se servent de la numération décimale.

Littérature orale. — Le nomade targui est un poète né. La solitude l'enchante, l'émeut, et, seul dans le désert, il écoutera sa voix pour passer le temps ; il dira ses peines, ses joies et ses espoirs au vent qui les emportera sans renvoyer d'écho.

1: Lhote MS25 Tuareg

Cet affamé perpétuel, ce coureur de grandes routes a soif de poésie, et malgré sa rudesse culturelle, il se laisse émouvoir par les récits rapportant les beaux coups d'épée, le charme des femmes, les qualités de son méhari.

Grâce au Père de Foucauld, on possède sur la littérature orale des Touaregs de l'Ăhaggar une documentation unique qui atteste leur caractère poétique. Le fait de composer des vers n'est pas le propre de quelques-uns, mais tous sont susceptibles d'en faire, nobles, vassaux, esclaves, aussi bien hommes que femmes, mais les nobles ont la renommée d'être plus éclectiques que les autres.

En examinant la littérature orale des Touaregs du Nord, il ressort que les sujets les plus courants de la poésie touarègue portent principalement ssr les événements guerriers, les voyages, les femmes, l'amour, ce qui reflète en somme les mœurs des Touaregs et remplit leur vie. Une place de choix est réservée à leur méhari et cela s'explique par le rôle capital que cet animal joue dans les déplacements et les guerres.

C'est un jeu, un passe-temps pour les Touaregs de faire des vers ; très frondeurs, ils se plaisent à en composer sur leurs amis, quelquefois à les tourner en dérision, sur leurs ennemis ou leurs rivaux des cours d'amour, et ceci donne lieu à des joutes littéraires qui se prolongent au cours de plusieurs soirées.

Les vers peuvent être récités ou chantés, accompagnés ou non de musique. On les chante ou on les déclame le soir au cours des réunions musicales, ou bien encore le long des pistes sahariennes en se laissant aller au pas lent du méhari, pour chasser la monotonie de la route.

Certains poèmes sont connus de tous, on les dit et redit pour leur beauté, pour le charme qu'ils procurent aux oreilles, de même que certaines chansons devenues classiques se chantent en canon.

La versification touarègue a des règles que les meilleurs poètes respectent et suivant le nombre de pieds formés de syllabes longues, brèves ou moyennes, les vers appartiennent aux formes *seienin*, *heinena*, *il-aner-Ialla* et *aliouen*. La forme *seienin* comporte généralement quatre pieds ; la forme *heinena*, deux hémistiches dont le premier de trois pieds et le deuxième d'un seul ; la forme *il-aner-Ialla* a quatre pieds, mais le premier comprend une syllabe brève et une longue, le deuxième, une syllabe brève et une longue, ou une brève sans règle déterminée, alors que dans la forme *seienin*, les deux premiers pieds

1: Lhote MS25 Tuareg

se composent invariablement d'une syllabe brève et d'une longue ; enfin la forme *aliouen*, vraisemblablement très ancienne et qui se perd à l'heure actuelle, semble être composée de douze syllabes en deux hémistiches.

D'après le Père de Foucauld. la forme *seienin* serait originaire de l'Ăhaggar et aurait un caractère national ; au contraire, la forme *heinena* viendrait de l'Ăjjer et serait employée beaucoup plus récemment que la *seienin*, vieille d'une centaine d'années ; la forme *il-aner-Ialla* (Dieu nous possède), originaire également des Ăjjer, très en usage vers le milieu du siècle dernier, serait plus ancienne que la *seienin*. Ces trois formes servent pour tous les sujets alors que la forme *aliouen* (les oliviers) n'est employée que chantée par les femmes dans les fêtes du mariage.

Il existe encore d'autres formes, mais dont l'usage se perd de plus en plus : telles sont les formes *târe*, *ahellel* et *âzahalag*.

A chacune de ces formes correspond un certain nombre d'airs de violon, mais ces derniers ne sont pas très variés, ce qui est normal, étant donné que l'instrument ne possède qu'une unique corde et qu'il est déjà assez extraordinaire de pouvoir en tirer des sons harmonieux qui s'enchaînent.

A la forme *seienin* correspondent des airs de chant dits de la *Kedouha*, d'*Agg-Amma*, des *Kel Rela*, etc.... A la forme *heinena*, ceux de *Gôgi*, *Chêt-Gânet*, *Kel-Ăras*, *Oukkiren*, etc... ; le rythme *il-aner-Ialla*, par son caractère cérémonial, n'est chanté que sur deux airs, celui des Ăjjer et celui de l'Ăhaggar. Le nom de ces airs correspond aux noms des hommes pour lesquels ils ont été innovés, ou bien aux noms des tribus dans lesquelles on a l'habitude de les jouer.

La musique touarègue ressemble beaucoup à celle de certaines tribus berbères de l'Atlas et si l'étude n'en a pas encore été faite, il est certain que l'on découvrira un jour une parenté musicale entre ces différentes tribus.

Quant aux réunions musicales, leur tenue n'est pas toujours d'une haute qualité littéraire. Parfois les vers qu'on y entend sont d'une grossièreté et d'une vulgarité sans pareille, mais il faut dire aussi, pour l'excuse des Touaregs, qu'à l'heure actuelle, ils n'ont plus tout à fait les beaux sujets de versification d'autrefois.

Il existe également chez les Touaregs des contes, des fables, des proverbes et de nombreuses légendes. Les contes et les

1: Lhote MS25 Tuareg

fables sont surtout à l'usage des enfants ; les vieilles femmes les leur racontent pendant les soirées où tout le monde est rassemblé autour des feux de camp. Les animaux, le chacal, l'hyène, sont souvent les héros de ces histoires à caractère moral. Il semble d'ailleurs que tous ces récits ne sont pas propres aux Touaregs, mais qu'ils sont répandus dans toute l'Afrique septentrionale, et même chez les Soudanais. Quant aux légendes, elles forment un folklore très étendu de toute la vie ancienne de l'Ăhaggar, elles se rapportent à d'anciens personnages ayant habité autrefois le pays, aux montagnes, à certains arbres également à qui les Touaregs attribuent une vie propre, vestiges d'anciens mythes qui à travers les siècles se sont transmis jusqu'à nous.

# *LES TOUAREGS DE L'AHAGGAR*
## *ORGANISATION SOCIALE*
## *CONFÉDÉRATION DE L'AHAGGAR*

---

## CHAPITRE PREMIER

## ORGANISATION SOCIALE

Nous parlerons ici des Touaregs de l'Ăhaggar. Mais comme tous les Touaregs forment un groupe ethnique assez homogène, ce que nous dirons de leur organisation sociale sera, d'une façon générale, valable pour l'ensemble, quoique la leur soit beaucoup plus restée à l'abri des influences étrangères que celle des autres groupements, du fait de leur isolement au cœur du Sahara.

Les Ihăggaren peuvent donc être considérés, grâce à cet isolement, comme les témoins et les représentants de la civilisation touarègue.

Classes et castes. — L'organisation sociale présente chez eux de fortes analogies avec notre ancien système féodal. On y trouve, en effet, un chef dont l'autorité nominale s'exerce sur toutes les tribus, un système de classes (aserkam) qui divise les tribus en suzeraines et vassales, des éléments religieux et des serfs, venant s'inféoder aux uns ou aux autres, et une caste artisanale.

Les classes, dans les sociétés dites primitives, sont nées de la propriété privée, de la richesse, de l'autorité des forts qui deviennent protecteurs des faibles, et ont eu pour corollaire la guerre et l'esclavage ; le système des castes, qui est une forme accentuée de celui des classes, comporte la spécialisation héréditaire, la hiérarchie, la répulsion entre les différents groupes, le refus de frayer avec les individus de caste différente, principes en partie en vigueur chez les Touaregs, dont le type d'organisation sociale emprunte aux deux systèmes.

[p. 149]

1: Lhote MS25 Tuareg

Il y a d'ailleurs entre les deux régimes de grandes analogies. Cette espèce d'organisation aristocratique convient bien à la vie nomade, à l'encontre de l'organisation démocratique que l'on trouve plus communément chez les sédentaires.

Selon certains auteurs, le système des castes serait spécifiquement hindou ; il n'aurait existé, à l'état de pureté, que dans l'Inde, et à un degré moindre, dans l'ancienne Égypte [1]. Nous ne sommes donc guère surpris de retrouver cette organisation chez les Touaregs qui, culturellement, appartiennent au même cycle de civilisation.

La cristallisation de cette organisation chez ce peuple qui, dans l'ensemble, possède des qualités intellectuelles assez élevées, de même que la cristallisation matérielle, ne peuvent s'expliquer que par l'isolement dans lequel il est confiné par suite de circonstances où le climat a certainement joué un grand rôle.

Les Touaregs sont divisés en suzerains (*Imochar*) à caractère spécifiquement guerrier, en vassaux (*Imrad*) plus généralement pasteurs, en religieux (*Inislimen*), en serfs (*Iklân*), auxquels viennent s'ajouter des éléments d'autres origines qui leur sont inféodés, tels les *Issekkemâren*, les *Iboroliten* et les *Enaden*.

Cette hiérarchie actuelle provient évidemment d'une suite de guerres et de compétitions intestines. Dans la lutte pour la vie, chacun s'est efforcé de tailler sa part et comme toujours ce fut au détriment du plus faible. Des tribus ont atteint une prédominance qu'elles n'ont pas toujours pu conserver, que d'autres leur ont ravie, et de suzeraines sont devenues vassales ; mais malgré ces imprévus de la guerre, les Touaregs attachent une grande importance aux origines du sang et respectent toujours les gens de haute naissance, fussent-ils leurs vaincus.

C'est ainsi qu'à l'heure actuelle, on voit les nobles de l'Ăhaggar et des Ăjjer rechercher les alliances avec des femmes de la fraction déchue des Sultans Imenan, ce qui ajoute aux fleurons de leur haute origine un certain caractère de noblesse religieuse qui, chez les musulmans, est fort apprécié.

Monogamie et matriarcat. — Pour comprendre la société touarègue, il faut retenir deux faits importants, qui ne sont d'ailleurs pas tout à fait indépendants l'un de l'autre, la monogamie et le matriarcat.

1. Deniker. *Les races et les peuples de la terre*, p. 489.

1: Lhote MS25 Tuareg

Alors que les Touaregs sont musulmans, qu'ils ont pour voisins des peuples polygames, on est étonné de constater qu'ils pratiquent la monogamie. C'est un indice évident que la femme tient dans leur société une place importante, nullement comparable à celle qu'elle occupe chez les Arabes. Ceci a frappé beaucoup les premiers voyageurs qui ont cru voir, dans la persistance de la monogamie, des traces d'une ancienne christianisation. Cet argument serait peut-être à retenir si l'on ne savait, d'autre part, que l'organisation sociale des Touaregs repose sur le matriarcat, coutume ancienne bien antérieure à l'ère chrétienne, qui explique la monogamie et la situation particulièrement élevée de la femme.

« On peut dire, a écrit Gautier à ce sujet, que les Touaregs pratiquent la galanterie chevaleresque ; l'expression n'est inadéquate que par l'association d'esprit qu'elle évoque : notre chevalerie est d'origine chrétienne ; le respect du Touareg pour la femme a des raisons bien plus profondes et bien plus lointaines, il remonte au matriarcat, il est antérieur à la notion de l'État et même à celle de la famille, c'est un témoin resté vivant de l'humanité tout à fait primordiale, un sentiment, si l'on peut dire, de l'âge quaternaire [1]. »

Le matriarcat remonte, en effet, au temps où les primitifs n'avaient pas de notions exactes sur les causes de l'enfantement.

Car « il semble, dit encore Gautier, que l'humanité primitive ait attribué toute naissance à une parthénogénèse et n'ait imaginé d'autre conception qu'immaculée ; elle n'a pas vu de lien inéluctable entre la caresse et la gestation : tout en pratiquant d'instinct la fécondation, elle ne s'en est pas fait une idée nette. Le mot de père n'a pas eu de sens pour elle et par conséquent les enfants n'ont pu se grouper qu'autour de la mère [2]. »

D'autre part, les règles du mariage n'étaient à cette époque pas encore établies, ce qui rendait la recherche de la paternité impossible. C'est de cet état de fait que découle la filiation par la branche utérine. Avec les croyances totémiques que l'on trouve dans les civilisations inférieures, le système matrilocal trouva encore une raison d'être, fut lié à l'exogamie, empêcha les unions entre les parents les plus proches, entre gens de castes différentes, et rendit l'inceste impossible.

Il existe dans certains groupements primitifs de l'Australie

1: Lhote MS25 Tuareg

dont l'étude nous aide pour la compréhension de l'évolution des sociétés, un système de parenté par classes de parenté que l'on retrouve chez les Touaregs et les peuples du Soudan. Il a été défini par Morgan et groupe au premier degré les frères, les sœurs, les cousins, au deuxième degré le père, la mère et leurs frères et sœurs, au troisième degré les grands-parents avec leurs frères et sœurs, etc..., etc...

Dans le matriarcat, le défenseur naturel de l'enfant est le frère de sa mère ; de même, se rattache au matriarcat l'obligation pour le mari d'habiter dans la famille de sa femme, coutume pratiquée dans l'Ăhaggar où le mari doit rester un an au campement de ses beaux-parents, temps qui est abrégé lorsque la jeune épouse a enfanté. Lorsqu'une femme devient veuve d'un homme qui n'appartient pas à sa tribu, elle rejoint cette dernière en emmenant ses enfants avec elle ; mais si elle divorce et si elle a des enfants adolescents, ces derniers restent avec le père. On retrouve ici une influence islamique en même temps qu'un système mixte matri-patriarcal.

Une des conséquences du matriarcat est de provoquer des différends qui opposent les cousins et mettent le père, partagé entre son affection paternelle et ses liens claniques, dans une situation embarrassante. Le cas est différent pour la filiation masculine qui, comme l'a écrit Lowie [1], bien que ne créant pas à elle seule la solidarité, favorise la formation d'unités politiques plus vastes et stables, et c'est ainsi que l'on pourrait expliquer en partie l'état tant soit peu anarchique dans lequel vivent les Touaregs.

Chez eux, nous nous trouvons, à l'heure actuelle, devant un matriarcat évoluant vers le patriarcat, et si la femme donne la caste à ses enfants, assure leurs droits politiques, sa position sociale n'est pas prédominante par rapport à celle de l'homme qui est le chef de famille. Nous retrouvons cette notion dans beaucoup de tribus australiennes à matriarcat archaïque où la situation de la femme n'est pas meilleure dans les tribus matrilinaires que dans les tribus patrilinaires [2].

Cependant la femme dispose dans les sociétés matriarcales d'une plus grande liberté que dans les sociétés patriarcales ; elle est consultée, en ce qui concerne son mariage, sur le choix de son mari, elle a la libre disposition de ses biens, les gère sui-

2. Lowie, ouv. cit., p. 292.

1: Lhote MS25 Tuareg

vant sa fantaisie et dispose même d'une plus grande liberté de mœurs.

Il est assez difficile de préciser l'origine du matriarcat chez les Touaregs.

Il semble avoir existé anciennement chez tous les Hamites. Frobénius en voit des traces dans les coutumes traditionnelles qui laissent le montage de la tente aux femmes, lui donnent le monopole du travail du cuir, traits particuliers révélant le caractère primordial du sentiment de la vie chez les Hamites [1].

Chez les Ihăggaren, la femme lègue à ses enfants ses droits sociaux et politiques. Ceux-ci sont particulièrement importants lorsqu'il s'agit de la succession d'un chef. La filiation politique du premier degré se fait au frère, au deuxième degré, au fils aîné de la tante maternelle, au troisième degré, au fils aîné de la sœur aînée, ce qui constitue une garantie pour a transmission du sang dans la lignée des chefs.

Les Ioullimmiden ne pratiquent pas la succession politique suivant les règles du matriarcat. L'explorateur Barth nous a même rapporté qu'ils considèrent cette coutume comme honteuse « et ne témoignant que du peu de confiance du chef en la vertu de sa femme [2] ».

Si le commandement est actuellement le privilège des hommes, il n'est pas impossible que dans le passé les femmes aient été investies du pouvoir. Nous en avons un témoignage dans l'histoire de la reine berbère, la Kahéna, qui résista longtemps aux envahisseurs arabes qui tentaient de soumettre l'Aurès, au VIIIe siècle. La légende de Ti-n-Hînân, ancêtre maternelle des Touaregs Ihăggaren, laisse supposer que cette femme était alors leur reine. En 1475, une fraction berbère installée au Soudan, les Sanhadja-Nounou, était gouvernée par une femme du nom de Bikoun-Kabi, que l'empereur sonrhaï Sonni-Ali eut à vaincre pour s'emparer de son territoire. L'auteur du Tarik-es-Soudan, Es-Sadi, rapporte plusieurs faits de ce genre.

L'islamisation des tribus berbères n'est certainement pas étrangère à l'élimination de cette coutume. De nos jours, les femmes ne jouent plus aucun rôle politique officiel. Mais elles se sont faites les gardiennes des coutumes ancestrales et du folklore, et elles sont si fortes de leur autorité que l'on

1: Lhote MS25 Tuareg

ne peut que citer la réponse d'un Targui à un Arabe qui lui faisait une remontrance au sujet des mœurs touarègues : « Personne n'oserait faire autrement, car ensuite, aucune femme ne voudrait plus nous regarder. »

La persistance de la monogamie chez les Touaregs est, de plus, favorisée par le surnombre très important d'hommes que l'on trouve chez eux, fait exceptionnel et contraire à ce que l'on observe dans les autres groupements humains.

L'Aménokal. — Aménokal veut dire, en langue tămâhak, possesseur du pays (de am, préfixe de possession, et de akal : pays).

Dans l'Ăhaggar, ce titre n'est conféré qu'au chef suprême régnant sur un ensemble de tribus nobles, vassales ou assimilées, alors que dans les tribus soudanaises il est parfois appliqué à des chefs de fraction, voire même à de simples chefs de campement.

L'Aménokal est désigné d'après des règles héréditaires découlant du système matriarcal, et est toujours choisi, non pas seulement dans la même tribu, mais dans la même lignée que l'on pourrait comparer au clan. La domination, pour être effective, doit être sanctionnée par l'approbation des nobles auxquels se joignent, pour la circonstance, les chefs des tribus vassales. L'approbation entraîne pour ces derniers, l'acceptation de payer ultérieurement un tribut.

Il y a parfois plusieurs prétendants au titre, soit qu'un descendant d'une famille évincée antérieurement fasse valoir ses droits, soit que l'héritier naturel ait été reconnu inapte au commandement ce qui entraîne une compétition où les règles héréditaires ne sont pas toujours respectées.

Suivant les règles précitées, la succession politique d'un aménokal revient au premier degré à son frère, au deuxième degré, c'est-à-dire au cas où il n'a pas de frère, à son cousin germain, fils aîné de sa tante maternelle, et en troisième degré, au fils aîné de sa sœur aînée. C'est en effet ce qui ressort de l'étude de la généalogie des chefs de l'Ăhaggar faite par M. Benhazéra [1] et modifiant l'ordre indiqué par Duveyrier, qui attribuait la succession au fils aîné de la sœur aînée [2].

Pour des raisons inconnues, ces règles n'ont pas toujours été suivies. C'est ainsi que l'Aménokal Younès succéda à son

1. *Six mois dans l'Ahaggar.*
2. *Les Touareg du Nord*, p. 397.

1: Lhote MS25 Tuareg

père Mohamed el Khir et l'Aménokal Ăitarel à son cousin El Khadj Akhmed, alors que ce dernier avait des parents plus proches. Encore récemment à la mort de l'Aménokal Akhamouk, ce fut son cousin au deuxième degré Meslah qui fut nommé pour le remplacer, alors qu'il avait un cousin au premier degré, fils de la sœur de l'ancien aménokal Moussa ag Ămâstan, qui fut éloigné du commandement pour incapacité.

Chez les Tenguériguifs, les chefs sont choisis alternativement dans deux lignées latérales, issues du même chef, Ikhmed, si bien que l'Aménokal décédé ne peut jamais avoir son frère pour successeur, mais un cousin au deuxième ou troisième degré, qui n'est pas pris obligatoirement dans la branche utérine. Comme chez les Ihăggaren, la nomination de l'Aménokal est soumise à l'agrément d'une assemblée de notables.

Chez les Ioullimmiden, depuis l'Aménokal Our Ilmet (1650-1715), sur quatorze chefs qui se sont succédés, nous remarquons six successions de père à fils, deux fois de frère à frère, deux fois d'oncle à neuveu et deux fois de petit cousin à petit cousin. La coutume matriarcale n'a pas été suivie, mais on sait, d'après les traditions recueillies chez les Ioullimmiden, qu'à l'élection d'Our Ilmet, l'ancêtre éponyme de la tribu, les Touaregs se battirent entre eux au sujet de la coutume successorale, et que le parti qui soutenait Our Ilmet, candidat patriarcal, finit par l'emporter [1].

Comme nous l'avons déjà noté, et comme l'a fait remarquer Seligman, on constate, qu'en dépit du fait que la descendance soit matrilinaire (sauf chez les Ioullimmiden) le gouvernement de chaque unité est patriarcal, et pour le principal similaire à ce qu'il est dans une tribu arabe nomade [2].

L'Aménokal n'est pas inamovible, et le titulaire peut être, pour une raison ou pour une autre, dépossédé par un chef plus populaire. Il perçoit annuellement sur chaque fraction un tribut, soit sous forme de vivres, graines, beurre, animaux, domestiques, soit de peaux et d'objets travaillés ; les caravanes lui paient une dîme de passage ; il reçoit le produit de certaines terres et de certains troupeaux qui sont son apanage. En échange, il doit entretenir les membres de son entourage et les parents de son prédécesseur.

Il existait jadis, chez les Touaregs du Nord, une coutume

1. Dr Richer, *Les Oulliminden*.
2. *Les races de l'Afrique*, p. 128.

aujourd'hui tombée en désuétude, qui s'appelait le droit de *tamaa*, dont bénéficiait l'héritier éventuel du commandement, et qui consistait en une redevance sur les tributs payés par les vassaux ; cette coutume était encore en usage il y a un peu moins d'un siècle.

L'insigne de commandement de l'aménokal est un énorme tambour de guerre qui porte le nom de *tobol*, d'origine arabe qui signifie tambour, caisse.

Cet instrument est aux yeux des Touaregs si représentatif du commandement qu'ils désignent souvent sous le nom de tobol l'aménokal, et toutes les tribus qu'il tient sous son commandement.

Chez les Ioullimmiden de l'Est (Kel Dinnik). l'Aménokal avait un étendard toujours placé dans sa tente et qui était sorti exceptionnellement pour la guerre ou l'intronisation d'un nouvel aménokal. Il était en soie : vert bleu et rouge [1].

Chez les Ihăggaren, la tribu tobol, c'est-à-dire celle dans laquelle est toujours choisi l'Aménokal, est celle des Kel Rela ; mais le tobol a vraisemblablement changé de mains à travers les siècles ; le souvenir d'une autre tribu-chef, celle des Tégéhé-n-ou-Sidi est resté, et c'est ainsi que l'ancien aménokal Aïtarel avait coutume de dire que les Tégéhé-n-ou-Sidi formaient le dos (de l'organisation politique des Ihăggaren), les Kel Rela, les Tăitok, les Tégéhé-Mellet, les côtes, mais que le dos s'affaiblit au profit des côtes [2]. Cette modification a été provoquée par l'extinction totale des Tégéhé-n-ou-Sidi.

Le rôle de l'Aménokal est surtout celui d'un chef de guerre. En temps normal, il arbitre les conflits qui opposent les tribus les unes aux autres, et il a en principe droit de vie et de mort. Son autorité est souvent contestée par les Imochar de sa propre tribu, qui tentent de s'arroger des droits sur les vassaux. Ce sont des disputes intestines du genre : « Qui t'a fait comte ? Et toi qui t'a fait roi ? »

C'est surtout dans les relations avec les tribus voisines ou étrangères que le rôle de l'aménokal prend une allure plus nationale, mais ses décisions n'ont toute leur autorité que si elles ont été approuvées par une assemblée de notables, *l'arollan*, composée des principaux chefs de fraction et des nobles.

1. Nicolas, Notes sur la société et l'état des Touaregs du Dinnik, *Bull. Inst. Français. Afrique noire*, t. I, nos 2-3, 1939, p. 586.
2. Benhazéra, *Six mois chez les Touaregs de l'Ahaggar*, p. 107.

L'Aménokal vit comme les autres Touaregs et le cérémonial qui entoure sa personne est inexistant. Chaque arrivant se présente sous sa tente, sans plus de formalité. Il n'y a ni cour, ni étiquette de cour.

Seul le tobol, placé généralement à l'entrée de la tente, indique la qualité de l'hôte.

Ce tambour est de forme demi-sphérique, creusé dans un tronc d'arbre et recouvert d'une peau de bœuf non épilée, maintenue par des cordes de peau, le poil au-dessus. Il peu avoir 80 cm. de diamètre. Deux poignées latérales, en peau, servent à le porter. Pour les rassemblements, deux hommes le frappent alternativement au moyen d'un percuteur en peau de chameau (imitkar). Seul, l'Aménokal a le droit de le faire battre, chose qu'il ne fait que dans les grandes circonstances. A sa mort, c'est son frère ou son khalife qui en est dépositaire en attendant qu'il soit remis à son successeur. L'Aménokal ne fait pas de grands déplacements sans son tambour qui est porté par un chameau mené par un homme de confiance ; lorsqu'il donne l'ordre de battre la caisse, un autre méhariste s'approche pour prendre la deuxième poignée, et les deux hommes marchent côte à côte, en frappant alternativement. Tout guerrier qui l'entend doit se rendre à l'appel et prévenir en même temps les gens qu'il rencontre. En cas de guerre, le battement, suivant qu'il est fait avec un ou deux imitkar, signifie que l'on a affaire à des fantassins ou à des méharistes.

Fig. 16. — Le Tobol, insigne de commandement de l'Aménokal et son « imitkar ».

Lorsque la peau du tobol est usée, c'est le guerrier le plus renommé de la tribu qui est chargé de la remplacer.

L'Aménokal a généralement un ou deux khalifes chargés de le suppléer ou de le représenter auprès des fractions.

L'Amrar. — Chaque tribu, qui porte le nom de *Taousit*, a son amrar nommé comme l'Aménokal, suivant les règles matriarcales.

Amrar, en tămâhak, veut dire le vieux, le respectable, l'an-

cien par amplification, celui qui détient la sagesse. C'est l'équivalent du mot arabe cheikh.

L'amrar est l'intermédiaire entre les gens de sa tribu et l'Aménokal. Il transmet les ordres de ce dernier et les fait exécuter. Chez les imrad, il collecte la *tioussé* destinée à l'Aménokal, et définit pour chacun la part à verser. Il règle le petitss différends entre les gens de sa tribu et fixe pour chaque campement la zone de pâturage à utiliser.

Il participe au vote qui sanctionne l'élection de l'Aménokal, et à l'*arollan*, qui discute des grandes décisions concernant la vie de la confédération.

Dans une confédération soumise à un Aménokal, groupement que les Touaregs de l'Ăhaggar appellent aussi *Tégéhé*, il peut exister plusieurs tobols, c'est-à-dire plusieurs tribus suzeraines ayant chacune des vassaux. Le nom de *Taousit*, faisant double emploi avec le nom de tribu, est quelquefois employé pour désigner cet ensemble dont le chef porte également le nom d'Amrar chez les Ihăggaren et d'Agoalla chez les Kel Aïr.

L'Amrar n'a pas de signe distinctif de commandement, du moins chez les Ihăggaren, car dans certaines tribus soudanaises, beaucoup avaient autrefois un tambour analogue à celui de l'Aménokal.

Les Imochar. — Les Imochar, sing. Amacher, forment la classe aristocratique. Ce mot veut dire homme de race dominante, aristocrate, et non noble comme on l'a écrit, ce qui se dirait en tămâhak *elli*, plur. illellan [1].

Dans les dialectes soudanais, Amacher, par transposition de phonétique locale devient *amajer*, plur. imajeuren. Il est facile de retrouver dans ces noms, comme nous y avons déjà fait allusion, la vieille racine berbère Amazir, qui désignait autrefois certaines populations libyennes et qui subsiste encore dans le nom porté au Maroc par une fraction berbère importante.

Les Imochar, qui détiennent les droits politiques, sont les véritables maîtres du pays. Ils prétendent tous être d'origine chérifienne, plus ou moins descendants du Prophète, mais cette prétention ne repose sur rien, sinon sur le désir de s'attribuer une haute naissance les affiliant de longue date à l'islamisme et à son fondateur, ce qui n'est pas.

1. Voir à ce sujet Nicolas, Notes sur la société et l'état des Touaregs du Dinnik, *Bull. Inst. Français, Afr. Noire*, t. I, nos 2-3, 1939, p. 579-586.

1: Lhote MS25 Tuareg

Les Touaregs désignent entre eux des hommes de vieille noblesse et de vieille race sous le nom de *loumet*.

Tous les Imochar sont essentiellement guerriers. Ils doivent leur haute situation sociale à leur sabre et ils ne connaissent pas d'autre occupation que la guerre ou les rezzou. Leur rôle de suzerains en fait des parasites des classes vassales et ils constituaient autrefois un fléau pour les caravanes qui traversaient leur pays. Leurs moyens d'existence n'ont jamais été autres que le pillage et le travail manuel est à leurs yeux une déchéance que seuls les esclaves peuvent accepter.

Courir le désert sur leurs chameaux, se battre, risquer la mort dans des équipées lointaines, voilà ce qui doit être la vie d'un homme de sang noble et qui entend le rester. Ils associaient leurs vassaux à leurs équipées et leur réservaient une partie des prises à titre de participation. Le mépris du travail manuel est chez eux un préjugé de classe, et non le fait d'un état de paresse car si, à aucun prix, ils n'acceptaient de travailler la terre, ils ne regardaient pas à franchir des milliers de kilomètres dans des conditions souvent pénibles et fort dangereuses pour aller piller les tribus adverses. Rentrés au campement, ils entendaient mener une vie dégagée de tous soucis matériels et se déchargeaient à ce sujet sur leurs vassaux.

C'est aux Imrad qu'ils confiaient la garde des troupeaux de prise, leur réclamant des bêtes lorsqu'ils en avaient besoin et l'usufruit nécessaire à leur nourriture. Pour eux-mêmes ils ne gardaient que quelques montures pour la guerre et le transport des objets ménagers et se contentaient de petits troupeaux de chèvres du nombre de têtes strictement nécessaire pour assurer leurs besoins journaliers en lait. De même, ils ne possédaient pas en propre beaucoup d'esclaves, car ces derniers auraient constitué autant de bouches à nourrir, ce dont ils n'avaient cure.

S'ils se reposaient en tout sur leurs Imrad, ils n'abusaient d'ailleurs pas de ces derniers, car, dit un proverbe targui : « il ne faut pas tuer la chamelle qui nous nourrit », et leurs demandes tenaient compte de la richesse et des possibilités du moment.

Les Imochar perçoivent chaque année sur les Imrad un impôt de vassalité qui s'appelle *tioussé*. Cet impôt, établi pour chaque tribu, comporte une contribution annuelle d'un certain nombre de têtes de bétail, de charges de grains, d'objets

divers (outres, piquets de tente, etc...), de peaux tannées, de beurre, etc.... Il est en principe invariable et est versé à l'Aménokal qui en dispose à son gré en tenant compte des besoins des Imochar.

L'Aménokal laisse les animaux qu'il perçoit en gérance aux Imrad qui en fournissent l'usufruit.

Le droit individuel des Imochar sur les Imrad n'existe pas en principe. En fait, il existe lorsqu'un homme est le dernier représentant d'une tribu, et qu'il perçoit pour lui-même les droits afférents à sa tribu.

D'un autre côté, certains se font fort de faire des petits prélèvements sur les Imrad ; ceux-ci ne refusent jamais, et il faut dire, à la décharge des nobles, qu'ils traitaient assez généreusement leurs Imrad lorsqu'un rezzi heureux les avait mis momentanément à l'aise.

En échange des droits de suzeraineté que les Imochar exerçaient sur les Imrad, ils devaient à ceux-ci une protection absolue, défendaient leurs intérêts chaque fois qu'ils étaient menacés et s'efforçaient d'obtenir réparation, s'ils étaient pillés par une tribu adverse.

En grands seigneurs, les Imochar dépensaient largement, manie qu'ils ont conservée malgré le changement de régime apporté par la paix française. Leur façon de vivre en parasites leur a enlevé toute idée de prévoyance et ils connaissent, de ce fait, beaucoup plus la gêne que l'aisance. L'occupation française, en effet, a eu pour première conséquence de supprimer l'état de guerre et les pillages, ce qui a privé les Imochar de leurs principales ressources. Ils sont devenus des pauvres, alors que les Imrad, possesseurs de troupeaux, ont vu leurs richesses augmenter et se valoriser. Cette perturbation sociale aurait pu avoir des conséquences graves, mais les Imrad n'ont pas totalement abandonné les Imochar, malgré l'occasion qui leur était offerte de s'affranchir de leur tutelle ancestrale. Nous devons peut-être nous en réjouir, car on peut se demander quelle aurait été la situation matérielle des Imochar, et, par contre-coup, leur état d'esprit à notre égard.

On s'est souvent servi des termes : « touaregs noirs » et « touaregs blancs » pour désigner les Imochar et les Imrad. « Dans le Nord, dit Seligman, les nobles ont un voile noir et les sujets un voile blanc »[1]. Cette distinction vestimentaire n'existe pas de nos jours où, suivant les goûts et la richesse de chacun,

1. *Les races de l'Afrique*, p. 129.

1: Lhote MS25 Tuareg

les Touaregs portent indifféremment des voiles noirs ou blancs. Il se peut qu'auparavant les Imrad n'aient pu disposer de voiles indigotés, toujours considérés comme un objet de luxe, et aient dû se contenter d'un voile en toile ordinaire ; cela expliquerait cette division en Touaregs noirs et blancs.

Les Touaregs blancs, « Touareg-el-biodh », seraient, d'après Duveyrier, les Oulad Ba Hamou, Arabes de la région d'In Salah qui ont pris aux Touaregs l'habitude de porter le voile, mais de couleur blanche au lieu d'indigo foncé.

Les Imochar sont, par contre, beaucoup plus distingués que les Imrad ; leur toilette est plus recherchée et leur démarche plus noble, au point qu'il est souvent facile de les distinguer des Imrad à leur port plus majestueux. Ils affectent également un langage plus élégant d'où sont bannis les expressions vulgaires, les mots étrangers à leur langue, importés chez eux par les esclaves, et cette distinction d'allure et de langage est encore plus sensible chez les femmes. Ces dernières étonnent parfois par leur grâce et leurs manières racées ; ce sont vraiment de grandes dames qui, sous leurs tentes de cuir, tiennent aussi dignement salon que des femmes européennes de la bonne société. Elles mettent d'ailleurs une certaine ostentation à bien recevoir leurs hôtes et à les charmer des sons mélodieux de leur violon ; les qualités prisées chez une jeune fille touarègue bien née consistent à savoir tenir sa tente, confectionner quelques beaux objets de cuir brodé destinés à être offerts à des amis ou à son chevalier servant, et à savoir jouer du violon.

En dehors de leurs courses dans le désert, les Imochar passent une partie de leur vie à courtiser les femmes et l'autre à dormir.

Les mœurs, beaucoup plus relâchées chez les Imochar que chez les Imrad, entraînent des mariages tardifs et par conséquent des unions le plus souvent peu prolifiques. L'occupation française a, d'autre part, enlevé à leurs yeux, leur véritable raison d'être, et une certaine neurasthénie semble, depuis quelques années, s'être emparée d'eux. Il serait bien regrettable de voir disparaître cette race si originale, mais devant son inertie à s'adapter aux conditions nouvelles, on ne voit pas bien quel palliatif on pourrait lui apporter.

Les Inislimen. — Les *Inislimen* forment chez les Touaregs la classe religieuse, jouent le rôle de chapelains, de marabouts,

1:-Lhote MS25 Tuareg

et sont chargés de la formation et de l'éducation religieuse des enfants.

Ils occupent donc une situation sociale importante, très supérieure à celle des Imrad. Dans certaines confédérations, ils sont exempts de tout impôt de vassalité et sont souvent l'objet, partout où ils passent, de beaucoup d'égards et de considération. C'est ainsi que dans l'Ăhaggar, ils sont traités sur le même pied que les Imochar et que ces derniers acceptent parfois les unions avec eux, tout en refusant l'octroi des droits politiques aux enfants issus de ces unions. Par contre, chez les Ioullimmiden, les Imochar repoussent toute alliance avec eux et leur font payer une redevance de vassalité. Ceux du Damergou, contrairement à la règle, sont considérés comme des nobles ; ils possèdent des Imrad et peuvent se livrer à la guerre. Ils se sont d'ailleurs fait remarquer parmi les tribus de l'Aïr, comme les plus belliqueux. Enfin, ceux de l'Ădrar, après l'abandon de ce pays par les Ioullimmiden, ont réussi à former une confédération ; ils ont des Imrad, mais les Imochar des autres confédérations ne veulent pas les considérer comme leurs égaux.

Ils sont souvent désignés sous le nom d'*Ichériffen*, ou *Chériffen*, qui vient du mot arabe chérif, qui veut dire noble et, par extension, descendant du Prophète. Mais chez les Touaregs, Ichériffen a un sens plus spécial et désigne les individus ayant un caractère religieux, sans qu'ils soient nécessairement descendants de Mahomet.

Les tribus maraboutiques comprennent les Ichériffen proprement dit, et les Ifôras.

Ce caractère religieux a des origines et des qualités diverses.

Certains éléments comptent vraiment des chérifs parmi leurs ancêtres ; tel serait le cas des Ifôras de l'Ădrar et de certaines fractions Kel Es-Souq, mais à côté d'eux, d'autres n'ont qu'un caractère religieux accidentel.

A ce sujet, le Commandant Cauvet dit que ces tribus maraboutiques paraissent être souvent des collectivités nobles et autrefois puissantes, devenues trop faibles pour continuer à jouir des droits et du prestige du fort, et qui se déclarent éloignées du métier des armes et consacrées aux pratiques pieuses par amour de Dieu et de l'Islam. « Une tribu qui, par suite d'événements de guerre, d'essaimages trop fréquents ou trop forts, se trouve menacée de perdre sa prépondérance, son rang ou même sa classe, prend parfois le parti de se dire

1: Lhote MS25 Tuareg

maraboutique. La piété n'est pas indispensable pour cela, il suffit que la tribu cesse de piller ses voisins, que ses membres ne portent plus d'armes ; si quelques-uns d'entre eux affichent les apparences de pieux Musulmans, apprennent quelque peu le Coran et portent des chapelets, surtout s'ils peuvent se recommander de quelque ancêtre arabe, réfugié autrefois dans la tribu, ils arrivent, au bout d'un certain temps, à être classés comme marabouts [1]. »

Dans les tribus qui pratiquent réellement leur religion d'une manière plus sérieuse que la plupart des Touaregs, dit-il encore, il y a assurément une infusion de sang étranger, parfois sémite et souvent antérieure à l'invasion arabe. Sans discuter ici des raisons sur lesquelles s'appuie le Commandant Cauvet pour parler d'infusion de sang sémite chez les Ichériffen, nous rappellerons ce que nous avons déjà dit, que nous avons été vivement frappé de trouver chez les Ichériffen de la région de Gao et les Kel Es-Souq de Mohamed Ouguinat, des individus présentant un facies sémitique, particulièrement marqué chez les hommes âgés.

L'explorateur Duveyrier, qui séjourna longtemps chez les Ifôras du Nord, les considérait comme d'anciens nobles « ayant abdiqué tout rôle politique dans une gestion des confédérations, pour conquérir une plus grande autorité religieuse, nécessaire dans une société où la justice n'est représentée par aucun pouvoir » [2].

Il leur attribuait une très grande action morale et religieuse. Il est vrai que certains chefs Ifôras, comme cheikh-Othman qui fut l'un des protecteurs de Duveyrier pendant son séjour dans le Tassili, acquirent sur les Ihăggaren et les Kel Ăjjer, une réelle autorité qui servit certainement les causes de la paix ; leur action générale est beaucoup moins importante qu'il ne l'a dit, et l'on peut en donner comme preuve que ces mêmes Ifôras furent eux-mêmes pillés à plusieurs reprises par les Ihăggaren et obligés de venir se mettre à l'abri de nos postes du Sud Algérien.

L'influence des Inislimen sur les Ihăggaren et les Kel Ăjjer n'est pas bien grande, car leur prosélytisme religieux n'est guère actif et ils sont plus diligents à faire prospérer leurs troupeaux qu'à répandre la loi du Prophète, dont ils sont, d'ailleurs, assez ignorants dans l'ensemble.

1. Cᵗ Cauvet, *Les noms des tribus Touaregs*, p. 10.
2. *Les Touareg du Nord*, p. 132.

Ils sont, malgré cela, très estimés et leur chef est entouré d'un très grand respect ; très pacifiques, ils établirent avec nous de longue date des rapports confiants et désapprouvèrent l'action belliqueuse des Ihăggaren à notre égard, en particulier lors du massacre de la mission Flatters.

Chez les Tădemaket et les Ioullimmiden, les Inislimen jouent un rôle plus important, diffusant activement l'islamisme. Certains sont des lettrés accomplis et ils enseignent le Coran dans les campements.

Alors que les éléments maraboutiques du Nord étaient les premiers à se rapprocher de nous, nous avons eu dans leurs frères du Sud, les plus irréductibles ennemis, et c'est eux qui furent, par leurs prédications, à la base de toutes les agitations, de toutes les révoltes et qui prêchèrent, avec le plus d'ardeur, la résistance à l'occupation française.

Le berceau des Ifôras serait l'ancienne capitale berbère de Tădemeka, dont le nom arabe actuel est Es-Souq, qui a été donné à la principale tribu. Ils ont essaimé de part et d'autre de la boucle du Niger, par tribus entières ou par petits groupes de quelques tentes. On en retrouve dans tout le pays targui.

Beaucoup, prétextant de leur caractère religieux, refusent de prendre part à la guerre, mais à côté de ces groupes pacifiques, d'autres sont nettement guerriers, et chez les Ioullimmiden, les Chériffen sont divisés en Chériffen ordinaires et en Chériffen guerriers.

La manière de vivre des Inislimen est celle des Touaregs ; ils parlent la même langue et s'administrent entre eux sans que les Imochar interviennent. On a signalé chez eux quelques cas de polygamie ; c'est le résultat de leur islamisation progressive qui favorise cette coutume ainsi que le patriarcat déjà appliqué dans un certain nombre de tribus soudanaises.

Les Imrad. — *Imrad* viendrait de la racine tămâchek *égeid*, *égeit*, qui veut dire chevreau, petite chèvre, et du préfixe *am* qui désigne la possession. Ce qui signifie, en somme, ceux qui possèdent des chèvres.

Auparavant, en effet, les Imrad ne pouvaient posséder que des chèvres, les Imochar se réservant la propriété des chameaux.

Leur surnom est *Kel Oulli*, ce qui veut dire aussi gens des chèvres, nom qu'ils préfèrent à celui d'Imrad, qui serait pour eux quelque peu avilissant.

1: Lhote MS25 Tuareg

Ils forment des tribus inféodées aux Imochar et sont leurs vassaux.

Les Imochar ont un certain mépris pour eux et les considèrent comme des gens de basse extraction, n'étant pas de pure race touarègue ; le nom de *Tao ·ia Settefet*, qui veut dire la descendance noire, leur est souvent appliqué.[1] Rien, pourtant, n'indique une infériorité raciale des Imrad par rapport aux Imochar ; si l'on veut interpréter les vieilles légendes de l'Ăhaggar, tout porte à croire que les Imrad furent, dans bien des cas, les premiers occupants du pays, et que les Imochar, qui furent les envahisseurs, des conquérants qui se sont rendus maîtres du pays par la force. Le métissage avec les noirs ne peut être un critère décisif, car beaucoup de tribus Imrad ne sont pas, somatiquement, plus « négroïdes » que les Imochar. Il est vrai aussi que les Imrad sont moins rigoristes que les Imochar pour le maintien de l'intégrité des vieilles coutumes touarègues. Il y a chez eux moins de noblesse d'âme et de sentiment, comme également moins de fierté ethnique.

Si leur situation actuelle est, comme nous l'avons dit, plus florissante que celle des Imochar, ils ne s'arrêtent pas aux considérations de prestige de ces derniers, et depuis l'occupation, ils ont pu se constituer, par l'élevage et les caravanes, un revenu appréciable.

Les Imrad sont organisés par tribus, élisent un chef, et respectent, comme les Imochar, les règles matriarcales. Ils s'administrent intérieurement comme ils l'entendent, sans que l'Aménokal ou les Imochar s'immiscent dans leurs affaires.

Dans toutes les confédérations, les Imrad sont plus nombreux que les Imochar, dans la proportion de un à cinq (Touaregs du Nord) et de un à huit (Ioullimmiden).

De caractère plus pacifique que les Imochar, parce que peut-être moins virils et moins courageux, ils furent bien souvent, contre leur gré, entraînés par ces derniers dans les rezzou, et le goût du lucre aidant, ils ne furent pas longs à piller à leur tour, chaque fois qu'une bonne occasion se présentait. Ils organisaient souvent des expéditions de leur propre initiative, mais, en cas de succès, ils devaient verser une certaine part du butin aux nobles. C'était une garantie pour l'avenir, disaient les Imochar, qui savaient bien qu'un rezzi entraîne un contre-rezzi, et qu'ils étaient susceptibles de supporter,

1. Chez les Ioullimmiden ils sont désignés sous le nom de *Idinet*.

un jour ou l'autre, les contre-coups des « inconduites » de leurs vassaux.

Certains Imrad acquirent même une renommée de grands guerriers, et des Imochar acceptèrent, devant leur supériorité, de se mettre, au cours d'un coup de main, sous leur commandement.

Ches les Ioullimmiden il existe des Imrad ordinaires, gardiens de chèvres, et des Imrad guerriers. Les premiers ne participaient pas à la guerre, alors que les autres étaient de tous les combats et, à ce titre, avaient droit au même armement que les Imochar, moins le bouclier.

Certaines tribus devinrent même militairement si fortes qu'elles réussirent à s'affranchir totalement de la tutelle des Imochar. C'est le cas des Kel Gossi de la boucle du Niger.

Des Imochar épousent parfois des femmes Imrad renommées par leur beauté, mais des cas inverses ne sont pas venus à notre connaissance. Des unions, ou plus exactement des concubinages, entre Imrad et négresses sont très courants.

Les Imrad ont le droit de posséder des esclaves noirs qui sont employés aux travaux ménagers et au gardiennage des troupeaux.

Schirmer a dit que les Imrad de l'Ăhaggar étaient des sédentaires et qu'ils étaient chargés d'entretenir les jardins [1] ; il a commis une erreur, due très certainement à des informations erronées. Cela est d'autant plus curieux que Duveyrier avait déjà défini exactement la situation des Imrad [2].

Duveyrier a traduit le mot *amrid* par le mot serf qui correspond exactement à l'expression arabe *ra'aya*, et parce que les ra'aya sont des sujets corvéables et contribuables que, suivant la loi musulmane, les marabouts ne doivent pas posséder. Duveyrier s'est cru confirmé dans son opinion par le fait que les Inislimen des Ăjjer n'avaient pas le droit d'avoir des Imrad. Il s'agit là d'une erreur d'interprétation. Ce terme arabe employé en la circonstance ne peut convenir, car la classe sociale des Imrad touaregs n'a rien d'équivalent chez les Arabes.

Nous avons préféré le terme de vassaux qui convient mieux, à notre sens, parce que les Imrad ne sont pas corvéables à merci, qu'ils versent un droit de vassalité parfaitement défini et que leurs chefs participent à l'élection de l'Aménokal et qu'eux-mêmes possèdent des esclaves.

1. *Le Sahara*, p. 298.
2. *Les Touareg du Nord*, p. 334.

1: Lhote MS25 Tuareg

Le terme « vassaux » a d'ailleurs été adopté par Richer, Deniker, Verneau, etc....

Au Soudan, on les désigne souvent sous le nom de *Daga*, mot d'origine sonrhaï, comme le mot *Bourdame* qui désigne les Imochar.

Possesseurs d'un grand nombre de chèvres, les Imrad de l'Ăhaggar sont tenus à de petits déplacements, mais ne sont pas sédentaires. Ils sont les possesseurs effectifs d'un grand nombre de centres de culture, mais ne les cultivent pas eux-mêmes ; ils emploient à cet effet des nègres du Tidikelt, les *harratines* qui jouent le rôle de fermiers et de cultivateurs.

Vassaux assimilés. — On assimile généralement aux Imrad des tribus qui portent le nom d'Issekkemâren et d'Irréguénaten. Celles-ci, quoique également vassales des Imochar, diffèrent notablement des Imrad au point de vue social.

Les Issekkemâren, les Irréguénaten, ne sont pas, aux yeux des Touaregs, des gens de leur race ; liés à eux par certains liens de parenté éloignés, ils sont considérés comme des mélangés, des mêlés, comme l'indique exactement leur nom ; ils sont le produit de mariages mixtes, généralement de femmes touarègues avec des Arabes ou des Berbères. Le terme d'Irréguénaten a même été étendu à des groupements issus de femmes imochar ou d'hommes imrad. Il en existe dans plusieurs confédérations ; on trouve des Irréguénaten chez les Ihăggaren ainsi que chez les Touaregs du fleuve, des Issekkemâren chez les Ihăggaren et dans la région de Tombouctou.

Socialement, ils occupent un rang plus élevé que les Imrad ; ils sont libres, et leur vassalité vis-à-vis des Imochar est beaucoup plus libérale. Ils se sont mis sous leur protection, parce que trop faibles pour assurer leur propre défense, et à ce titre, ils versent à l'Aménokal une indemnité annuelle qui porte le nom de *rharama*. Ils s'administrent exactement comme les Imrad, et ont les mêmes mœurs que les Touaregs. Extérieurement, on ne peut les en distinguer. Parlant également le tămâhak, ils sont moins rigoristes, il est vrai, pour le maintien des traditions. Ils possèdent des esclaves, mais ne manifestent pas une répugnance aussi vive pour le travail que les Imochar et les Imrad. Il n'y a jamais d'unions entre eux et les Imochar, et elles sont assez rares avec les Imrad.

Il existe au Soudan des tribus importantes qui portent le nom de Daoussak. On les considère généralement comme

1: Lhote MS25 Tuareg

des Imrad, mais, en réalité, les Daoussak seraient des anciens bergers des Ioullimmiden que l'on n'autorisait pas à porter la lance et à prendre part au combat. Ils tendent à se donner un certain caractère maraboutique et multiplient les écoles coraniques dans leurs campements.

Iborelliten. — On peut encore ranger parmi les vassaux assimilés, des tribus libres, jusqu'ici assez peu connues, et qui portent le nom de Iborelliten, sing. aborelli.

Ils parlent la langue tămâhak et ne diffèrent extérieurement en rien des Touaregs, au milieu desquels ils vivent. Ils forment, dans certaines confédérations, des tribus très distinctes, ne dépendant, en général, que de l'autorité directe du chef de la confédération, tels ceux de l'Aïr qui sont sous le commandement de l'anastafidet des Kel-Oui [1].

Ils sont plus ou moins teintés suivant les groupes, et certains sont aussi blancs que les Touaregs. Ils se marient entre eux et peuvent être possesseurs d'esclaves et de troupeaux. Ils recherchent parfois des alliances matrimoniales auprès des Imrad, mais ces derniers, qui les tiennent en assez grand mépris, s'y refusent le plus souvent.

D'après Nicolas, les Iborelliten seraient des captifs d'une origine plus élevée [2]. Pour de Foucauld [3], aborelli, pl. ibourelliten, désigne un mulâtre d'un blanc et d'une négresse, ou inversement ; il faut ajouter, à notre sens, dont l'un des parents est de race touarègue ; et nous sommes d'autant plus persuadé que ce caractère est indispensable que de Foucauld désigne, d'autre part, le mulâtre ordinaire sous le nom d'Achardan, pl. ichardanen [3].

Nous avons recueilli des renseignements dans les régions de Tahoua et de Gao, où éborelli désigne l'enfant issu d'un Amajer et d'une négresse non captive, ou d'une étrangère. Les Iborelliten sont donc des mulâtres issus de parents mixtes, Touareg et nègre.

Nous citerons, comme groupe d'Iborelliten, les Igdâlen de

1. Les Kel-Aïr sont divisés en Kel-Gerès et en Kel-Oui, placés sous l'autorité du Sultan d'Agadez. Les Kel-Oui, qui seraient d'origine oraren, se sont énormément métissés avec les sédentaires haoussa et se sont diminués, pour cela, aux yeux de leurs frères de race, qui les considèrent maintenant comme des nègres ; ils ont une organisation particulière et leur chef porte le nom d'anastafidet.
2. Loc. cit., pp. 579-586.
3. *Dictionnaire touareg-français*, t. I, p. 79.

l'Aïr, les Aboghelités dont parle Barth [1] qui seraient issus de mères touarègues (Imochar, d'après Barth) et de nègres. Il existerait au Soudan, dans la région de Niafunké, une autre tribu Iborelliten, issue de Touaregs et de Peuls, et qui se serait sédentarisée.

Il semble qu'il existe une catégorie d'Iborelliten de basse classe qui sont désignés sous le nom d'Irraouellan. Nicolas les considère comme d'anciens captifs libérés. Chudeau a signalé une tribu Irraouellan, dont les membres seraient des affranchis, ou les descendants d'anciens captifs ; il ajoute que les enfants d'un Targui et d'une esclave sont, de droit, Irraouellan.

Nous ajouterons à ces différentes définitions, qu'en Aïr, la femme esclave qui épouse un Targui devient libre ainsi que sa famille, et les enfants issus de son mariage sont alors appelés Ikalalen.

Parmi les Kel-Ăhaggar, on ne rencontre pas de véritables tribus Iborelliten ou Irraouellan, mais il existe des hommes appartenant à ces classes sociales.

Les Iklan. — Les Iklan, sing. Akli, fém. sing. Taklit, sont les serfs, les esclaves des Touaregs. Le nom d'Iklan viendrait de la racine tămâhak *Kl* : être noir [2] ; et, en effet, ces gens sont étrangers à la race touarègue. Ce sont des nègres de toutes origines, jadis capturés au Soudan par les Touaregs et réduits en esclavage. Ils forment une classe à part, mais qui n'est pas tribale, sauf lorsqu'ils sont affranchis sous conditions ou entièrement. Ils portent alors le nom d'Iklan-n-égef, ou d'Iderfan, suivant qu'ils se trouvent dans l'un ou l'autre cas.

Ils ont fait souche chez les Touaregs et donné naissance à une race nouvelle, aux caractères les plus variés d'où l'élément blanc n'est pas exclu.

Les esclaves sont employés à la garde des troupeaux, aux travaux ménagers du campement ; ils partagent la vie de leurs maîtres et, à leur contact, ont acquis un caractère indépendant qui leur fait aimer la liberté du nomadisme, à tel point qu'il leur serait, actuellement, bien difficile de reprendre la vie sédentaire de leurs ancêtres. Ceux de l'Ăhaggar se sont parfaitement adaptés au désert et possèdent des qualités physiques de sobriété très supérieures à celles de leurs frères de

1. Ouv. cit., t. I, p. 204.
2. Nicolas, ouv. cit., pp. 579-586.

1: Lhote MS25 Tuareg

race du Soudan qui, lorsqu'ils y sont transportés, éprouvent des difficultés à y vivre.

L'Akli est corvéable à merci. Il doit tout son travail à son maître, il est sa propriété, mais il reçoit quelques avantages et peut disposer de quelques jours de travail par semaine pour lui-même.

Dans l'Ăhaggar, les Iklan sont parfaitement bien traités par leurs maîtres, auxquels ils sont très attachés ; ils partagent les repas avec eux et subissent, d'une humeur égale, la bonne ou la mauvaise fortune dont jouit le campement. Leurs enfants sont élevés avec ceux des Touaregs et sur le même pied qu'eux.

Ils bénéficient de certaines règles humanitaires qui font honneur aux Touaregs, et c'est ainsi qu'un esclave trop jeune ou trop vieux, ne peut pas être libéré et doit être entretenu par son maître.

Les Iklan se lèguent par héritage ; ils peuvent être possesseurs d'animaux, dont ils ont alors l'usufruit ; mais à leur mort, ces animaux reviennent à leurs maîtres et non à leurs propres enfants.

Les Imochar, les Inislimen, les Imrad, ont tous les droits sur leurs esclaves ; ces derniers ne peuvent pas se marier sans leur consentement. Généralement, lorsqu'il y a un homme et une femme esclaves dans le même campement, on les marie, et l'homme reçoit une chèvre qu'il rend comme dot à sa femme. Si l'esclave veut chercher lui-même sa femme, et qu'il la trouve dans un autre campement, il ne reçoit rien de la part de son maître, et doit trouver lui-même les moyens de payer la dot de sa femme, ordinairement fixée à dix chèvres. Les esclaves préposés à la garde des troupeaux et qui, par leur occupation, sont souvent absents du campement, ne se marient généralement pas. « Ils cherchent leur petit profit où ils peuvent », disait le Père de Foucauld.

Les Touaregs prennent souvent des femmes esclaves comme concubines ; ils y trouvent plusieurs avantages ; en premier lieu, ils n'ont pas de dot à payer et, en second lieu, ils ont affaire à une femme qui se soumet à leurs caprices plus facilement qu'une femme de leur race, et qu'ils peuvent changer à leur gré. Les enfants issus de ces concubinages sont libres, mais ne font pas partie de la classe de leur père. Ce dernier les reconnaît comme les siens, mais ils sont moralement considérés comme des esclaves. Ils peuvent cependant hériter de leur père.

1: Lhote MS25 Tuareg

Les femmes touarègues de la classe noble, qui ont des rapports avec les Iklan, sont déconsidérées auprès des leurs ; mais le fait ne serait pas très rare, paraît-il, d'autant plus qu'une légende prétend que les rapports entre femmes imochar et captifs sont stériles.

Les Iklan ont des mœurs très corrompues, coutumiers de pédérastie et d'autres vices. Voler, mentir, sont dans leur instinct, défauts qui se trouvent du reste chez la plupart des noirs soudanais.

C'est ainsi qu'ils ont l'habitude, lorsqu'ils gardent les chèvres au pâturage, de les têter. Aussi, dans certains campements, ne reçoivent-ils jamais de lait, puisqu'on suppose avec raison qu'ils se sont servis les premiers. Certains maîtres, pour se garantir contre ces rapines, n'hésitaient pas à cadenasser la bouche des gardiens de leurs troupeaux, en leur perforant les lèvres. Il y a quelques années, il y avait encore dans l'Ăhaggar une vieille femme qui avait subi cette mutilation.

Ils vivent avec leur maître dans une grande familiarité et quelques-uns ont mérité leur confiance, soit par leur intelligence, soit par leur courage au cours des rezzou. L'ancien Aménokal de l'Ăhaggar, Moussa ag Ămâstan, était toujours accompagné de son nègre Chernach, et les faits de guerre qu'ils accomplirent ensemble font encore l'objet aux veillées des campements des récits les plus merveilleux.

Un esclave peut demander à changer de maître lorsqu'il est maltraité ou qu'il espère des avantages supérieurs ; comme généralement le Targui ne veut pas se séparer gratuitement de son esclave, ce dernier a recours à un subterfuge qui consiste à couper l'oreille à un animal du troupeau du maître à qui il veut désormais appartenir, ou à commettre une déprédation du même ordre. Ce délit entraîne un droit de vie ou de mort sur l'esclave qui en est l'auteur, au profit de la personne lésée et dans la pratique, suivant la coutume admise, cet esclave devient automatiquement sa propriété. Dans les cas de ce genre, les deux parties se sont ordinairement mises d'accord, au préalable.

On doit aux Iklan l'introduction d'une quantité de mots et d'expressions nouvelles dans la langue tămâhak, tous naturellement d'origine soudanaise. Ils ont un langage très grossier et écorchent abominablement la langue de leurs maîtres, au point d'en faire un véritable argot.

Ils ont gardé beaucoup de traits de leur folklore que l'on

1: Lhote MS25 Tuareg

retrouve dans les danses, les scènes mimées qu'ils organisent, entre eux, lors des réjouissances publiques ou des événements de la vie familiale de leurs maîtres.

L'évolution sociale, due à l'occupation française, entraînera, dans un temps indéterminé, la disparition du servage qui, il faut le préciser, n'a pas le caractère inhumain que l'on pourrait lui supposer.

Il aurait été maladroit d'imposer immédiatement la libération des Iklan et c'eût été contraire à leurs propres intérêts. Des tentatives faites en ce sens au Soudan ont donné des résultats déplorables. Les Iklan libérés du jour au lendemain sont des déclassés ; ils ne peuvent et ne veulent se remettre au travail de la terre et se trouvent alors dans l'impossibilité de gagner leur vie.

La disparition de l'esclavage se fera progressivement et individuellement ; elle se produit lentement, mais inexorablement, et elle apportera des transformations sociales importantes chez les Touaregs.

On peut déjà observer cette évolution chez les Ioullimmiden, en Ădrar, et surtout aux environs de Tombouctou, où les femmes Imrad s'emploient dorénavant elles-mêmes à piler le mil et à faire les gros travaux de ménage, jusqu'alors réservés aux captifs.

Iklan-n-Egef. — La libération des captifs a d'ailleurs existé de tous temps chez les Touaregs sous des formes plus ou moins atténuées.

Elle peut avoir plusieurs causes et en premier lieu, le surnombre des captifs qui constitue une quantité de bouches inutiles à nourrir. Les Touaregs ont donc rendu une demi-liberté à un certain nombre d'entre eux qu'ils ont chargés de la garde de leurs troupeaux. Ce sont les Iklan-n-Egef, ou captifs de dune. Au Soudan, on les désigne souvent sous le nom de *Bella* ou de *Bouzou*.

En deuxième lieu, des captifs peuvent être libérés par générosité pour récompenser des services rendus ; ils portent alors le nom d'Iderfan.

Les Bella, sans être affranchis définitivement, vivent librement, et les Touaregs les laissent gagner leur vie comme ils l'entendent. Beaucoup, en dehors de la garde des troupeaux, se livrent à de petites industries. Ils ramassent du bois qu'ils vont vendre dans les centres citadins, fabriquent du charbon

1: Lhote MS25 Tuareg

de bois pour la même destination, et quelques femmes se sont faites potières.

Ils s'organisent alors en tribus, et vivent en nomades sous la tente, comme les Touaregs, pratiquent l'endogamie, mais restent inféodés à une tribu imochar ou imrad. En cas de conflit, ils prennent fait et cause pour leurs maîtres, participent aux combats comme fantassins et sont armés de javelots.

On connaît plusieurs de ces tribus dans la région de Tombouctou, chez les Igouadaren et les Tenguéréguifs, dans la région de Gao, chez les Ioullimmiden, chez les Kel Dinnik (Ioullimmiden de l'Est) de la région de Tahoua, mais il n'en existe pas chez les Ihăggaren.

Dans l'Ăhaggar, il n'y a d'Iklan-n-Egef qu'à titre individuel.

Iderfan. — Le mot Iderfan vient de la racine sederf : affranchir, par amplification, qui n'est plus capable de rendre de bons services [1].

En principe, on ne peut se débarrasser, en l'affranchissant, d'un esclave atteint par l'âge ou dont le rendement de travail a baissé.

En fait, le cas se présente de temps en temps, surtout chez les Touaregs soudanais. Mais l'affranchissement peut être le résultat d'un geste de piété de la part du maître. D'autres fois, certains ont été affranchis en bloc en récompense d'une action d'éclat. Nicolas cite dans le centre de Tahoua la fraction actuelle des Tamjert qui furent affranchis après la bataille d'Izerwan où ils avaient courageusement résisté aux Kel Ăhaggar (1898). Beaucoup d'Iderfan reviennent à la culture, ils vivent souvent avec les sédentaires, avec lesquels ils s'allient ; ils rendent de menus services à ces derniers, en gardant leurs troupeaux.

Nicolas les assimile aux Harratines des Kel Ăhaggar. Cela n'est qu'en partie justifié, car s'il est vrai que quelques anciens esclaves travaillent dans les centres de culture de l'Ăhaggar, la majorité des Harratines sont des nègres du Tidikelt, qui viennent s'employer librement chez les Touaregs. Il ne faut donc pas confondre les Harratines avec les Iderfan.

Comme pour les Iklan-n-Egef, il n'existe d'Iderfan dans l'Ăhaggar qu'à titre individuel.

Les Enaden. — Les Enaden, sing. Enad, forment la caste artisanale des Touaregs ; au Soudan, on leur donne le nom de

1. Nicolas, ouvr. cit., pp. 579-586.

1: Lhote MS25 Tuareg

*garassa* ou de *gargassa*, qui est très probablement d'origine sonrhaï.

Le mot Enaden viendrait de *enad* qui veut dire l'autre, par amplification « ceux que l'on ne nomme pas »[1]. C'est que les Enaden constituent une caste fermée, méprisée et maudite par les Touaregs dont la répulsion pour le travail manuel est bien connue.

Leur rôle consiste à fabriquer pour les Touaregs tout ce dont ils peuvent avoir besoin, armes, ustensiles de vaisselle en bois, piquets de tente, selles de méhari, objets de harnachement.

En plus, ils exercent volontiers le métier de barbier-chirurgien, et au moyen de petits instruments qu'ils fabriquent, pratiquent adroitement des saignées, posent des ventouses, les scarifient et font d'autres petites opérations du même genre, y compris l'extraction des dents. Ils sont rémunérés pour leurs travaux lorsqu'ils travaillent pour les tribus, ou bien, s'ils sont attachés à un maître, ce dernier les a entièrement à sa charge.

Les Touaregs, qui les méprisent cordialement pour leur origine obscure et leur profession servile, reconnaissent leurs qualités dont ils sont bien heureux de profiter. Ils les craignent également beaucoup, car ils leur attribuent des pouvoirs extranaturels de sorcellerie et de magie. Possesseurs du feu, maltraitant la terre et les minerais en les battant, ils sont placés dans un monde à part, habité par les génies avec lesquels ils sont susceptibles d'entrer en relation. Si les marabouts musulmans se font volontiers marchands d'amulettes que les Touaregs apprécient, ces derniers n'hésitent pas, le cas échéant, à aller en demander de préférence aux Enaden.

Les Enaden sont encore méprisés parce que, sans principes moraux, ils jouent volontiers le rôle d'espions, de traîtres, épiant les Iklan et la femme de leur maître, se faisant également les entremetteurs des amoureux. Comme les bouffons de notre moyen âge, ils ont le droit d'accéder partout, y compris chez les femmes et tout le monde trouve cela naturel, car c'est un droit qui leur est presque reconnu.

Ils participent parfois au rezzou et ont la réputation de se battre bravement, mais personne ne veut rester à côté d'eux pendant le combat, car ils possèdent, paraît-il, des talismans tellement puissants que les javelots dirigés sur eux dévient

1. Nicolas, ouvr. cit., pp. 579-586.

1: Lhote MS25 Tuareg

de leur route et risquent d'atteindre ceux qui sont proches. Le Touaregs ne tuent jamais un Enad, car cela porte malheur et l'Enad s'en vengerait par delà la tombe.

Dans les tribus soudanaises, ils portent le nom d'*ag'gou*, pl. *ag'gouten* et jouent parfois le rôle de bouffons (griot). Certains sont musiciens et conteurs d'histoires. Ce rôle n'est pas généralisé, mais c'est ainsi que l'Aménokal des Tenguéréguifs, Chéboun, a plusieurs griots attachés à sa personne. Ils se vengent des gens qui ne sont pas assez généreux à leur égard en faisant contre eux des chansons satiriques auxquelles les Touaregs sont souvent sensibles.

Fig. 17. — Davier à extraire les dents et appareil utilisé pour les déchausser.

Tout leur est bon pour gagner un peu d'argent, qu'ils dépensent, d'ailleurs, aussi vite qu'ils le reçoivent. Un forgeron a toujours des dettes, mais on lui fait crédit parce que l'on sait qu'il sera toujours assez malin pour s'en acquitter un jour.

Il faut reconnaître que les Enaden ont souvent l'esprit très ouvert, sont doués d'une intelligence supérieure à la moyenne de la plupart des Touaregs, et c'est pourquoi ils ont parfois occupé des places de confiance auprès des principaux chefs qui les ont utilisés, comme émissaires ou comme interprètes, voire même comme conseillers.

C'est ainsi que lors de la mission Hourst, en 1896, Madidou, Aménokal des Ioullimmiden, délégua officiellement l'un d'eux à Gao, pour traiter avec l'officier français.

Les Enaden vivent, soit en campement groupé, soit par tentes isolées, ou même individuellement ; ils sont attachés à un chef ou à une tribu.

Étrangers à la race des Touaregs, ils rentrent malgré tout dans les composantes de la grande famille des voilés, car la vie

1: Lhote MS25 Tuareg

des uns et des autres est souvent confondue. Ils parlent le tămâhak et plus particulièrement, un dialecte spécial : *le tenet*, compris d'eux seuls et qui a un caractère un peu secret. Ce dialecte est inconnu dans l'Ăhaggar.

La légende leur attribue un ancêtre commun du nom de Tamamenet et toutes leurs fractions auraient vu le jour dans

FIG. 18. — Pendentif pectoral en argent porté par les femmes de l'Ahaggar. On retrouve dans la composition les motifs triangulaires communs à l'art kabyle et à certaines tribus berbères de l'Atlas.

l'Ădrar des Ifôras. Leur véritable origine est certainement des plus obscures ; on dit volontiers qu'ils sont les descendants des juifs installés jadis au Touat, dans l'oasis de Tamentit d'où ils furent chassés, à la fin du XV^e siècle par les marabouts arabes. Il est plausible qu'un certain nombre de juifs de Tamentit, en particulier ceux qui pratiquaient le métier de forgerons ou de bijoutiers, très en honneur chez eux, aient trouvé refuge chez les Touaregs. Peut-être ces derniers reçurent-ils, par leur intermédiaire, une influence artistique nouvelle. Leur con-

1: Lhote MS25 Tuareg

naissance du feu et du traitement des minerais a dû permettre, chez les Touaregs, l'introduction sur une plus grande échelle de l'industrie du fer ainsi que l'emploi d'instruments en métal qui, auparavant, ne devait certainement pas être très développé, les techniques des pasteurs nomades se limitant généralement au cuir et au bois. La parenté artistique des bijoux de Tamentit avec celle de l'orfèvrerie juive de l'Afrique du

FIG. 19. — Amulettes en argent, portées par les hommes sur le cimier de la coiffure.

Nord, d'une part, et celle actuellement en honneur chez les Touaregs d'autre part, n'est pas douteuse, et peut justifier l'opinion de l'origine israélite d'une partie des Enaden. Mais des éléments soudanais ont également contribué à la formation somatique du groupe, et c'est à travers ce mélange hétéroclite qu'il faut voir l'art touareg si particulier, à la fois lourd dans ses formes et délicat dans le détail.

Les Enaden de l'Ăhaggar sont peu nombreux. Ils comprennent cinq ou six familles récemment fixées dans le pays à la suite de razzia dont ils furent l'objet de la part des Ihăgga-

1: Lhote MS25 Tuareg

ren. La plupart sont originaires de l'Ădrar des Ifôras et étaient inféodés à la tribu Kounta, ou Dăg-Ech-Cheich. L'origine des familles les plus anciennement connues ne remonte pas à plus de deux générations. Ce sont celles d'Ehellellou, qui a laissé une descendance, de Badahol et de Mohamed, disparues aujourd'hui, et de Rati dont la descendance est actuellement fixée chez les Tăitok.

Fig. 20. — Cadenas touareg et sa clef. Cuivre damasquiné d'étain et fer.

Au temps de l'Aménokal Attici (1899), il y avait un chef des forgerons du nom d'Alamine dont le rôle était de surveiller et de répartir le travail, de mettre au pas les forgerons nouvellement capturés au Soudan et qui avait aussi un pouvoir judiciaire.

L'endogamie était auparavant la règle générale, mais depuis l'occupation, elle subit de nombreuses entorses, et les artisans prennent souvent femme parmi les Harratines et les Eklan.

Leur industrie est limitée à la fabrication de bijoux, de cadenas, de couteaux, de quelques ustensiles en bois et ils s'occupent surtout de réparer les objets détériorés.

1: Lhote MS25 Tuareg

Au Soudan, les Enaden sont beaucoup plus nombreux, et c'est pourquoi, on y trouve des industries beaucoup plus développées, d'autant plus qu'ils disposent de matières premières également plus variées et plus abondantes.

Les Enaden ne versent aucun impôt de vassalité. Socialement ils occupent une place intermédiaire entre les Imrad et les Iklan. Ils peuvent même, dans certains cas, posséder des captifs, et beaucoup disposent d'une aisance que ne connaissent pas les Imrad, ni même certains Imochar.

## CHAPITRE II

## CONFÉDÉRATION DE L'ĂHAGGAR

Les traditions orales des Touaregs du Nord prétendent que ceux-ci sont originaires de la ville d'Es-Souq, dans l'Ădrar des Ifôras, connue dans l'antiquité sous le nom de Tădemeka, et qui se trouve à égale distance de Tombouctou et d'In Salah.

On retrouve également cette tradition chez les Ioullimmiden et dans toutes les fractions campées actuellement en Ădrar et sur les bords du Niger, ce qui suppose, dans leur esprit, l'idée d'une origine commune.

Une autre légende, qui aurait pour origine des écrits arabes, fait remonter l'arrivée des Ihăggaren dans leur habitat actuel au XVI^e siècle. Auparavant ils auraient été fixés aux Ăjjer et au Fezzan.

Comme nous l'avons déjà rapporté, les nobles de l'Ăhaggar prétendent, d'autre part, être d'origine chérifienne, issus des Edrissides de Fez. Cette prétention ne peut trouver créance qu'à propos de quelques familles ayant contracté alliance avec des marabouts venus s'installer chez eux. La tradition rapporte, en effet, que des chérifs arabes vinrent se fixer chez les Touaregs après l'islamisation et y prirent une grande autorité. Profitant alors de l'anarchie qui régnait chez eux, entretenue par de constantes rivalités de clans, des chérifs s'emparèrent du pouvoir qu'ils surent conserver longtemps. Ces chérifs appartenaient à la famille des Imenân, les « Sultans », qui firent souche en épousant des femmes touarègues de haute naissance, constituant ainsi une nouvelle noblesse, et qui maintinrent longtemps leur autorité grâce à l'appui d'une importante tribu, celle des Imanrassâten, issue des Arabes de l'Est.

Les Sultans Imanan groupaient alors sous leur autorité les Touaregs de l'Ăhaggar et du Tassili-n-Ăjjer ; mais le caractère national, aiguisé par la vitalité des vieilles coutumes berbères, finit par se réveiller chez les Touaregs. A la suite d'exaction de la part des Imanan, plusieurs tribus se soulevèrent

1: Lhote MS25 Tuareg

dans un sursaut d'indépendance, et un noble Ăjjer du nom de Biska, de la fraction des Oûraren, tua de sa main le Sultan Imenân Goma. Ce fut l'origine d'une suite de guerres entre la tribu des Oûraren, qui se fit la championne de l'indépendance, et les Imanan et leurs alliés Imanrassâten, lutte dans laquelle les Oûraren, après des combats tantôt heureux, tantôt malheureux, finirent par triompher.

A la suite de ces événements, la suzeraineté des Imanan fut désormais détruite et les successeurs de Goma qui portaient toujours le titre d'Aménokal, essayèrent en vain, au cours de luttes interminables, de rétablir leur autorité.

Le Sultan Goma fut tué vers 1650, et c'est de cette époque que date l'indépendance des tribus de l'Ăhaggar, qui profitèrent de cet événement et de la lutte Oûraren-Imanrassâten pour s'affranchir du joug des Imenân.

Les nobles de l'Ăhaggar ne formaient, à l'origine, qu'une seule tribu, celle des Kel Ehan Mellen, divisée en quatorze fractions qui, suivant les nécessités du pâturage, essaimèrent et se détachèrent de la branche originale. Les Kel Ehan Mellen auraient habité primitivement au Tidikelt, d'où ils auraient été chassés par l'invasion arabe. Il ne reste d'eux, à l'heure actuelle, que les Tégéhé-n-as-Sakal, les Tégéhé-n-agg-Ali et les Kel Ehan Mellen-ouan-Taghert.

A un moment donné, l'une de ces tribus disparues, celle des Tégéhé-n-ou-Sidi, détint le pouvoir dans l'Ăhaggar, mais elle s'affaiblit progressivement par des mésalliances, au profit des tribus actuelles des Kel Réla, des Tăîtok et des Tégéhé-Mellet, qui, petit à petit, absorbèrent les autres fractions.

Parmi les Kel Réla, on retrouve aujourd'hui les derniers éléments des trois tribus citées issues des Kel Ehan-Mellen.

Kel Réla, Tăîtok, Tégéhé-Mellet, jouissaient chacun de leur côté de la plus complète indépendance mais, par suite d'héritages politiques, les Kel Réla devinrent les plus importants et les détenteurs du tobol.

Plus tard, vers 1755, profitant de la faiblesse de l'Aménokal Salah, dit Mokhamed el Khir, Tăîtok et Tégéhé-Mellet obtinrent une répartition des tribus imrad entre les trois groupes, tout en reconnaissant toujours l'autorité de l'Aménokal. Mais les Tăîtok insatisfaits de ces avantages pourtant considérables, auraient voulu s'emparer du tobol des Ihăggaren, ce qui déclencha une suite de luttes intestines avec leurs cousins Kel Réla.

Lorsque les Touaregs de l'Ăhaggar firent leur soumission à la France, les Tăïtok et les Tégéhé-Mellet furent organisés en tobol libre et leur chef porta le titre d'aménokal, tout en reconnaissant l'autorité de l'aménokal de l'Ăhaggar, Moussa ag Ămâstan qui venait d'être intronisé par les Français. Le chef des Tăïtok Aziouel et celui des Tégéhé-Mellet Ser'ir ag Bedda, acceptèrent cette vassalité sans la discuter, mais par la suite, ils soulevèrent des difficultés sans nombre. Cette politique, qui avait été instaurée pour renforcer l'autorité de Moussa ag Ămâstan, nous valut plusieurs déboires et, dès 1910, le Capitaine Niéger, Commandant l'Annexe du Tidikelt-Hoggar interpréta la dissidence des deux tribus imrad des Ăït Loaïen, et des Kel-i-n-Toûnîn, comme le début de complications graves.

On put mesurer sa clairvoyance au cours de la révolte de 1916-1918, et la mésentente entre Kel Réla et Tăïtok persiste encore aujourd'hui. Mais les Tăïtok et les Tégéhé-Mellet ayant participe à la révolte de 1916-1918, et leurs chefs n'ayant pas répondu à la confiance qui avait été mise en eux, furent replacés sous l'autorité directe de l'Aménokal de l'Ăhaggar avec le titre d'amrar.

## Tobol des Kel Rela

Le Tobol des Kel Rela est le plus important de l'Ăhaggar et son chef est en même temps l'Aménokal de la Confédération.

Il est formé par un certain nombre de familles nobles dont plusieurs sont réduites à une ou deux tentes. Ce sont les Inemba, les Iboglân, les Ikerremoïen, les Tégéhé-n-ăgg-Ali, les Tégéhé-n-as-Sakal, qui toutes ont droit au tobol, et les Kembiden, les Oulad el Goute, les Oulad Amechaoui, les Oulad Ibra qui à la suite de mésalliances n'ont plus droit au tobol.

La légende raconte que les nobles Kel Rela eurent pour ancêtre une femme du nom de Ti-n-Hînân, venue du Tafilalet avec sa servante Takamat. Ses gens portaient alors le nom de Kel Ehan Mellen — qui veut dire « gens des tentes blanches » — par opposition à une autre tribu, les Issetafenine, « gens des tentes noires », qui seraient les ancêtres des Ioullimmiden.

Plus tard, la fraction dominante fut celle des Tégéhé-n-

ou-Sidi, qui était celle de l'ancien Aménokal Sidi, et dont faisaient partie les Kel Rela, les Tăïtok, les Tégéhé-Mellet.

Une autre fraction se forma sur ces entrefaites, celle des Ikerremoïen. L'ancêtre de cette tribu, nommé Akerremoï, était d'origine Iguérissouten, de l'Aïr, et avait épousé une femme noble de l'Ăhaggar, fille de tobol, et dont le descendant le plus célèbre fut l'Aménokal Moussa ag Ămâstan.

Quant aux Iboglân, ils ont pour ancêtre le nommé Khatita, frère de Sakal, le chef des Tégéhé-n-as-Sakal, qui avait épousé une femme des Kel Réla.

Les Tégéhé-n-ăgg-Ali donnèrent naissance aux Inemba, et leur nom disparut avec les derniers hommes de cette vieille tribu.

D'après les légendes recueillies auprès des Touaregs de l'Ăhaggar, Ti-n-Hinân aurait eu sept filles dont trois eurent des enfants qui sont à l'origine des tribus actuelles. La première aurait engendré les Iboglân et les Inemba, la deuxième, les Ikerremoïen et les Kel Ehan Mellen, la troisième, les Kel Rela, les Tăïtok, les Tégéhé-Mellet.

Interprétons la légende en disant que c'est dans les différentes tribus citées que l'on retrouve les descendants des trois filles de Ti-n-Hinân.

D'après une autre légende répandue dans l'Ăhaggar et qu'a rapportée M. Benhazéra [1], Ti-n-Hinân aurait eu trois descendantes qui seraient les ancêtres des trois principales familles nobles de l'Ăhaggar, sans que l'on sache combien de générations les ont séparées. Ce sont :

Tinirt : l'antilope, qui serait l'ancêtre des Inemba ;

Tahenkat : la gazelle, qui serait celle des Kel Rela, et

Tamerouelt : la hase ou femelle du lièvre, qui serait celle des Iboglân.

C'est à Kella, descendante de Tahenkat, et mariée à Sidi ag Mohamed el Kheir que les Kel Rela (altération du mot Kella) doivent leur droit au tobol.

Les Kel Rela ont gardé avec précision le souvenir de la filiation de leurs aménokalen depuis Sidi ag Mohamed el Kheir jusqu'à l'Aménokal actuel. Auparavant les filiations étaient établies par les femmes, mais à part quelques-unes d'entre elles, leurs noms ont été oubliés. Cette démarcation très nette et qui date du XVII^e siècle indique une modification profonde

dans les règles successorales et une atténuation marquée du régime matriarcal absolu.

A l'Aménokal Sidi ag Mohamed el Kheir (1750 env.) ont succédé :

Younès ag Sidi (vers 1790) ;
Ag Mama ag Sidi (en 1830) ;
El Hadj Ahmed ag El Hadj el Bekri (1830-1877) ;
Ăitarel ag Mohamed Biska (1877 à 1900) ;
Ăttici ag Ămellal, nommé en même temps que
Mohamed ag Ourzig (1900-1905) ;
Moussa ag Ămâstan (1905-1920) ;
Ăkhamouk ag Yema (1920-1941) ;
Meslah ag Ămyas 1941-

Sidi ag Mohamed El Kheir ag Salah, marié à Kella, arrière-petite-fille de Tahenkat, elle-même fille de Ti-n-Hinân, ancêtre des Touaregs de l'Ăhaggar. Il eut neuf enfants, dont six filles, qui sont à l'origine de toutes les grandes familles actuelles au sein desquelles furent pris les aménokalen suivants ; il est le fondateur de la tribu des Tégéhé-n-ou-Sidi.

Il mourut vers 1790, après avoir, semble-t-il, cédé à toutes les demandes des Tăitok et des Tégéhé-Mellet, au sujet de la répartition des Imrad. Il eut à supporter une guerre contre les Tăitok, finit par les vaincre, et la paix fut signée. Ses deux fils épousèrent alors deux femmes des Tăitok.

Younes ag Sidi, succéda à son père. Il était l'aîné des enfants de Sidi ag Mohamed el Kheir. Il épousa une femme des Tăitok, de qui il eut un fils, Améchaoui qui, par le sang de sa mère, devint plus tard Amrar des Tăitok.

Ag Mama ag Sidi, était le frère de Younès ag Sidi et deuxième fils de Sidi ag Mohamed el Kheir. Comme son frère, il épousa une femme des Tăitok dont il eut un fils, Mohamed, qui devint plus tard, également, Amrar des Tăitok. Ag Mama mourut centenaire.

El Hadj Ahmed ag el Hadj Bekri, était le petit-fils de Sidi ag Mahomed el Kheir, par la fille de ce dernier, Zahra, qui s'était mariée avec El Hadj Bekri, de la tribu des Ifôras. Il était le neveu de l'aménokal précédent, étant fils aîné de la sœur aînée. Il eut à lutter contre les Tăitok dont l'un, Mohamed ag Mama, fils du précédent aménokal, aurait voulu lui succéder.

Sous son règne éclata une longue guerre avec les Ăjjer, alors que les Ihăggaren avait pris fait et cause pour les descendants du Sultan Imânen. Il fut tué au cours de cette lutte.

1: Lhote MS25 Tuareg

ĂITAREL AG MOHAMED BISKA, était le petit-fils de Sidi ag Mohamed el Kheir, par sa troisième fille Ăméněna, mariée à Mohamed Biska, de la tribu des Tégéhé-Mellet.

Par rapport à l'aménokal précédent, il était son cousin germain, fils aîné de la sœur de son père. Il eut une vie très mouvementée ; il dut lutter contre les Ăjjer sur lesquels il remporta une grande victoire à Edjmidhan, et fut en butte aux attaques des Tăitok. C'est sous son aménokalat que fut massacrée la mission Flatters, massacre dont il porte la plus grande responsabilité.

Il mourut en 1900, laissant une fille qui épousa Ămayas ag Khelbi, dont elle eut un fils, Meslah, aujourd'hui Aménokal de l'Ăhaggar.

ĂTTICI AG ĂMELLAL était le neveu du précédent Aménokal, comme fils aîné de sa deuxième sœur. Il fut nommé en même temps que son cousin MOHAMED AG OURZIG, fils aîné de la sœur aînée d'Ăitarel, à qui devait normalement revenir le tobol, mais qui, âgé et sans énergie, ne put affirmer ses droits. Ce fut une longue période d'anarchie dont les Imrad eurent à subir les conséquences, et qui prit fin avec l'occupation française et la nomination de Moussa ag Ămâstan.

MOUSSA AG ĂMASTAN, cousin d'Ăttici, arrière-petit-fils de Sidi Mohamed el Kheir par la dernière fille de ce dernier, Tar'aoussist et par sa grand-mère Tiguent, était né vers 1865, de mère Kel Rela, mais son père était des Ikerremoïen. Ce dernier, d'esprit très averti, aurait déconseillé le massacre de la mission Flatters, quoiqu'on ait assuré qu'il y eût participé.

Moussa était jeune lorsque son père mourut et il fut élevé par son oncle Ămdor. Ce dernier vivait avec les Ifôras de l'Ădrar et c'est là que Moussa fit la connaissance d'un marabout Kounta de grand renom qui avait établi son centre religieux à Teleya et qui devait avoir sur lui une grande influence,

Plus tard, il vécut toujours au Nord de l'Ădrar, ce qui lui permettait de faire des incursions chez les Ioullimmiden, les Ifôras, les Idnân, les Kounta, les Bérabiches qui, pour obtenir la tranquillité, finirent par lui payer une redevance. Mais Moussa ag Ămâstan ne razziait jamais les pauvres ni les faibles, et il s'en faisait, au contraire, le protecteur.

Les Tăitok ayant été razziés par les Kel Tădelé (de l'Aïr), ils accusèrent Moussa, et de ce jour data l'animosité qui régna toujours entre eux par la suite. Son frère ayant été tué par les Ioullimmiden, il organisa un rezzou composé de Kel Tădelé,

1: Lhote MS25 Tuareg

de Tăitok et d'Ifôras ; mais en route, les Tăitok pillèrent les troupeaux des Kel Tădelé ; Moussa, profondément indigné de cette conduite, n'hésita pas à se jeter sur les Tăitok pour les châtier et reprendre leurs prises. Les Ihăggaren s'indignèrent de ce geste et demandèrent à Moussa de rendre aux Tăitok les animaux razziés. Il refusa et se retira chez l'Aménokal des Ioulimmiden, Firhoun, où il s'employa à rétablir la paix entre ses hôtes et les Ihăggaren. Il en fit autant avec les Kel Aïr, ce qui permit aux Issekkemâren et aux Imrad de se rendre au Soudan pour leurs affaires, et contribua pour beaucoup à établir sa renommée.

Quittant les campements soudanais, il se rapprocha alors de l'Ăhaggar et suivit les événements de très près.

Ăïtarel l'avait, paraît-il, désigné pour lui succéder, mais il refusa devant l'anarchie qui régnait dans l'Ăhaggar, et ne fit aucune opposition à Ăttici, qui fut élu par le parti hostile à la paix avec les Français.

Les événements se précipitant, il s'entretint de la soumission des Ihăggaren avec le Caïd Bilou d'In Salah (1903) lequel était un de nos hommes de confiance. Puis il alla à Rhât, rendre visite au chef de cette région, In Gueddassen, pour l'inviter à venir à In Salah, avec lui. C'est alors qu'In Gueddassen ayant refusé, il se rendit directement à In Salah, pour discuter de la soumission des gens de l'Ăhaggar.

L'histoire de sa vie est ensuite toute celle de la pénétration française.

Moussa se maria tard et vécut jusqu'en 1910 en concubinage avec une captive dont il eut une fille. Il épousa alors la fille de Ibedi ag Bassi, Tihit, des Tăitok, qui lui donna une deuxième fille. Il partit ensuite pour la France sur l'invitation du Général Laperrine.

L'année suivante, en récompense des services rendus, il était fait Officier de la Légion d'Honneur.

Ses efforts, ainsi récompensés par les Français, Moussa ag Ămâstan vit le ralliement total de ses gens, mais il ne devait pas jouir longtemps de son triomphe et mourut assez mystérieusement en 1920 (30 décembre).

Maladif de nature, syphilitique, dit-on, et asthmatique, il fut pris un jour d'un malaise qu'il attribua aux suites d'une grave blessure à la poitrine reçue lors d'une chute de cheval. Il dut s'aliter et le sixième jour, il semblait aller mieux lorsque dans la nuit, il demanda à faire sa prière. Campé à cette

1: Lhote MS25 Tuareg

époque à proximité de Tămanrasset, il fit prévenir l'officier résidant, mais lorsque celui-ci arriva pour lui rendre visite, Moussa venait d'expirer, non sans avoir auparavant conseillé aux chefs présents de toujours suivre les Français.

Les membres de sa famille furent atterrés d'une mort si brusque, et un homme des Ăjjer, arrivé au campement depuis une dizaine de jours, fut accusé de l'avoir empoisonné. On lui fit prêter serment sur le Coran, mais il jura qu'il n'était pour rien dans la mort de Moussa, et il fut laissé libre.

Un marabout de la Zaouia de Teleya, Sidi Mohamed ben Badi, Mokhadem délégué du grand chef religieux des Kounta, Bey el Bekkay, était présent à la mort de Moussa. Il prétendit avoir été envoyé par Bey, à qui la mort de Moussa ag Ămâstan aurait été révélée dans un songe.

Cette assertion aida beaucoup à dissiper le doute dans les esprits, en même temps qu'elle augmentait la réputation de « saint » du marabout de Teleya.

Quelques jours après, la djemaa réunie nommait en remplacement Ăkhamouk ag Yéma et en prévenait les autorités par la lettre suivante :

« Du 30 Décembre 1920.

» Louange à Dieu l'Unique.

» De la part de votre ami Boukhelil ben Douka, à la Seigneurie de l'honorable Monsieur le Capitaine Depommier, Chef de l'annexe d'In Salah et du Ăhaggar. Que le salut soit sur vous.

» J'ai l'honneur de vous rendre compte que notre père, Moussa ag Ămâstan est mort, que Dieu le bénisse.

» Nous, Kébar Touaregs nobles, nous nous sommes réunis ainsi que les Kébar des Imrad, tous sans exception, nous avons accepté comme remplaçant de Moussa, Ăkhammouk ag Yéma. Sachez que du temps où Moussa était vivant, nous lui avons confié toutes les affaires pour lesquelles il était chargé près de l'autorité militaire française.

» Sachez qu'aujourd'hui nous ferons tous nos efforts possibles pour servir de bonne foi le Gouvernement français comme avant et même plus, et nous lui ferons (en bien) tout ce que nous pourrons faire. »

Ăkhamouk ag Yema était le cousin germain de Moussa ag Ămâstan, fils aîné de la tante maternelle de ce dernier. Par sa mère, il descendait des Inemba. Compagnon de jeunesse de

1: Lhote MS25 Tuareg

Moussa, il subit l'influence de son cousin et le suivit en tout. Beaucoup moins intelligent que lui, il n'en fut pas moins un chef fidèle et qui sut se faire respecter.

Il se maria deux fois et eut sept enfants.

Meslah ag Ămayas, est un cousin d'Ăkhamouk, mais au deuxième degré. Il est petit-fils de l'ancien aménokal Ăïtarel et il était le petit-cousin de Mohamed ag Ourzig et d'Ăttici ag Ămellal. Le tobol revenait ainsi dans la branche d'Ămennaï, 3e fils de Sidi ag Mohamed el Kheir, faute de descendants mâles dans la branche d'Héguier, répondant aux règles des successions matriarcales.

La sœur de Moussa ag Ămâstan, Rakhma, qui a épousé Ănaba ag Ămellal frère de l'Aménokal Ăttici a bien laissé un fils du nom de Louki, mais ce dernier a été écarté par les Imochar pour faiblesse d'esprit.

L'aménokal perçoit la *tioussé* sur les Imrad et vassaux assimilés. Certains d'entre eux versent également des droits de redevance aux descendants des vieilles familles nobles. C'est ainsi que les Dăg Râli versent une redevance annuelle aux Inemba Kel Tăhat et les Aït Loaïen, aux Inemba Kel Emori. Ces derniers perçoivent un pourcentage de 4 % des charges de grains rapportées du Soudan par les Aït Loaïen.

Mais ces droits de perception tendent à disparaître de plus en plus, avec l'extinction des vieilles familles de l'Ăhaggar dont certaines ne sont plus représentées que par quelques individus.

La tribu des Kel Rela s'est singulièrement renforcée depuis un siècle. Elle est toute puissante par le nombre de ses représentants et le matriarcat n'a pu qu'accentuer cette situation. En effet, les femmes des Kel Rela étant seules susceptibles de donner le jour à un aménokal, les jeunes gens des autres tribus nobles recherchent leur alliance, délaissant les femmes de leur propre tribu. Ce sang nouveau a donné aux Kel Rela une certaine vigueur physique en leur évitant de s'appauvrir par des alliances consanguines trop proches et trop répétées.

Depuis plus d'un siècle, la vie des Kel Rela a été faite d'une lutte constante contre les Tăïtok. Ces derniers, batailleurs et envieux, ne rêvaient que de s'emparer de l'aménokalat de l'Ăhaggar et l'histoire des Touaregs de ce pays n'est qu'une longue suite de guerres où les deux fractions furent alternati-

1: Lhote MS25 Tuareg

vement heureuses, mais où les Kel Rela gardèrent toujours l'avantage grâce à leur supériorité numérique. On trouvera le récit de ces événements dans le livre de M. Benhazéra [1].

Les Kel Rela comprenaient, au recensement de 1838, 312 personnes dont 38 hommes. En 1905, d'après Benhazéra, ils comptaient 55 à 60 tentes.

Le tobol des Kel Rela ne comprenait, à l'origine que deux tribus, les Dăg Râli et les Ăgouh-en-Tèhlé, ainsi qu'une grande partie des Issekkemâren. Depuis, d'autres fractions sont venues demander leur protection ou s'intégrer à eux. Tel est le cas des Ait-Loaïen et des Relaiddin.

Les imrad appellent les Kel Rela « les gens qui coûtent cher » faisant ainsi allusion aux redevances qu'ils sont obligés de leur verser.

Les Dag Rali. — Les Dăg Râli constituent la principale fraction du tobol des Kel Rela sur laquelle l'aménokal de l'Ăhaggar s'est toujours appuyé pour faire valoir ses droits, sans laquelle il ne serait et ne pourrait rien.

Ils formaient primitivement, avec les Kel Ăhnet, la tribu des Imessiliten, et ils seraient les descendants de Takamat, la servante de Ti-n-Hinân, l'ancêtre des Kel Rela. Ils sont issus de quatre sous-fractions : les Ikechchemâden, rattachés au tobol des Tăitok, les Imessiliten, les Oulad Ir'dal, les Dăg Mertemek.

Ils se subdivisent, à l'heure actuelle, en : 1° Kel Tăhat, 2° Kel Tarahananet, 3° Kel Tămanrâsset, 4° Kel Hirhâfok, 5° Kel Ărechchoum. Il faut ajouter aux Dăg Râli, quelques individus, aujourd'hui complètement assimilés à eux, descendants d'une tribu très ancienne, les Isebeten, qui seraient les autochtones de l'Ăhaggar et que les Dăg Râli auraient trouvés dans l'Ătakor lorsqu'ils vinrent s'y installer.

Après le combat de Tit, où ils perdirent plus de cent combattants, les Dăg Râli comptaient encore soixante guerriers. Le recensement de 1938 donne 1.090 personnes, dont 334 hommes, y compris les Iklan. Cette progression assez rare chez les Touaregs est le reflet de leur richesse et de l'amélioration de leurs conditions d'existence depuis l'occupation française.

Ils nomadisent dans la partie ouest de la Koudia, leur fief absolu, où aucune autre fraction n'est admise.

1. *Six mois chez les Touareg du Ahaggar*, p. 99 et suiv.

1: Lhote MS25 Tuareg

A l'est, les limites de leurs terrains de parcours sont fixés par la rive droite de l'oued Tămanrâsset, l'oued Interkadène jusqu'à Idelès, au sud, par la zone méridionale du Tahaïra jusqu'à Tin Dahar, à l'ouest par In Eker et au nord par la ligne In Eker, Hirhafok, Idelès.

Les Dăg Râli payent à l'Aménokal un tribut de dix sacs de dattes ou de sorgho ; en outre, chaque famille qui envoie une caravane au Soudan lui verse un petit sac de sorgho ; si les pâturages sont beaux, il est ajouté plusieurs « bottas » de beurre fondu et le lait de vingt brebis. En cas de razzia heureuse, ils versaient aux nobles la moitié des brebis.

Les Dăg Râli sont actuellement les gens les plus riches de l'Ăhaggar ; ils possèdent plus de 1.200 chèvres et plus de 1.000 chameaux. Ils peuvent faire, grâce à leurs bêtes de somme, de nombreuses caravanes très rémunératrices au Soudan et au Tidikelt. Ils possèdent en commun des troupeaux en deshérence qui portent le nom d'Edjeré-n-boutelma. Lorsque les pâturages sont insuffisants pour nourrir tout leur bétail, ils confient leurs chameaux aux Irréguénaten qui nomadisent sur la lisière saharo-soudanaise.

D'esprit très ouvert, ils ont favorisé la culture dans les centres de l'Ăhaggar et possèdent à l'heure actuelle des terrains à l'Ilâman, à Tarahananet, Tămanrâsset, Abălessa, Iglen, Tăfârit, I-n-Ămegel, Sîlet, qu'ils font cultiver par des nègres et l'Aménokal leur a octroyé un certain nombre de palmiers de l'oasis de Sîlet appartenant autrefois aux Tâïtok.

Les Dăg Râli sont les gens les plus pieux de l'Ăhaggar. Affiliés en majorité à l'ordre des Tidjanyia, quelques-uns ont cependant adhéré à la Sénoussyia et à l'ordre des Kadryia, mais ces affiliations semblent être de pure forme car, à quelques exceptions près, ils ne suivent pas les rites de ces ordres religieux.

C'est dans cette tribu que l'action du Père de Foucauld se fit particulièrement sentir. Par le fait de son installation à Tămanrasset et plus tard à son ermitage de l'Ăsekrem, le Père de Foucauld se trouvait en contact permanent avec les Dăg Râli qui, restant d'abord dans l'expectative à son égard, ne furent pas longs à venir à lui et furent les principaux bénéficiaires de ses bienfaits, car le Père allait à eux, soignant les malades et leur rendant de multiples services.

Leur chef, Ouksem ag Ourar, petit homme trapu, d'une intelligence ordinaire, mais très rusé, surtout lorsqu'il s'agissait d'intérêt matériel pour lui, voire même pour les siens, vit

PL. IX.

Jeune femme touarègue de classe noble se brossant les dents avec une tige d'irak. On aperçoit derrière elle la natte d'entourage de la tente appelée « asaber ».

Jeune ménage touareg assis à l'abri de l'asaber. Derrière, une taklit d'origine soudanaise, servante du ménage.

[p. 192 A]

PL. X.

Tente de l'Aménokal des Kel Ahaggar. Elle comprend 8 piquets intérieurs, et le vélum est fait de 60 peaux cousues ensemble. Les piquets isolés qui sont au premier plan servent, le soir, à maintenir l'*anaber*.

La tente est toujours montée par les femmes, en particulier par les servantes. Elles font des trous en terre pour y placer le piquet autour duquel elles tassent ensuite du sable. Le piquet en place, la peau y est attachée par une lanière

[p. 192 B]

1: Lhote MS25 Tuareg

le bénéfice qu'il pouvait tirer de ce rapprochement. Petit à petit, le Père s'efforça de le conquérir, de se l'attacher, et soutint ses intérêts auprès des autorités de Fort-Motylinski ; c'est ainsi que quelques mois plus tard Ouksem lui était tout acquis.

Ouksem prit auprès des autorités une certaine importance dont il était fier et qu'il savait devoir au Père de Foucauld.

Il fut par la suite un bon auxiliaire pour la pacification de l'Ăhaggar et, lors de la dissidence de 1915, il se montra très empressé à nous satisfaire, ce qui faisait écrire par le Père de Foucauld au Général Laperrine : « Ouksem chef des Dăg Râli, est bien entre tous ; il ne cesse de faire des progrès ; i est évident qu'il tient non seulement à être fidèle, mais à montrer sa fidélité d'une manière éclatante par son attitude. » Il ne faisait rien sans demander conseil au Père et suivit les conseils de ce dernier qui l'encourageait à créer un jardin à l'oued Ilâman, afin d'utiliser les eaux qui descendaient de la montagne. Ce jardin fut fondé, et pour flatter cet effort méritoire qui était un exemple, Ouksem reçut la médaille du Mérite agricole, fait unique, même encore à l'heure actuelle, dans les annales des Touaregs. Malheureusement, le Père de Foucauld disparu, le jardin fut abandonné.

Quoique cela se conçoive difficilement le Père de Foucauld avait même songé à Ouksem ag Ourar comme aménokal possible, ceci contre toutes les règles sociales touarègues.

Mais que reste-t-il de tout cela ? Les morts chez les Touatègs sont vite oubliés et si Ouksem rappelle de temps à autre que le marabout était son bon camarade, il est à présumer que pas plus lui que ses Dăg Râli n'ont compris le dévouement et l'affection qui devaient coûter la vie à l'ermite du Sahara.

Les Ikechchemâden, dont nous avons précédemment parlé, ont toujours vécu auprès des Dăg Râli avec lesquels ils ne formaient autrefois qu'une seule tribu. A la répartition des Imrad, ils devinrent les vassaux des Tăltok, mais demeurèrent avec les Dăg Râli, contractant avec eux de nombreuses unions au point qu'il est difficile de les différencier. Si bien qu'en 1907, ils demandèrent à être rattachés au tobol des Kel Rela.

Les Ăgouh-en-Tehlé. — Les Ăgouh-en-Tĕhlé constituent, après les Dăg Râli, la tribu imrad la plus importante de l'Ăhaggar. Ils auraient nomadisé auparavant dans les environs d'In

Gall en Aïr, et auraient émigré dans l'Ăhaggar à la suite des exactions du Sultan d'Agadez duquel ils dépendaient primitivement. Ce dernier, aux mœurs polygames, exigeait d'eux, chaque année, une jeune et jolie vierge. Las de cette coutume, contraire aux mœurs touarègues, ils quittèrent le pays et vinrent se placer sous la protection de l'Aménokal des Kel Rela, Younès, fils (?) de Kella (vers 1700). (La version recueillie par M. Benhazéra dit : fils de Mohamed el Kheir.)

Avant de venir demander protection aux Ihăggaren, ils appartenaient à la tribu des Tégéhé-n-Elimen, nom qu'on leur donne encore parfois. Une fraction de cette tribu est restée en Aïr et porte le nom de Ir'Alaman ou de Kel Rapsa. Ce seraient eux, en particulier, qui auraient fondé l'oasis de Rhât.

Ăgouh-en-Tĕhlé veut dire : gens du roseau. La légende rapporte qu'ils furent obligés de manger les racines de cette plante au cours de leur fuite de l'Aïr. Leur chef était alors un nommé Assékel ag Louka, homme de taille herculéenne, aux pieds si grands, dit la légende, que lorsque ses poursuivants en virent les empreintes, ils préférèrent abandonner la poursuite.

Les Ăgouh-en-Tĕhlé prétendent être originaires de La Mecque où leur lointain ancêtre reçut du Prophète une chamelle dont ils ne devaient boire que le lait. Mais ayant commis la faute de la tuer, ils durent s'enfuir et, après de longues marches, se fixèrent en Aïr.

Au moment du partage des Imrad (1750) ils faisaient partie des Issandaten. Les Ăgouh-en-Tĕhlé revinrent aux Kel Rela, et l'autre fraction, les Tégéhé-n-Ĕfis, aux Ţăîtok.

Leur terrain de parcours confine à celui des Dăg Râli. Il va de Tămanrasset à l'oued Ourchi, puis de la Koudia jusqu'à Afrahouhine et Tamaghine.

Ils paient un tribu à l'Aménokal, du même ordre de grandeur que celui des Dăg Râli, mais ils ne partageaient pas avec lui les chèvres et les moutons razziés.

Ils s'allient couramment avec les Dăg Râli et les Relaiddin.

Ils prirent part, contre nous, au combat de Tit où ils eurent une dizaine de tués. Pendant l'insurrection de 1916-1918, ils partirent en dissidence, et leurs femmes s'emparèrent même de trente méhara de Fort-Motylinski appartenant à la Compagnie méhariste. Par contre, ils ne prirent pas part directement à la révolte et furent les premiers à demander l'aman.

1: Lhote MS25 Tuareg

Totalisant 60 hommes en 1905, la tribu compterait, à l'heure actuelle, 150 personnes environ.

Les Ăgouh-en-Tĕhlé possèdent près d'un millier de chameaux qu'ils font paître sur les confins saharo-soudanais et 1.200 à 1.400 chèvres. Ils versent annuellement à l'Aménokal un tribut de 12 sacs de dattes, 6 pots de beurre et l'usufruit de 10 chèvres. La majorité des terrains de culture et des foggara de Tărhaouaout et de Tahifet leur appartient et ils ont des jardins à Ămsel, Tămanrasset, Talan-Tédit.

On leur attribue la fondation de Tămanrasset qui serait l'œuvre du chef de la fraction des Issenda (Issendaten), nommé Ilachen. Cette création remonterait à une soixantaine d'années, mais les terres irriguables seraient la propriété des Ăjjer. Ces dernières années, les Imanrassâten, qui seraient les véritables propriétaires des terrains cultivables de Tămanrasset, sont venus à plusieurs reprises réclamer le prix de location qui était d'un âne ou d'un mouton par an suivant les endroits. Mais ce droit n'était payable que si les propriétaires se présentaient, l'année non réclamée étant acquise pour le locataire.

Ils se trouvèrent souvent en conflit avec l'Aménokal à qui ils faisaient des difficultés pour payer la tioussé.

Ils se subdivisent en Kel Aguelella ou Kel Tărhaouhaout, en Kel Rapsa ou Kel Ezarounfat et en Issendaten ou Kel Tăhifet.

Les Aït Loaien. — Les Aït Loaien tiennent leur nom du verbe « élouai » qui veut dire : attacher les chameaux à la file indienne [1].

Ils seraient de même origine, par l'ancêtre Takamat, servante de Ti-n-Hinân, que les Dăg Râli et les Kel Ăhnet, et auraient été attribués, au moment du partage des Imrad, à parts égales aux Inemba et aux Tégéhé Mellet. Ils se subdivisent en Irayen (aujourd'hui éteints), en Kel Torha ou Dăg Houa et en Aït Loaien proprement dits.

Les Aït Loaien paient la *tioussé* à la famille des Téjéhé-n-ăgg-Ali, appelés aussi Kel Ahamellen (Kel Rela) et le groupe des Dăg Houa la verse aux Tégéhé Mellet.

Anciennement alliés aux Imekkérressen du groupe Ăjjer par de nombreux mariages, ils se séparèrent d'eux à la suite de discussions et du meurtre d'un des leurs, le targui Reskou

1. D'après Benhazéra, *Six mois chez les Touaregs du Ahaggar*, p. 148.

1: Lhote MS25 Tuareg

ag Yahia, renommé dans tout l'Ăhaggar. Depuis, les Imekkérressen se sont fixés aux Ăjjer.

Ils nomadisent vers Idelès, Tin Tarabine, Temasint, Aïtoklane, Ărokam, Serouanout et dans l'Ănahef.

Ils comptent actuellement 50 hommes et 102 femmes. Cette prédominance du nombre de femmes est assez rare dans les tribus touarègues.

Ils possèdent environ 350 chameaux et un millier de chèvres.

Les centres de culture d'Aïtoklane et de Tin-Tarabine sont leur propriété, mais ils sont laissés en friche depuis plusieurs années faute de main-d'œuvre.

Ils prirent part au massacre de la mission Flatters, et le guide Ser'ir ben Cheikh qui la conduisit dans le guet-apens de l'oued Ihéaouen, avait des alliances dans la tribu. Ils furent aussi à Tit, et partirent en dissidence dès décembre 1916. Ils portent la responsabilité entière de l'assassinat du Père de Foucauld et composaient la majorité du rezzi qui vint le tuer à Tămanrasset.

Plusieurs reconnaissances furent lancées contre eux (Sgt Remiot), ce qui ne les empêcha pas de donner l'hospitalité aux Ăjjer dissidents et de prendre part au combat d'In Eker avec les bandes révoltées du chef Abeuh ag Khabelli, l'un des plus grands pillards du Tassili.

Les Aït Loaien forment une tribu parfaitement indisciplinée qu'il faut constamment rappeler à l'ordre et qui est toujours prête à échapper au contrôle lorsqu'on lâche un peu la main.

Ils versent annuellement à l'Aménokal un tribut de six sacs de dattes.

Les Relaiddîn. — Les Relaiddîn seraient, comme les Ăgouh-en-Tĕhlé, auxquels ils sont apparentés, venus de l'Aïr. Ils campent près d'eux dans la partie nord-est de la Koudia et remontent vers T-i-n Tarabine et Aïtoklane.

Ils comptent une douzaine de tentes seulement, et une dizaine d'hommes valides. Ils paient la *tioussé* aux Iboglân.

Cette tribu, anciennement riche et forte, qui possédait près de 400 chameaux au moment de l'occupation française, n'en compte qu'une vingtaine à l'heure actuelle, et 300 chèvres contre 1.500. Ils doivent cet état de fait aux pertes qu'ils subirent pendant la révolte de 1916-1918 et qu'ils ne purent jamais compenser.

1: Lhote MS25 Tuareg

Ils possèdent bien quelques jardins à Tazerouk, Ti-n-Târabine, Aïtoklane et Sersouf, mais tous sont laissés en friche.

Pendant la révolte, ils partirent en dissidence avec les Ăgouh-en-Tĕhlé, mais ils demandèrent bientôt l'aman, car leur situation entre l'Ăhaggar et les Ăjjer les mettait toujours à la merci des rezzou de ces derniers.

Les Relaiddîn versent annuellement à l'Aménokal un tribut de deux charges de grains, un pot de beurre et une chèvre.

Aux Relaiddîn, il faut ajouter une petite fraction en voie de disparition, les Kel Bardjen, d'origine indéterminée. Comptant une dizaine de guerriers, ils sont reconnus comme des pillards invétérés, empiétant constamment sur les terrains de parcours d'autrui. Le Bardjen est situé entre Tazerouk, Imerera et Idelès. Le terrain de parcours des Kel Bardjen aurait été délimité vers 1750 et marqué par des monolithes dont quelques-uns portent des caractères tifinagh.

Les Ibettenaten. — Les Ibettenâten ne sont pas à proprement parler des « imrad ». D'après Benhazéra, cette tribu était auparavant noble. Ils auraient été asservis par les Kel Rela à la suite du meurtre d'un Amacher commis par l'un des leurs, et depuis ils paient la *tioussé* à l'Aménokal.

Les Ibettenâten seraient issus d'Ifôras Kel Ăfella du côté maternel et d'Arabes du Tidikelt du côté paternel.

Une trentaine de tentes nomadisent au Soudan vers Bou Djbiha mais ils remontent, suivant les pâturages, jusqu'à Taoudart et In Ouzal, dans l'Ădrar des Ifôras. Quinze autres tentes inféodées aux Kel Fadéï campent en Aïr.

Ils comptaient 160 personnes dont 62 hommes au recensement de 1938.

Ce sont des éleveurs intégraux, ne faisant que peu de caravanes et ne possédant aucun terrain de culture. Ils disposent de très beaux pâturages, sont propriétaires d'environ 800 chameaux, d'un millier de moutons et, chose assez rare, mais bien en rapport avec leur terrain de nomadisation, de près d'une centaine de bœufs.

Ils ne prirent pas part à la révolte de 1916-1918. Mais ayant quitté les environs de Kidal, malgré l'ordre qui leur avait été donné d'y rester, ils furent rejoints et razziés par la colonne du capitaine Depommier aux environs de Tamaïa.

Les Iklan-en-Taousit. — Les Iklân-en-Tăousit, appelés encore Kel Koas, seraient d'anciens serviteurs des Imenân ;

1: Lhote MS25 Tuareg

ils auraient constitué la garde du Sultan et relevaient encore de son commandement à la fin du siècle dernier.

Leur nom signifie « serviteur de la tribu ». On les dit de basse extraction et contrairement à tous les autres Touaregs, ils ne répugnent pas à travailler la terre. Ils contractèrent des alliances avec les gens de l'oasis de Djanet.

Ils se subdivisent en Iklân Settafen, et Iklân Mellen, et groupent environ 180 personnes, dont une soixantaine d'hommes.

Ils possèdent environ 250 chameaux et 400 chèvres qui nomadisent dans le bas Ăhaggar, dans le Tăhalra, la région de Silet-Ăbalessa, ainsi qu'au nord-est de l'Ădrar, vers Tin Zaouaten.

Très intéressés par la culture, ils sont propriétaires de jardins dans les centres de Tigeneouin, Ăbalessa, Tifert, ainsi que de la petite palmeraie de Tibeghin, à côté de Silet.

Pendant la révolte de 1916-1918, ils ne firent pas parler d'eux.

Aujourd'hui, ils fournissent une bonne partie de nos groupes méharistes.

Les Issekkemaren. — Les Issekkemâren, dont le nom est synonyme de « mélangés », seraient de pères arabes et de mères touarègues.

Ils se subdivisent en huit tribus qui sont :
les Iheiaouen Hâda,
les Kel In Rhar',
les Kel Tăfedest,
les Kel Immidir,
les Kel Tăzoûlet,
les Kel I-n-Toûnin,
les Kel Téroûrirt,
et les Kel Ouhet.

Ce ne sont pas des vassaux comme les Irréguénaten et les Ibettenâten, mais des agrégés.

D'après une tradition recueillie par le Dr Richer [1], les Issekkemâren seraient les descendants de la famille des Sagmara, signalée par El Bekri dans l'Ădrar des Ifôras et dans la région de Gao. Ils auraient été refoulés par l'invasion sonrhaï et seraient venus se réfugier chez les Touaregs du Nord alors qu'une petite fraction serait restée dans le sud, aux envi-

1. *Les Oulliminden*, p. 71.

1: Lhote MS25 Tuareg

rons de Tombouctou, et aurait à l'heure actuelle un caractère maraboutique.

S'ils sont plus islamisés que les autres tribus, ils n'en sont pas moins targuisés en ce sens qu'ils suivent les coutumes touarègues, et parlent le tàmâhak. Beaucoup d'entre eux, soit par leur origine, soit par leurs relations constantes avec le Tidikelt, parlent couramment l'arabe.

Lors du partage des Imrad, certaines tribus furent attribuées aux Kel Rela, d'autres aux Tăltok et aux Tégéhé-Mellet. Les tribus rattachées aux Kel Rela sont les Ihéiaouen Hâda, les Kel Immidir, les Kel Tăzoûlet, les Kel Tăfedest et les Kel In Rhar'.

Ce sont tous de grands caravaniers qui trafiquent beaucoup avec les marchés du Tidikelt. Ils sont possesseurs d'un grand nombre de chameaux et leur élevage est particulièrement renommé.

Les Iheiaouen Hada. — Les Ihéiaouen Hâda, appelés aussi Oulad Elias ou Ihéiaouen-n-Temounent, descendraient d'une femme arabe qui fut razziée au Touat. Le mot Iheiaouen signifiant en tàmâhak « les petits-fils de... » on doit conclure que les gens de cette tribu sont des descendants d'une femme nommé Ada.

Ils nomadisent dans le massif de la Tăfedest, vers Ădenek, Abezou, In Takoufi, Eguelougal et Tidessi. Pendant les périodes de sécheresse, ils conduisent leurs chameaux sur les confins saharo-soudanais, aux environs du puits de Tamaïa.

Ils se subdivisent en trois fractions : Oulad Elias, Oulad Asseroum et Oulad Fassi, groupant environ 120 personnes.

Ils possèdent une centaine de chameaux et 280 à 300 chèvres. Autrefois ils s'occupaient des petits centres de cultures de Sékaïa et de Tagemouṭ, dont ils sont les propriétaires, mais qui furent abandonnés par suite du manque d'eau et de main-d'œuvre. Très religieux, ils sont en majeure partie affiliés à la secte des Tidjanyia, quatre ou cinq d'entre eux ont adhéré au senoussisme. Fait assez rare, ils comptent deux pèlerins qui ont fait le voyage de La Mecque.

En 1904, ils furent complètement razziés par le Lieutenant Besset et se tinrent en dehors de la révolte de 1916-1918.

Les Kel In Rhar'. — Les Kel In Rhar' doivent vraisemblablement leur nom au village d'In Rhar', dans le Tidikelt, où ils ont dû séjourner avant de venir se fixer dans la Tăfedest.

Leur tradition orale rapporte qu'ils furent conquis par le Sultan Goma et attribués aux Kel Rela lors du partage des Imrad.

Au nombre de 150 personnes environ, ils campent sur le versant est de la Tăfedest, et nomadisent également dans la région de Méniet et dans l'Immidir.

Ils possédaient avant la guerre de 1914 près de 800 chameaux et 1.500 moutons et chèvres. Leur cheptel camelin est actuellement tombé à 200 têtes. Ils sont propriétaires de jardins à Mertoutek, petit centre qui leur appartient entièrement, à I-n-Ămegel, Déhine et Ăbézou.

Comme les Ihéiaouen Hâda, ils sont affiliés en majeure partie à la secte Tidjanyia.

Pendant la révolte de 1916-1918, ils refusèrent de se soulever contre nous, ce qui leur valut d'être razziés par les Touaregs Ăjjer.

Ils sont renommés comme de très grands chasseurs de moufflons.

Les Kel In Rhar' versent annuellement à l'Aménokal six sacs de dattes et un chamelon.

Les Kel Tafedest. — Les Kel Tăfedest ou Kel Tégatoufé (ou gens de la fourmi) se composent d'une petite fraction très pauvre comprenant une cinquantaine de personnes, dont 18 femmes.

Ils nomadisent vers la Garet ed Djenoun, l'Ăseksem, Ămegid, l'Ădrar Torha, et possèdent environ 300 chèvres et 30 chameaux. (Recensement de 1938, contre 600 chèvres et 200 chameaux en 1905.)

Ils sont propriétaires de quelques jardins dans la Tăfedest.

Assez religieux, ils sont affiliés à l'ordre des Tidjanyia.

Les Kel Tăfedest versent annuellement à l'Aménokal quatre charges de dattes et un chamelon.

Les Kel Immidir. — Les Kel Immidir, ou Kel Mouydir, sont encore appelés Ihéiaouen-n-Tin-Emma; ils sont de même origine que les Ihéiaouen Hâda et les Kel Tazoulé.

Ils se subdivisent en Kel Terahart et en Kel Raris, et groupent une cinquantaine de personnes. Ils nomadisent dans le massif de l'Immidir vers Joraf, Tagmout, et ont des terrains de parcours entre l'Ifetessen et In Eker.

Ce sont de pauvres gens qui possèdent une vingtaine de chameaux et 250 chèvres. Très commerçants et excellents caravaniers, ils s'emploient pour le compte de propriétaires de chameaux afin de subvenir à leurs besoins.

Aux Kel Immidir, il convient d'ajouter les Isselamaten, petite fraction comprenant une quinzaine de tentes, qui vit avec eux et nomadise vers Aneserfa, Ărak, Ahohor, Tagemout et Tiredjert.

Les Kel Tazoûlet. — Les Kel Tăzoûlet ou Dăg el Mesk, campent dans la région du Tăzoûlet et vers Tăzerouk. Ils comptent environ 225 personnes, possèdent 285 chameaux et plus de 2.000 chèvres. L'aridité de la région qu'ils habitent les oblige, lorsqu'il n'y a pas eu de pluies sur l'Ăhaggar, à se réfugier au Soudan.

Ils sont propriétaires de jardins à Bloumet, Iberbern Touakkine et à Tăzerouk.

En contact avec les Ait Loaien, ils suivirent ces derniers en dissidence et participèrent avec eux aux combats de Tit et de l'oued Ilâman.

Assez religieux, ils sont affiliés aux Tidjanyia et comptent quatre ou cinq des leurs ayant fait le pèlerinage de La Mecque.

Ils versent annuellement à l'Aménokal trois charges de dattes et trois chevreaux.

Les Irréguénaten. — Les Irréguénaten sont comme les Issekkemâren, des vassaux assimilés et d'un rang social supérieur à celui des imrad.

Ils seraient de mères touarègues, de la tribu des Ibettenâten, et de pères arabes, de la tribu des Kounta.

Ils sont divisés en deux groupes : 1° les Irréguénaten de l'Ădrar ou Irréguénaten Issettafénine, qui descendraient d'un chérif du Gourara nommé Abdelmoumen, et dont deux fils. Mouima et Inchelane, auraient été mariés à des femmes Ibettenâten ; 2° les Irréguénaten de l'Ăhaggar ou Irréguénaten Ihăggarénine, qui seraient issus des Dermachaka, tribu agrégée aux Kounta et d'Ibettenâten.

Tous nomadisent dans le Nord de l'Ădrar des Ifôras, le Timétrine, et poussent même jusqu'à l'erg Chech. Ils fréquentent également l'Ăhnet et le Tămasna.

C'est une tribu très riche qui se livre à l'élevage des chameaux. Les Irréguénaten posséderaient plus de 2.300 chameaux, 350 bœufs et plus de 2.350 chèvres et moutons.

En 1908, ils comptaient, d'après Benhazéra, 50 à 60 hommes. Le recensement de 1938 porte 358 personnes dont 100 combattants.

1: Lhote MS25 Tuareg

Ils paient la tioussé aux descendants des Inemba et aux descendants de Si Mohamed ag Othman.

Fréquentant les Kounta de l'Ădrar, ils restèrent en relations avec le marabout dissident Abidine, réfugié chez les Kel Ăhnet. Ils lui auraient même servi d'agents de renseignements, et les gens de l'Ădrar des Ifôras les tinrent longtemps pour suspects.

Leur élevage camelin est très renommé et leurs femmes sont très expertes aux travaux du cuir.

Il existe également des Irréguénaten dans la boucle du Niger, mais qui n'ont aucun lien de parenté avec ceux de l'Ăhaggar.

## Tobol des Taïtok

Les Tăitok sont avec les Kel Rela et les Tégéhé Mellet les nobles de haute souche de l'Ăhaggar.

Ils sont apparentés aux Kel Rela par la cousine de Kella, Sakina, qui fut mariée à Amer el Khadj, amrar des Tăitok.

D'après Duveyrier, une partie de cette tribu serait de même origine que les sultans Imenân, c'est-à-dire de descendance édrisside, et l'autre partie serait originaire des Kel Fadei, du pays d'Aïr où la souche existe encore [1].

Les Tăitok, capturés à Hassi Inifel en 1887, par les Chaamba Mouadi, ont rapporté au Capitaine Bissuel qu'ils repoussaient toute fraternité avec les Ihăggaren : « Nous sommes originaires du pays que nous habitons, nos pères y sont nés, nos aïeux aussi, et cela depuis que le monde existe ; nos ancêtres ne sont pas venus d'un pays étranger. A aucune époque nous n'avons été les frères des Hoggar ni des Ăjjer, ni d'aucune autre tribu [2]. » Cette version semble sans grande valeur, et le capitaine Bissuel la donne sous réserves en invoquant l'ignorance probable de ses informateurs.

D'esprit très indépendant, ils ne purent jamais subir sans regimber la prédominance, même nominale, des Kel Rela, et la suzeraineté de l'Aménokal de l'Ăhaggar. Après le partage des tribus imrad ils s'efforcèrent toujours de s'emparer de l'aménokalat, ce qui donna lieu à des luttes fratricides avec les Kel Rela. Ces luttes méritent d'autant plus le nom de fra-

1. *Les Touareg du Nord*, p. 322.
2. *Les Touareg de l'Ouest*, p. 18, Alger, 1888.

tricides que Kel Rela et Tăitok sont liés par de nombreux mariages et que tous sont plus ou moins cousins.

Les dissentions commencèrent au sujet des tribus imrad dépendant des Kel Rela, pillées sans vergogne par les Tăitok, ce qui nécessita l'intervention armée des suzerains. Les Tăitok, inférieurs en nombre aux Kel Rela, eurent le plus souvent le dessous, mais cela ne les empêcha jamais de recommencer quelque temps après.

Les choses en étaient encore là, à la fin du siècle dernier, lorsque l'Aménokal Ăltarel, homme très pacifique, réussit à faire suspendre les hostilités entre les deux tribus rivales.

Le chef des Tăitok d'alors, Sidi ag Kéradji, était par son père, le neveu d'Ăltarel ; il était par conséquent Kel Rela, tandis qu'il tenait de sa mère le droit au tobol des Tăitok. Ăltarel, en sa qualité d'oncle, s'efforça de le protéger aussi bien des Kel Rela que de certains éléments Tăitok à qui cette trêve ne convenait pas.

Sidi, sentant la situation lui échapper, renonça au tobol, croyant ainsi mettre son bien et sa personne en sécurité en cas de reprise des hostilités, et il se réfugia dans l'Ăhaggar, au milieu des Kel Rela.

Mais à la mort d'Ăltarel les rivalités se réveillèrent à nouveau, et les Kel Rela prièrent Sidi de quitter leurs campements. Où pouvait-il aller, alors que les Tăitok n'avaient que des ennemis ?

L'anarchie régnait partout et les Kel I-n-Toûnîn, imrad des Tăitok, en profitèrent pour s'affranchir ; ils se réclamèrent des Oûraren, tribu noble des Ăjjer. Sidi prit la résolution de se fixer chez eux, alors qu'un prétendant au tobol, Azioul, cherchait à s'emparer de ce dernier.

Azioul était le type du parfait Tăitok, du parfait pillard des sables, aux instincts cruels et sans retenue. « Homme de beaux coups de sabre, disait de lui dans un rapport un ancien chef de l'Annexe du Tidikelt-Hoggar, le Capitaine Métois, de toutes les sottises, et de plus, menteur, pillard et traître ». Ce fut lui qui négocia la soumission des Tăitok, tandis que Sidi ag Kéradji était maintenu comme aménokal.

Azioul, dirigé par ses goûts de pillard, mena en 1905 un gros rezzi dans le Hodh, mais il joua de malheur. Repoussés par les Bérabers après un dur combat, contraints de s'enfuir, la plupart des hommes, y compris Azioul, moururent de soif dans le désert.

1: Lhote MS25 Tuareg

A la suite de ce rezzi, Sidi ag Kéradji devenu vieux fut relevé de son commandement et remplacé par Amri ag Sidi Mohamed.

Les Tăitok avaient également subi un échec cuisant en 1887 au puits d'Inifel où les Chaamba Mouadhi avaient détruit un rezzi venu les attaquer. Ces échecs successifs réduisirent la tribu à une quarantaine d'hommes.

A l'heure actuelle, les Tăitok n'acceptent encore que de mauvaise grâce la suzeraineté de l'Aménokal, plutôt nominale qu'effective, sous laquelle on les a placés. Des altercations, souvent violentes, ont encore lieu entre eux et les Kel Rela. Ils se sont réfugiés au Soudan, dans la région de In Gall – In Abangarit, et tendent de plus en plus à vouloir passer sous le contrôle des autorités soudanaises pour ne plus avoir affaire avec les Kel Rela et l'Aménokal de l'Ăhaggar.

Pauvres, comme tous les imochar, les Tăitok vivent au détriment de leurs nombreux imrad. Autrefois, ils percevaient également une redevance sur les campements arabes nomadisant entre l'Ăhnet et Ăkabli, sur les Asoudji et les Ferguémoussen de l'Ădrar des Ifôras, les Tégéhé-n-Éfis et les Isoknâten de l'Aïr.

Ils groupent une trentaine de tentes et possèdent trois à quatre cents chameaux et un millier de chèvres.

Pendant la guerre de 1914-1918, Amri ag Sidi Mohamed qui, au début, nous avait donné toute satisfaction, fut un des premiers à partir en dissidence, entraîné par ses Imrad Kel I-n-Toûnîn, chez le chef de la révolte, Kaocen ; mais il faut dire à sa décharge qu'il ne prit pas les armes contre nos troupes. Il fut fait prisonnier devant Agadès par les troupes soudanaises.

A la suite de ces faits, il fut relevé de son commandement, et celui-ci fut remis à Mohamed ag Mohamed, l'amrar actuel.

Les Tăitok possédaient, par leurs Imrad, la palmeraie de Silet qui leur fut enlevée par le Général Laperrine pour les punir de leur dissidence, et donnée à Mousa ag Ămastân.

Chez les Tăitok, l'amrar est nommé suivant les règles matriarcales, et son élection doit être approuvée par les chefs des tribus imrad. Pourtant, il faut le signaler, depuis l'amrar Salah les chefs se sont succédés à plusieurs reprises de père en fils.

Les Tăitok donnent quelquefois le nom de Ar'rerf Ăhnet à

leur groupement, du nom de la région où ils nomadisaient la plupart du temps ainsi que leurs Imrad [1].

Les Tăitok vivent en très bonne intelligence avec leurs vassaux, et ces derniers, fiers de se dire Tăitok, épousent toutes les rivalités de leurs seigneurs. Des mariages entre castes différentes ne sont pas rares, et beaucoup de nobles ont épousé des femmes imrad, ce qui entraîne pour leurs enfants la perte des droits politiques au tobol. Mais l'extension de plus en plus accusée de cette coutume, apportera obligatoirement des modifications dans le droit coutumier de filiation, ou le patriarcat finira par remplacer le matriarcat.

Les Imrad versent une *tioussé* globale qui est répartie entre les différents imochar; il n'existe plus de droit individuel comme on le trouve encore chez les Kel Rela et les Tégéhé Mellet.

Pillards entre tous, les Tăitok avaient su se réserver des alliances un peu partout en dehors de leur pays, dans les régions qu'ils avaient à traverser pour aller exercer leur rapines : alliances militaires ou alliances de protection. C'est ainsi que pour ne pas être pillés, les Sékakna, les Mazil, tribus arabes des environs d'Ăkabli, qui nomadisaient parfois dans l'Ădrar Ăhnet, leur payaient une légère redevance. Ils étaient alliés des Fergoumoussen, tribu imochar de l'Ădrar, aux Tarat Mellet, aux Kel Boujbiha, aux Kel Araouan, aux Tadjakant, aux Arib, aux Kel Taoudeni. Ces alliances donnent un aperçu de la portée des rezzou des Tăitok.

Le tobol des Tăitok comprend : les Irechchoûmen, petite tribu noble, mais ayant perdu ses droits au tobol par suite de mésalliances, les Kel Ăhnet, les Tégéhé-n-Ĕfis, les Kel I-n-Toûnin, les Iouarouaren, les Ikouttissen et les Ikechchemâden.

Les Irechchoûmen. — Les Irechchoûmen, appelés également Iradjenaten (sang mêlé), campent ordinairement dans l'Ăhnet et remontent jusqu'à Aoulef. Le chef de famille était Ibédi ag Bassi, qui avait épousé une fille des Oulad Zenan (Arabes d'Aoulef) et avait eu pour gendres Azioueł et Tacha ag Serada, des Tăitok, morts en rezzou [2].

Ils sont alliés avec les Tăitok par de nombreux mariages, ainsi qu'avec les Imrad Kel Ăhnet. Ils se marient aussi avec

1. Ar'rerf correspond ici à tobol. D'après Nicolas, ouv. cit. Agref, suivant son orthographe, veut dire petite fraction.
2. La veuve d'Azioueł épousa en 1910 Moussa ag Amastân, Aménokal de l'Ahaggar.

1: Lhote MS25 Tuareg

des femmes arabes du Touat, et ces multiples mésalliances leur ont fait perdre le droit au tobol.

D'après une tradition rapportée par Duveyrier, les Irechchoûmen seraient originaires d'Es Souq. Une partie de la tribu descendrait des Edrissiens et une autre aurait pour pères des Ikadeien.

Ils ne comprennent, à l'heure actuelle, qu'une dizaine de tentes, groupant une soixantaine de personnes.

Les Kel Ăhnet. — Les Kel Ăhnet sont de même origine que les Dăg Râli avec lesquels ils formaient auparavant la fraction des Imessiliten. Cette scission s'est faite sous l'aménokalat de Sidi ag Mohamed el Kheir, au moment du partage des Imrad entre les différentes tribus nobles, et les Kel Ăhnet furent attribués aux Tăitok.

Ils avaient été parmi les premiers à venir faire leur soumission et leur chef, Badjeloud ag Maklia, était venu à In Salah dès 1902.

Retirés aux Tăitok et rendus libres, ils furent remis sous leur commandement en 1909.

Ils nomadisent depuis Silet jusqu'à Reggan et Aoulef. Leur terrain de parcours englobe tout l'Ădrar Ăhnet, l'Ăseg'rad et une partie de l'Immidir. Les limites qui les séparèrent des Issekkemâren sont au nord-est, Tin Tir'atimine, Tagemout (aux Kel Immidir) ; l'oued Arak jusqu'à Amsir, Méniet (aux Kel Immidir) à l'est, par le puits d'In Rabir ; au sud, ils disposent de toute la partie montagneuse, y compris In Ziza et Nahalet, c'est-à-dire toute la région qui confine au Tanezrouft et est limitée à l'est par Ou[illegible]ien, le dernier point d'eau avant le Tanezrouft ; au nord, par l'oued Ăsouf Mellen.

Dans les années de sécheresse ils descendent jusqu'au Soudan dans la région d'In Abangarit – In Gall, Tamaïa, campent près des Tăitok dans l'Ădrar Tazerzaït où ils échappent au contrôle des autorités algériennes et soudanaises.

Anciennement, ils exploitaient une sebkha dans l'oued In Méraguen.

En 1905, ils groupaient 35 à 40 tentes. Au recensement de 1938, ils ne comptaient plus que 58 personnes dont 21 hommes.

Assez batailleurs, ils accompagnaient toujours les Tăitok dans leurs expéditions et partageaient le butin avec eux à parts égales.

Pendant la Grande Guerre, ils restèrent dans l'Ăhnet et

ne prirent qu'individuellement part à la révolte en ravitaillant les rebelles de gré ou de force. Ce n'est qu'à la fin de 1917, sous l'influence d'éléments Ăjjer, qu'ils partirent en dissidence et allèrent piller en Ădrar et à Ăkabli.

Assez peu religieux, ils suivent le rite malékite, et quelques-uns sont affiliés à l'ordre des Tidjanyia. Ils professent un grand respect pour les marabouts et en reçoivent volontiers dans leurs campements. C'est chez eux qu'au début de la conquête s'était réfugié l'agitateur Abidine, des Kounta de Tombouctou, qui avait longtemps mené la lutte contre nous dans cette dernière région.

Ajoutons que les Kel Ăhnet prétendent être d'origine Béraber par Takamat, la servante de Ti-n-Hinân. Mais les Tăitok disent que l'on ne sait pas d'où ils sortent, sinon qu'ils devaient habiter l'Ăhaggar bien avant l'arrivée de Ti-n-Hinân.

Les Tégéhé-n-Efis. — Les Tégéhé-n-Ĕfis sont de même origine que les Tégéhé-n-Elimen.

Ils nomadisaient auparavant en Aïr et durent quitter ce pays à la suite du meurtre du Sultan qui voulait les obliger à payer un impôt trop lourd. Efis était leur chef et c'est lui qui les décida à partir. Les descendants de ces familles portèrent désormais son nom.

Ils ne formaient avec les Ăgouh-en-Tĕhlé qu'une seule tribu. Ce serait sous l'aménokalat de Mohamed el Kheir que les Tégéhé-n-Elimen vinrent demander protection aux Ihăggaren — certains disent de Younès, petit-fils du précédent.

Au cours de la guerre qui mit aux prises Kel Rela et Tăitok, les Tégéhé-n-Ĕfis se réfugièrent sur les confins de l'Aïr. Par la suite, ils rentrèrent en grande partie, mais une dizaine de tentes restèrent au Soudan.

En 1905, ils comptaient une trentaine de tentes ; au recensement de 1938, ils comptaient 164 personnes dont 51 hommes. Ils possèdent 80 chameaux et 250 chèvres. Ils sont propriétaires de terrains de culture à Tigeneouin, Amsel, Ăbalessa, Tahart. Ils font également cultiver, à Tămanrasset, des jardins qui appartiendraient de vieille date aux Imekkerresen, tribu imrad du Tassili des Ăjjer. A ce titre, ils devraient payer à ces derniers une redevance, mais elle n'est jamais réclamée.

Ils nomadisent dans le Tahalra (sud-ouest de la Koudia) et se déplacent sur le parallèle Amsel, Tigeneouin, Tâmaïa. La ligne de démarcation qui sépare leur terrain de parcours de

1: Lhote MS25 Tuareg

celui des Ăgouh-en-Tăhlé est formée par l'oued Tămanrasset.

Attribués aux Tăitok lors du partage des Imrad, ils ont suivi leurs suzerains dans toutes leurs affaires.

Les Kel I-n-Toûnin. — Les Kel I-n-Toûnin sont des Issekkemâren. Ils auraient été attribués aux Tăitok sous l'aménokalat de Sidi (1755) lors du fractionnement du tobol des Kel Rela, alors que les Kel Ouhet et les Kel Téroûrirt étaient donnés aux Tegéhé Mellet.

Les Kel I-n-Toûnin doivent leur nom à l'oued auprès duquel ils nomadisent ordinairement, dans le massif de la Tăfedest. A la fin du siècle dernier, ils profitèrent des dissensions qui existaient entre Tăitok et Kel Rela ainsi que des disputes intestines des Tăitok pour s'affranchir de ces derniers, passer aux Ăjjer, se réclamer d'eux, mais ils ne leur paient pas d'impôts.

Après leur soumission aux Français, les Tăitok les réclamèrent et le Général Laperrine acquiesça à leur demande.

Ils prirent une grande part à la rébellion de 1916 et furent les premiers à partir en dissidence, car ils étaient sous l'influence directe des Ăjjer.

Réfugiés primitivement au Fezzan, ils s'employèrent à nous combattre en lançant des rezzou contre les fractions soumises à notre influence. Plus tard, ils participèrent au combat d'Aïn el Hadjadj. Passant ensuite au Soudan, ils réussirent à entraîner un certain nombre de Tăitok parmi lesquels leur chef, Amri, malgré les efforts que fit Moussa ag Ămastân pour les retenir.

Ils comptent une vingtaine de tentes qui campent dans le nord du massif de la Tăfedest et remontent jusqu'à l'Ădrar Ifetessen sur les contreforts de l'Immidir.

Ils sont alliés aux Tégéhé Mellet par des mariages récents.

Renommés comme bons éleveurs, ils possèdent une centaine de chameaux et 300 chèvres. Ce sont également de bons caravaniers qui trafiquent entre les marchés d'In Salah, Rhât et Rhâdamès.

Ils font cultiver quelques jardins à Idelès et dans les centres de culture du Tassili.

Les Iouarouaren. — Les Iouarouaren forment une petite tribu d'une quinzaine de tentes qui nomadise avec les Kel Ăhnet dans l'Ădrar.

D'après les uns, ils seraient originaires de l'Aïr, des Ăjjer suivant les autres.

L'intérieur d'une tente. Les bagages sont suspendus aux montants. Les enfants en bas âge jouent sur le sol où a été placée une épaisse couche de sable fin.

Les femmes des Kel Ahaggar, en particulier celles des Imrads, voyagent souvent à âne. L'une d'elles vient de rencontrer deux ânes avec lesquelles elle échange des nouvelles des méharistes partis au loin.

[p. 208 A]

PL. XII.

La chasse à courre avec chien est commune chez les Touaregs qui emploient à cet effet des slougis rappelant le lévrier arabe. Leurs éklan sont souvent des chasseurs réputés. On voit sur cette photographie l'un d'eux tenant un couple de chiens en laisse et s'apprêtant à aller pister des moufflons.

En dehors de la chasse à courre avec chien, les Touaregs pratiquent le piégeage. On voit ici la pose d'un piège à pointes radiaires et l'arrimage du lasso sur une grosse branche d'arbre enfoncée dans le sol et dissimulée par une couche de sable.

Tableau des marques de propriété appliquées aux chameaux dans les différentes tribus de l'Ahaggar.

1: Lhote MS25 Tuareg

Une femme des Ăjjer (ou des Ifôras) ayant été faite prisonnière par les gens de l'Aïr, ce serait, d'après Sidi ag Kéradji, Ămastân ag Ourzig, oncle maternel de Sidi, qui aurait payé sa rançon et l'aurait mariée à un Kel Ăhnet, et c'est de cette union que seraient issus les Iouarouaren [1].

Ils campent souvent près des Dăg Râli et les unions entre ces deux tribus ne sont pas rares.

Pendant la révolte de 1916-1918, ils suivirent les Tăitok dans leurs pérégrinations.

Ils étaient les propriétaires de la petite palmeraie de Tibéghîn, près de Silet, mais elle leur fut enlevée après ces événements pour être remise à Moussa ag Ămastân. Ils possèdent une cinquantaine de chameaux et une centaine de chèvres. La *tioussé* payée à l'amrar des Tăitok se composait d'un sac de dattesou de sorgho, un pot de 10 kg. de beurre, la moitié du butin en cas de razzia heureuse.

Les Ikechchemaden. — Les Ikechchemâden vivent mélangés avec les Dăg Râli et sont souvent compris parmi ces derniers quoiqu'ils appartiennent au tobol des Tăitok.

Leur nom signifie « les très laids », du tàmâhak *akechchemdh* qui désigne un homme laid et mal vêtu.

En 1907, ils demandèrent à être mis sous les ordres de Moussa ag Ămastân.

C'est une petite tribu qui ne comprend pas plus d'une quinzaine d'hommes.

Ils possédaient en partie l'oasis de Silet qui leur fut retirée en 1916, mais leur accointance avec les Dăg Râli fait qu'ils ont toujours l'usufruit de leurs palmiers.

On n'a aucune donnée précise sur leur origine, et il est probable qu'ils s'intégreront rapidement aux Dăg Râli.

Les Ikouttisen. — Les Ikouttisen nomadisent vers le Tassili des Ăjjer et comptent encore 70 hommes. Ils tiendraient leur nom d'une de leurs aïeules, nommée Takottis.

D'après un renseignement de Benhazéra les gens de cette tribu ne vont jamais en rezzi. Il n'en précise pas les raisons qui sont peut-être d'ordre religieux.

Les Ikadeien. — Les Ikadeïen forment une petite tribu d'une quinzaine de tentes qui campent vers Tit et Tigeneouin.

1. Benhazéra, *Six mois chez les Touareg du Ahaggar*, p. 177.

1: Lhote MS25 Tuareg

Originaires d'Es Souq, dans l'Ădrar des Ifôras, ils sont mélangés avec les Ahl Azzi, d'In Salah.

Sans être à proprement parler imrad des Tăitok, les Ikadelen peuvent être considérés comme des satellites de ce tobol.

### Tobol des Tégéhé-Mellet

Les Tégéhé-Mellet forment le troisième tobol de l'Ăhaggar, le moins important des trois.

Suivant une tradition orale, ils seraient les descendants de Ti-n-Hinân, par sa fille Tahenkat. De filiation plus récente, ils seraient issus des Tégéhé-n-ou-Sidi. Mais d'après une autre tradition, ils seraient d'origine Chaamba, de la tribu de Oulad Messaoud. Plus exactement, il faut penser que certains hommes des Oulad Messaoud vinrent se fixer chez eux et y fondèrent des foyers, ce qui leur fait contester, par certains, leur pure origine imochar. D'autre part, ils ont épousé des femmes des Kel-I-n-Toûnin alors que des femmes Tégéhé Mellet auraient épousé des Issekkemâren.

Ils obtinrent leur indépendance en même temps que les Tăitok sous l'aménokalat de Sidi Mohamed, avec l'attribution d'un certain nombre de tribus vassales. Mais depuis, ils n'ont joué qu'un rôle très effacé dans l'histoire de l'Ăhaggar et les Tégéhé Mellet sont en voie de disparition.

D'après Duveyrier, ils avaient la réputation d'apporter un esprit de conciliation dans les rapports souvent tendus entre les Ihăggaren et les Touaregs Ăjjer. La position géographique qu'ils occupaient entre les deux groupes adverses les désignait tout naturellement pour ce rôle.

Ils étaient auparavant tobol libre, et ce n'est qu'avec l'occupation française qu'ils furent placés sous la tutelle de Moussa ag Ămastân.

Ser'ir ag Bedda, leur amrar, protesta longtemps, et n'a cessé de réclamer son indépendance. En relation avec cet état d'esprit, beaucoup de Tégéhé Mellet partirent en dissidence avec les Imrad Kel-I-n-Toûnin plutôt que d'accepter la suprématie de Moussa ag Ămastân et des Kel Rela. Ils maintinrent longtemps l'agitation, encouragés par l'ancien aménokal, Attici ag Ămellal, et furent une des causes de nos embarras avec les Ăjjer.

C'est actuellement une petite tribu comprenant une quinzaine de tentes, nomadisant vers Ămegid, l'Ounane, l'Eguéré et

Tiramar. Sa force est faite surtout de ses vassaux, entre tous, très turbulents. Ils auraient participé au massacre de la mission Flatters, et Attici et Ănaba ag Ămellal, qui furent les meneurs du drame, appartenaient à cette fraction.

Les Tégéhé-Mellet n'ont pas d'Imrad proprement dits, mais plusieurs fractions Issekkemâren leur sont inféodées.

Les Kel Terourirt. — Les Kel Térourirt sont des Issekkemâren, et nomadisent au nord-est de l'Ăhaggar, vers Tiramar, Tahihaout, Ounane, l'Eguéré et la Garet ed Djenoun.

Ils comprennent actuellement 25 tentes.

Lors des événements de 1916, ils partirent en dissidence suivant les Kel Ouhet et les Kel I-n-Toûnîn.

Ils paient à l'amrar des Tégéhé Mellet une *tioussé* qui se monte annuellement à quatre sacs de dattes et quatre chèvres.

Les Kel Ouhet. — Comme les Kel Térourirt, les Kel Ouhet sont des Issekkemâren. Ils se subdivisent en plusieurs petites fractions : les Kel Raris, les Dăg-Khamaya, les Dăg Iknân, et groupent en tout une quarantaine de tentes (51 personnes au recensement de 1938, dont 23 hommes).

Ils campent dans la partie nord du massif de la Tăfedest et remontent jusqu'à Amegid et dans la vallée de l'Igharghar.

Ils possèdent de nombreux chameaux et fréquentent les marchés du Tidikelt et de Rhât.

Un certain nombre d'entre eux ont quitté l'Ăhaggar et vivent maintenant aux Ăjjer.

Les Kel Torha. — Les Kel Torha ou Dăg Houa sont des Aït Loaien et forment une petite fraction en voie de disparition. Quoique vivant avec les Aït Loaien qui appartiennent au tobol des Kel Rela, ils versent aux Tégéhé-Mellet la *tioussé* qui se monte annuellement à un mézoued de dattes.

On remarquera qu'il n'y a pas de tribus maraboutiques dans les différents tobols de l'Ăhaggar. Les Ifôras qui nomadisent dans la région de Témaçinine (Fort-Flatters) sont complètement indépendants. Ils entretiennent avec les Ihăggaren et les Kel Ăjjer des relations amicales, mais celles-ci sont très espacées et n'ont aucun caractère politique ou religieux. Ils n'envoient aucun chapelain chez les Ihăggaren. Leur chef s'est fixé à la petite zaouïa de Témaçinine auprès de laquelle sont enterrés tous ses ancêtres, et où il jouit d'une grande

1: Lhote MS25 Tuareg

notoriété. Tous les Touaregs, Ihăggaren ou Ăjjer, qui passent à proximité de ce point, ne manquent jamais de s'y arrêter, de rendre visite au Cheikh, et d'aller prier sur la tombe de Si Othman, saint réputé de cette lignée maraboutique.

Cette zaouia est affiliée à la confrérie des Tidjanyia.

Il existe plusieurs marabouts qui vivent au milieu des campements Ihăggaren, mais tous sont d'origine arabe, aucun d'eux n'est Ifôras.

Les Ifôras dépendent administrativement de l'annexe des Ăjjer et politiquement, ils font beaucoup plus partie des Kel Ăjjer que des Ihăggaren.

Ils se subdivisent en trois fractions :

Les Ifôras-oui-n-Oukkiren,

Les Ifôras-oui-n-Egdad,

Les Ifôras-oui-n-Ettebel.

Les deux premières, qui sont de descendance chérifienne, avaient coutume d'épouser la cause des Oûraren, alors que les troisièmes étaient attachées aux sultans Imenân.

Duveyrier a dit que les Ifôras-oui-n-Ettebel avaient été pourvus de tambours et continuaient à constituer la cour et le corps de musique des sultans déchus, et il conclut en disant que leur rôle se borne à faire du bruit [1]. Or les Ifôras-oui-n-Ettebel n'ont jamais été musiciens, mais leur nom, qui peut prêter à confusion, signifie « ceux qui sont attachés à l'Amenokal », comme Iklân-en-Tăousit (de l'Ăhaggar) veut dire « serviteur de la tribu » ou de « l'ensemble des tribus formant le tobol » et par extension « serviteur du tobol ».

A l'heure actuelle, ces trois fractions comptent environ 150 personnes.

Nous ne les signalons ici que pour mémoire.

1. *Les Touareg du Nord*, p. 361.

# LIVRE V
# LA VIE MATÉRIELLE

## CHAPITRE PREMIER

## LES CONDITIONS DE VIE CHEZ LES TOUAREGS DE L'ĂHAGGAR

L'Ăhaggar, nous l'avons déjà dit, est une montagne refuge. On ne sait pourquoi les Touaregs ont continué à l'habiter alors qu'ils auraient pu trouver au sud des pays bien meilleurs, où ils auraient eu une vie beaucoup plus facile. Peut-être faut-il voir là les signes d'un attachement au pays ou, tout simplement, un état de fait ancien qui les a obligés à se réfugier au milieu des cailloux contre leur volonté.

Un examen, qui n'a pas besoin d'être bien approfondi, laisse voir que l'Ăhaggar est un pays très pauvre, aux ressources infimes, qui imposent un standard de vie au-dessous de la moyenne. Les réserves en pâturage sont calculées, celles en eau également, le sous-sol ne possède rien, ou presque, qui soit marchandable, à part un peu de sel. Les possibilités de vie y sont par conséquent fort limitées ; il faut donc que pour vivre les habitants aient recours aux ressources de l'extérieur.

Les Touaregs sont des éleveurs. Il ne semble pas qu'ils aient jamais connu un autre stade de civilisation sinon la chasse qui est le prélude de l'élevage. Mais même en utilisant judicieusement les pâturages, ils ne peuvent posséder un grand nombre d'animaux domestiques et, en fin de compte, l'élevage passe au second plan dans leurs moyens d'existence. Le pays ne pouvant les nourrir, il a fallu chercher ailleurs ce qui leur manquait, et ils ont demandé le surplus à leur sabre.

Les éternels affamés que sont les Touaregs sont, comme la plupart des éleveurs, des guerriers nés, parce que de tous temps ils ont dû disputer les terres riches aux sédentaires. La vie libre les a rendus indépendants, anarchistes, et le bien

1: Lhote MS25 Tuareg

d'autrui ne leur a inspiré aucun respect, mais un sentiment d'envie qu'aucune règle morale n'a pu réfréner. Le pillage a donc été élevé à l'état d'institution et les Touaregs sont devenus des maîtres en la matière.

Les rezzou, maintenant un état de guerre continuel avec leurs voisins, peuvent être considérés comme le principal fait social des Touaregs. Et c'est alors que l'on voit le rôle important que jouent les montagnes de l'Ăhaggar ; elles sont non seulement un refuge de vie, mais un refuge pour brigands qui désirent se mettre à l'abri des investigations possibles de leurs victimes.

Le rezzi, c'est le pillage organisé, voire même ordonnancé. Il est une institution qui a ses règles, que les antagonistes respectent. Sa forme la plus simple est la prise des troupeaux du voisin ; le coup fait, on s'arrange avec lui, on transige en lui rendant un certain nombre de bêtes pour qu'il puisse subsister, et en gardant par devers soi ce qui est jugé être l'excédent. La forme compliquée, c'est lorsque l'assailli se défend ou tente de reprendre son bien. Cela peut entraîner des batailles rangées, et par conséquent, mort d'hommes ; dès lors, c'est la guerre fratricide qui exige du sang et qui crée des haines éternelles.

Fig. 21.
Mors et bride de chameau.

Voilà quelle était, avant l'occupation française, la vie des Touaregs de l'Ăhaggar.

De plus, ils pillaient les caravanes qui s'aventuraient dans leur pays, rançonnaient odieusement les voyageurs et de temps en temps, allaient vider les greniers des sédentaires des oasis ou des villages soudanais, capturant les nègres et les négresses pour les vendre comme esclaves.

Lorsque l'état de paix régnait dans le pays, ils organisaient

V. Schéma du cycle caravanier des Tou

nufactarés et de viande séchée contre dattes après retour en A.

[p. 217]

1: Lhote MS25 Tuareg

volontiers des caravanes qui se rendaient dans les oasis du Tidikelt ou du Touat pour chercher des dattes, ou bien au Soudan, pour s'y approvisionner en millet. Ils se faisaient aussi protecteurs de caravanes pour la traversée de leur pays, en faisant naturellement payer au caravanier un droit en marchandise toujours élevé.

Fig. 22. — Mors de chameau (détail).

L'Ăhaggar possède des mines de sel célèbres, dans la région qui porte le nom d'Ămadror et qui se trouve dans une grande dépression située à l'est du massif de la Tăfedest. Elles sont pour les Ihăggaren une ressource appréciable, mais leur exploitation demande d'abord de la main-d'œuvre, ensuite le transport et la circulation exigent un état de paix général mettant les nombreux troupeaux de chameaux transporteurs à l'abri des surprises possibles et des coups d'un rezzi. C'est pourquoi, avant l'occupation française, les salines d'Ămadror restèrent longtemps inexploitées du fait de l'état de guerre perpétuel qui existait entre Touaregs de l'Ăhaggar et Touaregs du Tassili.

Fig. 23. — Dispositif de fixation de la bride du chameau.

La matière d'échange idéale est le sel qui abonde au Sahara et qui manque totalement au Soudan. Et c'est ainsi que l'on voit un cycle caravanier s'échelonner sur une année entière et sur des milliers de kilomètres. Il est d'autant plus viable pour les Ihăggaren qu'ils trouvent là l'emploi de leurs nombreux chameaux qui, autrement, resteraient en partie inutilisés.

Le point de départ est naturellement la saline. La mine

se trouve à ciel ouvert ; il suffit de détacher le sel en morceaux et de le placer dans des sacs de peau pour le transporter. Ce travail est réservé aux Iklan qui arrivent sur les salines au cours de l'été et y séjournent de trois semaines à un mois. Chaque propriétaire de chameaux opère à son gré, et après l'extraction, transporte le sel dans son campement.

Vers la mi-septembre, tous les caravaniers se rassemblent par tribus, et bientôt, laissant leurs familles dans l'Ăhaggar, ils prennent la longue route du Soudan qui traverse le Tanezrouft. On voit ainsi des caravanes de 100 à 150 chameaux, mais rarement plus, car le pâturage ne le permettrait pas. L'arrivée au Soudan doit se faire après la saison des pluies qui se termine généralement avec le mois de septembre. Lorsque les caravaniers arrivent avant, ils restent en attente dans la région du Tămasna et mettent leur sel à l'abri en le cachant dans les anfractuosités des rochers.

Fig. 24. — Sandale « irratimen », de fabrication haoussa, portée par les Ihaggaren.

De toutes façons, ils restent toujours au moins deux mois dans cette région pour que leurs chameaux reprennent des forces. Puis, par petits groupes, ils se dirigent vers le Dămergou où, dans certains villages, ils connaissent des gens avec qui ils échangent leur sel contre du millet. Ces échanges se font sur des bases variables, suivant que la récolte de millet a été abondante ou non, ou que le sel est arrivé en plus ou moins grande quantité. Ils se font le plus généralement sur la base d'une charge de sel contre trois charges de millet, mais quelquefois dans la proportion d'une charge de sel contre dix charges de millet, ce qui est très avantageux pour les Ihăggaren.

Comme ils n'ont pas suffisamment de chameaux pour emporter tout ce grain, dont la quantité dépasse d'ailleurs leurs besoins dans l'Ăhaggar, ils en vendent ou en échangent une bonne partie contre des objets manufacturés, d'un transport

1: Lhote MS25 Tuareg

et d'un écoulement faciles. Ce sont des sandales, des sacs de selle, des selles de chameaux, des boîtes en peau, des vêtements de coton, des lithams de fabrication soudanaise. Et après deux mois de repos passés au Soudan, pendant lesquels les chameaux se délectent sur les gras pâturages, tous reprennent la route de l'Ăhaggar où ils arrivent à partir de janvier. Février-mars les voit repartir pour le Tidikelt ou le Touat. Ils n'emmènent alors que très peu de chameaux, et vont échanger là-bas le surplus des objets manufacturés qu'ils ont recueillis au Soudan et de la viande de mouflon séchée contre des dattes. Ce voyage dure en moyenne deux mois et vers la fin avril tout le monde, en principe, est rentré au Ăhaggar. C'est un repos de quelques semaines, et chacun songe à la prochaine campagne de sel qu'il va falloir préparer.

Nous nous trouvons donc devant un cycle caravanier complet qui, à lui seul, pourrait permettre une vie normale aux Touaregs. Mais, comme nous l'avons dit, il implique un état de paix qui auparavant était une exception, et ensuite une somme de travail à fournir qui n'est pas toujours en accord avec les goûts guerriers des Imochar.

La chasse fournit aux Touaregs quelques occupations, de même que la cueillette. Mais l'une et l'autre ne sont que des passe-temps aléatoires, sans beaucoup de profits. La vie des Touaregs peut donc se résumer en quelques lignes : élevage à la base, doublé d'un brigandage élevé à l'état d'une institution et accessoirement organisations des caravanes. Nous allons voir maintenant les Touaregs dans leur vie intérieure.

# CHAPITRE II

## L'HABITATION

Le campement. — Le campement est la forme d'habitat traditionnelle des Touaregs qui s'allie avec le nomadisme qu'implique toujours l'élevage. Il groupe un certain nombre de personnes réunies sous une autorité patriarcale par des liens de parenté très proches.

A la base de la constitution du campement, pour le choix de son emplacement, pour le nombre de tentes à grouper, il y a la question de l'eau.

L'eau est évidemment le problème de toute vie ; elle joue un rôle dans l'installation de nos petits villages d'Europe, mais ce rôle est encore bien plus grand dans les pays désertiques où elle est très rare. L'existence de points d'eau n'est pas seulement nécessaire pour la vie des hommes, mais aussi pour celle de leurs animaux domestiques.

A cette condition primordiale de l'existence d'un point d'eau, il faut ajouter celle du pâturage pour les animaux domestiques. On voit donc que l'installation d'un campement chez les Ihăggaren est conditionnée par deux éléments principaux dont le caractère peut varier dans le temps, suivant les saisons et l'abondance ou la rareté des pluies. Mais en fin de compte, ce sont les nécessités du pâturage qui priment, car, d'une façon générale, il est encore plus rare que l'eau, puisqu'il peut être parfois complètement absent. Cette nécessité du pâturage oblige au morcellement des tribus, à la dispersion des campements pour son exploitation rationnelle et elle est telle que chacun d'eux groupe rarement plus de cinq ou six tentes. Seul le campement de l'Aménokal peut compter jusqu'à quinze ou vingt tentes, mais c'est tout à fait exceptionnel ; il y a là une question de prestige et en même temps d'ordre social qui joue. L'Aménokal entretient, en effet, une nombreuse famille, ses khalifes, ses serviteurs, etc.... Mais ce groupement du chef est tout à fait artificiel et les troupeaux dont les gens sont propriétaires ne sont pas avec eux, et sont

[p. 221]

1: Lhote MS25 Tuareg

répartis dans la montagne, gardés par des Imrad ou des serviteurs.

Le campement est toujours installé assez loin des points d'eau, car il est préférable d'être plus près des pâturages. Il en est souvent distant de cinq à six kilomètres. Les bêtes s'y rendent pour boire tous les deux ou trois jours, et les gens en profitent pour faire leur provision, qui sera transportée dans des outres sur le dos ou sous le ventre des ânes. Les Touaregs n'aiment d'ailleurs pas s'installer à proximité d'un point d'eau, car celui-ci est toujours un endroit de passage, et ils évitent de signaler leur présence aux étrangers. Lorsque l'état de guerre existait, la dissimulation était une nécessité capitale facile à comprendre, et il semble que, par atavisme, ils aient pris l'habitude de toujours se placer dans des endroits où ils échappent à l'investigation des regards indiscrets.

Ils installent leurs tentes sur les terrasses des vallées, parfois dans la vallée même s'ils n'ont pas à craindre les pluies qui tombent le plus souvent à la fin de l'été.

Par la nécessité de la recherche du pâturage, les campements sont en déplacements continuels ; suivant qu'il a été revivifié par les pluies ou qu'il est sec, ils prolongent plus ou moins leur séjour qui peut être de 8 à 15 jours. Mais ces déplacements ne sont jamais d'une grande ampleur, ne dépassant pas plus de 7 à 8 kilomètres. Si nous prenons pour exemple la tribu des Dăg Râli qui nomadisent dans la partie ouest de la Koudia, nous trouvons en été les campements installés dans les vallées de la haute montagne, jusqu'à 2. 400 m. d'altitude. En hiver, ils s'installent au contraire sur les pentes, ou dans les parties basses, recherchant les endroits abrités du vent. Ceci, naturellement dans une période normale, c'est-à-dire de pâturage moyen. Mais au cours de l'été 1940, à la suite d'une longue période de sécheresse, la haute Koudia voyait un grand nombre de ses points d'eau taris, et la végétation pour ainsi dire inexistante ; aussi, tous les nomades se réfugiaient-ils dans les parties basses du massif, dans les vallées d'Outoul, d'Eferer, d'I-n-Amegel, où l'eau était plus abondante et où il restait encore un vestige de pâturage. Au début de septembre, tout le massif bénéficia de pluies abondantes ; huit jours plus tard, toutes les tentes s'ébranlèrent dans la montagne afin d'utiliser le pâturage des alpages avant l'hiver, et de réserver pour cette saison celui des vallées inférieures.

1: Lhote MS25 Tuareg

Les points d'eau de l'Ătakor sont surtout des réservoirs naturels — *aguelmam* — et des sources coulant à fleur de terre, dans le creux des vallées. Dans la partie moyenne, ce sont surtout des rédir — *abankor* — ou petits puits creusés à moins d'un mètre du sol pour atteindre la couche d'eau souvent retenue par des seuils rocheux mais ces rédir s'épuisent avec le temps si les pluies ne sont pas venues renouveler l'eau accumulée dans le lit sablonneux des oueds. La partie basse de l'Ăhaggar bénéficie de tous les suintements de la haute montagne, de toutes les coulées souterraines, et elle est plus riche en points d'eau. Ceux-ci sont des rédir ou des puits dont la profondeur varie de 5 à 10 mètres.

La tente. — On retrouve ce mode d'habitat depuis les steppes de l'Asie occidentale jusqu'à l'Atlantique, où les nomades ont généralement adopté la tente en poil de chameau. Les Touaregs qui ne possèdent pas de chameaux à longue laine utilisent la peau.

La tente est composée d'un grand velum formé par l'assemblage de 30 à 40 peaux de mouflon ou de chèvre, épilées et tannées. La rareté des peaux de mouflon fait qu'on leur substitue de plus en plus la peau de chèvre, voire même la peau de bœuf ; c'est même cette dernière qui est exclusivement utilisée chez les Touaregs Ioullimmiden. Le velum est soutenu par une armature d'arceaux ou de montants. Les Kel Ăhaggar possèdent d'ailleurs deux genres de tentes : une à supports verticaux, l'autre à arceaux. La première est actuellement la plus répandue. Elle comporte un montant central avec une faîtière en bois et six montants secondaires placés en cercle ; la partie la plus élevée du velum se trouve à environ 1 m. 50 du sol. Les extrémités de la peau sont abattues presque au ras du sol et fixées par des petits piquets afin de faire écran aux vents de sable très communs au printemps et en été, et de protéger du froid en hiver.

La faîtière à montant central est surtout employée en été lorsqu'on craint les pluies, car elle donne une inclinaison appropriée du velum pour l'écoulement de l'eau. Dans les autres saisons, cette faîtière est remplacée par deux montants supportant une traverse.

Quoiqu'on ne puisse se tenir debout à l'intérieur, la tente touarègue est assez spacieuse. Les montants sont en bois de tamarix, grossièrement sculptés dans la partie supérieure,

pyrogravés et peints. Ce type de tente est employé chez les Kel Rela, les Dăg Râli et la plupart des Kel Ăhaggar.

L'autre modèle n'est plus employé que chez les Ăgouh-en-Tĕhlé. Les Kel Ăhnet et les Kel In Rhar l'utiliseraient, paraît-il, encore. Le piquet central du type précédemment décrit est remplacé par un ou deux arceaux en racines d'éthel reliés par une traverse formant l'armature centrale, et quatre piquets verticaux placés deux par deux de chaque côté de la tente.

Ce modèle était autrefois beaucoup plus répandu dans l'Ăhaggar et il semble être d'un emploi plus ancien dans ce pays, car le modèle actuellement le plus en usage a dû être pris aux Ioullimmiden. Tous les vieillards se rappellent l'avoir

Fig. 25. — Tente utilisée par les Kel Rela. Pendant la saison des pluies les deux piquets centraux sont remplacés par un piquet unique soutenant une faîtière.

vu, dans leur jeunesse, utilisé dans presque tous les campements à égalité avec le système à piquets verticaux.

La tente à arceaux, dont la partie supérieure forme un peu dôme, est plus apte que l'autre à affronter les pluies. Si c'était là sa raison d'être, on comprend sa disparition avec l'assèchement progressif du Sahara, disparition qui peut aussi avoir pour cause la difficulté de se procurer de grandes racines pour la confection des arceaux.

Le velum est toujours recouvert d'un enduit d'ocre rouge qui le protège des ardeurs du soleil et de la pluie.

Dans l'un ou l'autre modèle, la tente comprend toujours une espèce de clôture mobile faite d'une longue natte — asaber — en tiges de graminée que l'on déroule intérieurement autour des piquets pour la clore complètement. En haute montagne, les Touaregs réduisent la surface intérieure de la tente pour avoir plus chaud, et garnissent la partie opposée

1: Lhote MS25 Tuareg

obligé, mais un stockage réduit, consistant en deux ou trois sacs de sorgho ou de dattes qui sont transportés dans tous les déplacements du campement. Il est de coutume, lorsque les réserves sont plus importantes, de les abandonner dans les rochers de la montagne en des endroits connus des gens de la tribu. Ces greniers — *ekaham* — permettent de s'alléger et de mettre en même temps les réserves en lieux sûrs, si bien que dans le cas où les campements sont razziés, elles constituent l'appoint alimentaire suffisant pour que les gens ne soient pas acculés à mourir de faim.

Quelques tribus qui possèdent des jardins dans les centres de culture y ont souvent des dépôts de vivres ; ceux-ci sont emmagasinés pour tout un groupe familial. C'est ainsi que les Dăg Râli possèdent des magasins dans la Koudia, à Ilâman, à Tarahananet, à Ăbalessa, etc... où ils confient la garde de leurs marchandises à leurs représentants locaux. Ces centres possèdent des greniers secrets ; ils ne sont plus guère utilisés, mais l'étaient toujours avant l'occupation française, pour des raisons de sécurité vis-à-vis des rezzou. Nous avons vu des cachettes de ce genre à Tit, à Bloûmet, et il en existerait à Tazerouk et à Idelès. Elles consistent en des caves creusées dans le sol à fleur de terre et dissimulées aux regards des passants ; les marchandises étaient ainsi à l'abri des hommes et des rongeurs.

Nous ajouterons à ce sujet que le grenier creusé dans le roc est un fait courant chez tous les Berbères. De nos jours on peut encore en observer au Maroc et chez les Chaouias de l'Aurès. Cette coutume semble avoir été commune dans les pays méditerranéens, en Syrie, en Palestine notamment où elle était signalée déjà dans les temps bibliques.

L'Aménokal Akhamouk était le seul à posséder de vrais greniers. Au nombre de trois ou quatre, ils sont construits avec des pierres reliées par de l'argile suivant la technique soudanaise, et placées au sommet d'une crête rocheuse, sur la rive gauche de l'oued Ăbalessa, à proximité de l'endroit où son campement était le plus souvent installé.

Le couchage. — Le matériel de couchage ne comprend qu'une ou deux peaux de mouton cousues ensemble, plus rarement un tapis, chez les gens riches. Il n'existe pas de lit, sauf chez l'Aménokal qui en possède un, de type haoussa, modèle qui a été également adopté dans un certain nombre de

campements des Kel Oui [1]. L'homme et la femme couchent chacun de leur côté, les garçons avec le père, les fillettes avec la mère.

Il n'existe pas de berceaux pour les bébés chez les Touaregs de l'Ăhaggar, et les jeunes enfants sont déposés sur une peau ou sur des couvertures. Quelquefois, on place au-dessus d'eux une espèce d'armature hémi-sphérique en osier, que l'on recouvre d'étoffe pour les isoler de la lumière ou les protéger du vent de sable.

Les Kel Aïr et les Tenguéréguifs possèdent de petits berceaux qui sont suspendus au faîte de la tente.

Le feu. — Devant chaque tente se trouve un foyer généralement composé de trois pierres. Il n'est pas destiné à la cuisine, mais au chauffage, le soir, lorsque le soleil est couché, quand tous les gens viennent se rassembler à l'abri de l'*asaber* déroulé en arc de cercle devant la tente. C'est la flamme qui réchauffe les cœurs et les corps, qui synthétise la famille et l'amitié. Parfois on place sur les trois pierres une bouillotte pleine d'eau à chauffer pour la confection du thé.

Le feu de cuisine est placé à l'écart, généralement à trois ou quatre mètres de la tente, à l'abri d'une petite murette de pierres pour le protéger du vent.

Nous n'avons pu recueillir chez les Touaregs aucun mythe sur l'origine du feu. D'après eux, il a été créé par Dieu qui l'a donné aux hommes pour cuire les aliments, Iblis — Satan — a voulu s'emparer du secret de sa fabrication et Dieu l'a puni en créant le martyre de l'enfer ; mais Iblis a communiqué son secret aux forgerons qui depuis savent l'utiliser pour le travail des métaux.

Les Touaregs obtenaient autrefois le feu par frottement en utilisant une planche de torha (callotropis procera) et une branche de bois dur ; ils recueillaient la poussière charbonneuse sur une touffe de soie provenant du fruit du callotropis et soufflaient dessus jusqu'à obtention de la flamme, ce qui demandait environ une minute. Ils ont conservé ce procédé et l'utilisent encore accidentellement.

Aujourd'hui, ils trouvent des allumettes chez les commer-

1. Contrairement à ce qui a été dit, le lit n'est pas touareg, mais haoussa. Il est répandu chez les sédentaires de l'Aïr, du Damergou et du Sokoto et ce sont des forgerons haoussa qui le fabriquent.

1: Lhote MS25 Tuareg

çants de Tamanrasset, mais tous possèdent un briquet à silex fait d'une tige de fer recourbée.

Ils ne conservent pas le feu. Ils le transportent d'une tente à l'autre dans un fragment de vieille calebasse ou tiennent quelquefois une braise dans leurs mains sans se brûler. Lorsqu'ils veulent le transporter à une assez grande distance, ils utilisent des braises de crottes de chameau.

Les Touaregs emploient communément comme combustible des excréments de chameau et de chèvre. En haute montagne, le bois est assez rare, mais dans les parties basses de la Koudia, ils trouvent de vieilles souches d'acacia ou d'éthel. Ils n'utilisent jamais le bois du callotropis qui est

Fig. 27. — Plat des Touaregs de l'Ahaggar, importé du pays haoussa.

l'arbre du diable et qui fait entendre des bruits sourds lorsqu'on le brûle.

Pour la confection du foyer, ils ne prennent jamais de blocs de basalte, le basalte étant d'après eux possédé par les génies et éclatant violemment sous l'action de la chaleur.

Mobilier. — Nous avons décrit sommairement les objets qui meublaient les parties de la tente réservées aux conjoints ; il faut leur ajouter un certain nombre d'objets qui constituent le mobilier. Ces objets ne sont d'ailleurs pas nombreux et sont le reflet de la vie primitive que mènent les Touaregs.

Sur le côté gauche de la tente se trouve généralement l'outre à eau, accrochée sur deux piquets de bois placés en V. Une vieille étoffe la recouvre souvent pour la protéger du soleil. L'outre est fréquemment vide, car les Touaregs sont peu prévoyants. Lorsqu'il y a de l'eau, ils boivent, mais lors-

1: Lhote MS25 Tuareg

qu'il n'y en a plus, ils restent là à attendre pendant une demi-journée que les Iklan soient revenus du puits, si bien que lorsque le voyageur vient à passer, il est le plus généralement assailli de demandes d'eau alors que lui-même espérait bien souvent en trouver au campement !

Devant la porte, et à proximité de toutes les tentes, on aperçoit un énorme mortier en bois et son pilon dans lequel la servante pile le millet ou les dattes. En fouillant un peu la tente ou l'abri servant de cuisine, on trouve deux ou trois plats en bois, de forme hémisphérique, destinés à contenir les aliments, deux ou trois écuelles coniques servant de récipient pour boire, et accrochés à l'un des piquets extérieurs de la tente, un vase à traire en bois, un van en sparterie pour cribler la farine de millet et servant en même temps de couvre-plat, une ou deux petites nattes en sparterie pouvant servir au même usage, et enfin quelques cuillers en bois. Chaque maîtresse de tente possède un petit racloir en bois qui lui sert à nettoyer le sol de la tente, lequel est généralement recouvert d'une couche de sable fin prélevé dans le lit de l'oued voisin.

Fig. 28.
Pelle de tente.

Une ou deux marmites en terre, des petites théières et des petits verres pour le thé, et nous avons là un aperçu du mobilier des Touaregs, qui, comme on peut s'en rendre compte, est réduit à la plus simple expression.

Lorsque le campement se déplace, tous ces objets sont chargés sur des ânes munis pour la circonstance d'un petit bât. C'est aux femmes qu'incombe le pliage des bagages, leur chargement et leur transport sur les ânes. Elles montent elles-mêmes sur les bagages pendant le transport, et il n'y a que les femmes nobles qui voyagent à dos de chameau. Ceux-ci ne sont utilisés au cours des déplacements que s'il s'agit d'un long voyage.

## CHAPITRE III

## L'ALIMENTATION

On a pu dire que les Touaregs, comme beaucoup de populations d'éleveurs, vivaient du lait de leurs troupeaux. Ils vivent plus exactement des produits de leurs bêtes, mais le lait et la viande à eux seuls ne sauraient suffire. En fait, la base de leur nourriture est une graminée, le *béchena* (sorghum cernuum Host.), sorte de millet cultivé dans les oasis sahariennes et au Soudan.

Les Touaregs consomment un peu de blé, mais tout à fait exceptionnellement. C'est surtout pendant leurs déplacements, au cours des caravanes, qu'ils mangent des galettes de blé cuites dans le sable, car elles sont d'une confection simple et rapide.

Il est assez curieux de constater que les Touaregs qui, culturellement, appartiennent à la civilisation méditerranéenne — qui peut être appelée la civilisation du blé — n'aient pas conservé le blé comme base alimentaire comme l'ont fait toutes les autres populations de l'Afrique du Nord. Pourtant la question de la nourriture est l'une de celles qui rattachent le plus l'homme à son milieu natal et qu'il transporte généralement avec lui dans ses migrations. La culture du blé descend au Soudan jusque dans la région de Tombouctou, en Aïr, et un peu au nord de la Nigeria ; mais elle est partout d'introduction récente due à l'influence des Arabes qui n'ont pas abandonné leur aliment traditionnel.

La *béchena* est un aliment d'adaptation dû à leur exode vers le Soudan, pays duquel ils sont à l'heure actuelle beaucoup plus près au point de vue des conditions d'existence matérielle, que de l'Afrique septentrionale, à moins que cette plante ait existé autrefois à l'état spontané au Sahara, comme l'a supposé le Pr Chevalier et qu'elle ait été l'une des ressources alimentaires principales de ses premiers habitants.

Le Sahara, par ses cultures et ses productions, est complètement nègre. Les méthodes de culture, sauf l'irrigation,

à l'ouverture d'une petite murette en pierre qui protège efficacement du froid. La porte est toujours ouverte au sud.

La tente n'est habitée que par un ménage et chaque conjoint a son côté réservé : l'homme, à gauche en entrant ; c'est là qu'il place sa selle de méhari, ses armes, ses sacs de selle ; la femme à droite ; c'est là qu'elle dépose son sac à affaires personnelles, sa selle, si elle en possède une, les sacs contenant les réserves de nourriture, ainsi que les instruments de cuisine, dont elle a la garde.

L'été, lorsqu'il fait très chaud, les Touaregs utilisent parfois des huttes de paille, tant pour économiser les peaux que

FIG. 26. — Tente utilisée par les Agouh-n-Tehlé. Parfois le piquet support de l'arragailledagaille peut être remplacé par un deuxième arceau. Dans certaines tribus, en particulier chez les Kel Ahnet, les arceaux étaient placés transversalement.

pour avoir un peu plus de confort. La tente de cuir est, en effet, rendue presque inutilisable par la chaleur, et les nomades vont souvent chercher abri, aux heures chaudes, sous les arbres voisins lorsqu'il y en a, ou bien dans les rochers.

Les captifs n'ont jamais de tentes. Ils se construisent de petits abris avec quelques branches sur lesquelles sont tendus des lambeaux de peau ou d'étoffe.

Le montage des tentes incombe entièrement aux femmes.

LES GRENIERS. — L'un des faits les plus caractéristiques de la vie du nomade est son imprévoyance pour les questions alimentaires et la plupart du temps il subsiste au jour le jour, au fil des saisons, sans rien accumuler. C'est un peu le cas pour les Touaregs. Pourtant le Sahara n'est pas un pays où l'on trouve à se ravitailler facilement. Il y a donc chez eux stockage

1: Lhote MS25 Tuareg

sont empruntées aux Soudanais, et en particulier le travail à la houe — le *daba* —, alors que l'Afrique du Nord emploie surtout la charrue qui est ignorée dans la zone intertropicale.

La *béchena* est consommée en farine bouillie cuite, en farine crue, ou mélangée à des liquides, eau ou lait.

Les dattes jouent également un grand rôle dans l'alimentation des Touaregs, et tous les ans chaque chef de famille organise une petite caravane au Touat ou au Tidikelt pour en rapporter deux ou trois charges de dattes sèches de mauvaise qualité qui sont écrasées au pilon et consommées avec du lait de chamelle.

Fig. 29.
Mortier des caravaniers et son pilon.

D'après ce que nous savons de la production des terrains de culture de l'Ahaggar lui-même et d'après ce que les Touaregs sont obligés d'importer, on peut connaître approximativement leurs besoins. Au cours des bonnes années, la production locale n'équivaut qu'au quart du nécessaire. Elle peut être évaluée à 150 tonnes. Il faut y ajouter la production en blé, mais celle-ci ne peut être prise en considération en ce qui concerne la consommation, car elle est presqu'entièrement destinée à l'exportation. Il en ressort que les besoins d'importation s'élèvent à 4.000 charges de mil par an qui, calculées à 150 kg. chacune, font 600 tonnes, lesquelles sont en majeure partie achetées ou échangées au Damergou ou dans la région de Tahoua. Les besoins annuels en dattes sont de 400 charges.

De ces chiffres, il ressort que les besoins annuels par personne sont, à peu de chose près, une charge de mil et un dixième de charge de dattes.

La consommation individuelle peut donc être estimée à 187 kg. de mil et 15 kg. de dattes par an, alors qu'un calcul

identique nous a donné, pour les Arabes sahariens, 180 kg. de blé et 75 kg. de dattes. Mais il ne faut pas s'illusionner ; ces chiffres sont établis d'après des années, sinon d'abondance, du moins de facilité relative. En fait, la moyenne annuelle est très au dessous, car les Ihăggaren ne disposent pas toujours de moyens d'échange propres à assurer leurs besoins, et on peut

Fig. 30. — Corne de mouflon servant de récipient à beurre.

réduire les chiffres donnés plus haut d'un bon tiers, parfois même de la moitié.

Pour suppléer à cette carence en graminées, les Touaregs ont recours aux produits de la cueillette.

Les captives et les femmes des Imrad recueillent, après les pluies, les graines de certaines plantes qui poussent dans les vallées de l'Ăhaggar. Ce sont celles de l'afasso (panicum turgidum F.), de l'oulloul (aristida pungens D.) ; mais l'importance de cette cueillette est en fonction de l'abondance des pluies, et l'on peut dire que la plupart du temps elle est bien

aléatoire. Il n'en est pas de même au Soudan où, tous les ans, les Iklan ramassent des sacs entiers de graines sauvages et en particulier celles du cram-cram (cenchrus echinatus).

Il y a bien dans l'Ăhaggar quelques baies sauvages : celles du jujubier (zizyphus lotus D.), du téborak (balanites aegyptiaca) ; d'autres graines encore auxquelles les Touaregs font appel en cas de disette, telles celles de la coloquinte, de l'aca-

FIG. 31. — Petite gourde de peau servant de récipient à beurre.

cia tortillis, etc..., mais toutes ces plantes ne jouent qu'un rôle bien secondaire dans l'alimentation des Touaregs.

Les Touaregs disposent du lait de leurs chamelles, de leurs chèvres et de leurs brebis. Ils le consomment soit entier soit coupé d'eau, soit frais, soit aigri.

C'est un luxe de boire du lait entier que l'on réserve aux jeunes mamans, aux enfants. Les grandes personnes en boivent généralement le matin et le soir, après la traite, et au repas de midi alors qu'il est déjà aigri. Il peut accompagner les plats

1: Lhote MS25 Tuareg

de béchena, servir de sauce, et être également pris comme boisson. Lorsqu'ils font de grands déplacements, les Touaregs emportent sur leur chameau une outre pleine de lait écrémé. Celui-ci caille rapidement et donne un petit lait au goût aigrelet qui est très rafraîchissant. Mais le lait est surtout apprécié par les sous-produits qu'il fournit, le beurre et le fromage.

Le beurre — *oudi* — est obtenu par barratage du lait dans une petite outre en peau qu'une femme secoue sur ses genoux en la faisant basculer dans un mouvement de droite à gauche et inversement. Le beurre recueilli est placé à l'intérieur d'une

Fig. 32. — Réservoir à beurre fait d'une peau du cou de chameau.

corne de mouflon servant de vase. Lorsque la production en beurre dépasse la consommation journalière, on le place dans des récipients en peau, en forme de gourde, où la chaleur le tient généralement liquide ou très fluide, sauf l'hiver où il est nécessaire de le réchauffer pour le faire sortir du récipient.

Le beurre est essentiellement consommé comme sauce ; on en arrose les bouillies de béchena ou les galettes de blé. Les Touaregs ne le font jamais cuire comme dans les fritures.

Dans les années où le pâturage a été exceptionnellement développé, ce qui assure une lactation abondante des bêtes, les Touaregs fabriquent du fromage — *tikomaren*. — Ils font cailler le lait, pressent le fromage blanc dans de petites nattes pour en extraire toute l'eau et le font sécher ensuite sur de

petites claies placées dans les branches des arbres. Il va sans dire que la fabrication du fromage est très rare dans l'Ăhaggar et que c'est surtout lorsqu'ils nomadisent au Soudan que les Touaregs la pratiquent. Chaque année les Ihăggaren remontent, de leur séjour dans la zone soudanaise, de grandes provisions de fromages qui sont secs comme du bois, produits de leur fabrication ou achetés dans les tribus du Sud. Ils constituent un appoint non négligeable dans l'alimentation. Ces fromages secs sont pilés dans le mortier, réduits en petits fragments, au point de leur donner la consistance de la farine et mélangés ensuite aux aliments, soit bouillie de béchena, soit breuvage à la farine de béchena et de dattes.

On pourrait supposer que la viande joue un très grand rôle dans l'alimentation des Touaregs. Mais que l'on se rappelle l'un de nos vieux proverbes français qui dit que le bottier est toujours le plus mal chaussé. On pourrait appliquer cet adage aux éleveurs qui sont peut-être les moins gros mangeurs de viande qui existent. Un éleveur a des bêtes pour tirer parti de leurs produits, mais il ne les mange que très rarement, car chaque mise à mort est un préjudice porté à son capital.

En fait, les Touaregs ne tuent leurs bêtes que très exceptionnellement, surtout lors de fêtes familiales et religieuses, et ces mises à mort rappellent un peu le sens religieux des sacrifices. Ce qui ne veut pas dire qu'ils n'aiment pas la viande, car lorsqu'ils razziaient un campement adverse, ils s'empressaient de faire des coupes sombres dans le petit bétail et mangeaient jusqu'à en étouffer.

La viande de chasse leur fournit un maigre appoint. Ils tuent tous les ans un certain nombre de gazelles et de mouflons, en consomment une partie fraîche, faisant sécher l'autre pour la tenir en réserve.

Ils capturent des lézards stellion (Uromastix acanthinurus), des gerboises, des gondi (Ctenodactylus sp.), quelquefois même des chacals et des lièvres. On peut ajouter à leur alimentation carnée, les sauterelles (shistocerca gregaria) qu'ils font griller dans la braise, sécher ensuite, pour les réduire en poudre. Tous les nomades sahariens sont très friands des sauterelles, et dès la plus haute antiquité, certaines tribus de l'Afrique du Nord étaient censées en faire la base de leur nourriture, ce qui leur a valu le surnom d'acridophages. Les Nasamons d'Hérodote les préparaient de la même façon que le font les Touaregs, et le

1: Lhote MS25 Tuareg

rapprochement alimentaire que l'on peut faire entre ces deux populations n'est peut-être pas du domaine du seul hasard.

Il y a bien dans l'Ăhaggar quelques mares à poissons, mais les Imochar et les Imrad ne mangent pas la chair de ces animaux ; seuls les Issekkemâren capturent des barbeaux et quelquefois des silures, ou les ramassent dans les oueds après les crues, car ils ne connaissent pas la pêche proprement dite.

Les sédentaires élèvent des poulets, mais les Touaregs n'en mangent pas non plus, considérant leur viande comme impure. Le même interdit est étendu aux œufs. Le seul oiseau qui fait exception est l'autruche. Il n'en existe plus au Sahara, mais lorsque les Ihăggaren vont au Soudan, ils la capturent s'ils en ont l'occasion ; de même, ils mangent ses œufs cuits dans la cendre.

Les disettes se font parfois sentir. Elles sont rares maintenant que les caravanes peuvent circuler librement, mais elles étaient beaucoup plus fréquentes lorsque l'état de guerre se prolongeait longtemps. Les Touaregs se rabattaient sur des plantes sauvages qui n'entrent généralement pas dans l'alimentation, sur les jeunes pousses de *tahlé* (typha elephantina), sur les feuilles de la *tanekfit* (eruca aurea), de l'*aramas* (Atriplex Halimus), sur les tiges souterraines du *danoun* (cistanche lutea) qui ressemblent à l'asperge, et sur bien d'autres encore, de qualité alimentaire très douteuse, qu'ils mangeaient pour calmer leur faim. L'état de famine peut devenir si accusé qu'ils ramassent parfois les vieux os pour les piler, les réduire en farine et en faire des bouillies. Il va sans dire que c'est pendant ces périodes que les pillages battent leur plein. Les gens se volent de campement à campement ; de tribu à tribu ; et chacun oublie son frère, son ami et ne songe qu'à une chose : subsister par tous les moyens.

Avant l'occupation française, les Touaregs ne faisaient en principe qu'un repas par jour, le soir, après la traite des bêtes. Dans la journée, ils se contentaient de boire un peu de lait.

Le plat national des Touaregs est l'*asink*, qui est une bouillie de mil cuite à l'eau, arrosée de beurre ou de petit lait. C'est le repas surtout en honneur l'hiver et pendant toute la saison froide. Pendant les mois de forte chaleur, ils préfèrent un breuvage d'eau ou de petit lait dans lequel ils jettent de la farine de mil, allongée parfois de fromage sec et de dattes pilées. C'est l'*alakoh*. Les dattes, également, sont surtout consom-

1: Lhote MS25 Tuareg

mées en été concassées et mélangées avec de l'eau ou du lait.

Lorsque les Touaregs tuent un mouton, ils préparent les intestins qu'ils renferment à l'intérieur de l'estomac, et après avoir lié les deux extrémités de ce dernier, ils le placent sur un lit de cendres pour le faire cuire. Cette cuisson, qui est celle le plus couramment employée par les chasseurs, s'appelle l'*abatoul*. Les viandes sont préparées bouillies ou cuites sous la cendre. Celles qui sont bouillies sont surtout celles qui ont été préalablement séchées (mouflon, gazelle, quelquefois mouton) ; dans ce cas, on les broie d'abord entre deux cailloux, car elles sont aussi dures que du bois ; la viande est alors répandue en fragments sur le plat d'asink.

Les Touaregs ne préparent pas de viande rôtie sur la braise. mais ils la placent sous la cendre. Lorsqu'ils veulent cuire un mouton entier, ils l'ouvrent en deux et le placent ainsi sous la cendre, prenant la précaution de le retourner une fois pendant la cuisson.

Lors de grandes fêtes, fêtes religieuses, de mariage ou réception d'un hôte de marque, les Touaregs égorgent de jeunes chamelons. Ils les servent avec un couscous de blé à gros grains.

Les animaux domestiques livrés à la boucherie sont : les chèvres, les moutons, les chameaux, les bœufs lorsqu'ils en ont. Ils ne mangent pas le cheval, ni l'âne, ni le chien.

La cuisine est préparée par les captives, à proximité de la tente des maîtres.

Les hommes prennent leurs repas à part et reçoivent les plats en premier ; les femmes et les enfants mangent de leur côté et les Iklan reçoivent les restes.

Les Touaregs se servent de cuillers. L'emploi de cet instrument leur est particulier, car leurs voisins arabes ou nègres mangent avec leurs mains. Cette coutume doit être afférente au port du voile qu'ils ne retirent pas pour manger et qui leur interdit de porter la main pleine d'aliments à la bouche. Ils portent la nourriture à cette dernière en soutenant légèrement l'extrémité de leur voile.

Comme boisson, ils ne boivent que de l'eau, même si cette dernière est plus ou moins propre, plus ou moins polluée, et du lait.

Depuis un demi-siècle, ils ont pris l'habitude de boire du thé vert à la mode arabe ; ils l'aromatisent avec de la menthe ou certaines plantes parfumées de l'Ahaggar, en particulier

1: Lhote MS25 Tuareg

du *chih* (artemisia herba alba). Le café, qui était répandu chez eux autrefois, est surtout pris maintenant comme médicament, pour calmer les toux violentes ou les douleurs d'estomac.

Si nous cherchons maintenant les produits de consommation absorbés comme excitants ou comme stupéfiants, nous voyons que les Touaregs ne connaissent que le tabac, qu'ils chiquent ou qu'ils prisent.

Il n'est pas dans leurs mœurs de fumer. Les jeunes gens qui sont en contact avec les Français aiment à quémander une cigarette, mais c'est par simple esprit d'imitation.

Duveyrier a pourtant dit que les Touaregs fumaient ; peut-être était-ce la mode chez les Touaregs qui fréquentaient Rhât ? Avant lui, Barth a écrit que tous les riverains du Niger aimaient beaucoup à fumer. « Il est fort rare, dit-il, qu'ils quittent leurs jolies petites pipes d'argile, et tous, Rouma comme Touaregs, se couvrent la bouche en fumant, de sorte qu'on ne voit qu'une grêle tête de pipe sortir du châle qui leur couvre la face »[1].

De son côté, le Commandant Cauvet, en décrivant le vêtement targui, a dit que les hommes déposaient leur pipe et leur tabac dans la poche de leurs grandes blouses.

Aussi, tous ces témoignages, venant de voyageurs si dignes de confiance, tentaient de faire croire que les Touaregs sont des coutumiers de la pipe. Pour notre part, nous n'en avons jamais vu.

Par contre, ils aiment beaucoup chiquer et leurs femmes pratiquent également cette coutume, au point qu'à la longue elles ont une déformation de la lèvre inférieure, résultat de la manie qu'elles ont de caler leur chique entre la gencive et la lèvre inférieure.

Le tabac n'est pas cultivé dans l'Ăhaggar, mais il est importé du Touat par les Arabes. Les Touaregs soudanais s'en procurent chez les sédentaires du Niger ou par l'intermédiaire des caravaniers du Haut-Dahomey. Ils y ajoutent généralement quelques cristaux de natron pour lui enlever l'âcreté ou bien des cendres de graminées qui jouent le même rôle que le natron.

Beaucoup de Touaregs nigériens ont pris l'habitude de mâcher de la noix de kola, laquelle est un stimulant puissant dont les Noirs font un très grand usage. Quelques Ihăggaren

1. *Voyage en Afrique*, t. IV, p. 137.

se livrent à cette pratique lorsqu'ils vont au Soudan, mais ne l'ont pas introduite dans leurs mœurs d'une façon courante et ne consomment jamais de kola lorsqu'ils sont dans leur pays.

Les Touaregs sont soumis à un assez grand nombre d'interdits alimentaires. D'abord, comme Musulmans, ils ne doivent consommer que des viandes provenant d'animaux égorgés rituellement. Ils doivent s'abstenir de manger la viande de porc et de phacochère, et de boire des boissons fermentées qui sont *haram*. La viande d'oiseau — sauf celle d'autruche — et celle du poisson sont également interdites et considérées comme impures. Mais il s'agit là de coutumes très antérieures à l'Islam. De même qu'ils ne doivent pas manger la chair de l'ourane, ce lézard étant considéré comme le descendant de leur oncle maternel.

Ils ne doivent pas faire chauffer le lait de chamelle qui vient d'être trait sous peine de provoquer des maladies chez la bête qui l'a donné.

En ce qui concerne l'interdit des personnes, il n'y en a pas à proprement parler, car si hommes et femmes ne doivent pas manger ensemble, il s'agit là d'une coutume plutôt que d'un interdit.

Un homme marié ne doit pas manger avec ses beaux-parents et le fils majeur ne doit pas manger avec son père. Ce sont surtout là des marques de respect, peut-être vestiges de pratiques anciennes à caractères religieux.

# CHAPITRE IV

## LA CHASSE. — LA PÊCHE

Nous dirons maintenant quelques mots sur les industries liées aux problèmes de l'alimentation, c'est-à-dire sur la chasse, la pêche, l'élevage, l'agriculture.

La chasse. — Dans un pays à la faune un peu dense, la chasse aurait procuré aux Ihăggaren un apport alimentaire non négligeable. Elle fut, dans le passé, très en honneur au Sahara. Les multiples gravures et peintures rupestres l'attestent, car beaucoup représentent des scènes de chasse qui traduisent l'état de civilisation des hommes, leur préoccupation, en même temps que la nature de la faune dont les caractères ont bien changé depuis.

De nos jours, avec l'assèchement très avancé de presque tous les districts sahariens, la faune s'est clarifiée et les espèces susceptibles d'être chassées utilement sont réduites à quelques-unes. On ne chasse donc plus que les gazelles et les mouflons. Nous ne pouvons pas citer les antilopes addax et oryx, car la première est en voie d'extinction au Sahara, et la seconde confinée dans la zone de la steppe. Accessoirement on peut ajouter le lièvre et le chacal.

Chez les Touaregs, la chasse est le fait de quelques hommes, de quelques spécialistes qui en ont fait un métier, mais on observe une forte proportion d'Iklan qui y semblent plus aptes, plus disposés que leurs maîtres. Il y a certainement là un caractère atavique, un vestige des mœurs ancestrales influencées par le milieu originel de la forêt où la chasse était le plus souvent la base de l'activité humaine. Mais il n'en est pas moins vrai que beaucoup de Touaregs sont de très bons chasseurs. Les plus renommés semblent être chez les Issekkemâren et les Dăg Râli.

La chasse la plus appréciée est celle au chien courant. Elle est pratiquée contre le mouflon et les gazelles avec des lévriers du genre slougûi qui servent en même temps de chiens de cam-

1: Lhote MS25 Tuareg

pement aux Touaregs. Ces animaux, hauts sur pattes, qui appartiennent à une race intermédiaire entre le chien kabyle et le slougui berbère, et doivent également posséder du sang de chacal, sont particulièrement aptes à la course et possèdent des qualités innées pour la chasse.

Le rôle du chasseur est de dépister l'animal, d'arriver à le découvrir, soit au pâturage, soit au gîte, et de lâcher les chiens dessus au moment propice où il ne s'y attend pas et à une distance convenable. Il s'ensuit parfois une lutte épique entre l'animal et les chiens, lutte qui nécessite souvent l'intervention de l'homme lorsqu'il s'agit, par exemple, d'un mouflon qui n'hésite pas à tenir tête à ses assaillants. Le chasseur, armé ordinairement d'un long javelot à hampe de bois, s'efforce alors de planter son arme dans le corps de l'animal et de le mettre à mort. Lorsqu'il s'agit de gazelles, il n'y a qu'à laisser faire les chiens, et s'ils peuvent la rattraper, la bête sera rapidement neutralisée par les mâchoires puissantes des slougui.

Fig. 33. — Piège à pointes radiaires utilisé pour la capture des gazelles.

A côté de la chasse au chien courant, les Touaregs se livrent au piégeage, qui est une méthode paresseuse de la chasse d'autant plus appréciée au Sahara que le gibier est rare, méfiant, et que sa capture suppose toujours une certaine part de chance.

Les Ihăggaren utilisent deux genres de pièges : le piège à pointes radiaires et le piège à torsion en forme d'arc.

Le piège à pointes radiaires est celui décrit par Montandon [1] qui était déjà connu des Égyptiens et qui est répandu dans toute l'Afrique centrale et intertropicale. Il se compose d'un disque en matière végétale sur lequel sont fixées des tiges de graminées assez résistantes qui convergent vers le centre. L'appareil est placé sur une petite fosse d'un diamètre un peu moindre que le sien, recouvert ensuite de fétus de paille

1. *Traité d'ethnologie culturelle*, p. 222, fig. 8.

1: Lhote MS25 Tuareg

et de sable. On le dispose sous les arbres au feuillage encore vert, que les gazelles viennent brouter ; en tournant autour de l'arbre, les bêtes finissent par marcher dessus et la patte qui passe au travers des tiges est prise dans le disque qui, malgré les efforts et les mouvements, reste fixé dessus, empêchant ensuite la bête de fuir. Le chasseur intervient alors ; il prend les traces de l'animal, le suit, et finit par le rejoindre ; il le met à mort d'un coup de lance. Quelquefois, un lasso est placé sur le disque alors que son extrémité est fixée au tronc de l'arbre ou à une vieille souche.

Le piège à torsion en forme d'arc est un système plus compliqué. Il se compose d'un fragment de corne d'antilope oryx sur lequel est monté un tendeur en tendons provenant du même animal et que l'on enroule au moyen d'un bâton dont l'une des extrémités est taillée en pointe. Un deuxième appareil comporte un petit disque de bois recouvert d'une peau et le tout est fixé sur un autre bâton un peu plus long que celui du premier appareil qui vient s'encastrer entre le tendeur et l'arc alors que le bâton épointé vient s'accrocher dans le trou d'une perle ou sur un petit anneau de peau fixé sur le disque de peau ; un lasso est placé sur ce disque et son extrémité est fixée sur le corps du bâton épointé.

Ce piège est généralement placé sur les sentiers fréquentés par les gazelles et légèrement recouvert de sable. Si l'animal pose la patte sur le disque de peau, la pression qu'il provoque décroche le bâton épointé qui peut, sous le choc, lui briser une patte, et qui dans tous les cas, resserre le lasso autour de sa patte.

Plus récemment, les Touaregs ont employé le piège à ressort métallique du type anglais que leurs forgerons savent maintenant fabriquer. Ils ont remplacé le porte-appât à bascule par une peau tendue sur laquelle ils ont fixé une grosse perle en verre à laquelle l'appât est fixé et qui est d'un décrochage plus sensible. Ce piège peut prendre accidentellement des gazelles, mais les captures les plus courantes sont des lièvres et des chacals.

Les Touaregs chassent sur leurs terrains de parcours et n'ont pas le droit de chasser sur le terrain des tribus voisines. Si le cas se produisait, ils seraient tenus de remettre le gibier aux propriétaires du terrain, lesquels peuvent toujours en rétrocéder une partie, mais gardent la peau, surtout s'il s'agit d'un mouflon.

1: Lhote MS25 Tuareg

Certaines régions sont le fief de chasse d'un seul homme. C'est ainsi que dans la Koudia, personne n'a le droit de chasse sur le pic Tăhat sans l'autorisation de son propriétaire qui est un descendant de l'ancienne tribu des Isebeten. De toutes façons, la peau, la tête et la moitié de la bête doivent lui être remises.

Depuis quelques années, les Touaregs de l'Ăhaggar disposent de fusils à tir rapide. Ils ne sont pas de bons tireurs, mais savent admirablement approcher le gibier, si bien qu'ils ont fait des massacres massifs qui seront longs à réparer.

L'Administration a heureusement pris la décision de confisquer ces armes.

Il est très difficile d'avoir une idée exacte du nombre de bêtes tuées annuellement par les chasseurs. Mais en donnant le chiffre de 300, nous croyons être très près de la réalité. On voit donc que la chasse tient une très petite place dans l'économie des Touaregs de l'Ăhaggar.

La pêche. — La pêche n'est pas pratiquée par les Touaregs pour les raisons que nous avons données. Seuls les Issekkemâren et les Iklan s'y livrent. Ils pêchent les poissons lorsque l'eau des mares est très basse. Au Tassili, ils creusent sur les bas-côtés des plans d'eau, des petites rigoles, qui aboutissent à de petits réservoirs où les poissons viennent se réfugier et où ils sont alors sûrement capturés.

Lorsque la pêche a été fructueuse, les Issekkemâren font sécher les poissons pour les garder pour les périodes de disette.

# CHAPITRE V

## L'AGRICULTURE

Les Touaregs de l'Ăhaggar n'ont jamais attaché qu'une importance très secondaire à l'agriculture. Leur mentalité de nomades est à l'opposé de la propriété du sol et encore plus de sa mise en valeur, qui implique la sédentarisation. Il existe pourtant, dans leur pays, un certain nombre de centres de culture dont l'intérêt n'est pas niable et qui pourraient prendre une plus grande extension si une législation mal appropriée n'entravait pas leur développement.

La création de la plupart de ces centres de culture ne remonte pas à plus d'un siècle. Elle s'est faite sous l'influence d'éléments arabes installés dans l'Ăhaggar. Seules les oasis de Silet et de Tibeghin sont beaucoup plus vieilles et datent probablement du temps des sultans Imanan qui avaient fait venir dans l'Ăhaggar des marabouts originaires du Touat qui apportèrent avec eux le système d'irrigation par foggara. Les Touaregs saisirent par la suite tout l'intérêt qu'ils avaient à multiplier ces centres, et c'est ainsi qu'au moment de l'occupation française, près de quarante centres étaient en exploitation.

La jouissance de la terre appartient à ceux qui l'ont cultivée les premiers. La terre, par elle-même, appartient à l'Aménokal, mais celui-ci la cède à bail et, en contre-partie, perçoit chaque année un impôt — mesk — sur la récolte, à raison de quatre *guessa* de blé, soit environ 10 kg. par jardin. La terre peut donc avoir pour propriétaires, soit des Imochar, soit des Imrad, voire même des Enaden, mais les Iklan ne peuvent pas posséder de jardin.

Ce ne sont pas ces propriétaires qui les cultivent, mais des fermiers de race nègre, originaires du Touat ou du Tidikelt qui portent le nom *d'harratin* (sing. hartani). Un arrangement s'opère entre eux et les propriétaires sur les bases suivantes : le propriétaire fournit à l'hartani deux charges de mil par an pour son entretien, les semences, une houe, et paie le creuse-

1: Lhote MS25 Tuareg

ment des puits de la foggara. La foggara creusée, son entretien est ensuite à la charge de l'hartani. Ce dernier sème, arrose, moissonne, bat le grain et perçoit un cinquième de la récolte. De plus, il a le droit de semer pour son compte dans les canaux d'irrigation et de cultiver plusieurs planches de légumes.

Ces centres de cultures sont installés sur les terrasses des vallées lorsqu'elles sont assez larges et possèdent des alluvions anciennes. Les feggaguir de l'Ăhaggar n'ont rien de commun avec celles du Tidikelt ou des oasis de la Saoura qui vont capter l'eau à de grandes distances des jardins, aux coupures géologiques où elle est retenue. Dans l'Ăhaggar, l'eau provenant des pluies se réfugie dans le lit des oueds et s'emmagasine sous le sable. Les feggaguir sont donc creusées dans le lit de l'oued et vont chercher l'eau à des distances qui peuvent varier entre un et sept kilomètres. L'oued présente une certaine déclivité, il s'agit d'amener progressivement l'eau au même niveau, ou à un niveau légèrement supérieur à celui des jardins. Les feggaguir comportent une première partie souterraine faite de nombreux puits d'une profondeur variable, de deux à quatre mètres, reliés ensemble par un petit canal servant de conducteur d'eau, puis d'une partie aérienne, sous forme de canal, d'abord au même niveau que l'oued, ensuite à un niveau un peu supérieur. Elles débouchent dans des réservoirs de distribution — majem — qui, par des canaux secondaires — seguia, — déversent l'eau dans les jardins à irriguer.

Ces centres de culture s'étendent donc tout le long de l'oued, de part et d'autre de ses rives. Les cultivateurs s'installent à proximité de leur jardin et habitent des huttes en paille ou en roseau, ou de petites maisons d'argile.

On compte cinq centres de haute montagne entre 1.500 et 1.800 mètres d'altitude, mais la plupart sont situés entre 1.200 et 1.500 mètres ; quelques-uns peuvent être en dessous, comme Silet (730 mètres) et I-n-Amegel (1.030 mètres).

Certains sont de petites palmeraies comme Silet et Tibeghin qui comptent 10.000 palmiers, Idelès, Tâhârt, Ăbalessa, mais l'Ăhaggar, par son altitude, ne semble pas être très apte à la culture de la datte. L'instabilité des harratin est aussi un obstacle au développement de l'arboriculture qui demande des soins suivis et les cultivateurs qui travaillent ici aujourd'hui, autre part demain, ne sauraient s'intéresser à un labeur dont ils ne tirent aucun profit immédiat. Le pays se prêterait pourtant à la culture sur une assez grande échelle, du pêcher,

de l'abricotier, du figuier, et de la vigne, et c'est ainsi que le petit centre de Tăzerouk possède de nombreux pêchers, que celui de Tit donne un raisin renommé.

Les terres de l'Ăhaggar sont de haute qualité et doivent en partie leur richesse aux éléments d'origine volcanique qui, dans une large proportion, entrent dans la composition des alluvions. Le climat favorise, d'autre part, la culture au point que les indigènes obtiennent deux ou même trois récoltes par an.

Dans les centres d'altitude moyenne, on sème du blé et de l'orge en décembre pour faire la moisson en mai, puis celle-ci à peine terminée, on sème le mil qui est récolté au début d'octobre. Entre temps, les indigènes pratiquent aussi des cultures potagères : carottes, navets, oignons, ail, piment, haricots, potiron, melons indigènes, pastèque et diverses cucurbitacées d'origine locale, parfois des lentilles. Ces légumes appartiennent en propre au cultivateur et non au propriétaire du jardin ; ils sont consommés par lui, car les Touaregs les dédaignent généralement et n'en mangent que lorsqu'ils séjournent dans les centres de culture.

Mais ces cultures peuvent être handicapées par de nombreux facteurs d'ordre climatique.

Les pluies sont évidemment bienfaisantes lorsqu'elles arrivent au bon moment ; malheureusement elles tombent le plus souvent en hiver ou en été, époques qui ne correspondent pas à la grande poussée de la végétation. Celle-ci n'en bénéficie que lorsque les pluies sont très abondantes et que le sol peut emmagasiner de l'eau pour plusieurs mois. Mais encore faut-il que les chutes d'eau ne soient pas trop fortes, car si elles entraînent des coulées d'oueds, les feggaguir sont irrémédiablement détruites ; leur reconstruction demande alors plusieurs mois, et entre-temps, les cultures qui ne peuvent pas être irriguées se dessèchent sur place et sont complètement perdues.

Le froid peut également avoir une action néfaste. Le blé qui pousse l'hiver n'en souffre pas, mais son développement est ralenti. Il est bien plus mauvais pour l'arboriculture, car s'il est tardif et qu'il vienne après la floraison qui se produit parfois dès janvier, il risque d'arrêter complètement la fécondation. Heureusement la floraison dans les centres arboricoles comme Tăzerouk est bien plus tardive, et il n'y a à craindre que les gelées brusques.

1: Lhote MS25 Tuareg

Le vent qui souffle violemment au printemps peut entraver également l'arboriculture en faisant tomber les fleurs ou les jeunes fruits, voire même les fruits venus presqu'à maturité. Les grands vents chauds de l'été, par le dessèchement intense qu'ils provoquent, compromettent la récolte si l'on n'obvie pas à cet inconvénient par des arrosages abondants. Or c'est précisément à cette époque que le débit des feggaguir baisse, conséquence de l'échauffement du sol et de l'évaporation intense.

On voit donc que les cultures de l'Ăhaggar sont sujettes à bien des aléas et que les récoltes peuvent être très variables. L'abondance ou la rareté de l'eau font que les surfaces ensemencées varient dans la proportion de un à quatre. Après plusieurs années de sécheresse des centres de culture doivent être complètement abandonnés. C'était le cas, ces dernières années, de Tit, Aïtoklane, Tâhârt, Dar-Mouli, etc....

En 1940, les terres ensemencées étaient de 555 hectares. C'est le chiffre d'une bonne année qui peut être exceptionnellement dépassé, mais aussi réduit de plus de moitié.

La population des centres de culture, qui était de 1.310 personnes en 1916, était de 2.280 en 1938, ce qui dénote un gros effort fait en faveur de l'agriculture, qui n'a pu être réalisé que grâce à l'état de paix dûe à l'occupation française.

Voici les chiffres de chacun des principaux centres, d'après les archives du poste de Tămanrasset [1] :

| | 1911 | 1938 | |
|---|---|---|---|
| Tămanrasset .... | 150 | 686 | |
| Ăbalessa ..... | 272 | 250 | |
| I-n-Amgel ..... | 180 | 206 | |
| Iglen ..... | | 168 | |
| Idelès ..... | 70 | 160 | |
| Tazerouk ..... | 150 | 148 | |
| Tit..... | 75 | 98 | ont dû s'expatrier dans les autres centres dès l'été 1938. |
| Tărhaouhaout ... | 140 | 91 | |
| Amsel ..... | 90 | 66 | |
| Tahifet ..... | | 39 | |

1. Rapport Florimond, 1938.

| | 1911 | 1938 | |
|---|---|---|---|
| | — | — | |
| Tigeneouin ..... | 25 | 23 | |
| Mertoûtek ..... | | 60 | |
| Hirhafok ..... | | 80 | |
| Ilâman ..... | 10 | | |
| T-i-n-Ămenser | 36 | | abandonné provisoirement |
| Tifert ..... | 50 | | » |
| Esséléséḳin ..... | 30 | | |
| T-i-n-Târâbin .. | 15 | | abandonné |

Ces chiffres font ressortir l'affaiblissement de centres au profit d'autres. C'est ainsi qu'un certain nombre de cultivateurs de Tarahouhaout (où se trouvait auparavant le poste français) sont venus s'installer à Tămanrasset et que le groupe des petits centres installés aux environs d'Ăbalessa, Iglen, Tăfarit, etc... a absorbé les éléments d'autres centres abandonnés comme Tifert, Esséléséḳin, Ilâman, Tarahananet, etc...

Ces centres réunis comptent environ 400 jardins et 80 feggaguir.

Le blé récolté est consommé en partie par les cultivateurs, et surtout destiné à l'exportation, échangé au Touat contre des dattes et l'ensemble des récoltes de l'Ăhaggar, même pour celles des bonnes années, ne correspond que dans la proportion d'un cinquième aux besoins de ses habitants.

On compte dans l'Ăhaggar 15 centres de culture exploités ; ce sont ceux de Tămanrasset, Tărhaouahout, Tahifet, Tăzerouk, Idelès, Ăbalessa, Hirhafok, Iglen, I-n-Amegel, T-i-n-Ămenser, Amsel, Tigeneouin, Talan-Tedit, Mertoûtek, Esseléséḳine.

Il existe d'autre part vingt-deux autres centres qui sont abandonnés depuis un certain nombre d'années, par suite de la sécheresse ou du manque de main-d'œuvre. Ce sont ceux de : Aïtoklane, Ădenek, Ămrah, Ăbezou, Ăglil, Bloûmet. Déhine, Dar Mouli, Ennedid, Innezal, Ilâman, In Ămertek, Ilafok, Outoul, Ouhet, Souaïka, T-i-n-Târabin, Touakin, Teberbert, Tarahananet, Tahart, Joraf.

1: Lhote MS25 Tuareg

# CHAPITRE VI

## L'ÉLEVAGE

Si nous étudions en particulier les tribus qui vivent au Soudan, dans un pays qui se prête parfaitement à l'élevage, nous constatons que les Touaregs sont des éleveurs émérites, capables de faire prospérer des troupeaux. La rareté des pâturages sahariens a évidemment mis l'élevage au second plan chez les Touaregs du Nord, mais il n'en fut certainement pas toujours ainsi, et l'exemple que nous avons sous les yeux au Soudan nous permet de classer tous les Touaregs parmi les grands éleveurs.

L'élevage est à la base même de leurs conditions d'existence, il est probablement à l'origine de leurs migrations, de leur essaimage au Sahara et au Soudan. On peut, à ce titre, reprocher aux Touaregs, comme à tous les pasteurs, leur esprit pillard et destructeur dont l'effet se fait sentir très souvent sur des groupements urbains, et toujours sur la végétation qu'ils détruisent sans vergogne, mais ces réserves faites, ils ont apporté avec eux des éléments de civilisation culturelle qui ont joué un rôle considérable tant au Sahara qu'au Soudan.

Les Ihâggaren sont obligés de compter sur les revenus de leurs troupeaux et ne pourraient pas vivre sans eux. C'est pourquoi, malgré les difficultés que leur impose leur entretien, ils consacrent une grande part de leurs occupations à l'élevage.

Cet élevage, d'ailleurs, est propre aux régions sahariennes et diffère totalement de celui des Touaregs soudanais. C'est une question de pâturages évidemment. Les Soudanais possèdent des bœufs, des moutons en grande quantité, des chevaux ; le Sahara ne pourrait pas entretenir de pareils troupeaux.

Les Touaregs de l'Ăhaggar élèvent des chameaux, des chèvres, des moutons et des ânes.

Le chameau. — Nous avons vu précédemment ce qu'il faut penser de l'introduction du chameau au Sahara. Qu'il ait été

1: Lhote MS25 Tuareg

introduit avant ou après l'ère chrétienne, il n'en est pas moins vrai que ce sont les ancêtres des Touaregs qui ont dû s'en faire les introducteurs.

A l'heure actuelle, sans le chameau, l'humanité du Sahara, qui n'est déjà pas très importante, serait réduite à zéro. C'est un fait capital qui a été amplement démontré et sur lequel il est inutile d'insister. Th. Monod, qui a dédié l'un de ses ouvrages « Au chameau et au bouc, au véhicule et au récipient, aux deux seuls vainqueurs du Sahara »[1], n'a pas seulement fait là de la littérature et de l'esprit, mais il a situé la vérité en quelques mots. Sans le chameau aucune relation ne serait possible entre les oasis, aucune relation entre l'Afrique du Nord et l'Afrique intertropicale.

On conçoit donc que cet animal joue un grand rôle dans la vie des Touaregs sahariens, et que ces derniers fassent un gros effort pour son élevage. Ils se sont toujours efforcés de posséder beaucoup de chameaux et, actuellement, leur cheptel s'élève à plus de dix mille têtes.

Si le chameau s'est parfaitement adapté aux pâturages et aux terrains sahariens, il n'en est pas moins vrai que l'assèchement est tel qu'il éprouve des difficultés pour s'y maintenir en bon état et qu'une marche un peu prolongée demande en compensation une période de repos d'une durée double à celle pendant laquelle il a fatigué. C'est pourquoi les Ihăggaren font nomadiser leurs chameaux sur les confins du Soudan, dans la steppe à acacias et à graminées.

L'élevage hoggar est très réputé ; il fournit des bêtes résistantes, très sobres, aptes à affronter la rocaille de la montagne, comme à marcher des semaines entières sur les regs granitiques du Tanezrouft, chose que ne sauraient faire les chameaux de l'élevage soudanais.

Les Touaregs sélectionnent les animaux dès leur jeune âge, les destinant soit à la selle, soit au portage. Les méhara sont castrés et subissent un dressage spécial. En parlant de ces chameaux de selle, on ne peut donc faire allusion à une race particulière, propre à la course, comme on l'entend communément dire.

Le chameau a, chez les Touaregs, une valeur d'échange bien déterminée. Il est une des bases de comparaison dans leurs transactions commerciales.

Chaque tribu marque ses animaux d'un signe particulier et

1. Méharées.

1: Lhote MS25 Tuareg

les propriétaires qui en possèdent beaucoup ont également un signe à eux, marqué au fer rouge, sur une des parties du corps de l'animal : cou, joue, cuisse.

Le mouton. — Le mouton n'est élevé qu'accessoirement dans l'Ăhaggar parce que l'herbe n'y est pas suffisamment abondante. Mais il tient une grande place dans l'élevage soudanais.

C'est un animal très particulier, à poils ras, à longue queue, haut sur pattes, caractère qui lui a valu son nom d'ovis longipes. Les Touaregs ont certainement été son introducteur en Afrique occidentale. Les zoologistes ne le désignent jamais autrement que sous le nom de mouton targui. Son antiquité

Fig. 34. — Hache à fer triangulaire.
La forme du fer rappelle celle des haches néolithiques.

en Afrique du Nord est bien connue. C'est sous sa forme caractéristique qu'est représenté le bélier d'Ammon et il est reconnaissable également dans les splendides gravures rupestres de Géryville et de Tiout. Il semble descendre du mouflon de Corse plutôt que du mouflon d'Algérie. Aujourd'hui, c'est un animal que l'on retrouve exclusivement dans les campements touaregs du Soudan ou dans leur zone d'influence.

Le mouton est le mets des grands festins et sa peau est utilisée comme tapis de sol, comme couverture, ou pour confectionner des objets de harnachement.

La chèvre. — La chèvre est l'animal de montagne par excellence, sobre au possible, résistant aussi bien au froid qu'à la chaleur, sachant se contenter des pâturages les plus maigres. Il est donc tout naturel de la trouver en abondance chez les Ihăggaren.

1: Lhote MS25 Tuareg

L'espèce de l'Ăhaggar est de petite taille, à poils longs et noirs. Au Soudan, elle est de couleur variable, blanche et noire, ou rouge, à poils ras, elle est plus haute sur pattes que l'espèce de l'Ăhaggar et souvent métissée, dans les tribus du sud, avec la chèvre naine.

L'origine de la chèvre est moins certaine que celle du mouton. Très répandue sur le globe, elle a dû être domestiquée en plusieurs points différents, et il n'est pas impossible que l'espèce élevée actuellement dans l'Ăhaggar, soit d'origine africaine. On en trouve des ossements dans les gisements néolithiques du Sahara.

A l'heure actuelle, c'est dans l'Ăhaggar une lutte à mort entre la chèvre et l'arbre. La chèvre elle-même est susceptible, grâce à son agilité, de brouter les branches basses et de les détruire ; le Targui fait le reste, lorsque le pâturage vient à manquer, en abattant les branches maîtresses pour les mettre à la portée de ses bêtes. Si bien que dans un temps relativement proche, les arbres, et en particulier les *tahlĕ* (acacia sp.) ne seront plus qu'un souvenir dans l'Ăhaggar. Rien n'a été fait par l'Administration française dans l'Ăhaggar pour la protection des arbres, alors qu'il suffirait de consigner certaines vallées pendant plusieurs années, tout en tenant compte des besoins des pasteurs. Des mesures de ce genre ont été prises aux environs de Goundam, et ont donné de très bons résultats.

La sécheresse prolongée entraînant l'absence de pâturage met souvent l'élevage caprin en difficulté. La natalité est arrêtée d'un coup et la mortalité peut s'ensuivre, très importante au point que le nombre des bêtes tombe parfois à un cinquième. Il faut alors des années pour reconstituer les troupeaux, en admettant, bien entendu, l'arrivée de pluies favorables.

Les Ihăggaren insouciants et fatalistes n'essayent même pas alors d'intensifier la reproduction en achetant des géniteurs en Ădrar ou en Aïr ; ils laissent leurs faibles troupeaux se reconstituer par leurs propres moyens, ce qui demande parfois de nombreuses années. En cas de surabondance dans les naissances, ils limitent le nombre des bêtes car ils connaissent bien les ressources moyennes de leur pays, et ne laissent jamais leurs troupeaux dépasser un certain nombre de têtes, celui qui est nécessaire aux besoins en lait de leur famille, soit dix à douze bêtes par personne. Le surplus est consommé ou vendu aux sédentaires des centres de culture.

1: Lhote MS25 Tuareg

La chèvre de l'Ăhaggar donne un lait très riche qui fournit un beurre excellent. La chair, qui est un peu résistante, est consommée bouillie, et la peau est appréciée pour la confection des sacs de selle, des outres et parfois des tentes.

L'ANE. — Les Touaregs de l'Ăhaggar possèdent beaucoup d'ânes. Ils ne les élèvent pas à proprement parler, ne s'occupant pas d'eux, et les laissant se reproduire en liberté. Beaucoup de Touaregs ne savent pas exactement le nombre d'ânes qu'ils possèdent, car ne les utilisant pas tous, ils les abandonnent dans la montagne où ils deviennent plus ou moins sauvages. Les jeunes, nés entre-temps, ne se laissent pas approcher, et il faut les piéger, puis les dresser pour pouvoir les utiliser. Ces ânes en liberté, que les Touaregs de l'Ăhaggar nomment haoulil, ont donné naissance à une légende d'ânes sauvages. Gautier, à leur sujet, a cité l'aventure du Général Laperrine qui, ayant fait chasser un âne « sauvage » par ses goumiers, s'aperçut après coup que l'animal avait été castré !

S'il n'y a plus d'ânes sauvages dans l'Ăhaggar, il est à peu près certain qu'il y en a eu. Il est figuré dans les gravures rupestres de l'oued Djorat et il existe encore en Abyssinie où on lui donne le nom d'onagre.

L'âne est, dans l'Ăhaggar, bien dans son milieu. Il est possible qu'il ait été domestiqué sur place. Les légendes des Ihăggaren ont gardé le souvenir des premiers habitants, les Issebeten, qui ne possédaient que des ânes et des chèvres.

Dans leurs petits déplacements, les Touaregs utilisent les ânes pour le transport des bagages et les hommes comme les femmes s'en servent aussi comme montures. C'est avec les ânes également que les serviteurs assurent le ravitaillement en eau, leur faisant porter les lourdes outres sur le dos ou sous le ventre.

L'âne n'est jamais mangé, et sa peau n'est pas utilisée.

LE CHEVAL. — Le cheval n'est pas un animal saharien. En 1929, il existait dans l'Ăhaggar quatre chevaux qui appartenaient à l'Aménokal. Aujourd'hui, il en existe une vingtaine qui appartiennent aux membres de sa famille ou aux notables de son campement.

C'est un luxe qui coûte cher, car il faut nourrir ces animaux avec de l'orge dont les gens n'ont déjà pas trop pour eux-mêmes. Chez les Touaregs soudanais, il tend à remplacer le chameau.

1: Lhote MS25 Tuareg

Le zébu. — Il y a quelques années, l'Aménokal possédait un petit troupeau de zébus qu'il avait fait venir du Soudan. Dans l'Ăhaggar même, l'élevage de cet animal n'est pas pratiqué et ne pourrait l'être, faute de pâturages appropriés.

Les zébus servent dans les centres de culture pour le puisage de l'eau. Ils sont fournis au fermier par le propriétaire du terrain et ils sont nourris, très mal, avec les moyens du bord, de fanes, d'herbes, ou mis dans les pâturages de joncs généralement abondants dans les centres de culture.

Lorsque la bête est fatiguée, le propriétaire la change si toutefois il en a la possibilité. Les privations auxquelles sont soumis les zébus entraînent leur mort dans un laps de temps relativement court, et il s'agit donc dans l'Ăhaggar, de les entretenir plutôt que de les élever. Dans tous les cas, ils ne suivent jamais les campements dans leurs déplacements et ne vivent jamais près d'eux.

Nous avons dit, lorsque nous avons parlé du campement, dans quelle mesure la recherche du pâturage présidait à son installation.

En ce qui concerne l'élevage proprement dit, nous constatons que les petites animaux, ovins, caprins, asiniens, restent toujours dans l'Ăhaggar et suivent les déplacements du campement.

Quant aux chameaux, il n'en est pas de même ; ils sont souvent mis au pâturage loin des tentes, gardés seulement par quelques bergers. La majorité est même installée au Soudan, à 800 km. de la tente de leurs propriétaires où quelques campements vivent à demeure, remplissant la fonction de bergers pour les gens restés dans l'Ăhaggar.

Il y a donc à la fois nomadisme et transhumance.

La définition des deux genres de vie est celle-ci : il y a nomadisme lorsque la tribu accompagne le bétail en mouvement et transhumance lorsque les troupeaux sont seulement accompagnés par les bergers. Nous voyons donc qu'il n'est pas possible de rattacher les Touaregs à l'une ou l'autre des deux catégories, mais qu'ils pratiquent les deux genres de vie, voire même, dans certains cas, un système mixte. Bien souvent, en effet, les chèvres sont au pâturage dans l'Ăhaggar avec quelques bergers, alors que les femmes restent dans la montagne et que tous les hommes sont au Soudan avec les chameaux.

1: Lhote MS25 Tuareg

Les migrations de ces petits troupeaux de chèvres rappellent la transhumance que Vidal de la Blache a décrite sous le nom de transhumance montagnarde, c'est-à-dire que les campements se déplacent régulièrement des pâturages d'été, qui se trouvent sur les sommets, à ceux d'hiver qui sont dans la plaine. Ces déplacements ne peuvent pas avoir la régularité qu'ils ont dans nos pays, étant données les irrégularités des pluies.

On peut donc dire que les Touaregs de l'Ăhaggar, par le peu d'amplitude des déplacements de leurs campements, sont de petits nomades, mais sont, par contre, de grands transhumants.

*Règles concernant le passage et le nomadisme des troupeaux*

Les terrains de parcours des tribus sont fixés par l'Aménokal à qui appartient la terre, et c'est du droit de pâturage qu'il octroie, que vient en partie l'origine de la *tioussé*.

Chaque tribu est propriétaire de son terrain, en a la pleine jouissance, à l'exclusion des autres. Celles-ci ne peuvent venir s'installer chez elle qu'avec l'autorisation de l'amrar de la tribu, mais le droit de passage est acquis pour tous, y compris celui d'abreuver les troupeaux.

Ces règles peuvent être modifiées dans les périodes de grande sécheresse ou dans celles succédant à des pluies abondantes.

Lorsqu'à la suite d'une longue période de sécheresse, le pâturage vient à manquer, une entente s'établit entre les différents chefs de tribus et l'un d'eux peut autoriser la tribu de l'autre à venir nomadiser sur son territoire, à la condition, bien entendu, de ne pas y commettre de dégâts, de ne pas mutiler les arbres et de ne pas se livrer à la chasse.

Lorsqu'une région a été abondamment favorisée par les pluies, l'amrar décrète le terrain interdit — *ganent*. — Personne ne pourra alors y venir, y compris les gens de la tribu. Cette mesure a pour but de protéger les jeunes pousses de la dent des animaux, de laisser venir le pâturage à maturité. Quelques semaines plus tard, l'interdiction est levée, le terrain est libre, et tout le monde, sans distinction, peut venir en profiter, en se conformant, bien entendu, à la juridiction concernant la protection des arbres et à l'interdiction de la chasse.

Les animaux égarés sur le terrain d'une tribu voisine sont

1: Lhote MS25 Tuareg

rendus à leurs propriétaires sans qu'aucune sanction n'intervienne. Mais lorsqu'un troupeau est surpris sur une terre *ganent*, le propriétaire est mis à l'amende d'une tête de bétail, d'une chèvre s'il s'agit d'un troupeau de chèvres, d'un mouton, s'il s'agit d'un troupeau de moutons, d'un chameau s'il s'agit d'un troupeau de chameaux.

Une branche coupée par un membre d'une tribu voisine entraîne une amende d'une chèvre ou d'un mouton. Mais cette règle n'est pas souvent appliquée, car les Touaregs n'ont que peu de respect pour la protection des arbres.

# CHAPITRE VII

## ENTRETIEN ET PRATIQUES SE RAPPORTANT AU CORPS

PROPRETÉ ET SOINS DU CORPS. — Dans un pays où l'eau est rare, il est naturel que les gens ne soient pas portés à faire des ablutions journalières. Les Touaregs, à force de vivre dans le désert, loin des puits d'eau, ont perdu l'habitude de se laver. Ce n'est pas qu'ils méprisent les soins à donner au corps, mais ils trouvent les ablutions complètement inutiles et même néfastes à la santé. Ils prétendent même que s'ils se lavaient tous les jours, ils deviendraient malades, et ils donnent comme argument que les ablutions journalières sur les membres font écailler la peau.

Pour eux, la grande question est de protéger les différentes parties du corps des ardeurs du soleil. Tous les soins qu'ils donnent au corps n'ont pas d'autre but.

Ils ont l'habitude de porter des vêtements de toile fortement indigotés qui déteignent abondamment sur la peau, au point de lui donner une couleur bleue foncée. Loin d'essayer d'enlever cette teinture par un lavage, ils sont d'autant plus fiers d'eux-mêmes que la couche de bleu est plus épaisse. Ils se frottent les membres et la figure avec des étoffes neuves pour obtenir la teinte désirée.

Pour rendre la peau plus douce et plus brillante ils s'enduisent les membres avec des corps gras, du beurre ou des graisses d'origine animale. C'est une coutume adoptée également par les nègres soudanais et les Arabes du désert.

C'est à la bouche et aux dents que les Touaregs portent le plus d'attention. Ils se rincent la bouche à grande eau après chaque repas et se brossent les dents avec de petites branches dont l'une des extrémités est mâchée et forme brosse. Ils emploient à cet usage des branches d'*irak* (Salvadora persica) ou des djerid de palmier.

[p. 257]

1: Lhote MS25 Tuareg

Les hommes et les femmes apportent beaucoup de coquetterie dans les soins de leur chevelure.

Les jeunes garçons ont la tête rasée sauf une crête ou une touffe de cheveux qui est laissée sur le sommet. Les hommes portent les cheveux longs et tressés alors qu'une petite auréole sur le devant de la tête est rasée. Ils se font coiffer par leurs sœurs ou leurs amies, moyennant quoi ils leur offrent un peu de tabac. Les coiffures varient suivant les régions, soit qu'elles comportent un plus ou moins grand nombre de nattes, soit que ces dernières tombent en arrière ou soient relevées sur le sommet de la tête. A un certain âge, lorsque les cheveux commencent à grisonner, les hommes se font complètement raser.

Fig. 35. — Brosse à dents en bois d'Irak et son étui de peau.

Les femmes portent également des cheveux tressés en un grand nombre de nattes qui tombent sur les côtés des tempes. Elles se coiffent entre elles et ce travail demandant de nombreuses heures n'est fait qu'une ou deux fois dans le mois. Elles commencent par démêler les cheveux au moyen d'un petit peigne tout en les imprégnant de sable et de cendre de bois ; ensuite il est procédé à l'épouillage, car chaque chevelure touarègue abrite généralement tout un petit monde d'insectes ; puis la coiffeuse les sépare en paquets au moyen d'un petit couteau, les imprègne d'eau et de beurre et les tresse, soit en grosses nattes de façon à ce qu'il y en ait trois ou quatre qui tombent de chaque côté, soit en de multiples petites nattes. Le fait d'enduire les cheveux avec du beurre n'a pas d'autre but que de les protéger contre le soleil et surtout contre l'air très sec qui les rend cassants.

Les hommes laissent pousser leur barbe, mais ils se rasent presque toujours la moustache ou la coupent très court pour

1: Lhote MS25 Tuareg

qu'elle ne gêne pas sous le voile qui recouvre la partie inférieure du visage.

Les hommes et les femmes se rasent le pubis.

Après s'être coiffés ou rasés, les Touaregs enterrent toujours leurs cheveux ou leurs duvets, de peur que des personnes qui leur voudraient du mal ne s'en emparent pour les porter à quelque sorcier capable de s'en servir pour confectionner des maléfices redoutables.

Les hommes et les femmes se cernent les yeux de kohl : ils en mettent non seulement sur les sourcils, mais surtout à la naissance des cils et cela dans un but médical, car ils attribuent au kohl des qualités protectrices contre les maux d'yeux et en particulier contre l'ophtalmie dont beaucoup sont atteints.

Les Touaregs apprécient des mains fines et longues qui sont celles de gens ne pratiquant aucun travail manuel. Ils ne les soignent pas particulièrement, et se contentent de couper leurs ongles assez ras. Comme pour les cheveux, ils en enterrent les débris pour que personne ne puisse s'en emparer.

Fig. 36. — Couteau à coiffure. Il porte le nom de l'artisan qui l'a ouvré en caractères tifinagh.

Tatouages. — Fards. — Contrairement aux Kabyles et aux Berbères, les Touaregs ne portent pas de tatouages. Ce détail, qui peut paraître insignifiant, indique malgré tout que la parenté de ces différents groupements humains est beaucoup moins étroite qu'on pourrait le croire pour qu'il y ait des différences de mœurs aussi sensibles.

Certaines femmes se bleuissent les gencives et parfois les lèvres par le procédé du tatouage, mais cette coutume est surtout usitée dans les tribus soudanaises de la région de Tombouctou.

Par contre, l'emploi des fards est pratiqué chez les femmes touarègues sur une grande échelle. Elles se mettent de l'ocre rouge sur la figure pour se protéger la peau contre l'action du

1: Lhote MS25 Tuareg

soleil, et dans un but d'esthétique, se bleuissent les lèvres et le tour de la bouche avec de l'indigo.

A l'occasion des fêtes, certaines femmes portent des peintures sur le visage, des points blancs ou ocres au-dessus de la racine du nez, sous les joues et sur le menton. Ces peintures n'ont, paraît-il, qu'un caractère esthétique.

Tous les Touaregs, hommes et femmes, portent deux ou trois petites cicatrices linéaires sur le front et sur les tempes, et l'indigo des vêtements qui s'est souvent incrusté dedans leur donne l'aspect d'un tatouage. Il s'agit là d'incisions faites dans un but médico-magique lorsque les enfants sont en très bas âge pour les protéger des maux de tête et des convulsions.

Il paraît aussi que cette coutume contribue à les rendre forts et à les faire marcher très tôt [1].

Médecine, Chirurgie. — Si nous étudions maintenant la médecine et la chirurgie chez les Touaregs, nous constatons que leurs connaissances ne sont pas bien étendues et n'ont rien de bien particulier.

Les Touaregs classent, dans leur esprit, les maladies en deux catégories : celles qui sont le fait d'une action extérieure visible et déterminable, et celles dont l'origine ne peut être expliquée par aucun lien de causalité. Les premières se soignent par des traitements médicaux appropriés, les secondes par des procédés magiques.

Les procédés médicaux, qui appartiennent plutôt à la chirurgie, sont nettement empiriques ; au nombre de quelques-uns ils servent pour quantité de maladies. Ce sont, en particulier, la saignée et l'application du feu ; dans la saignée, l'opérateur décongestionne la partie malade, et dans l'application du feu, il circonscrit le mal tout en décongestionnant.

Les Ihăggaren possèdent toute une pharmacopée qu'ils ont empruntée aux Soudanais. Ce sont des racines, des plantes, des graines qui poussent au Soudan, et dans lesquelles les Touaregs ont une très grande confiance. Chaque fois qu'ils descendent en caravane dans le sud, ils en font de nombreux achats, soit pour leur usage personnel, soit pour les revendre dans leur pays ou à In Salah.

Les maladies ne sont pas nombreuses dans l'Ăhaggar, car ce pays est relativement sain, du fait de son climat très sec

1. De Foucauld, Textes en prose, p. 64.

1: Lhote MS25 Tuareg

et de l'action tonifiante du soleil qui, en même temps, détruit les germes microbiens. C'est d'ailleurs très heureux, car avec le peu d'hygiène que pratiquent les Touaregs, il serait impossible de lutter contre les maladies ; il est peut-être vrai aussi que cette absence d'hygiène peut découler du fait que les Touaregs n'ont pas eu à en constater la nécessité.

Les gens de l'Ăhaggar meurent de vieillesse ou de blessures de guerre. Il y a bien parfois des épidémies susceptibles de faire des dégâts, mais elles sont rares du fait de l'isolement des campements, les grandes distances qui les séparent les uns des autres étant une défense naturelle contre les contagions massives. Ces épidémies viennent toujours par le canal des caravaniers ou de gens qui rentrent du Soudan, où ils ont séjourné dans les centres des sédentaires. Nous pouvons citer la variole, très commune au Soudan et qui fait parfois de grands ravages dans les tribus. Le typhus, transmis par les poux, qui peut décimer une tribu entière en quelques jours, n'est pas très rare chez les Touaregs ; mais ces deux maladies sont exceptionnellement signalées dans l'Ăhaggar. Lorsqu'un homme qui rentre du Soudan est atteint par l'une d'elles, son cas est signalé par les messagers bien avant son arrivée et le malade est systématiquement isolé.

Les Touaregs qui reconnaissent en la circonstance l'état de contagion, ne voient pas les causes de la maladie. D'après eux, elle est provoquée par l'action de mauvais génies. Ils prétendent, en bons Musulmans, ne pas croire à ces génies, mais en réalité, la plupart des talismans qu'ils portent sur eux en abondance n'ont pas d'autres buts que de s'en protéger. Pour s'en procurer, ils s'adressent à des marabouts ou à des hommes réputés pour leur connaissance des sciences occultes, sortes de sorciers qui portent le nom d'*amekelléou*.

Lorsqu'un mauvais génie est censé habiter le corps d'une personne, les gens se réunissent et mènent autour d'elle un vacarme épouvantable accompagné de tam-tam, qui a pour but de la mettre en transe afin que le génie finisse par prendre peur et se décide à s'en aller. Ils procèdent de même pour les chameaux qui sont parfois atteints de troubles nerveux.

Il y a quelques années, une femme noble de l'Ăhaggar était sujette à des crises d'épilepsie. Elle avait des hallucinations, elle se disait possédée par un mauvais génie qu'elle voyait et sentait en elle-même, si bien, que chaque fois que la crise éclatait, les gens de son campement se livraient à leurs démons-

trations habituelles. Un jour elle se mit dans la tête d'extirper son hôte et se trancha la gorge pour lui permettre de sortir. Elle se fit une blessure si grave que ses jours furent longtemps après en grand danger, mais à peine fut-elle remise qu'elle fut reprise de ses crises, et qu'elle s'ouvrit la gorge une deuxième fois.

La chirurgie des Kel Ăhaggar est aussi élémentaire que leur médecine. Nous dirons d'abord qu'il n'existe pas chez eux de chirurgiens, pas plus qu'il n'y a d'individus renommés pour leurs connaissances médicales. Médecine et chirurgie sont le fait de tous ; les connaissances qu'on en possède sont du domaine de chacun, et chaque Touareg est capable de se soigner lui-même ou de soigner les personnes de son campement. Pour les opérations chirurgicales, il est fait malgré tout appel de préférence aux Enaden, généralement plus adroits que les autres. Ils possèdent ordinairement de petits instruments qu'ils fabriquent eux-mêmes, davier, déchausse-dents, scarificateur, ventouses, coupe-amygdales, etc..., avec lesquels ils opèrent assez adroitement.

On a pu très justement les comparer à nos chirurgiens-barbiers d'autrefois [1].

La vie guerrière et mouvementée des Touaregs les expose à de multiples blessures ou accidents. Ils soignent les blessures de guerre en saupoudrant la plaie de sucre ou en l'enduisant d'emplâtres d'origine végétale, des feuilles hachées du *Zizyptus lotus*, ou de la résine pilée du *Balsamodron africanum*. Parfois, ils versent du beurre dessus, et, si la plaie est infectée, mettent des emplâtres de beurre et de cendre d'*aferegak*, *chrozophora brocchiana*.

Mais nous avons pu observer que l'emploi de cette cendre n'était pas d'une grande efficacité, que les plaies étaient très longues à cicatriser, et que, dans bien des cas, on préférait faire appel au médecin européen.

Les fractures sont soignées absolument avec les mêmes méthodes que celles employées par nos médecins européens. Le membre fracturé, après avoir été remis en place, est enduit d'un emplâtre de farine, garni d'un petit matelassage de poils de chèvre, et consolidé au moyen d'attelles faites de planchettes de bois fixées sur une peau de mouton et maintenues en place par des cordelettes de peau.

1. Dr Foley, *Mœurs et médecine des Touaregs de l'Ahaggar*, p. 85.

1: Lhote MS25 Tuareg

Nous n'avons jamais vu d'amputation chez les Touaregs et nous ignorons s'ils savent la pratiquer.

Les Touaregs connaissent également l'emploi du bock à lavement. L'appareil est constitué par un os de mouton dont une des extrémités a été arrondie et polie et dont l'autre est montée sur une petite outre en peau de chèvre qui reçoit le

Fig. 37. — Bock à injection touareg.

liquide à injecter. Pendant l'opération, on presse sur l'outre de manière à faire pénétrer le liquide alors que le patient a la tête en bas et les pieds attachés à un arbre. Le lavement est généralement composé d'eau, de beurre et de racines d'afasso pilées. Lorsqu'il s'agit de donner un lavement à un jeune enfant, la maman s'emplit la bouche d'eau et appliquant ses lèvres contre l'anus, elle souffle le liquide de toutes ses forces.

# CHAPITRE VIII

## HABILLEMENT. — PARURE

Les vêtements. — Le portrait du Targui est maintenant bien connu. Drapé dans une longue blouse de teinte sombre, serrée à la ceinture, la tête entourée d'un voile noir placé en forme de haumier, il se profile majestueux autant que mystérieux sur son fin méhari, à la selle duquel, aussi célèbre que l'homme, pend le large bouclier de peau d'antilope.

Les Touaregs, même pauvres, sont très coquets ; ils ont beau ne posséder que des haillons sordides, ils sauront toujours les placer avec bon goût et garder en toutes circonstances une attitude fière et digne.

Le costume masculin est le même dans toutes les confédérations. Il se compose : 1° d'un pantalon très ample, serré à la ceinture par une cordelette de peau tressée ; la jambe est pincée sur le cou-de-pied et blouse sur ce dernier au point de traîner parfois à terre ; 2° d'une grande blouse très ample formée par une pièce d'étoffe de forme rectangulaire, cousue par un point aux quatre angles et munie d'une ouverture en son milieu pour permettre le passage de la tête ; elle descend jusqu'à mi-jambe et est portée flottante ou, le plus souvent, serrée à la taille par une ceinture ; 3° d'un voile recouvrant la figure, ne laissant voir que le dessus de la tête et les yeux.

Telle est la tenue la plus simple des Touaregs.

La tenue de gala comprend plusieurs blouses superposées les unes sur les autres : une blouse blanche en dessous, une bleue indigotée par-dessus et enfin, pour les gens riches, une troisième blouse faite de bandes de coton, travaillées au Soudan, dont la teinte de fond est généralement violacée, portant des grandes et fines broderies sur la poitrine et sur les épaules ; elle comporte une poche large et profonde sur le côté gauche à la hauteur du sein. De larges bandes d'étoffe, blanches et rouges, ceignent les reins en formant ceinture et se croisent sur la poitrine en forme de baudrier ; de grands cordons de soie avec glands rouges ou verts terminent le costume qui donne si grand air aux Touaregs.

1: Lhote MS25 Tuareg

Les vêtements, sauf la gandourah faite de bandes de coton, sont en étoffe d'importation européenne, très fortement indigotée, nommée *chêga*, donnant un lustrage très foncé ; c'est l'étoffe préférée des hommes et des femmes touaregs, mais qui est remplacée chez les gens moins aisés par de l'étoffe ordinaire.

Les voiles sont fabriqués en Nigéria anglaise, dans le village de Koura, près de l'importante ville de Kano. Ils sont faits de

Fig. 38. — Habillement des hommes de l'Ahaggar.
1° Amrid avec gandourah relevée sur les épaules.
2° Akli portant la gandourah en peau.
3° Amajer en tenue de cérémonie portant sur la tête la takoumbout.

l'assemblage d'une multitude de petites bandes de toile ; leur prix est très élevé et peut atteindre, suivant la qualité, de trois à cinq chèvres. Ils portent en langue haoussa le nom de *toukourdi*, qui a été adopté par les Touaregs, et ils ont longtemps servi de monnaie d'échange pour les transactions commerciales.

On s'est maintes fois demandé les raisons qui ont amené les Touaregs à se voiler la face. L'hygiène que l'on a évoquée souvent, le besoin de se protéger les voies respiratoires contre le vent de sable, ne sont pas des raisons suffisantes pour expliquer cette habitude. Il y a autre chose, une coutume

1: Lhote MS25 Tuareg

énigmatique très ancienne dont l'origine s'est perdue dans la nuit des temps, qui s'est maintenue sans que l'on sache trop pourquoi, mais qui est tellement bien ancrée chez les Touaregs que ces derniers ne conçoivent pas qu'un homme qui se respecte puisse s'abstenir du port du voile.

Les hommes sans tête, les acéphales des auteurs anciens, n'ont certainement dû leur surnom qu'à cette coutume très particulière de se cacher la face, coutume qui devait déjà exister à cette époque reculée. On ne peut qu'échafauder des hypothèses sur l'origine de ce voile.

Nous savons par Ibn Khaldoun qu'au XIVe siècle le port du voile était généralisé chez les populations qui habitaient la côte atlantique et les pays adjacents, ce qui établit que cet usage est très ancien.

Dans les peintures rupestres, d'âge pré ou protohistorique qui ont été découvertes ces dernières années au Sahara central, on a remarqué la façon toute particulière de représenter la tête des figurations humaines. Il semble qu'en la circonstance, il existait un tabou qui interdisait de représenter les signes du visage.

La substitution de tête zoomorphe dans des figurations humaines d'époque très ancienne, gravées sur les rochers du Tassili-n-Ăjjer, dérivée de croyances totémiques, peut-elle contribuer également à expliquer l'origine du voile ? C'est une hypothèse permise.

Ce qui est certain, c'est qu'à l'heure actuelle il est honteux pour un Targui de montrer sa bouche et que le voile est l'élément capital de son vêtement. Lorsqu'il tirera l'eau d'un puits, il enlèvera sa gandourah, il relèvera le bas de son pantalon, pour être plus à son aise, mais il veillera à ce que son voile soit toujours en place.

Le port du litham — ou tiguelmoust — comporte tout un rituel qui implique l'existence de croyances dont les détails nous ont échappé, parce que les Touaregs eux-mêmes n'en dégagent plus la signification.

La façon de porter le voile, de placer sur la tête ses différentes parties, peut varier d'une tribu à l'autre, et il y a des modes locales que certains préfèrent par goût personnel. C'est ainsi que ces dernières années les jeunes gens de l'Ăhaggar adoptèrent la façon de porter le voile des Kel Férouan de l'Aïr, ce qui leur valut d'ailleurs les critiques acerbes des anciens de la tribu.

1: Lhote MS25 Tuareg

Mais en dehors des différentes manières de placer le voile suivant les modes locales ou personnelles, il y a la tournure, le tour de main qui fait qu'il est plus ou moins élégant. Il y a aussi une psychologie du voile et lorsque l'on connaît l'homme, la façon dont est placé son voile peut indiquer son état d'esprit. Il y a la manière réservée et pudique usitée lorsqu'on se présente dans un campement où il y a des femmes, la manière élégante et recherchée pour aller aux réunions galantes, la manière altière du guerrier conscient de son importance, comme celle fantasque de l'imrad ou de l'esclave fanfaron. Il y a aussi la façon de porter le voile, détachée, lâche, du garçon jovial, bon enfant, désordonnée de l'homme instable de caractère et facilement irritable.

Le voile peut exprimer un sentiment passager. C'est ainsi qu'il est rabattu sur les yeux devant des personnes respectables ou devant des femmes, alors qu'au contraire relevé sur le front il est signe de familiarité. Pour rire à son aise d'une facétie un Targui relèvera très haut la partie inférieure de son voile sur son nez et lorsqu'il sera irrité il la serrera comme une jugulaire pour masquer sa colère.

Dans la tenue de gala portée à l'occasion des fêtes religieuses ou familiales, le voile se complique de nombreux turbans de mousseline blanche et de bandes de soie colorées ; la partie supérieure reçoit une espèce de bâti qui permet de dresser de multiples bandes de coton, de les entrecroiser et de former ainsi une sorte de cimier. La partie supérieure du crâne n'est jamais couverte et le voile laisse apparaître des touffes de cheveux tressés. Lors des mariages, on avait coutume, autrefois, de porter la « takoumbout », sorte de grande chéchia de drap munie d'énormes floches de coton et couverte d'appliques d'argent. Cette coiffure tend à disparaître complètement et il n'en existe plus qu'une ou deux dans tout l'Ăhaggar.

Les Ihăggaren utilisent deux sortes de sandales : la sandale large, en peau de bœuf, avec brides simples en cuir rouge se croisant sur le cou-de-pied et appelée *irratimen*, et une sandale faite d'une multitude de fragments de peau de chèvre cousues les unes sur les autres, avec bride passant derrière le talon et venant s'attacher par un nœud sur le cou-de-pied, et appelée *imerkéden*.

Les *irratimen* sont surtout portées par les hommes aisés et particulièrement appréciées dans les régions sablonneuses où leur grande surface portante permet de ne pas trop enfoncer.

1: Lhote MS25 Tuareg

Cette sandale, qui est fabriquée par les artisans haoussa d'Agadez ou du Damergou, a été empruntée à ces populations par les Touaregs, et ce n'est pas à ces derniers qu'il faut en imputer l'origine.

Les véritables sandales des gens de l'Ăhaggar sont les *imerkéden*, que portent encore et que préfèrent toujours les gens de la montagne, car elles sont particulièrement bien adaptées à la marche dans les rochers. Elles sont portées par les gens du commun, par les Iklan qui n'ont pas les moyens d'acheter des sandales soudanaises alors que tous savent confectionner des imerkéden très confortables avec quelques vieux morceaux de peaux de chèvre.

FIG. 39. — L'imerkéden, sandales faites de peaux cousues les unes sur les autres et portées par les montagnards de l'Ăhaggar.

Si le costume masculin ne varie pas, ou varie très peu, il n'en est pas de même du vêtement féminin. Celui porté par les femmes de l'Ăhaggar est propre à cette contrée, alors que les femmes de l'Aïr ou des Ioullimmiden s'habillent à leur manière.

Les femmes touarègues ne portent pas de pantalons, mais elles ont un jupon de toile blanche enroulé autour des reins. Celles de l'Ăhaggar portent dessus une grande blouse en toile blanche, semblable, pour la forme, à celle des hommes, mais fermée sur les côtés. Les femmes aisées en portent une deuxième par-dessus, en toile indigotée.

En Aïr, la blouse est remplacée par un petit boléro et dans les tribus Ioullimmiden les femmes vont généralement le torse nu ou se contentent d'une pièce d'étoffe rectangulaire qu'elles jettent négligemment sur les épaules.

Elles ne se voilent pas la figure comme les hommes et portent une petite mantille faite d'un ou deux toukourdi avec lesquelles elles s'entourent la tête et la figure dont elles dissimulent les traits devant les étrangers. Pendant les déplacements, les femmes de l'Ăhaggar utilisent un grand chapeau de paille à large bord — le *télé* — pour se protéger du soleil

1: Lhote MS25 Tuareg

Elles se chaussent d'irratimen, comme les hommes, mais elles vont le plus souvent pieds nus ; au Soudan, pendant la saison des pluies, elles remplacent les irratimen en peau, par des irratimen en bois très léger qui jouent là-bas, le même rôle que les sabots chez nous.

Dans l'Ăhaggar et au Tassili, hommes et femmes portent un grand haïk de laine blanche dont ils s'enveloppent la tête et les épaules, et pendant la période froide de l'hiver, ils s'enveloppent d'une longue couverture de laine — le *dokkali*

FIG. 40. — 1° Habillement de femmes touarègues de l'Aïr comprenant un jupon et un petit boléro.
2° Habillement des femmes touarègues de l'Ahaggar comprenant jupon et grande gandourah tombant jusqu'aux pieds.
3° Habillement des femmes touarègues du Soudan comprenant un jupon et un châle recouvrant les épaules.
4° Jupes en peau des servantes usitées dans les tribus Ioullimminden.

— fabriqué par les Arabes du Touat et que ces derniers viennent échanger aux Ihăggaren contre des moutons.

Les vêtements de toile sont d'un usage certainement récent chez les Touaregs qui auparavant portaient des vêtements en peau. Quelques Iklan de l'Ăhaggar portent encore de ces blouses s'arrêtant aux genoux, garnies de franges sur la poitrine, les côtés et les manches. On trouve encore des témoins de ces vêtements de peau chez les captives du Soudan et de la région de Tombouctou qui portent des jupes serrées à la taille teintes à moitié en rouge, moitié en jaune, et ornementées de franges multicolores. On voit encore en Aïr les fillettes porter

1: Lhote MS25 Tuareg

des espèces de petits tabliers en peau et les garçonnets de petits pantalons de peau.

Il semble que ce soient là les vêtements ancestraux des Touaregs. La description de la robe des femmes libyennes, que nous a donnée Hérodote, correspond en tous points à la robe de cuir en usage dans la région de Tombouctou et certaines peintures rupestres du Tassili évoquent à s'y méprendre la petite tunique en peau des Iklan de la Koudia.

Parures. Bijoux. — La coquetterie chez les Touaregs de l'Ăhaggar est une chose fort remarquable et assez inattendue chez des gens qui vivent dans des conditions très primitives et dont les instincts naturels doivent porter avant tout vers l'esprit de conservation et les préoccupations matérielles. Mais elle est le reflet de leur vie un peu superficielle, de leurs mœurs légères, de cette existence de plaisir que les nobles entendent mener.

Et c'est ainsi que les Touaregs sacrifient tout à leur coquetterie, se priveront de nourriture, aliéneront une partie de leurs biens pour pouvoir se procurer des vêtements bien lustrés, des rubans multicolores pour relever l'éclat de leur coiffure, des étuis à amulettes qui seront beaucoup plus portés dans un but esthétique que religieux.

Les femmes sacrifient aux mêmes travers et ne connaissent pas le repos tant qu'elles n'ont pas un certain nombre de bijoux pour se parer.

Chez les hommes, la parure consiste en quelques bijoux et surtout en porte-amulettes. En fait de bijoux, ils ne portent qu'une ou deux bagues d'argent aux doigts, sortes d'anneaux lourds et grossiers, soit unis, soit légèrement torsadés, et un anneau de pierre passé au-dessus du coude.

Cet anneau de pierre — *ahbeg* — a été décrit par l'explorateur Duveyrier comme une arme. Il n'a, en réalité, qu'un caractère ornemental, car il est tellement fragile qu'on ne saurait lui faire subir une forte pression sans le faire éclater, ce qui risquerait de blesser gravement l'homme qui le porte.

A l'heure actuelle, les Touaregs sont les seuls parmi les populations africaines à porter cet anneau de pierre, à part certains groupements humains qui vivent à leur contact et qui l'ont adopté par esprit d'imitation. Il était pourtant d'un usage très courant chez les populations néolithiques, et il n'est pas rare d'en trouver des fragments au milieu des gisements

anciens, datant de cette époque. C'est là qu'il faut chercher son origine, et il n'est pas autre chose, à l'heure actuelle, qu'un vestige néolithique.

On peut considérer comme parures une foule de petits étuis que les Touaregs portent suspendus au cou et reposant sur la

Fig. 41. — Types de bracelets portés au-dessus du coude par les Touaregs. 1, 2, 3 sont en schiste tendre de l'Aïr, 4 en marbre de la région de Hombori.

poitrine. Ce sont de petits étuis en peau, décorés, peints ou brodés, ou encore impressionnés en relief, qui contiennent de petits instruments variés. Il existe ainsi des porte-glacé, des porte-aiguilles, des porte-rasoir, des porte-ciseaux, des porte-brosse à dents etc..., et de petites sacoches porte-monnaie dans lesquels les Touaregs enferment ce qu'ils ont de plus précieux : de l'argent, un briquet et sa pierre, du tabac.

Ils portent également sur la poitrine, au bras ou sur la coiffure, des quantités d'amulettes dont l'étui est en peau ou en métal. Mais cette coutume, d'origine religieuse, a évolué dans

FIG. 42. — Porte-aiguilles en peau travaillée, incisions au couteau et broderie. Fond rouge, décor noir, broderie en coton rouge et vert.

le sens ornemental, car beaucoup de ces porte-amulettes ne contiennent rien.

La bijouterie féminine est beaucoup plus riche et variée. Elle est toute fabriquée en argent, et l'on ne voit jamais chez les Touaregs de bijoux en or. Ils prétendent que l'or porte malheur à qui le possède et que ce métal corrompt les gens.

Les femmes de l'Ăhaggar portent aux doigts de larges bagues de forme ronde, constituées par de petits boîtiers dans lesquels est un petit caillou qui tinte comme un grelot. Celles qui sont riches en ont deux ou trois à chaque main.

Les poignets sont ornés de bracelets en argent à section triangulaire, et creux, portant de petites gravures linéaires.

Fig. 43. — Bagues des femmes de l'Ahaggar.

Il existe également des bracelets assez larges, en corne noire, et les bracelets d'origine soudanaise faits de perles multicolores montées sur peau sont également adoptés par quelques femmes.

Le cou est orné d'un collier portant un coquillage ovale (?) ou d'une matière provenant d'un animal originaire du Niger et qui pourrait bien être le lamentin. Ce bijou — *ame-éouan* — a une grosse valeur et est très rare dans l'Ăhaggar. Il se transmet de mère en fille.

Au-dessous du collier, les femmes touarègues portent des

1: Lhote MS25 Tuareg

pendentifs pectoraux, l'un de petite taille, en forme de losange, avec une pierre rouge sertie à l'intérieur et agrémenté à la base d'une série de petites plaquettes triangulaires, l'autre de grande taille, formé de plusieurs triangles, avec de gros cabochons d'argent, agrémentés chacun à la base de petites plaques triangulaires.

Le style de ces bijoux est simple et très particulier aux Touaregs. Si leur forme triangulaire rappelle un peu celle des

FIG. 44. — Bracelet en argent porté au poignet par les femmes.

bijoux kabyles, il n'en est pas moins vrai qu'ils ne présentent aucun rapport avec l'orfèvrerie nord-africaine et qu'il est bien difficile d'expliquer leur origine.

Les femmes touarègues de l'Ăhaggar ne portent pas de boucles d'oreilles, mais de grands anneaux d'argent massif qui sont suspendus de chaque côté et à hauteur des oreilles par une lanière de cuir qui passe sur le dessus de la tête.

Très souvent, elles portent également de petits pendentifs de chevelure qui sont fixés à l'extrémité des nattes des cheveux.

Hommes et femmes sont munis d'une petite pince pour enlever les épines — *l'irremdan* — portée en sautoir. Celle des femmes, qui est en cuivre et de forme bi-triangulaire,

1: Lhote MS25 Tuareg

prend le caractère d'un bijou, car elle est soigneusement travaillée et présente un réel caractère artistique. Celle des hommes, plus simple, est complétée par un petit poinçon et une lame de canif, et joue le rôle d'une petite trousse de chirurgie portative.

Ce n'est qu'au cours des fêtes que chacun se pare de ses bijoux ; ils sont généralement placés dans des sacs fermés par

FIG. 45. — Anneau d'oreille des femmes touarègues de l'Ahaggar.

un cadenas curieux, de forme rectangulaire, muni d'un ou deux pènes intérieurs qu'il faut dégager avec une énorme clé que les Touaregs ont toujours sur eux.

# CHAPITRE IX

## ARTISANAT ET ART CHEZ LES TOUAREGS DE L'ĂHAGGAR

La vie de nomades et de pasteurs que mènent les Touaregs limite évidemment le développement des techniques artisanales, et celui de l'art lui-même. Tout se résume chez eux aux nécessités immédiates de la vie courante, donc aux objets ménagers, à ceux de l'habitation, aux harnachements, aux vêtements, et accessoirement à la parure.

Fig. 46. — Entonnoir en bois.

Si l'on cherche quelles sont les matières premières employées et dont disposent les Touaregs pour la confection des divers objets qui leur sont nécessaires, on constate que le bois tient la plus grande place, ensuite la peau, puis certaines tiges de graminées et enfin les métaux.

Si, en deuxième lieu, on cherche quelles sont les aptitudes des Touaregs eux-mêmes à travailler ces différentes matières premières, on s'aperçoit que leur énumération suit le même ordre que précédemment avec cette réserve qu'aucun d'eux ne sait travailler les métaux. Ces derniers travaux sont l'apanage des Enaden, c'est-à-dire des artisans, et il en ressort que sans le concours des artisans l'industrie des Touaregs se limiterait aux travaux du bois, de la peau et de la sparterie. C'est en somme le cycle culturel des peuples pasteurs de la steppe.

Ce n'est que bien plus tard, lorsque les Touaregs eurent intégré les Enaden à leur organisation sociale, qu'ils utilisèrent les métaux et l'on saisit dès lors le rôle considérable que durent jouer les artisans dans l'évolution technique et dans celle de l'art lui-même.

1: Lhote MS25 Tuareg

La présence des Enaden dans les campements a réduit l'activité manuelle des Touaregs, mais ceux-ci sont encore capables de confectionner des objets en bois : vases à traire, écuelles, piquets de tentes, etc....

L'une des coutumes les plus curieuses est celle des femmes de haute noblesse qui travaillent de leurs mains, au moyen d'une petite herminette, des vases en bois, des entonnoirs, qu'elles offrent généralement aux femmes de leurs Imrad, lesquelles se montrent très sensibles à ces cadeaux. Nous avons retrouvé dans les campements de l'Ăhaggar des multitudes de petits ustensiles qui étaient l'œuvre des femmes nobles célèbres, de taménokalin dont les noms sont pieusement gardés, et qui étaient conservés avec beaucoup de vénération. Cette coutume est d'autant plus remarquable que l'on sait tout le mépris qu'ont les Touaregs pour les travaux manuels et il faut y voir la survivance du travail du bois, lequel devait être autrefois le travail de tous, sans distinction, avant la création de la caste artisanale.

Fig. 47. — L'amoula, petit biberon en bois pour faire boire les jeunes enfants.

Le bois fournit des récipients pour les aliments, des vases à boire, à traire, des mortiers, des pilons, des piquets de tentes, des traverses et des planches pour la confection des selles. L'Ăhaggar ne possède pas plus de cinq à six essences susceptibles d'être travaillées, et les objets, de forme très simple, sont beaucoup moins variés que dans les tribus soudanaises.

Toutes les femmes de l'Ăhaggar, nobles ou vassales, savent tanner, épiler, coudre, décorer et broder les peaux. Elles sont capables de confectionner une outre nécessaire au transport de l'eau, de préparer les peaux pour la confection des tentes, de fabriquer des sacs pour le transport des vivres et des objets personnels. Toutes sont devenues expertes dans ces travaux au point qu'il est difficile de trouver dans le monde d'autres populations possédant une technique du cuir aussi développée.

La pauvreté de l'Ăhaggar en matière végétale est une des raisons pour lesquelles l'emploi de la sparterie est relativement restreint. Seules, les tiges d'une graminée commune dans les oueds — le Panicum turgidum — sont utilisées pour la confection des nattes : grandes nattes de clôtures qui entourent la tente, nattes de couchage, nattes couvre-plats.

1: Lhote MS25 Tuareg

Les tiges sont liées par de petites lanières de peau et l'association graminée-peau est du plus heureux effet ; elle permet des décorations géométriques très régulières en même temps qu'un travail très solide.

Il n'existe pas de vans en sparterie chez les Touarega. Les femmes utilisent des vans et des chapeaux en feuilles de palmier, mais ces objets sont l'œuvre des harratines des petites palmeraies de Sîlet, d'Idelès et d'Ăbalessa.

Le filage est pratiqué par toutes les femmes touarègues. Elles filent le poil de chèvre, de chameau, de mouflon, pour faire des cordes d'une très grande solidité et des sangles de selles.

Le tissage est limité à la confection de sacs en poils de chèvre, plus rarement en poils de chameau. C'est une technique

Fig. 48.
Louche en bois de tabarekkat, servant également de vase à boire.

très primitive qui ne comporte pas de métier et qui est d'ailleurs en voie de disparition dans l'Ăhaggar, où seules quelques femmes nobles la pratiquent encore ; elle est complètement éteinte dans les tribus soudanaises.

Le travail de la pierre, survivance du néolithisme, était encore pratiqué dans l'Ăhaggar il y a quelques années pour la fabrication des anneaux de bras. Des gisements de schistes granitoïdes étaient auparavant exploités à Aseksem et à Terahart, dans la Tăfedest et nous avons retrouvé au sud de Sîlet, sur les bords de l'oued Tămanrasset, un ancien atelier de fabrication. De nos jours, tous les bracelets de pierre proviennent de l'Aïr, quelques-uns de Hombori, où ils sont façonnés par des artisans touaregs ou haoussa.

Le travail des métaux est exclusivement entre les mains des Enaden qui transforment l'argent, le cuivre, le fer. Ces matières, sauf le fer, n'existent pas à l'état natif et exploitable dans l'Ăhaggar. Mais si le minerai de fer est commun

dans certaines roches volcaniques de leur pays, les Touaregs ne le font pas exploiter, car il se trouve en si petites particules, qu'il nécessite un travail de forge disproportionné avec les quantités susceptibles d'être recueillies. Le souvenir du coulage du minerai est malgré tout resté chez les Enaden qui utilisaient plusieurs forges à la fois, mais ne connaissaient pas le haut fourneau. Ce sont les caravaniers venant du nord ou du Soudan qui apportaient autrefois les métaux.

FIG. 49. — Soufflet de forge double.

Actuellement l'argent provient des pièces de monnaie qui sont fondues ; depuis des années les Touaregs disposaient de thalers de Marie-Thérèse qui furent longtemps la monnaie étalon dans toute l'Afrique centrale[1]. Le cuivre est surtout fourni par des étuis de cartouches, et le fer par des débris abandonnés des vieilles voitures, des ressorts d'autos, des plaques de tôle, des boîtes de conserves, etc....

L'aluminium qui commence à pénétrer dans la région du Niger n'est pas encore utilisé dans l'Ahaggar, et les tubes, les haubans abandonnés aux quatre coins du désert par les avions en perdition, n'ont jusqu'ici servi qu'à faire des montants de tentes.

1. Le thaler de Marie-Thérèse fut introduit en Afrique au début du XIXe siècle par les navigateurs et commerçants qui fréquentaient le golfe de Guinée. Il devint avec la barre de fer la base des échanges commerciaux et il eut cours dans l'intérieur de l'Afrique Occidentale ainsi qu'en Abyssinie.

1: Lhote MS25 Tuareg

L'argent est utilisé à la confection des bijoux : pendentifs, pendeloques de coiffures, bracelets, bagues, boucles d'oreilles, porte-amulettes, etc....

Le cuivre fournit un nombre d'objets plus important et naturellement d'un usage plus courant : objets de sellerie, caveçons pour chameaux, cadenas avec clés très ouvrés, couteaux à cheveux, etc.... Ce métal est généralement mieux travaillé que l'argent ; il est souvent ciselé, gravé et surmonté d'applications d'étain dont la technique rappelle le damasquinage. Différents objets, petits couteaux, trousse médicale, portent des applications de cuivre sur fer.

Fig. 50. — Marteau.

Le cuivre et l'argent sont coulés dans de petits creusets en terre cuite et la température élevée que réclame leur fonte est obtenue par une forge à double soufflet à mains, ou à soufflet unique, du modèle employé par les Arabes sahariens et par les Soudanais.

Les Enaden de l'Ăhaggar ne fabriquent pas d'armes et se contentent de les réparer. Sabres, poignards, lances, étaient pour la plupart fabriqués par les forgerons de la tribu des Kel Dinnik (Ioullimmiden de Tahoua). Les lames de sabre étaient importées de Rhât et montées par les artisans ; les lances venaient de chez les Kel Geres où les Enaden de ce groupement exploitaient une mine de fer qui se trouve à côté du village de Tassaoua.

Seuls quelques poignards étaient fabriqués dans l'Ăhaggar.

Fig. 51. Pince de forgeron.

La poterie est d'un emploi courant chez les Touaregs. Elle n'est généralement pas en usage chez les nomades. Pourtant elle est répandue depuis longtemps au Sahara, car on trouve des quantités de tessons et de fragments sur les regs qui sont bien postérieurs à la période néolithique, et d'ailleurs son emploi se généralise de plus en plus dans les campements.

Les poteries sont fabriquées par des négresses, femmes

1: Lhote MS25 Tuareg

d'harratines, ou anciennes captives libérées qui vivent dans les centres de culture.

Cet aperçu des techniques et industries des Touaregs Kel Ăhaggar fait ressortir leur pauvreté.

Peut-on parler d'art chez les Ihăggaren ? Cela semble difficile car, à part quelques rares objets, tous ceux qu'ils emploient sont plus ou moins en usage dans les tribus du Soudan. C'est ainsi que tous les modèles de bijoux portés dans l'Ăhaggar sont importés de l'Aïr ou de l'Ădrar des Ifôras. Et cela s'explique d'autant mieux que les artisans sont plus ou moins originaires de ces régions.

Fig. 52. — Pince à sucre.

Il est difficile de déterminer les origines de l'art targui en général. C'est en réalité un art composite qui a pris à tous ses voisins, qui n'est pas, pour une grande part, le fait des Touaregs eux-mêmes, mais de leurs artisans. Et c'est chez ces derniers qu'il faudrait en chercher les origines lointaines.

Les goûts des Touaregs semblent être immuables. Ils sont fixés depuis des siècles et c'est ainsi que l'on retrouve dans les documents anciens, vieux d'une centaine d'années, la même forme, les mêmes dimensions, les mêmes coloris qu'aujourd'hui. Nous dirons à ce sujet que l'Ênad n'est pas un artiste. C'est un ouvrier qui peut avoir du goût, mais qui, dans l'ensemble, est incapable de créer ; il reproduit fidèlement le modèle qui lui est transmis, il peut le faire avec plus ou moins de fini, mais son inspiration s'arrêtera là. Seuls, les travaux du cuir et du bois sont bien le fait des Ihăggaren, car ils dérivent de besoins anciens et les techniques se sont conservées dans leurs mains et non dans celles des Enaden.

# *LIVRE VI*

# *LA VIE SOCIALE*

## *CULTES ANCIENS, RELIGIONS ET CROYANCES DES TOUAREGS*

---

## CHAPITRE PREMIER

## LA VIE SOCIALE

Nous allons suivre maintenant les Touaregs dans les détails de leur vie sociale.

La naissance. — Lorsque des jeunes gens se sont mariés, il est rare que les liens du mariage ne soient pas bientôt fortifiés par la naissance d'un enfant. Il est de très mauvais ton pour un jeune ménage de ne pas avoir d'enfant et la stérilité d'un des conjoints est souvent un motif de divorce.

Enceinte, la femme touarègue continue à vaquer aux travaux du ménage, entourée du respect de son entourage.

Lorsque le moment de l'enfantement approche, la femme se fait conduire au campement de ses parents, si toutefois elle n'y est pas encore, car ce n'est qu'en cas de force majeure qu'elle accouche au campement de son mari.

Une tente est dressée où l'on installe la femme et elle se fait ordinairement assister d'une matrone qui lui masse le ventre, s'assure de la bonne position de l'enfant, la roule sur le sol pour le mettre en place s'il y a lieu, mais ne fait jamais d'exploration vaginale.

Si l'accouchement ne se fait pas normalement, la matrone peut demander le secours du marabout. Celui-ci vient, se tient à l'extérieur de la tente, donne des conseils à la voix, mais n'intervient jamais personnellement et ne peut accéder près de la parturiente.

Pour accoucher, la femme se tient accroupie sur les genoux et s'arqueboute au piquet central de la tente. Généralement

1: Lhote MS25 Tuareg

l'enfant tombe sur une couche de sable fin qui a été préparée à cet effet. Aussitôt, la matrone coupe le cordon ombilical, lave l'enfant à l'eau chaude, le fait crier en le pinçant pour s'assurer de sa vitalité. La mère le prend ensuite, lui trait un peu de son lait dans les narines, lui étire le nez pour qu'il devienne long et fin, lui presse la tête entre ses mains pour lui donner une forme allongée. Cette coutume est certainement un vestige de la déformation crânienne qui n'est plus pratiquée chez les Touaregs, mais qui était commune autrefois chez les Égyptiens.

Aussitôt que le père apprend la naissance de l'enfant, il fait égorger un mouton qu'il envoie au campement de sa femme ; ce mouton est destiné à sa nourriture et à celle des personnes qui l'ont assistée. On fait absorber à la femme beaucoup de bouillon de viande. La jeune maman se relève quelquefois deux ou trois jours après ses couches.

La naissance d'un garçon est accueillie avec plus de joie que celle d'une fille. Dans le premier cas, tous les gens, hommes et femmes, viennent féliciter la maman, mais si c'est une fille, seules les femmes viennent la voir. Au cours de cette visite, les femmes mettent souvent de l'ocre jaune au-dessous des yeux et autour de la bouche pour éloigner les mauvais génies que l'on présume toujours rôder dans les tentes où vient d'arriver un nouveau-né.

Le septième jour après la naissance, la femme retourne au campement de son mari, accompagnée par les femmes de sa famille et par ses frères, si elle en a. Le père voit alors son enfant pour la première fois.

L'apposition du nom. — C'est alors qu'a lieu l'apposition du nom. Il est fait choix de plusieurs noms qui sont tirés à la courte paille. Dans les tribus de l'Aïr, lorsqu'il y a discussion sur le choix du nom, chacune des parties présentes apporte une petite chèvre et lui donne secrètement le nom préféré. La mère, qui ignore les donateurs des chèvres, choisit celle qui lui plaît et la fait égorger ; l'enfant doit alors porter le nom qui avait été donné à la chèvre pour la circonstance. Ensuite, un repas est servi aux gens du campement et aux invités, un cadeau est offert au marabout, s'il en est venu un.

Le même jour, on coupe les cheveux pour la première fois au nouveau-né, et le marabout lui fixe une amulette autour du cou.

1: Lhote MS25 Tuareg

Les noms que l'on donne aux enfants sont très variés et quelquefois très fantaisistes. On observe des coutumes semblables à celles des Peaux-Rouges, et c'est ainsi que les parents tiennent compte de certaines circonstances fortuites qui ont entouré la naissance. Nous avons vu une jeune fille qui portait le nom de Tédigrès, qui veut dire la grêle, parce qu'il avait grêlé au moment de sa venue au monde. D'autres portent des noms d'animaux tels que : Ănaba : la panthère, Ăbagui : le chacal, Acotey : la gerboise, Tinirt : l'antilope, Ăhenkatt : la gazelle, etc....

Avec l'influence arabe, beaucoup de noms tirés de la Bible et arabisés ont été adoptés par les Touaregs. Ainsi : Moussa, de Moïse, Firhoun, de Pharaon, Younès, de Jonas, etc....

Ils portent également des noms très anciens qui leur viennent par la tradition et dont ils ignorent la signification et l'origine : Akhamouk (m), Amastane (m), Yklou (m), Chékou (f), Tinguelous (f) [1].

Dès lors l'enfant porte accolé à son nom celui de son père et le garde toute sa vie. Il n'y a pas de noms de famille et le mariage n'entraîne aucune substitution pour l'un ou l'autre sexe. On dira Anaba ag (fils de) Mohamed, ou Chékou oult (fille de) Mohamed, si le père s'appelle Mohamed. La filiation nominale est donc patrilinaire.

Les surnoms sont nombreux dans l'Ăhaggar, nous dit le Père de Foucauld, « ce sont tantôt des noms propres de personnes différentes de celui qu'on a reçu, tantôt des noms rappelant une particularité physique ou un événement, tantôt des noms sans signification. Bien des personnes n'ont pas de surnom ; parmi celles qui en ont, certains les acceptent, d'autres s'en offensent. Parfois les surnoms sont passagers, connus seulement de quelques intimes et vite oubliés ; parfois ils s'attachent tellement à la personne qu'elle n'est plus désignée autrement et que son nom réel tombe dans l'oubli » [2].

La conception et l'allaitement. — Au sujet de la conception, les Touaregs y voient seulement la volonté de Dieu, mais établissent aussi la relation de cause à effet dans les rapports sexuels, et ne mettent pas en discussion l'idée qu'une femme ne peut concevoir sans le contact de l'homme. L'existence et le rôle des spermatozoïdes sont ignorés, mais les Tou-

1. Ce nom viendrait du latin *angelus*.
2. *Dictionnaire abrégé Touareg-Français des noms propres*, p. xv.

aregs reconnaissent l'action du liquide séminal et les femmes pratiquent des aspersions d'eau dans un but anticonceptionnel. Le Professeur Gautier a même parlé d'un irrigateur rustique. Cet appareil est inconnu des femmes touarègues et Gautier a certainement fait confusion avec le bock à lavement.

Les menstrues — *iba-n-amoud* — apparaissent chez les jeunes filles touarègues entre 13 et 15 ans, et leur causent de grandes frayeurs. Pendant leur indisposition, elles ne pratiquent aucune toilette intime, ne prennent souvent aucune précaution pour absorber le flux qui tache leur vêtement et s'abstiennent de faire la prière comme étant en état d'impureté.

L'arrêt des menstrues pendant la grossesse est judicieusement interprété, à savoir que l'enfant est nourri du flux et en rejette les déchets à sa naissance (placenta).

Lorsqu'une femme ne peut pas avoir d'enfant, son mari va trouver un marabout qui lui remet contre paiement, une amulette que la femme doit porter sur elle, à même la peau. La femme, de son côté, va prier auprès des vieilles tombes connues comme étant celles de personnages vénérés, demandant à Dieu le pardon de ses fautes et au mort de l'exaucer auprès du créateur. Si la femme conçoit, le mari porte au marabout une offrande qui s'élève parfois à plusieurs têtes de bétail.

Après l'accouchement la femme n'a pas de rapports avec son mari avant un mois et dix jours. Le quarantième jour, le mari fait cadeau à sa femme de sandales et de vêtements neufs.

L'allaitement dure en moyenne deux ans à deux ans et demi, mais les garçons sont sevrés six mois plus tard que les filles, car ils sont, paraît-il, plus fragiles et ont besoin d'une plus forte alimentation.

Au campement, l'enfant en bas âge est placé sur un coussin, couché sur le ventre, et maintenu par une bande de toile qui passe sur les reins et est nouée sous le coussin ; les poignets sont parfois aussi attachés. On place quelquefois au-dessus de lui un cadre de bois fait d'arceaux qui supporte des étoffes et le protège à la fois des mouches, de la lumière et du vent de sable. Les Touaregs Ioullimmiden utilisent de petits berceaux qui sont accrochés aux arceaux de la tente.

Dans les déplacements, la mère porte son enfant sur le dos ou sur la hanche, retenu par un pagne, noué au-dessus des seins. Cette méthode, employée également chez les Soudanais ne semble pas incommoder l'enfant malgré les mouvements

1: Lhote MS25 Tuareg

souvent fort brusques de la mère. S'il crie, elle lui met le sein dans la bouche jusqu'à épuisement et il n'est nullement question d'heures de tétées, ni de mesure.

Le long allaitement ainsi que le système de portage entraîne un affaissement rapide des seins dès la première maternité, mais pour les Touaregs, l'esthétique compte moins que la maternité qui ennoblit la femme.

Circoncision. — Les garçons sont circoncis vers trois ou quatre ans, généralement par un marabout. La circoncision — *amoud*, ou *amilli*, ou *azemmoued* — ne donne lieu à aucune fête et est pratiquée collectivement. L'instrument contondant employé est un petit couteau à lame de fer, utilisé par les hommes comme rasoir. Pendant la période de cicatrisation l'enfant reste au campement de ses parents et est soigné par eux.

Les fillettes ne sont pas excisées comme chez les Maures du Tagant et du Hodh.

Les enfants vont nus jusqu'à cinq, six ans, suivant l'état de fortune ou la prévoyance de leurs parents. Les fillettes portent un pagne vers six, sept ans, et les garçons un pantalon du même modèle que celui des hommes.

Éducation. — L'éducation des enfants commence après le sevrage. Dès lors, le garçon passe sous la coupe de son père alors que la fille reste sous la direction de sa mère. Cette éducation, pour l'un comme pour l'autre, n'est guère compliquée.

Dès cinq ans, le garçonnet, de lui-même, s'occupe du gardiennage des chèvres et des moutons ; plus tard, on lui confie des chameaux qu'il mène au pâturage et à l'abreuvoir, et il s'initie à traire les chèvres, car chez les Touaregs ce sont les hommes qui, en principe, sont chargés de ce travail. Vers sept ans il commence à monter à chameau. Alors, sous forme de jeux, des combats au sabre ou à la lance s'organisent entre enfants du même âge, les armes étant remplacées par des tiges de mil ou des branches d'arbres. Ceci ne fait pas partie, à proprement parler, de l'éducation, mais est le fait des enfants eux-mêmes.

L'éducation religieuse est assez délaissée chez les Touaregs de l'Ăhaggar où les marabouts sont rares. Lorsqu'il y en a un dans un campement, il enseigne aux enfants et aux jeunes gens les rudiments du Coran qu'ils apprennent par cœur, en le chantant à longueur de journée car ils sont toujours ignorants de l'écriture arabe.

1: Lhote MS25 Tuareg

C'est vers 15 ou 16 ans, lorsque les duvets de l'aisselle commencent à apparaître, que le litham est remis au jeune garçon ; cette remise est faite par le père, le plus souvent à l'occasion de la fête du Ramadan. Elle n'est l'objet d'aucune cérémonie extérieure. Le père donne quelques conseils de sagesse à son fils et les jeunes femmes et jeunes filles lui remettent du tabac en cadeau.

De ce jour, le jeune garçon entre dans la classe des hommes, il peut aller à la guerre et assister aux *ahal*.

L'éducation des filles n'offre guère plus d'intérêt. Vers six ou sept ans la fillette commence à vaquer aux soins du ménage, participe au nettoyage de la tente, à la confection des repas, etc.... Un peu plus tard, elle apprend à travailler les nattes et les menus objets de cuir, à filer le poil des chèvres.

L'éducation musicale et littéraire des jeunes filles est fort appréciée chez les Touaregs et tout particulièrement chez les Imochar. Les fillettes apprennent à écrire les caractères tifinagh et à jouer de l'*amzad*, sorte de petit violon monocorde qui égaie les soirées de langueur des Touaregs.

FIG. 53. — Amzad, ou violon monocorde des femmes touarègues de l'Ahaggar, et son archet.

L'*amzad* est fait de la moitié d'une courge évidée et séchée sur laquelle on a étendu une peau de chèvre ou d'ourane, fixée par des cordes (Ăhaggar) ou de petites épines d'acacia (Aïr). La peau est percée d'un ou deux trous qui augmentent la résonance. Le manche est constitué par un bâton qui pénètre par une ouverture dans un des côtés de la calebasse et est fixé à l'autre par une pointe, à moins qu'il ne la traverse aussi. La corde est formée de plusieurs crins de cheval écartés de la peau par un petit chevalet fait de deux petits morceaux de bois liés en croix. L'archet — *taganhé* — forme un arc de cercle aux extrémités duquel sont fixés des crins. Pendant la musique, la joueuse frotte de temps en temps les crins avec un morceau de résine de gommier qui fait office de colophane.

1: Lhote MS25 Tuareg

Les peaux des *amzad* sont souvent décorées de motifs peints avec des couleurs très vives, ou sont couvertes d'inscriptions tifinagh indiquant le nom de la propriétaire, et portant des vers amoureux à l'usage des admirateurs.

Chez les Ihăggaren, les violons sont généralement de grande taille et atteignent jusqu'à 40 cm. de diamètre, tandis que dans les tribus soudanaises, ils sont beaucoup plus petits, ne dépassant que très rarement 25 à 30 cm.

L'*amzad* joue un grand rôle chez les Touaregs qui lui portent un véritable culte. Jeunes, ils vont l'écouter jouer par les jeunes filles ; mariés, ils aiment entendre leur femme, qui charme ainsi les heures creuses des soirées estivales. C'est une punition que les femmes infligent aux hommes en ne leur jouant pas d'*amzad* et dans les combats, les guerriers cherchaient toujours à être braves de peur que leurs femmes ou leurs fiancées ne les privent de musique. « Il n'y aura pas d'*amzad*, » disaient-ils au retour d'un rezzi malheureux et cette perspective suffisait souvent pour leur redonner du courage, et les inciter à partir effacer leur défaite.

L'AHAL. — C'est vers seize ans que jeunes gens et jeunes filles ont accès à la société des grandes personnes et commencent à participer aux ahal.

Le mot *ahal* signifie réunion, conversation, entretien ; il a un synonyme qui est *édéouenné*. Ces réunions musicales et littéraires ont un caractère plus ou moins particulier, suivant qu'elles sont mêlées d'*asri* ou non.

L'*asri*, littéralement, courir à bride relâchée, signifie la pratique de certaines mœurs très libres, et vivre en état d'*asri*, c'est être dans des conditions permettant de pratiquer les libertés de mœurs. Peuvent être en état d'*asri*, les jeunes gens et jeunes filles pubères, les veufs et les divorcés des deux sexes.

Ces réunions se font à proximité des campements, à l'abri d'un oued, mais toujours en dehors de la vue des vieux et des personnes respectables de la tribu ; elles ont lieu ordinairement avant le repas du soir, qui est pris très tard, plus rarement après si c'est pour fêter un étranger. Tous s'assoient en rond. Chacun prend place suivant son ordre d'arrivée, de manière à alterner les hommes et les femmes. Lorsque tout le monde est là, on élit un président et une présidente, dont le rôle est de faire respecter les us et coutumes de l'*ahal*, et, par plaisan-

PL. XIII.

Chèvre de l'Ahaggar à longs poils. Cette espèce est localisée dans les massifs montagneux du Sahara central (Ahaggar, Aïr, Adrar des Iforas, Tibesti).

Le mouton daman ou mouton targui, très répandu dans la steppe sahélienne est assez commun dans l'Ahaggar, mais n'y est élevé qu'accessoirement. Bête très robuste, beaucoup de caravaniers en importent de l'Adrar des Iforas en leur faisant traverser le Tanezrouft. Il est caractérisé par ses longues pattes et sa longue queue.

1: Lhote MS25 Tuareg

terie, d'infliger des gages à ceux qui s'attirent les récriminations des autres. Parfois, il n'est élu qu'une présidente, mais jamais un président seul.

La présence de plusieurs jeunes filles dans un campement suffit bien souvent pour qu'il s'y organise un *ahal* mêlé d'*asri*. Les jeunes gens des campements voisins y viennent, toujours vêtus de leurs vêtements d'apparat et certains font parfois des centaines de kilomètres pour assister à une réunion où ils savent trouver de jolies personnes et une distraction agréable. Alors une des assistantes joue du violon. Les sons sortent aigrelets, plaintifs, monotones, s'accordant bien avec le décor sauvage fait par la nature et les gens. Les hommes accentuent le rythme par des ho-ho cadencés chantés et finissant en sourdine. Et chacun plaisante, lance des gauloiseries, car la partie poétique est souvent d'une qualité fort douteuse, sinon faite de réparties plus ou moins grossières.

Puis le violon se tait, et les rires fusent de toutes parts ; hommes et femmes se font des attouchements très libres et se frottent le nez l'un contre l'autre, ce qui est la forme particulière du baiser targui. Ces réunions se terminent très tard dans la nuit, et chacun retourne à son campement, non sans s'être, par un langage spécial du jeu des mains, donné rendez-vous pour terminer d'une manière plus intime ces agapes amoureuses.

Les mœurs des jeunes filles sont, en effet, très licencieuses, au point que le Père de Foucauld affirmait qu'en tămâhak, le mot virginité n'existait pas [1]. « Il n'est pas question, dit d'autre part le Docteur Vermale, d'amener la jeune fille pure jusqu'à son mariage. Ce sont là des sentiments que les Touaregs ne comprennent pas. Aussi dès qu'elle est nubile, elle va à l'ahal et ne tarde pas à être déflorée. La virginité n'existe pas, n'a aucune valeur représentative aux yeux des Touaregs [2]. » En fait, les femmes sont plus ou moins faciles, certaines se donnent au premier venu, d'autres n'accordent leurs faveurs qu'à un petit groupe d'amis, mais les accorder à un seul serait jugé de très mauvais goût et comme un signe de perversion.

Personne ne trouve à redire à leur liberté de mœurs, à condition qu'elles ne se laissent courtiser que par des hommes de condition sociale égale à la leur. Certaines se laissent courtiser par des esclaves et cela est regardé pour elles comme une honte.

2. Ouvr. cit., p. 171.

1: Lhote MS25 Tuareg

On peut s'étonner qu'avec des mœurs si dissolues, les filles-mères ne soient pas plus nombreuses. Les habitudes restrictives sont couramment employées, et comme dit le Docteur Foley, l'*effusio seminis inter crura* serait la conclusion fréquente des rendez-vous nocturnes, après l'*ahal*[1]. Ces habitudes restrictives ne doivent pas être sans rapport avec la faible natalité des Touaregs et il est fort possible que mariée la femme touarègue continue à les pratiquer.

L'enfantement hors du mariage et le bâtard — *agama* — sont l'objet de la déconsidération publique. Les Touarègues pratiquent rarement l'avortement, mais auparavant les inanticides étaient fort nombreux et personne ne songeait à s'en offusquer. Lorsqu'une femme se trouve enceinte dans ces conditions, elle part ordinairement chez une parente et s'efforce de dissimuler sa grossesse. Personne n'est dupe, mais nul ne dit rien. Elle va voir un marabout qui, pour une assez forte somme, fait devant la pécheresse quelques signes mystérieux, écrit quelques mots en arabe sur une planchette, lave l'écriture et recueille dans une calebasse l'eau que la femme doit boire. Au cas où ces pratiques réussissent (?) une seconde somme identique à la première est versée. Sinon, la femme essaie plusieurs mixtures, généralement à base d'adjerdjir *cassia abavata* et, au cas où les résultats sont toujours négatifs, l'enfant est tout simplement étranglé lorsqu'il vient au monde. Si ces mœurs sont toujours plus ou moins en vigueur, elles semblent tant soit peu s'atténuer avec l'islamisation, et les mères dénaturées sont quelquefois sévèrement punies.

L'*ahal* semble avoir existé dans les anciennes tribus libyennes de l'Afrique du Nord. Hérodote a signalé la communauté des femmes chez les Nasamons, et l'*ahal* n'est en fait qu'une forme dérivée et, si l'on peut dire, évoluée.

Le mariage. — Avec l'existence de mœurs aussi faciles, on comprend que jeunes gens et jeunes filles ne tiennent pas à se marier de bonne heure, et il est rare que les femmes convolent avant 20 ans et les hommes avant 30 ans.

Si, comme nous l'avons vu, la jeune fille est libre de son corps, l'autorisation paternelle ne lui est pas moins nécessaire pour se marier, mais, par contre, il est rare qu'un mari lui soit imposé ou qu'elle soit mariée avant d'être nubile comme chez les Arabes.

1. *Mœurs et médecine des Touaregs de l'Ahaggar*, p. 56.

Les époux se choisissent dans les réunions amoureuses qui constituent une sorte de mariage à l'essai. Le prétendant doit faire sa demande au père de la jeune fille, par l'intermédiaire d'un de ses parents, ou bien par un personnage religieux s'il y en a un dans les environs.

Chez les Ihăggaren tout le monde est mis au courant de la demande, mais en Aïr, il n'en est pas de même et la mère de la jeune fille n'est prévenue, ainsi que la famille, que lorsque tout est arrangé. Si la femme a déjà été mariée, l'autorisation paternelle n'est plus nécessaire.

La dot — *taggalt* — à verser par le futur époux est alors fixée. Elle est généralement de sept chamelles chez les imochar, de moindre importance chez les imrad, où elle peut être constituée par des chameaux, des moutons et des chèvres, mais il n'est jamais donné d'ânes. Cette dot peut être versée en une ou plusieurs fois. Elle devient la propriété des parents de la jeune fille qui, à son tour, peut être dotée par eux.

Dans le mariage — *addoubâl* — la femme conserve la libre disposition de ses biens et elle ne subvient en aucune mesure aux besoins du ménage. Les frais de ceux-ci incombent entièrement au mari, si bien que par ce système, les fortunes féminines s'accroissent rapidement alors que celles des hommes restent stationnaires ou diminuent.

La question de la dot réglée, la date du mariage est fixée, quelquefois à quelques jours de la demande, d'autres fois à un an, voire même à deux, si la jeune fille est très jeune ; mais cette dernière coutume est surtout en usage dans les tribus du Soudan.

Les fêtes du mariage ont lieu au campement de la jeune fille et la consommation n'a lieu que le huitième jour. Les frères et les parents du fiancé viennent au campement des parents de la jeune fille où ils sont fêtés et où leur est offert un somptueux repas. Pendant les sept jours qui précèdent la consommation du mariage, le fiancé n'a pas le droit de venir au campement pendant la durée du soleil. Il se réfugie alors dans une tente à l'écart où ses amis lui tiennent compagnie et il porte pendant toute cette période le nom d'*anesdiben*.

Les divertissements qui accompagnent les fêtes du mariage consistent en une fantasia exécutée par les méharistes qui passent et repassent par groupes de deux ou quatre, devant le groupe des femmes, au milieu duquel est la fiancée ; les femmes jouent du tambourin et du violon accompagné de

1: Lhote MS25 Tuareg

chants. Au Ăhaggar le chant du mariage se joue sur le rythme musical « aliouen », c'est-à-dire les oliviers. Cette coutume serait, d'après le Docteur Vermale, un reste de l'influence du paganisme ancien où l'olivier était l'arbre consacré à la déesse de l'amour [1].

Une tente neuve est préparée avec ses accessoires, nattes, cordes, piquets, également neufs. A l'intérieur, sur le côté gauche, on édifie un petit tertre de sable de forme ovalaire sur lequel devra avoir lieu la consommation. Par la suite, lorsque le campement est obligé de se déplacer, cet édifice est respecté et reste plusieurs mois en place.

Le septième jour, le père de la jeune fille fait ratifier le mariage par un marabout, et le soir la fiancée, qui est restée cachée toute la journée chez une parente, est conduite à la tente nuptiale, où l'a précédée le jeune homme, au milieu des femmes en procession jouant du tambourin.

Le lendemain, les jeunes gens se réunissent sous la tente des mariés, et ainsi pendant tous les jours de fêtes qui suivent le mariage. Cette réunion s'appelle : *tigedelsatin*.

Les nouveaux époux habitent le campement des parents de la jeune fille pendant un an. Cette institution du « temps de service » est signalée à plusieurs reprises dans l'Ancien Testament et était pratiquée chez les Hébreux. Elle implique que le fiancé doit résider dans sa future famille, ou tout près d'elle, pour une durée temporaire ou permanente. Cette coutume a pour conséquence de restreindre temporairement l'autorité maritale et de prendre des garanties pour que l'accoutumance se fasse et que la jeune femme soit bien traitée.

Si la nouvelle épousée a déjà été mariée, elle part le septième jour au campement de son mari, montée sur un chameau, accompagnée de ses amis et de ses serviteurs.

Dans le premier cas, une nouvelle fête a lieu un an après. Les hommes et les femmes appartenant au campement du mari s'en vont un soir au campement de la femme et simulent un enlèvement à main armée. Les méharistes qui se sont approchés en se dissimulant, se jettent alors au milieu des tentes en poussant des cris de guerre, auxquels répondent les cris de terreur des femmes du campement ; ils entourent la tente de la jeune femme et la réclament comme appartenant dorénavant à leur famille.

1. Vermale, ouv. cit., p. 175.

C'est alors l'occasion de nouveaux écarts gastronomiques, et le lendemain soir, la jeune femme enveloppée dans un grand châle blanc, accompagnée de ses parentes montées sur des ânes, s'en va, suivie des hommes montés à chameau, vers sa nouvelle demeure où elle est reçue par le chef et les vieilles femmes.

Pendant que les époux se réfugient sous leur tente, l'assistance ripaille et danse, et la fête commencée au coucher du soleil, ne s'arrête que le lendemain au petit jour, lorsque tous les assistants sont épuisés.

La jeune femme est alors entrée dans sa nouvelle famille, qu'elle ne quittera qu'en cas de divorce ou de mort de son mari et, en attendant, elle n'aura pas le droit d'aller rendre visite à ses parents, mais ceux-ci pourront venir à son campement.

Dans le mariage, les femmes touarègues conservent une grande indépendance. Il est difficile de savoir si elles sont des épouses fidèles ou si elles profitent des absences souvent prolongées de leurs maris pour se mal conduire. Suivant les uns (Duveyrier), leur conduite est exemplaire ; suivant d'autres (de Foucauld, Vermale), elle laisserait grandement à désirer, et les épouses continueraient à pratiquer les mœurs légères apprises à l'*ahal*. « Leur unique préoccupation, dit le Docteur Vermale, c'est l'amour, avoir des amants, voilà leur seul but. » Il est certain que les anciens amants des réunions galantes continuent à venir rendre visite à la femme mariée, à vanter ses charmes dans les *ahal* ; mais il fait préciser que le mari ne s'en montre pas jaloux, ce qui serait du plus mauvais goût, et que cette cour serait toute platonique. Il est très difficile d'enquêter à ce sujet, car les Touaregs, soucieux de la réputation de leurs femmes, prétendent à leur irréprochabilité.

Quant aux hommes, leur conduite est convenable dans leur campement, encore que certains n'hésitent pas à user de leurs esclaves ; mais lors des caravanes, une fois arrivés dans les centres, loin de leur pays, ils donnent libre cours à leur fougue qu'une longue abstinence a rendu plus impétueuse.

L'adultère — *aker* — de la femme est souvent puni de mort, c'est-à-dire que l'homme rend sa justice lui-même sans que personne ne songe à le lui reprocher, tuant les coupables de sa main.

La femme touarègue, très indépendante, a très mauvais

caractère et de plus est souvent très jalouse. A la moindre inconduite de son mari, elle retourne chez ses parents, et ne réintègre le foyer conjugal qu'après une compensation matérielle. De son côté, l'homme est violent et cela provoque souvent des dissentiments dans les ménages.

Empêchements au mariage. — Les cas d'empêchements au mariage sont identiques à ceux fixés par le droit musulman. Il est interdit de se marier avec ses proches, avec sa nourrice ou avec l'enfant de sa nourrice, ou avec une femme ayant été nourrie du même lait féminin que soi-même.

Les alliances entre imochar et imrad sont très rares, car l'imochar qui épouse une femme de la classe vassale fait perdre à ses enfants les droits liés à son rang.

Les femmes nobles et vassales acceptent de s'unir à des Arabes, surtout s'ils sont marabouts, à condition toutefois qu'ils respectent la monogamie, se plient aux mœurs touarègues et s'engagent à habiter au campement de la femme. Les Touaregs n'épousent que très rarement des femmes arabes.

Le divorce. — La séparation n'existe pour ainsi dire pas chez les Touaregs qui usent du divorce, sans toutefois en abuser ; il est admis par le Coran et n'est pas sujet à l'opprobre. La femme touarègue peut demander le divorce, alors que chez les Arabes la femme ne le peut pas. C'est beaucoup plus souvent la femme qui le provoque que l'homme. Les raisons invoquées par la femme sont généralement les mauvais traitements de son mari, l'insuffisance d'entretien, le détournement d'animaux, l'inconduite, ce qui est un motif plus rare, et parfois le non-paiement du reliquat de la dot.

L'homme invoque le plus ordinairement l'inconduite, l'infécondité de sa femme, la contestation de dot ou d'animaux, l'incompatibilité d'humeur, très souvent la mésentente entre la femme et ses beaux-parents.

Quelques maladies, comme la lèpre, peuvent être l'occasion de divorce.

Les divorces se passent rarement sans histoire, et si une femme veut quitter son mari, tous les motifs lui sont bons. Le fait de se refuser est un cas de divorce, mais l'opprobre est alors jeté sur la femme qui trouve ensuite rarement à se remarier. L'homme n'a qu'à dire à sa femme : « Je te renvoie chez tes parents, » pour que le mariage soit rompu ; mais le plus

1: Lhote MS25 Tuareg

souvent, il dissimule son jeu et envoie sa femme pour quelques jours dans sa famille. Il délègue alors une vieille femme de son campement aux parents de sa femme pour leur annoncer la rupture du mariage.

Si c'est le mari qui a provoqué le divorce, la dot reste la propriété des parents de la femme, mais dans tous les cas, les enfants restent la propriété du père.

La femme ne peut se remarier avant trois mois et dix jours. Cette retraite obligatoire pour les femmes, qui est prescrite par le Coran, porte en langue touarègue le nom d'*ettef*, ou d'*elloud-det* et les femmes elles-mêmes, pendant cette période, sont désignées sous le nom de *tananleft*. Cette période terminée, ses parents et les gens de son campement organisent une petite fête qui est l'annonce que la femme reprend la vie de « liberté de mœurs ».

Beaucoup de femmes ne veulent pas tenir cette retraite, et pour y échapper, elles se déchargent sur un arbre appelé en tămâhak *agar* (Maerua crassifolia). Elles s'adressent à l'arbre comme s'il s'agissait d'une personne, et lui disent : « Agar, décharge-moi de ma retraite qui me pèse trop, prends-en la charge, » et elles déposent au pied de l'arbre, en guise d'offrande, de la poudre d'antimoine, un peu de parfum, un fragment de tissu qui synthétisent les attributs de la femme en état d'*asri*. Puis elles reprennent, sans attendre davantage, la vie de liberté de mœurs.

Si le mari veut reprendre sa femme répudiée, un nouveau mariage est nécessaire et une nouvelle dot, moins importante que la première, doit être payée aux parents de la femme.

Le meurtre. — Le meurtre chez les Touaregs est assez rare. Il est puni de la peine du talion lorsqu'il a été prémédité, et par une compensation matérielle dans les autres cas. La vendetta, autrefois commune chez les Touaregs, a disparu pour faire place à la « dia » ou impôt du sang. La coutume exigeait quelquefois que l'assassin fût remis à la famille de la victime, mais s'il n'était pas connu, la djema, ou assemblée de notables, décidait un homme de la tribu qui allait se constituer prisonnier à sa place. Il n'y a pas d'exemple qu'en pareil cas, l'otage fût mis à mort. Les cas graves étaient ordinairement jugés par l'Aménokal qui était aidé par quatre assesseurs, pris deux par deux, dans chacun des partis.

Le suicide. — Le suicide est aussi rare que le meurtre chez les Touaregs. Lorsqu'il s'en produit, le suicidé est abandonné sur le terrain, sans sépulture, et le campement est levé et abandonné pour toujours. Le Coran réprouve le suicide et les Touaregs considèrent le suicidé comme s'il n'avait jamais existé, et l'on ne doit plus jamais en parler.

Il est reproché deux crimes au suicidé : celui de s'être supprimé, ce qui n'est pas permis à un être humain qui doit sa vie à Dieu, et celui d'avoir offensé Dieu en cette circonstance.

L'âme du suicidé ne peut trouver refuge, et vagabonde sans cesse. Elle aime à revenir à l'endroit où elle a quitté son enveloppe mortelle, et les gens prétendent qu'on peut l'entendre le soir à proximité, et qu'elle fait tant de bruit qu'il est impossible de dormir.

La mort. — Les Touaregs ne craignent pas la mort. Lorsque l'un d'eux se voit mourir, il réunit les siens autour de lui, fait ses dernières recommandations, puis, conformément aux principes religieux qu'il a peut-être négligés au cours de son existence, mais qu'il se rappelle au moment suprême, il prononce la « Fatika », ou s'il n'en a pas la force, il lève l'index de la main droite, et rend le dernier soupir.

Le corps est aussitôt lavé à l'eau tiède et enveloppé dans un linceul, dans lequel sont introduits des aromates, pendant que les esclaves vont creuser la tombe sur une éminence avoisinante. La fosse comprend une petite tranchée à deux étages comme celle des Arabes. Le corps est transporté sur une espèce de brancard et conduit au lieu de sépulture porté par quatre hommes, la tête en avant ; il est ensuite déposé sur le flanc droit, la face tournée dans la direction de La Mecque.

Un marabout ou un lettré lit la prière musulmane et les hommes, se tenant debout derrière lui, les mains accolées et ouvertes à hauteur de la poitrine, la répètent avec lui. Les femmes ne participent pas à l'enterrement.

Les tombes touarègues modernes portent des pierres témoins — *chouabed* — une aux pieds et une à la tête pour les hommes, une à la tête et deux aux pieds pour les femmes. Elles sont de forme ovale et le tertre est légèrement en dôme ; elles comportent généralement un entourage de pierre formant couloir avec une avancée ouverte à l'est. On trouve souvent des piquets de bois, ou des piquets de tente enfoncés aux deux extrémités, ainsi que de grosses billes de quartz hialin, qui,

1: Lhote MS25 Tuareg

d'après les Touaregs, ont servi à frotter le corps du mort avant de l'ensevelir. Dans bien des endroits où il existe des hyènes, comme au Soudan, la tombe est généralement recouverte de branches d'épineux pour les empêcher de déterrer le mort.

Après l'enterrement, les personnes venues pour la circonstance, présentent leurs condoléances à la famille qui leur fait servir un repas en souvenir du mort.

Les vêtements du mort sont remis au marabout ou à la personne qui l'a lavé.

Puis le campement est immédiatement levé et les gens ne reviennent jamais camper à cet endroit.

Le deuil existe chez les Touaregs. Il est de courte durée pour l'homme qui a perdu sa femme. Pendant trois jours, il reste enfermé dans sa tente. Pendant ce temps les *ahal* et toutes les réjouissances sont interdites au campement. Pour la femme qui a perdu son mari, c'est une véritable retraite qui dure quatre mois et dix jours pendant lesquels elle ne doit pas paraître en public. La fin de la retraite est marquée par une petite cérémonie : les femmes du campement emmènent la veuve voir le lever du soleil, lui présentent un livre pieux ouvert et lui font voir du sel.

Les Touaregs ne s'apitoient jamais sur la mort d'une personne et les condoléances ont souvent cette formule : « Tu es heureux, celui que tu as aimé est maintenant dans le paradis de Dieu. »

# CHAPITRE II

## CULTES ANCIENS, RELIGIONS ET CROYANCES DES TOUAREGS

Les Touaregs sont aujourd'hui musulmans, mais leur islamisation est très superficielle et relativement récente. Si, comme tous les nouveaux convertis, ils s'efforcent de dissimuler leurs croyances anciennes, il n'en est pas moins vrai que celles-ci ont laissé des traces encore visibles chez eux. Depuis quelques années, ils mettent un point d'honneur à se dire bons disciples du Prophète et tentent même de s'attribuer une origine chérifienne, si bien qu'il est très difficile d'obtenir d'eux le moindre éclaircissement sur leur ancienne religion.

Quelles furent ces anciennes croyances ? Idolâtrie ou fétichisme ? Nous ne pouvons, à ce sujet, qu'interpréter des faits qui resteront toujours très vagues, car, comme dit Gautier, les Touaregs sont suffisamment islamisés pour avoir perdu toute curiosité de leur propre passé préislamique.

Cultes préhistoriques et protohistoriques. — Si nous examinons de près les gravures et les peintures rupestres découvertes ces dernières années au Sahara central, nous y trouvons un certain nombre d'éléments susceptibles de nous donner une idée sur les croyances de ses anciens habitants. Peut-être n'y a-t-il entre ces derniers et les Touaregs aucun rapport, ce qui est vraisemblable, mais on peut admettre aussi qu'il y ait eu, à travers les siècles, des points de contact communs qui ont laissé des traces dans les différents peuples ayant habité les régions qui nous intéressent.

Dans les gravures précamelines, antérieures à la période des bovidés, le caractère totémique est accusé par plusieurs personnages à tête zoomorphe (dogue, chien) et à queue postiche, qui rappellent tout à la fois la figuration des vieux dieux de l'ancienne Égypte et les déguisements rituels encore en usage chez les nègres de l'Afrique. Il peut s'agir, soit de déguisements appropriés, utilisés pour la chasse afin de pouvoir

1: Lhote MS25 Tuareg

approcher plus facilement le gibier, soit de personnages portant des masques dans un but religieux. On peut affirmer, en tous cas, qu'à la même époque, le culte de la fécondation était en honneur, à en croire les nombreuses gravures à caractère érotique. Enfin, on peut encore ajouter que la magie était pratiquée vis-à-vis de certains animaux, antilopes, hippopotames, dont les reproductions sont souvent associées à des signes cabalistiques, spirale double, ou appendice entre les cornes rappelant l'urae des Égyptiens. Plusieurs statuettes en pierre, vraisemblablement d'âge néolithique, ont été trouvées à Tit, Tazerouk (Ăhaggar), à Tabelbalet (Tassili) ; elles représentaient des animaux, bélier ou bovidé, chouette, qui furent certainement l'objet d'idolâtrie.

Dans l'étage dit des bovidés, on peut faire des observations identiques. Plusieurs bœufs portent des disques entre les cornes, ou bien une petite boucle rappelant un nœud coulant. Peut-être ces gravures sont-elles en rapport avec le culte du bélier qui fut très en faveur en Afrique septentrionale et en particulier dans l'oasis d'Ammon, lequel culte semble avoir été remplacé au Sahara central par celui du bœuf. Cet animal était encore honoré comme un dieu chez les Berbères sous le nom de Doul Korneïn, et les Peuls du Soudan ne séparent pas leur vie mystique de leurs bovidés. Nous devons préciser qu'aucune croyance semblable n'a été retrouvée chez les Touaregs.

Les peintures rupestres qui sont, dans l'ensemble, plus récentes que les plus anciennes gravures, nous donnent également quelques indications à retenir. Près de Djanet, un grand panneau peint représente une série de femmes plus ou moins stéatopyges, dansant au milieu d'un cercle de personnages tapant des mains, alors que de son côté, un homme portant un masque surmonté de cornes — un sorcier ou un porteur de masque des ancêtres — entre à son tour dans la danse. C'est exactement la reproduction des scènes magiques que nous voyons chez les Soudanais où périodiquement des danses sont organisées auxquelles participent les masques des ancêtres familiaux. Le vestige de ces danses s'est même maintenu dans l'oasis de Djanet où chaque année, à l'occasion de la fête de la « zébiba », certains individus se revêtent d'oripeaux et de masques surmontés de cornes. A Mertoûtek, on peut voir également un grand personnage peint au fond d'une conque ressemblant à un autel, dont la tête est surmontée

1: Lhote MS25 Tuareg

d'un énorme disque qui doit avoir un caractère religieux. Enfin, de nombreuses petites figurations humaines sont acéphales, ce qui d'après plusieurs savants, en particulier Gautier, doit être interprété comme un interdit se rapportant à la tête et dont le port du voile, chez les Touaregs, serait une réminiscence.

Rappelons également l'existence en pays targui de nombreux disques de grand diamètre en pierre, qui seraient d'anciens autels destinés à un culte solaire (Gautier) et de nombreux tombeaux païens où les corps reposent dans la position fœtale, coutume à caractère religieux qui était répandue dans toute l'Afrique du Nord et dans l'Égypte prépharaonique.

Religion des anciens Libyens. — Sur la religion des anciens Libyens nous n'avons que très peu de renseignements, la plupart laissés par Hérodote. Cet auteur nous dit que les Nasamons vénéraient les tombeaux des ancêtres, de ceux qui passaient pour avoir été les plus justes et les meilleurs, et ils juraient par eux en allant toucher leurs tombeaux (CLXXII). Les Ammoniens, ceux de l'oasis d'Ammon, pratiquaient le culte du bélier, ce qui devait être un emprunt fait à Thèbes où Zeus, le dieu de cette localité, était représenté par un personnage humain à figure de bélier (CLXXXI). Les Auses vénéraient la divinité Athéna, fille de Poséidon et de la *limmé* Tritonis (CLXXX). Quant aux Atlantes, dont la renommée de sagesse était très grande, ils ne faisaient point de rêves (c'est-à-dire qu'ils ne pratiquaient pas les oracles comme la plupart des peuples méditerranéens) et ne mangeaient rien de ce qui a eu vie (CLXXXIV), ce qui peut être interprété comme un vestige de totémisme. Hérodote nous dit encore que tous les Libyens nomades qui vivaient depuis l'Égypte jusqu'au lac Tritonis, et qui se nourrissaient de viande et de lait, imitaient les Égyptiens et s'abstenaient de manger de la vache et du porc et que leurs femmes suivaient également cette règle, par respect pour Isis, la déesse égyptienne (CLXXXVI). Tous sacrifiaient à la lune et au soleil. Ceux du lac Triton, à Athéna, ensuite à Triton et à Poséidon (CLXXXVIII).

Au IIIe siècle avant J.-C., les Massyles, nation numide, adoraient, dit-on, Cronos, et lui offraient des victimes humaines [1].

L'auteur byzantin, Corripus, nous dit d'autre part que les

1. Gsell, *Histoire ancienne de l'Afrique du Nord*, t. IV, p. 289.

Louata et les Hoouara professaient le paganisme. Ils se représentaient la divinité sous la forme d'un taureau qui était la souche d'autres dieux indigènes ayant aussi la forme de jeunes taureaux. L'un portait le nom de Gurzil. Ils avaient des idoles sacrées, dont ils criaient le nom pendant les combats et ces idoles étaient, à la veille des combats, arrosées du sang des sacrifices.

Christianisation. — On a beaucoup parlé de l'ancienne christianisation des Touaregs. Duveyrier, en particulier, a attribué à l'influence du Christianisme la situation élevée de la femme dans la société touarègue. Il a voulu voir la même influence dans l'existence d'un certain nombre de mots latins d'origine religieuse dans le tămâhak, ainsi que dans les motifs décoratifs de certains objets où la croix est souvent représentée (sur les boucliers des guerriers, dans les pommeaux des selles, dans les poignées des poignards et des épées, dans une petite pendeloque portée au cou par les femmes).

D'ailleurs Duveyrier n'a pas été le seul à abonder dans ce sens ; il n'y a qu'à regarder la gravure donnée par Barth (T. I-II, n° 12) représentant un méhariste targui où la croix de la selle et celle du bouclier sont nettement chrétiennes. Un tel document, qui n'a aucun rapport avec la réalité, est bien fait pour propager une croyance basée plutôt sur l'imagination que sur les faits.

Il faudrait examiner auparavant ce que fut la véritable situation du christianisme en Afrique du Nord où il s'implanta dans les premières années de l'ère chrétienne. Dès son introduction, la religion nouvelle fit de grands progrès ; beaucoup d'évêques furent créés qui portèrent la foi nouvelle de la Mauritanie césarienne à la Byzacène, atteignant les Hauts-Plateaux et jusqu'aux Chotts Djérid. D'après Tertullien, non seulement toute l'Afrique proconsulaire était chrétienne, mais encore toute la région des Syrtes et certaines tribus gétules également. Mais le Père Mesnage, à qui l'on doit d'importants travaux sur le Christianisme en Afrique, s'est demandé avec juste raison si les ministres du culte veillaient suffisamment sur la qualité des nouvelles recrues. Le spectacle donné en particulier par la communauté de Carthage en 250, lors de la persécution de Dèce, a été vraiment lamentable, et ce fut par milliers que se comptèrent les apostats. Les Numides, en se convertissant au Christianisme, adop-

taient la religion du vainqueur, ou toutefois semblaient s'y convertir, car la masse était restée païenne. Que penser alors des tribus nomades qui échappèrent toujours aux maîtres de l'Afrique du Nord ? Dans une lettre écrite à Hésychius, évêque de Salone en Dalmatie, saint Augustin disait « que l'Évangile n'avait pas été prêché chez les barbares et que, quant aux nations plus reculées qui ne reconnaissaient nullement la puissance romaine, elles n'appartenaient à la religion chrétienne par aucun de ceux qui la composent » (lettre n° 199).

En parlant des Berbères évangélisés, saint Grégoire disait d'autre part que beaucoup étaient restés païens et continuaient à adorer les pierres et les arbres [1].

Par contre, Procope nous dit que vers 548, sous l'empereur Justinien, les Nasamons de Rhâdamès se convertirent et qu'en 569 les Garamantes du Fezzan conclurent un traité de paix avec l'Empire et se convertirent également. « Jamais la foi, dit le Père Mesnage, n'avait eu une telle extension en Afrique. La conversion de ces nouveaux peuples étendait l'influence de l'Église ou de l'Empire assez profondément vers l'intérieur de l'Afrique. Mais était-elle solide ? La propagande religieuse a été de longtemps une des formes favorites de l'expansion byzantine. Il s'ensuivait que les conversions qu'elle provoquait étaient surtout politiques, *se faisaient sans instruction catéchistique préalable*, par conséquent sans conviction de la part des convertis. Elle ne durait, hélas, qu'autant que les intérêts politiques restaient en accord avec les intérêts personnels [2]. »

L'auteur arabe Ibn Khaldoun, au XIVe siècle, disait, en parlant de l'islamisation des Berbères Sanhadja, que ce peuple païen n'avait jamais adopté la religion chrétienne.

Il semble donc peu probable que les Touaregs aient jamais été chrétiens. Rien dans leurs mœurs actuelles n'en trahit la moindre trace. La croix retrouvée sur les boucliers, sur les armes, sur les objets de sellerie, dans les bijoux, n'a aucun caractère typiquement chrétien ; elle est un motif décoratif que l'on retrouve dans l'ornementation usitée parmi les populations qui n'ont rien à voir avec le christianisme. Seuls, les mots latins introduits dans la langue tāmâhak peuvent indi-

1. S. Grégoire, IV, 23, 27 ; VIII, *loc. cit.* Mésnage, *Le Christianisme en Afrique*, t. I, p. 75.

1: Lhote MS25 Tuareg

quer que les Touaregs ont dû être en rapports plus ou moins éloignés avec les populations chrétiennes, mais ne peuvent, à eux seuls, attester leur ancienne christianisation.

Le judaïsme. — Si le christianisme n'a certainement fait qu'effleurer les Berbères de l'Afrique du Nord et par contrecoup les nomades sahariens, il en est peut-être tout autrement du Judaïsme. En effet, les Juifs s'installèrent de bonne heure en Afrique du Nord où était alors professé le paganisme et firent beaucoup d'adeptes parmi les populations berbères. Des tribus entières s'étaient converties et au moment où le christianisme vint s'implanter à son tour, il trouva devant lui de nombreux éléments tant judaïques que judaïsés. La position des sectateurs d'Israël se trouva sans cesse fortifiée par l'arrivée continuelle de nouveaux sujets venus d'Égypte. Si bien que quelques années plus tard, sous l'Empire Byzantin, leur influence fut tellement grande aussi bien dans le domaine culturel que politique, qu'elle porta ombrage aux autorités établies et que l'empereur Justinien entreprit de les chasser. Beaucoup s'enfuirent alors à l'intérieur du continent et se réfugièrent même au Sahara, où ils formèrent des collectivités nombreuses et actives. C'est ainsi, comme nous l'avons déjà signalé, que se forma un état juif au Touat.

Lorsque les Arabes se présentèrent à leur tour en Afrique du Nord, ils y trouvèrent eux aussi de nombreux éléments juifs. Ce fut l'occasion de persécutions violentes, d'un nouvel exode et beaucoup de collectivités israélites furent contraintes d'embrasser l'islamisme.

Au XVe siècle, il existait encore des Juifs au Sahara, lesquels disparurent en tant qu'israélites sous la poussée des conquérants musulmans qui les abhorraient, et ils durent se fondre dans les populations de la boucle du Niger.

Il semble que les tribus réunies autour de la Kahéna pour défendre l'indépendance des Berbères étaient judaïsées. Le nom même de l'héroïne de l'Aurès, la Kahéna, est de consonance juive et viendrait de l'hébreu cohen : prêtre, ce qui voudrait dire : la prêtresse.

Le Père Mesnage a signalé que parmi les Haouara, plusieurs fractions étaient judaïsées, en particulier celle des Herreneha, aujourd'hui fixée au nord-est de l'Aurès [1].

Nous avons dit par ailleurs que le type juif se retrouvait

1. *Le Christianisme en Afrique*, t. III, pp. 95-107.

1: Lhote MS25 Tuareg

dans certains éléments touaregs de la boucle du Niger, que l'étoile de Salomon décorait souvent certains objets utilisés par eux et que la légende attribue une origine juive aux artisans.

Islamisme. — D'après les récits arabes, l'islamisation des Touaregs, et en particulier de ceux de l'Ahaggar, aurait été menée par Abd Allah Ed-Djafar, lieutenant de Sidi Okba ben Nafi (mort en 683), dont deux compagnons seraient morts près du petit village d'Hirhafok, exactement à Tiokine, où leurs tombes seraient encore l'objet d'une certaine vénération.

Dans les légendes, les indigènes prétendent même que Sidi Okba fut tué par un Targui (Koceïlata), confondant ainsi leur histoire avec celles des gens de l'Aurès et des Kounta Dag Ech Cheikh qui se disent les descendants de Sidi Okba, expliquant de cette manière la haine ancestrale qui existe entre eux et les Touaregs. Preuve est pourtant faite que Sidi Okba ben Nafi n'a jamais pénétré au Sahara, mais peut-être s'agit-il d'une confuson de noms ou d'un homonyme.

Le passage de ces premiers islamisateurs serait attesté, en plus des tombes de Tiokine, par l'inscription rupestre de T-i-m-missao peinte au plafond d'une grotte, qui a été signalée pour la première fois par Duveyrier et relevée par M. Benhazéra [1].

Il ne faut pas croire que les Touaregs adoptèrent d'emblée l'islamisme, car s'ils acceptèrent le Coran pour guide de leur loi religieuse, ils n'abdiquèrent rien de leurs mœurs ni de leurs anciennes coutumes païennes. Les Arabes prétendent même qu'ils apostasièrent jusqu'à quatorze fois, et encore aujourd'hui, ils les considèrent comme de bien tièdes musulmans. De plus, ils auraient appartenu longtemps à la secte hérétique des Ouahabites à laquelle ils se rallièrent, ce qui était une façon comme une autre de s'insurger contre les vainqueurs.

Ils sont peu instruits dans la religion, sont incapables de lire le Coran, sauf quelques-uns, chez les Taïtok, par exemple, ou dans la tribu soudanaise des Kel es Souq. Il y a chez eux très peu de marabouts et ceux qui y sont, à quelques exceptions près, y vivent par intérêt dans un esprit par-dessus tout mercantile. Il n'existe chez les Touaregs ni *imam*, ni *mufti* et

PL. XVI.

Installés dans des campements sommaires les forgerons travaillent en plein air confectionnant les armes et les ustensiles nécessaires aux Touaregs.

Les femmes des imrads s'occupent de faire paître et abreuver les troupeaux. Tous les deux ou trois jours elles se rendent aux puits, tirent l'eau pour les chèvres qui boivent dans des écuelles en bois ou dans des peaux formant récipient placées sur un monticule de sable en forme de cuvette. Elles remplissent les outres qui seront transportées au campement par les ânes.

[p. 304 B]

1: Lhote MS25 Tuareg

les mosquées sont réduites à de simples lieux de prières formés d'un alignement de pierres.

Beaucoup de Touaregs ne suivent pas les prescriptions coraniques et certains chefs, il y a quelques années, s'en reposaient sur les marabouts « pour faire leurs prières à leur place ! » Ceux qui pratiquent le font avec ostentation. Un grand nombre sont affiliés à des ordres religieux, mais ignorent généralement la signification des rites. C'est ainsi qu'au milieu du XIXe siècle, la confrérie des Tidjanyia fut puissante chez eux. La majorité d'entre ceux que l'explorateur Foureau rencontra au cours de ses voyages dans le Tassili en faisaient partie, mais il signale qu'il y avait aussi quelques Kadryia ; le chef In Guéddassen et un certain nombre de nobles de la région de Rhât étaient senoussistes. Tant que les Oulad Sidi Cheikh, qui étaient les plus importants éléments des Tidjanyia, combattirent la France, la majorité des Touaregs resta attachée à cette confrérie, mais ensuite beaucoup se rallièrent au Senoussisme. Les principaux représentants des Tidjanyia en pays targui étaient les Ifôras du Tassili dont la Zaouia de Témaçinine avait été fondée par l'un d'eux, El Hadj el Foki. Son fils Moussa acquit une très grande renommée de sainteté et c'est ainsi que son tombeau, situé près de la petite palmeraie, est honoré par tous les Touaregs du Nord.

Les Touaregs de l'Ădrar des Ifôras sont affiliés aux Kadryia et ont reçu l'ouerd de Cheikh Bay, ancien marabout Kounta de Teleya, mort il y a quelques années et dont la renommée s'étend sur tout le Sahara. Chez les Ioullimmiden, certaines tribus sont Kadryia (Kel es Souq), d'autres Tidjanyia (Daoussahak).

La tiédeur religieuse des Touaregs est telle qu'ils ne professent pas toujours un grand respect pour les marabouts et que bien peu font le pèlerinage de La Mecque. Lorsque Duveyrier fit son voyage à Rhât (1860) il y avait une trentaine de pèlerins chez les Touaregs du Nord [1] ; à l'heure actuelle, il n'y aurait que trois hommes parmi les Ihăggaren qui peuvent s'honorer du titre d'El Hadj.

Mais cette tiédeur n'exclut pas toujours le fanatisme. Barth signalait déjà qu'au cours de son voyage, il avait eu à lui faire face, et qu'il avait été assailli de questions et avait dû discuter avec certains Touaregs des différents dogmes religieux, ce dont il se tira par une parfaite connaissance du Coran et des mœurs

1. *Ouv. cit.*, p. 412.

1: Lhote MS25 Tuareg

musulmanes. Leur ignorance religieuse en fait, en même temps, des instruments faciles entre les mains des marabouts qui en ont souvent profité pour attiser la haine du chrétien et les pousser à la guerre sainte, comme ce fut le cas pour les révoltes de 1915-1916-1917 ; malgré les échecs cuisants qui s'ensuivirent, leur confiance dans leurs thaumaturges ne fut aucunement diminuée.

A l'heure actuelle, il existe plusieurs écoles coraniques dans l'Ăhaggar tenues par des marabouts arabes, installées dans les centres de culture, et surtout fréquentées par les enfants des Harratines, car les enfants des Touaregs qui restent dans les campements de leurs parents, ne peuvent y aller du fait de leur éloignement. Une famille de marabout originaire des Cheurfa d'Aoulef (Tidikelt) s'est installée il y a une quarantaine d'années dans l'Ăhaggar et jouit d'une grande vénération. Elle était fixée, il n'y a pas longtemps, dans le petit centre de Dar-Mouli qu'elle mettait en valeur, mais, par suite de la sécheresse du lieu, elle s'est transportée à Esselissekine où tous les ans a lieu une grande fête d'aumônes à laquelle se rendent tous les Touaregs de l'Ăhaggar. Son chef actuel, Moulay el Ouafi ben Moulay abd Allah, quoique encore tout jeune, est un exemple de piété et est entouré d'un grand respect.

En parlant de l'islamisation des Touaregs, Henri Basset a dit que ces derniers n'avaient presque rien pris à l'Islam, sauf parfois le Coran comme amulette, mais qu'ils en avaient retenu le fatalisme [1]. Beaucoup d'auteurs se plaisent à signaler aussi leur vernis plus que superficiel en matière d'islamisme.

Il ne faut pas, malgré tout, exagérer le degré d'irreligion des Touaregs, et depuis l'occupation française, l'action des marabouts qui traversent leur pays en commerçant, se fait lentement, mais sûrement. L'état de léthargie dans lequel les a jetés la suppression de leur vie de brigandage, les pousse petit à petit vers la religion et il devient de plus en plus courant de voir de jeunes nobles tuer le temps en psalmodiant devant une planchette coranique.

La superstition est très forte chez eux ; ils n'ont pas réussi à se dégager de leurs croyances anciennes et portent sur eux quantités d'amulettes qui ont souvent une origine païenne (patte de chacal, tête de lézard, peau d'hyène, etc...).

Conjointement on observe dans certaines familles nobles

1. *Essai sur la littérature des Berbères*, p. 388.

1: Lhote MS25 Tuareg

qu'à côté des saints orthodoxes, on invoque des personnages mystérieux qui ne peuvent être que de vieux petits dieux mal éliminés [1], et le Père de Foucauld a retrouvé dans les vieilles légendes de l'Ăhaggar, les noms de certains d'entre eux : Tamârès, Bourdân, Tâssoud, Ouerdaz, Noulana, Radès. Les Ihăggaren les invoquaient autrefois pour exaucer leurs désirs, mais aujourd'hui ces personnages sont tombés dans l'oubli, et seules quelques personnes âgées se souviennent encore de leur nom [2].

Certains Touaregs pratiquent scrupuleusement le jeûne, et les différentes fêtes musulmanes sont maintenant suivies ponctuellement. Mais à côté de cela, ils conservent l'ahal, la monogamie et le matriarcat.

Survivances païennes. — Dix siècles d'islamisme n'ont pas complètement débarrassé les Touaregs de leurs croyances anciennes. Ils croient encore à l'existence d'un monde animé, peuplé d'éléments agissant visiblement ou invisiblement, habitant les minéraux, les végétaux, les eaux, etc.... Certes, ces croyances s'estompent, s'amenuisent, perdent de leur intensité, mais les Touaregs vivent encore avec elles, au point, comme dans nos campagnes, de pratiquer certains rites.

Leur crédulité en matière surnaturelle dépasse tout ce que l'on peut imaginer. Ils croient aux génies — *alhinnen* ou *imdounen* — dont ils peuplent les montagnes, les sources, les endroits escarpés, certains arbres, et s'en protègent par le port de nombreux talismans qu'ils vont quémander aux marabouts, ou par la pratique de l'exorcisation. Les femmes, à ce sujet, sont encore plus crédules que les hommes. Elles consultent les morts en allant prier près des tombeaux et en leur demandant des nouvelles des absents.

Les cultes pétrographiques sont encore très vivaces chez les Touaregs. Ils croient certaines pierres hantées, et pour se concilier les esprits, placent à proximité des ex-voto sous forme de cailloux. C'est ainsi qu'au passage de certains cols, de certains sentiers inévitables, on rencontre souvent d'énormes tas de pierres imitant des tumuli, ou bien encore de multiples petits tas placés de part et d'autre de certaines pistes chamelières. Certaines tombes anciennes sont l'objet d'un culte très particulier, telle celle de Tazerouk, découverte il y a quelques

1. Gautier, *La conquête du Sahara*, cit. Vermale, *ouv. cit.*, p. 184.
2. Cit. Vermale, *ouv. cit.*, p. 184.

années par le Capitaine Niéger. Cette tombe sur laquelle reposaient plusieurs statuettes de pierre, des haches polies, de nombreux objets néolithiques, était encore fréquentée ces dernières années, jusqu'au moment où elle fut fouillée par les Français. Les Touaregs s'en défendent, naturellement, mais la découverte d'objets déposés là récemment (fragments de tissus, perles, etc...) l'atteste. Les statuettes de pierre représentaient les Tibaradines, c'est-à-dire les fillettes, lesquelles étaient censément une femme de haute naissance et sa servante, qui avaient été transformées en pierre à la demande qu'en avait faite à Dieu la maîtresse pour échapper à un rezzi qui venait piller son campement. Mais ce rezzi passé, Dieu maintint les femmes à l'état de pierre, malgré leurs prières et c'est pour que la vie leur soit rendue que les Touaregs venaient déposer des objets divers à chaque fois qu'ils passaient à proximité de la tombe. Le culte des Tibaradines est certainement un vestige des croyances préislamiques et peut-être néolithiques qui a dû être déformé à travers les siècles. L'une des statuettes représente un bovidé et s'apparente nettement à celle trouvée à Silet.

Les restes de totémisme sont encore affirmés par les tabous alimentaires. Les nobles se refusent à manger du poisson, de la chair d'oiseau, ainsi que les œufs de ces derniers ; seule, l'autruche échappe à cet interdit. D'autre part, une légende rapporte même que l'ourane, ou grand lézard des sables, est l'oncle maternel de tous les Touaregs.

Certains arbres sont également l'objet de pratiques cultuelles. *Le Maerua crassifolia* que les Touaregs appellent *agar* est censé être habité par un génie qu'ils chassent en frappant l'arbre à coups de pierre, chaque fois qu'ils veulent se mettre sous son ombre. Comme nous l'avons déjà signalé, les femmes répudiées qui ne veulent pas garder la retraite réglementaire imposée par la coutume pour reprendre l'état de liberté de mœurs, vont se confier à l'arbre et lui demandent de prendre à son compte cette retraite qui les gêne tant.

Sorcellerie. — Divination. — A côté de ces croyances plus ou moins religieuses, les Touaregs pratiquent la sorcellerie, la divination et interprètent les rêves.

Certains hommes, souvent des forgerons, sont connus comme sorciers, fabriquent des philtres destinés à jeter des sorts qu'ils confectionnent généralement avec des dépouilles d'animaux

1: Lhote MS25 Tuareg

et qu'ils remettent aux personnes qui veulent jeter un sort à quelqu'un avec mission de le leur faire prendre par surprise. Le lézard ourane joue un grand rôle dans la confection de ces sortilèges.

La divination, surtout pratiquée par les femmes, se fait de plusieurs manières et a toujours pour but de demander des nouvelles des absents.

Nous avons déjà signalé la divination par les tombeaux. Il y a aussi celle que les Touaregs appellent *tachilet* (la vipère) ; elle est pratiquée également avec un miroir ou bien encore avec un lézard, qui sont interrogés suivant différentes formes et qui doivent répondre aux questions posées.

Les rêves sont interprétés de différentes manières. Si un homme rêve de noir, c'est un mauvais signe ; de blanc, il recevra de l'argent ; de dattes, quelqu'un de son entourage ou lui-même sera blessé ; de vipère, c'est que quelqu'un lui jette un mauvais sort, etc... [1].

Nous ajouterons que les Touaregs croient aussi aux présages en interprétant la présence inopinée d'animaux, corbeaux, gazelles, traquets, et que certains jours ou certains mois, certains chiffres pairs ou impairs sont considérés comme de bon ou de mauvais augure.

# *LA VIE EXTÉRIEURE*

## CHAPITRE PREMIER

## COMMERCE, CARAVANES, PISTES CARAVANIÈRES ET TRANSPORTS

Aussi loin que l'on remonte dans le passé, on s'aperçoit que le Sahara a toujours joué le rôle de pont entre l'Afrique du Nord et l'Afrique subéquatoriale, qu'il n'y eut jamais une cloison étanche dressée entre les deux pays.

Les Nord-Africains se sont toujours préoccupés des richesses du Soudan et nous en avons plusieurs preuves, entre autres le périple du Carthaginois Hannon, qui fut chargé d'explorer la côte d'Afrique à l'ouest des Colonnes d'Hercule, et le voyage des trois jeunes Nasamons qui, du temps d'Hérodote, tentèrent la traversée du désert.

La zone subtropicale, c'est le pays des nègres. Les Égyptiens savaient bien cela, ils tiraient maints avantages de ce lointain voisinage et leurs Pharaons n'hésitaient pas à y envoyer des expéditions militaires pour en ramener de l'or, de l'ivoire, des plumes d'autruche, et du bétail humain ! Les habitants de l'Afrique du Nord n'en ignoraient rien non plus, et bientôt la richesse du Soudan étant un fait connu de tous, de grandes routes caravanières sillonnèrent tout le Sahara du nord au sud.

Il semble que l'Ăhaggar fut écarté de leur tracé. On en ignore les véritables raisons, mais on peut les supposer : la montagne dut être évitée pour les obstacles qu'elle présentait par son altitude, par la nature rocailleuse de son sol. Le tracé le plus court, qui suit une direction nord-sud ne peut donc pas passer par l'Ăhaggar mais le longer sur ses flancs. C'est ce qui s'est produit. La réputation de brigands et de bandits de grand chemin dont jouissent les Touaregs, n'est peut-être pas étrangère non plus à ce détournement des pistes caravanières.

[p. 310]

Les grandes artères qui sillonnent les abords immédiats de l'Ăhaggar, relient des oasis importantes les unes aux autres, et elles ont pu prospérer du fait que ces oasis participent directement à la vie des Touaregs et que ces derniers en ont besoin pour assurer leur ravitaillement.

La plus importante et la plus fréquentée de ces pistes est celle qui relie les oasis du Touat et du Ṭidikelt à la ville d'Agadez. Pour les Ihăggaren, elle est la route des greniers : dattes au Tidikelt, mil au Soudan. Il faut quarante jours pour aller d'Akabli à Agadez et l'Ăhaggar se trouve à mi-chemin. Il y a une montagne près de la guelta d'Outoul, située à 18 km. à l'ouest de Tămanrasset que les Arabes appellent Ounous et qui marque exactement la moitié de la route. Cette piste est en effet empruntée par les Arabes pour qui le Soudan est une attraction. Ils réalisent par les transactions de très gros bénéfices et le rêve de chacun d'eux est de pouvoir faire une caravane au Soudan, d'où il espère revenir riche.

Au départ d'In Salah, la piste franchit l'Ăhaggar par les gorges d'Arak, atteint la basse Koudia à I-n-Ămegel, passe à Tămanrasset, traverse le Tanezrouft par In Gueżzam et atteint la zone soudanaise soit par le puits d'In Abangarit, soit par celui de Taket-n-koutat.

D'Agadez, les caravaniers se dirigent ordinairement sur Zinder, Kano ou Sokoto.

Une autre piste, aujourd'hui moins fréquentée mais qui joua autrefois un rôle très important, est celle qui relie les oasis de Rhâdamès et de Rhât à Tombouctou ou à Gao. C'est la route qu'empruntaient autrefois les pèlerins sonrhaï qui se rendaient en Égypte. Elle était alors une route beaucoup plus religieuse que commerciale car les transactions entre le Fezzan et Tombouctou étaient peu développées et portaient ordinairement sur l'or qui venait de Bambouk.

En partant de Rhât, la piste traversait la plaine d'Ădmer, coupait l'Ădrar Ănahef, gagnait Aïtoklane, Ăbalessa, Sîlet et traversait le Tanezrouft, soit par Tin Rerhoh, soit par T-i-m-missao, pour aboutir à Tin Zaouaten ; traversant ensuite l'Ădrar des Ifôras, elle aboutissait soit à Gao, en suivant la dépression du Tilemsi, soit à Tombouctou.

C'est par cette piste que le voyageur arabe Ibn Batouta rentra de Gao dans son pays ; il la quitta après avoir traversé le Tanezrouft et s'engagea dans l'Ăhnet pour gagner le Touat.

Il existait une autre piste, Rhâdamès, Rhât, Tombouctou,

1: Lhote MS25 Tuareg

qui évitait complètement l'Ăhaggar et allait de Rhât à In Salah en traversant le Tassili-n-Ăjjer. Ce détour allongeait évidemment la route, mais celle-ci était beaucoup plus sûre pour les caravaniers que celle de l'Ăhaggar, car elle était entièrement sous le contrôle des Touaregs du Tassili, en bons rapports avec les gens des oasis de Rhât et du Touat. Il faut 25 jours pour aller, par cet itinéraire, de Rhât à In Salah, et un mois d'In Salah à Gao.

La route d'In Salah à Gao est à l'heure actuelle encore très fréquentée, non seulement par les Arabes du Touat, mais aussi par les Touaregs de l'Ăhaggar et par ceux de l'Ădrar des Ifôras. C'est la piste des « moutons », celle employée par les caravaniers qui se livrent au commerce du bétail sur pied et qui ravitaillent en viande les oasis du Tidikelt et du Touat qui en manquent. Grâce aux puits de T-i-m-missao et d'In Ziza, les moutons arrivent à franchir le Tanezrouft sans trop souffrir.

Ce mouvement commercial n'est évidemment pratiqué que pendant les mois les plus frais de l'année, c'est-à-dire, d'octobre à avril, et demande aux caravaniers de prendre de grandes précautions.

Voici la liste des puits, au départ de Timeïaouine (Ădrar des Ifôras) où les animaux sont successivement abreuvés, ainsi que le nombre de journées de marche qui les séparent l'un de l'autre, d'après les renseignements qui nous ont été fournis par l'Amrar des Kel Ăhnet, El Bak el Fassi.

| | | |
|---|---|---|
| Timeïaouine (puits, abreuvoir) | | Ădrar des Ifôras |
| I-n-Gezzal | 1 jour | |
| Efenargh | 1 — | |
| In Ouzzal | 1 jour 1/2 | |
| Tirek | 3 jours | Tanezrouft |
| Ti-m-missao | 2 — | |
| Tin Senatet | 5 — | Ăhnet |
| In Torha | 1/2 jour | |
| Aleg'nenou | 5 jours | |
| Tin Khalifa | 2 — | |
| In Belret | 1 — | |
| El Khenig | 1 jour 1/2 | Immidir |
| In Salah | 3 jours | Tidikelt |

Soit 26 journées 1/2 de marche.

1: Lhote MS25 Tuareg

Suivant les années, c'est-à-dire la plus ou moins grande abondance de pâturages, les caravaniers éprouvent plus ou moins de pertes dans leurs troupeaux. Parfois cette perte est totale, d'autres fois elle est nulle.

Nous avons vu un Ḱel Ăhnet faire le voyage à la fin du mois d'avril, période peu favorable, avec 35 moutons, et n'avoir été obligé d'en tuer qu'un seul en cours de route.

Lorsqu'on parle d'une piste caravanière, il faut éloigner l'idée d'une route plus ou moins aménagée pour faciliter la circulation. Les pistes sahariennes sont simplement marquées sur le sol par les traces qu'y font les chameaux, passant là depuis des siècles à la même place. Dans l'Ăhaggar, elles apparaissent comme un long ruban clair, circulant au milieu de la rocaille noire. La piste peut être composée de deux, de trois ou de six rubans, qui courent parallèlement les uns aux autres, suivant son importance et la disposition du terrain.

Les pistes suivent toujours les flancs des vallées, reliant naturellement les puits les uns aux autres, passant d'une vallée à l'autre par les cols les plus accessibles. Elles ne sont jamais balisées. Il y a bien par endroits quelques « redjem », espèce de tas de cailloux signalant les cols ou la proximité de certains puits, mais ils sont rares et dans l'ensemble ils ont été construits récemment, car les Ihăggaren se sont toujours efforcés de dissimuler les routes de leur pays aux étrangers.

Dans les endroits sablonneux, dans les terrains de reg, dont le sol est toujours plus ou moins transformé par l'action du vent, la piste devient souvent invisible, et la caravane doit alors se fier aux connaissances d'un guide ou d'un homme qui a déjà fait le chemin plusieurs fois et qui le connaît.

Pistes secondaires. — A l'intérieur de l'Ăhaggar existent de nombreuses pistes secondaires utilisées pour les besoins locaux. Elles vont toutes d'un puits à un autre. Tous les centres de culture sont reliés entre eux par un réseau de pistes bien tracées qu'il est facile de suivre sans avoir des connaissances bien grandes du pays. Il existe aussi des pistes de pâturage, petites routes marquées par le piétinement répété des chèvres allant d'une vallée à l'autre, contournant les montagnes et que les bêtes suivent journellement. Ce réseau est incroyablement étendu et l'on peut dire que toute montagne, que tout plateau est sillonné par plusieurs de ces petits che-

mins. On en retrouve dans les endroits les plus inaccessibles, les plus dénudés, ce qui démontre que l'Ăhaggar était parcouru autrefois en tous sens, dans ses moindres régions, résultat d'un élevage caprin plus intense et preuves de l'existence de pâturages plus nombreux que de nos jours.

Il y a des différences très sensibles dans la façon de marcher des caravaniers, soit qu'ils soient Arabes, soit qu'ils soient Touaregs. Les Arabes poussent toujours leurs chameaux devant eux, ces chameaux marchent *en ligne*, librement, sans aucune bride ni attache. Les Touaregs, au contraire, avancent toujours *en file*, les chameaux attachés les uns derrière les autres, et guidés par un homme qui prend la tête du convoi en tenant l'un des animaux par la bride, à moins qu'il ne soit monté dessus.

Ces méthodes différentes sont imposées pour deux raisons, l'une et l'autre en rapport avec la structure du terrain. Le Sahara arabe est généralement un pays plat où la circulation est facile, où aucun obstacle naturel ne vient s'opposer à la marche des bêtes, tandis qu'en pays de montagne, comme dans l'Ăhaggar, l'exiguïté de certaines pistes, au passage de certains cols en particulier, oblige à prendre des précautions, à régler la marche des chameaux, si l'on ne veut pas les voir se bousculer les uns sur les autres au détriment des bagages dont ils sont chargés. D'autre part, les pâturages se présentent aussi dans des conditions différentes : dans le Sahara du Nord, dont le sol appartient surtout aux formations calcaires, la végétation est toujours diffuse, ce qui oblige les chameaux à se déplacer énormément pour aller brouter d'une touffe à l'autre. Aussi les Arabes ont-ils pris l'habitude de ne jamais mettre de laisse à leurs bêtes afin de leur permettre de cueillir les touffes de végétation qui se trouvent à leur portée, tout en marchant.

Dans l'Ăhaggar, comme nous avons eu l'occasion de le dire la végétation est au contraire concentrée, réfugiée dans les vallées où l'humidité se dissimule sous les alluvions sablonneuses. Il n'y a donc aucun intérêt à laisser une certaine liberté aux chameaux, mais au contraire, il ne faut pas perdre une minute sur la piste pour gagner le plus rapidement possible le lieu du pâturage, donc assurer une stricte discipline de marche à la caravane.

De là les deux systèmes de marche employés respectivement par les Arabes et les Touaregs.

1: Lhote MS25 Tuareg

Les caravanes qui traversaient autrefois le pays des Ihăggaren étaient obligées de se mettre sous la protection de ceux-ci, en versant un droit de passage convenu d'avance. Le droit revenait à l'Aménokal, mais la protection n'était assurée que dans la mesure de son autorité, qui ne dépassait pas, bien souvent, les limites de sa propre tribu. Si bien que le caravanier était l'objet de quémandages perpétuels de la part des gens habitant le terrain traversé, auxquels il était bien souvent difficile d'échapper. Un guide était parfois mis à sa disposition et recevait une rémunération en marchandises.

Lorsque la limite du territoire était atteinte, la protection s'arrêtait là et la cupidité des Touaregs était tellement grande qu'ils n'hésitaient pas, parfois, à aller piller, en dehors de leur territoire, la caravane qu'ils venaient de protéger. Cela entraînait souvent des conflits de tribu à tribu voisine, mais en fin de compte tout s'arrangeait sur le dos du caravanier.

Parfois les Touaregs se faisaient loueurs de leurs chameaux. Certaines tribus du Tassili s'étaient fait la spécialité des transports entre Rhâdamès et Rhât, de même que les Issekkemâren acceptaient de louer leurs bêtes entre In Salah et le Soudan. Ils retiraient de ce travail des bénéfices appréciables.

Comme conséquence de ces prélèvements continuels, le caravanier ne pouvait transporter qu'une marchandise dont l'échange était très rémunérateur.

Il est une coutume, chez les caravaniers, qui consiste à déposer dans les rochers ou dans des endroits à l'abri, les vivres de réserve nécessaires à leur retour. Ces vivres sont abandonnés sans gardien et personne ne songe à s'en emparer.

Ceci a été observé par Duveyrier, le Capitaine de Bonnemain, M. Boû Derba, sur l'itinéraire Ouargla-Rhât. Nous avons été nous-même témoin de faits semblables, mais les marchandises ainsi entreposées appartenaient à des Ihăggaren, et personne n'aurait alors osé y porter la main. La chose est moins sûre s'il s'était agi du bien d'un étranger.

Lorsqu'un chameau meurt en cours de route, la charge qu'il portait est abandonnée sur place et mise sous la sauvegarde publique. Le caravanier est toujours sûr de retrouver son bien, serait-ce six mois ou huit mois plus tard. A ce sujet, il est bon de dire que les Touaregs, tout pillards qu'ils soient, ne sont pas voleurs. Lorsqu'un vol a été commis dans leur

1: Lhote MS25 Tuareg

pays, le fautif, est généralement un nègre, mais rarement un Targui de race blanche.

Quels étaient les produits transportés ? Des objets manufacturés pour la plupart, généralement de fabrication européenne. C'étaient des tissus, des soieries que les Touaregs et les Soudanais recherchaient avec empressement, c'était de la bimbeloterie, des lames d'épées non montées, du sucre, du café (le thé n'a fait son apparition au Sahara que récemment).

Toutes ces marchandises étaient revendues ou échangées à dix fois leur valeur. Au retour, les caravaniers ramenaient des plumes d'autruche, de la poudre d'or, de l'ivoire, des négrillons et des négrillonnes achetés comme esclaves et revendus très cher dans les villes d'Algérie. Les cuirs étaient également l'objet d'un trafic intense, ainsi que des médicaments d'origine végétale ou animale (graisse d'autruche) faisant partie de la pharmacopée soudanaise, très appréciés chez les Arabes.

De nos jours, sauf l'or et l'ivoire, qui sont devenus rares et dont le commerce est entre les mains des Européens, sauf la vente d'esclaves qui est interdite depuis l'occupation française, le trafic est resté le même. Mais les routes sont devenues libres et les Touaregs ne peuvent plus compter sur leurs anciens profits. Il leur restait une ressource, celle de faire les caravaniers à leur tour, et d'utiliser ainsi leurs nombreux chameaux. C'est ce qu'ils ont fait.

Le commerce des moutons, qui a pris ces dernières années un grand développement, se fait essentiellement par échange. Il est surtout le fait des caravaniers arabes du Touat qui se rendent au Soudan, avec des dattes, du tabac, des tissus, des couvertures, qu'ils échangent non pas sur des marchés, mais dans les campements. Des Touaregs de l'Ădrar des Ifôras et des Arabes Kounta procèdent aussi à l'inverse, et conduisent leurs moutons au Tidikelt et au Touat.

En 1939, les prix de vente des moutons pratiqués à In Salah étaient de 75 à 100 francs. Les prix d'achat au Soudan variaient de 35 à 45 francs, mais comme nous l'avons dit, les échanges étaient le plus souvent à la base de toutes les transactions.

C'est ainsi que pour un chameau qu'ils recevaient, les Touaregs de l'Ădrar donneient 120 moutons. Un mouton lui-même était échangé contre 12 à 15 coudées de toile, ou 10 *gué-*

1: Lhote MS25 Tuareg

*çâa* de dattes. Un *dokkali*, grande couverture du Touat très appréciée des Touaregs, valait 10 moutons au Soudan et 7 dans l'Ădrar.

Le chameau servait de base aux échanges. Les Touaregs ne se sont jamais servi de monnaie ; ils acceptaient par contre le thaler de Marie-Thérèse qui avait cours au Soudan et la livre turque qui était répandue en Tripolitaine. Les tribus soudanaises traitaient en *toukourdi*, bande d'étoffe servant de voile, et en *kori*, (Cypraea moneta), petit coquillage marin originaire de l'Océan Indien.

Depuis l'occupation française on a vu un certain nombre de commerçants indigènes s'installer à Tămanrasset, la capitale administrative de l'Ăhaggar. Ce sont pour la plupart des Mozabites et quelques Arabes de Metlili, qui ont construit des boutiques et qui se font expédier des marchandises par leurs correspondants du Tell algérien.

Cet état de choses récent tend à se développer de plus en plus et l'agence postale de Tămanrasset enregistre tous les ans plusieurs millions d'affaires.

Ces affaires portent particulièrement sur le thé, le sucre, les tissus, les parfums, la quincaillerie, le carbure, les couvertures du Touat. Elles provoquent un mouvement chamelier assez important dont les Ihăggaren sont les bénéficiaires, avec les Arabes d'In Salah qui louent leurs chameaux aux commerçants.

Les transports. — Il n'est plus à répéter que sans le chameau le Sahara serait aujourd'hui inhabité. Il joue, en effet, dans les transports pour les relations entre oasis, un rôle capital ; il est la monture des guerriers, des gens en déplacement et le véhicule des bagages. On ne saurait se passer de ses services dès l'instant qu'il s'agit de franchir une centaine de kilomètres en région démunie de points d'eau.

L'âne joue aussi un grand rôle, mais son emploi est plus localisé, confiné aux limites du massif dans lequel il est rare de ne pas trouver d'eau au cours d'une journée de marche. C'est l'âne qui, en réalité, assure tous les transports internes, ceux que nécessitent les déplacements des campements, les transports de l'eau et même des personnes, car si les Imochar ne voyagent jamais autrement qu'à chameau, les Imrad

1: Lhote MS25 Tuareg

mettent couramment l'âne à contribution et leurs femmes ne connaissent pas d'autres montures. Son rôle est d'autant plus apprécié qu'il ménage les chameaux qui, dans l'Ăhaggar, doivent être soumis à un travail modéré, et de plus, on l'a toujours sous la main, car il vit à proximité des campements, alors que les chameaux sont souvent, pour des nécessités de pâturage, à plusieurs journées de marche.

Les méharistes possèdent un harnachement particulier : des selles légères qui se placent sur le garrot de l'animal et qui sont conçues pour recevoir les différents sacs de selle et les outres d'eau.

Les Touaregs de l'Ăhaggar possèdent plusieurs genres de selles : 1° la *tarik*, avec pommeau en forme de croix, recouverte d'une peau rouge ; 2° la *tamzak*, de même forme, mais beaucoup plus luxueuse, dont les faces externes, du pommeau et du dossier sont garnies de petites lamelles métalliques ajourées et de cabochons de cuivre ; 3° la *tahiast*, selle grossière à pommeau en palette en bois nu ou recouvert d'une peau décorée de dessins géométriques.

La *tarik* est la selle couramment employée par les Touaregs de l'Ăhaggar, celle qui leur est propre et qu'ils ont dû connaître de temps immémorial. La *tamzak* qui est une variante décorée de la *tarik*, doit l'origine de sa décoration à des influences haoussa. On retrouve, en effet, la technique particulière de l'application des bandes métalliques ajourées et relevées de tissus de peaux coloriés dans les selleries pour chevaux des haoussa du Damergou, du Sokoto, etc..., et il ne fait aucun doute que cet art, qui est sans relation avec celui des Touaregs, est beaucoup plus développé dans ces populations.

Les deux selles sont généralement faites en Air, voire même à Agadez, mais les vieux forgerons touaregs ne fabriquent que la *tarik*, alors que la *tamzak* est l'œuvre d'artisans ordinairement fixés à Agadez et plus ou moins croisés avec des artisans d'origine haoussa. Les forgerons de l'Ăhaggar ne fabriquent que la *tahiast*, qui est la selle adoptée par tous les Touaregs de l'Ădrar des Ifôras, que les Arabes Chaamba utilisent aussi, et qui est dérivée de la selle des Maures du Sahara occidental.

Les femmes nobles de l'Ăhaggar qui ne voyagent qu'à méhari possèdent des selles spéciales, ressemblant au basour des Arabes mais qui ne comportent pas d'arceaux recouverts d'étoffes. Ces selles portent le nom d'*akhaoui* ; elles sont faites

en bois et sont ornementées de gros pommeaux, à l'avant, et de plaquettes sur le côté, garnies de clouteries de cuivre. Plusieurs coussins placés au centre assurent le confort de la voyageuse. Lors des grands déplacements ces selles peuvent être munies d'une cage en osier recouverte d'étoffe, mais cet usage n'est pas courant.

FIG. 54.
1. Selle de chameau dite *tamzack*. — 2. Détail du dossier de la selle.

Les selles reçoivent des sacs en peau qui contiennent soit les vêtements de rechange, soit les vivres de réserve, de même que les outres d'eau constituant la provision nécessaire à la traversée des régions dépourvues de puits.

Pour les transports, les chameaux sont munis d'un bât spécial fait en fibres de palmier qui couronne littéralement leur arête dorsale ; la plupart de ces bâts sont fabriqués au Tidikelt. Pour les caravanes de longue durée, les bêtes sont chargées à cent kilos environ, plus les outres d'eau que l'on adjoint généralement aux bagages. Les serviteurs, qui accompagnent les bêtes et ne disposent pas de montures person-

nelles, montent en surcharge par-dessus et font tout le voyage dans ces conditions.

Les Touaregs sont de très mauvais marcheurs et ne conçoivent pas que l'on puisse aller à pied, ne serait-ce que pour ménager la monture pendant quelques kilomètres.

Les ânes qui, comme nous l'avons dit sont utilisés pour le transport à l'intérieur du massif, sont munis d'un petit bât servant en même temps de selle. Lorsque le campement se déplace, on les charge de la tente, des piquets, des sacs contenant les vivres de réserve, et ce sont eux qui assurent le transport de l'eau du puits au campement.

Lorsqu'un Amrid se déplace seul pour accomplir un voyage, il prend un âne pour porter son eau, ses menus bagages et sa couverture et, le poussant devant lui, il marche derrière, portant sa lance en travers sur les épaules. Il ne monte dessus que pendant les heures chaudes de la journée.

Ces dernières années un certain nombre de notables, parmi lesquels l'Aménokal, se déplaçaient à cheval, mais seulement lorsqu'ils voyageaient dans le bas Ăhaggar, qui est sillonné de larges vallées permettant d'éviter la rocaille.

Les Ihăggaren ne voyagent jamais à zébu et ne l'emploient jamais pour les transports. Au Soudan, cet animal est au contraire employé comme animal de selle et de bât.

## CHAPITRE II

## GUERRE ET REZZOU

Les Touaregs distinguent deux sortes d'expéditions guerrières : la guerre déclarée entre fractions ou peuples qu'ils appellent *annemensi* ou *amdjer*, et le rezzi, *édjen* ou *égen*, qui a pour but le pillage par surprise d'un campement ou d'un troupeau.

Si la guerre était assez rare, les rezzou étaient, au contraire, très fréquents. Ils étaient provoqués par le goût atavique des Touaregs pour ce genre d'expédition et rassemblaient, pour la circonstance, les éléments les plus disparates animés du même esprit d'aventure et de bataille.

Lorsqu'une expédition était décidée contre un campement, les assistants s'efforçaient de réunir le nombre d'hommes convenable. C'est l'été qu'elles étaient les plus fréquentes, car les campements étant dans l'obligation de se disséminer dans les pâturages, les surprises étaient rendues plus faciles.

La guerre, au contraire, était menée l'hiver, alors que les caravanes étaient rentrées et que les provisions nécessaires à la vie de la tribu étaient assurées pour de longs mois, ce qui enlevait toute préoccupation matérielle aux guerriers sur le sort de leurs familles.

Chaque homme avait à se procurer des armes, et s'il ne possédait pas de méhari personnel, il trouvait prêteur, mais devait, en cas de prises, remettre à ce dernier la moitié des animaux capturés. Il n'était pas tenu en cas d'échec et de mort du chameau de rembourser celui-ci.

Les hommes se réunissaient, discutaient de l'expédition projetée et prononçaient une formule sacramentelle, *narhaï allar*, qui les liait les uns aux autres pendant toute la durée de l'expédition et pendant laquelle ils devaient se porter une aide mutuelle.

Ils nommaient ensuite un chef qui n'était pas forcément un Amajer, mais un homme réputé pour son courage, son

[p. 321]

1: Lhote MS25 Tuareg

à-propos et son expérience des expéditions de ce genre. Et le groupe partait précédé d'éclaireurs.

Tous impedimenta étaient écartés. Chacun était monté à méhari, n'emportant que le strict nécessaire pour la route, car il fallait marcher vite tout en s'efforçant de maintenir les bêtes en bon état. Avant le lever du soleil, le rezzi était déjà en route et la marche rapide était poussée sans arrêt jusqu'au soir. Les hommes ne mangeaient que quelques dattes à midi, ne faisaient pas de sieste, ne prenaient qu'un repas le soir, tout était sacrifié à la rapidité de la marche qui était la clé du succès.

A proximité du but, le rezzi forçait encore la marche si cela était possible et il se partageait souvent en deux parties ; l'une était chargée de s'emparer des bêtes et de les amener à un point déterminé, l'autre faisait diversion sur les campements ennemis pour donner le change.

L'ennemi surpris était attaqué à coups de fusil par quelques hommes déployés en tirailleurs, alors que les méharistes se précipitaient dessus, lançaient leurs javelots, puis en venaient bientôt au corps à corps. De leur côté, les gens attaqués s'efforçaient de connaître les forces des assaillants et, suivant le cas, ils battaient en retraite ou passaient eux-mêmes à l'attaque.

Malgré ce déploiement guerrier et la vigueur de l'attaque, ces combats n'étaient en général guère meurtriers, et n'entraînaient pas toujours mort d'hommes.

Lorsque des rezzou étaient menés contre des campements soudanais, les nègres et négresses étaient enlevés avec autant d'intérêt que les chameaux. Les ravisseurs en conservaient quelques-uns pour leur servir de domestiques et allaient vendre les autres sur les marchés d'In Salah et du Touat.

Le butin enlevé, le rezzi se rendait à marche forcée au point convenu d'avance, où il rejoignait l'autre groupe de méharistes.

Les gens razziés, de leur côté, s'organisaient, mais ne s'efforçaient pas de rejoindre immédiatement le rezzi et ne s'usaient pas en vaine poursuite ; comme la route de retour du rezzi était connue, ils essayaient d'atteindre un puits où il devait forcément passer et s'ils réussissaient à le devancer et à lui couper l'abreuvoir, le véritable combat commençait, cette fois acharné et souvent très meurtrier.

Serrés de près, les Touaregs se formaient en carré derrière leurs chameaux et se défendaient à l'abri de leur bouclier ;

lorsqu'ils se voyaient dans l'impossibilité de se rendre maîtres du puits, ils abandonnaient leurs prises. La bataille prenait fin et les razzieurs étaient rarement poursuivis. Dans le camp adverse, un certain nombre d'hommes étaient laissés en sentinelles pour parer à des retours offensifs et les autres s'efforçaient de rallier leurs bêtes et de les ramener au douar.

Une fois que le rezzi était à l'abri, les hommes se répartissaient les prises en fraction plus ou moins égales, suivant les mérites de chacun pendant le combat. Mais dans certaines tribus, des coutumes se rapportant à la *tioussé*, voulaient que l'amrid en versât une partie aux Imochar. Le prêteur d'armes ou de méhari était à son tour indemnisé et cette part du butin s'appelait *abellag*.

Dans les combats, les Touaregs avaient la réputation d'agir par traîtrise et de ne pas toujours suivre les règles de chevalerie de la guerre saharienne.

FIG. 55. — Lance touarègue. La lame en fer est garnie d'incrustations en cuivre ; la partie où se pose la main est recouverte de peau et une petite boucle de peau placée en arrière est destinée à recevoir l'index qui au moment de lancer donne une plus grande propulsion à l'arme.

Dans la bataille, un homme qui se jetait aux pieds de son vainqueur et touchait ses habits se mettait ainsi sous sa protection et avait droit à la vie ; mais les Touaregs ne faisaient pas toujours cas de cette règle et tuaient souvent leurs prisonniers.

Lorsqu'une tribu avait été pillée illégalement, c'est-à-dire lorsqu'il n'y avait pas auparavant d'actes d'hostilité autorisant une réciprocité, une délégation de guerriers de cette tribu venait au campement adverse, essayer de négocier la restitution des prises. C'est ce que les Arabes appellent le *myad*, terme qui a été adopté par les Touaregs. Là encore, les Touaregs ne se montraient pas toujours très chevaleresques et, souvent, massacraient sauvagement les ambassadeurs sans défense.

Au cours des guerres ou des rezzou, la femme jouit d'un privilège rare, celui d'être respectée par les combattants. On a souvent vu pendant les opérations de l'occupation française, les hommes fuir les campements, abandonnant les femmes et

1: Lhote MS25 Tuareg

les enfants aux vainqueurs, et cette conduite a souvent valu aux Touaregs d'être taxés de lâcheté. Il y a eu une fausse interprétation des faits, car les Touaregs agissaient ainsi en s'inspirant de l'immunité dont jouissent les femmes.

Il est honteux, au cours d'un rezzi, d'oublier cette règle de protection, de faire violence aux femmes, de les dépouiller de leurs vêtements, de pénétrer dans leurs tentes. Les infractions commises étaient souvent le fait d'éléments sans scrupules, de gens sans honneur. La plupart des Imrad et des Iklan sont, paraît-il, coutumiers du fait de dépouiller les femmes de leurs vêtements et de leurs bijoux au point de les laisser complètement nues, et il arrive même qu'ils les violent. Les Imochar, plus chevaleresques, quelques rares Imrad, s'efforcent de s'y opposer, mais dans ces équipées guerrières les Iklan et les gens de peu de morale sont souvent plus nombreux que les autres.

Fig. 56. — La tacouba ou épée.

Les abus commis sur des femmes demandaient toujours une vengeance que les adversaires n'étaient généralement pas longs à subir ; des faits de ce genre suffisaient pour dresser des tribus entières l'une contre l'autre. C'est ainsi qu'au Soudan, les exactions des gens du marabout Abidine sur les Touaregs Kel Ădrar, lors du meurtre de leur aménokal Safikroum, qui eut lieu vers 1912, ont fait de ces deux fractions des ennemis irréconciliables.

Au début de l'occupation française, lorsque les lieutenants Cottenest et Guilho-Lohan poussèrent leurs reconnaissances dans l'Ăhaggar, ils trouvèrent des femmes dans les campements abandonnés par leurs maris ; les bons soins dont elles furent entourées facilitèrent par la suite notre prise de contact pacifique avec les Ihăggaren.

L'armement des Touaregs se compose de lances de fer, de javelots à hampe de bois, d'épées, de poignards et d'un bouclier.

Dès avant l'occupation française, les Touaregs connaissaient l'emploi des armes à feu et étaient en possession d'un certain nombre de fusils. C'était pour la plupart des armes de traite ou de modèle archaïque, type Lefaucheux. Mais leurs prix élevés pour la bourse des Touaregs, la difficulté de se procurer de la poudre et des balles en faisaient des armes peu courantes qui étaient souvent l'apanage des chefs.

L'armement des Touaregs varie suivant les cas. L'Imochar porte les armes qui lui plaisent ; elles comprennent : l'épée — *tacouba* — qui est l'arme par excellence des nobles, la lance en fer — *allar'* — portée par les nobles et les vassaux, les javelots à talon et pointe en fer, à hampe de bois — *tarda* — réservés aux vassaux et aux esclaves, et le poignard d'avant-bras — *télak* — muni d'un anneau de cuir qui permet de le suspendre au poignet. Au Soudan, les esclaves portent également des matraques en bois — *tabouri* — sorte de grosses branches munies d'un nœud à l'une des extrémités.

Fig. 57.
Poignard de bras de type ancien.

Les Touaregs n'ont qu'une arme défensive, le bouclier, — *ahrer* — qui est fait en peau d'antilope oryx. Il était généralement l'apanage des nobles et eux seuls avaient le droit de le porter ; il rappelle le blason par sa forme et l'idéologie qui l'entoure, et les motifs décoratifs qu'il porte ont un caractère magique.

Les Touaregs sont des escrimeurs adroits, combattant corps

à corps à l'épée en se garantissant de leur bouclier qui leur couvre le corps et qu'ils manient avec beaucoup de dextérité malgré son volume et son poids. L'épée frappe d'estoc et est susceptible, si elle est de bonne qualité, de fendre un bouclier en deux. La main est protégée par une petite garde rectangulaire en fer qui donne une forme de croix à la partie supérieure de l'épée.

L'explorateur Duveyrier avait signalé que les Touaregs se

Fig. 58. — Bouclier touareg en peau d'antilope oryx.

servaient de l'arc. Nous n'avons pas retrouvé cette arme chez eux, ni aucun témoignage comme quoi elle était employée autrefois.

Tout cet armement devient bien vétuste devant l'arrivée des armes à tir rapide. Les Imochar de l'Ăhaggar tiennent encore à leur épée qu'ils portent toujours en sautoir, et qui semble beaucoup plus servir à situer leur rang social qu'à toute action guerrière. Au Soudan, presque tous les Touaregs portent encore la lance, quelques-uns le poignard d'avant-bras, et en Aïr, il arrive encore de voir un bouclier suspendu à la selle d'un méhari. Mais dans quelques années, tous ces objets seront bons à garnir des panoplies.

## *LA PÉNÉTRATION EUROPÉENNE CHEZ LES TOUAREGS*

(1800-1900)

---

La pénétration européenne au Sahara n'entra vraiment dans une phase active qu'au début du XIXe siècle. Et encore fallut-il arriver au milieu de celui-ci pour que nous ayons des données à peu près exactes sur l'intérieur du désert. Le Sahara était pourtant un sujet de curiosité et plus d'un voyageur songeait à s'y aventurer, mais les éléments restaient les plus forts et les obstacles semblaient insurmontables. Conjointement, nous ne savions rien sur les Touaregs.

En 1798, un Anglais du nom de Mungo Park fit le projet d'atteindre le désert, partit de la Sierra Leone, arriva jusqu'à proximité de Tombouctou, mais dut faire machine arrière devant les difficultés qui s'amoncelaient sur sa route. Pourtant, en 1804, il renouvelait sa tentative et parvint à Kabara, le port de Tombouctou, sans pouvoir gagner la ville, et continua à descendre le Niger, prenant pour la première fois contact avec des tribus touarègues, de la confédération des Ioullimmiden qui étaient campés sur les bords du fleuve. Mais attaqué par les riverains des villages, aux rapides de Boussa, qui se trouvent un peu au sud de l'actuelle frontière de la Nigéria anglaise, il périt noyé et ses notes de voyage ne purent jamais parvenir en Europe.

C'est au Français René Caillé que devait revenir l'honneur de traverser le premier le pays targui et le Sahara. Parti de la Sierra Leone, en 1828, il put atteindre Tombouctou et séjourner quelques jours dans la ville, en passant par Djenné, d'où il gagna le Maroc à travers le Tanezrouft. Malheureusement, René Caillé qui accomplit son voyage dans des conditions très difficiles, ne put rapporter que des renseignements très fragmentaires sur les Touaregs.

[p. 327]

1: Lhote MS25 Tuareg

Quelques années avant son voyage, un officier anglais, le major Gordon Laing, avait essayé de gagner Tombouctou en partant de Tripoli. Il fut le premier, parmi les Européens, à prendre contact avec les Touaregs du Nord et à atteindre l'Ăhaggar. Il entra en rapport avec le marabout targui de la Zaouia de Temaçinine, nommé Cheikh Othman, qui accepta de le mener de Rhâdamès à In Salah. Laing put ensuite gagner Tombouctou en passant par le puits d'In Ziza et l'Ădrar des Ifôras, mais au retour, à quelques jours d'Araouan, il fut massacré par ses guides arabes. Cheikh Othman, qui devait par la suite jouer un grand rôle dans la pénétration française au Sahara, s'offrit pour aller à In Salah essayer de récupérer les notes de route laissées par Laing, mais ses tentatives restèrent sans succès, et les documents qui devaient présenter un très grand intérêt ne purent jamais être retrouvés.

En 1849, le célèbre explorateur allemand, Henri Barth, partait de Tripoli.

Pendant quatre ans il devait visiter le Fezzan, l'Aïr, les pays du Tchad, le Damergou, traverser sans encombre le pays des Touaregs Ioullimmiden, gagner Tombouctou et rentrer à Tripoli en passant par le Kaouar. Cette exploration magistrale peut être considérée comme la plus importante du XIXe siècle et son auteur, comme le premier d'une phalange qui devait compter les Duveyrier, les Speke, les Grant, les Livingstone, les Stanley, les de Brazza, les Foureau, les Monteil, etc....

Il avait laissé l'Ăhaggar en dehors de ses itinéraires et ne rapporta sur ses habitants que des renseignements fragmentaires ; il put affirmer qu'au cas où les Français, qui occupaient déjà presque toute l'Algérie, voudraient pousser leur occupation plus loin, tous les Touaregs, Ihăggaren en tête, s'y opposeraient de toutes leurs forces.

En 1855, le Gouverneur général d'Algérie, désireux d'amorcer des relations avec les Touaregs du Sahara central, fit inviter, par l'intermédiaire du caïd d'Ouargla, Si Hamza, le Cheikh Othman à venir à Alger. Si Othman accepta et vint traiter de l'organisation de caravanes commerciales dans son pays.

En 1856, sur le conseil de Cheikh Othman, le Capitaine de Bonnemain entreprit un voyage à Rhâdamès. Il reconnut la piste allant d'El Oued à Rhâdamès et fut assez bien accueilli dans cette dernière ville. Il enrichit la géographie d'un double

1: Lhote MS25 Tuareg

itinéraire et du plan de la ville, rapporta également de nombreux renseignements d'ordre commercial.

En 1858, Cheikh Othman revint à Alger. De retour dans son pays, il ramena avec lui l'interprète militaire, Ismaïl Bou Derba, et le conduisit à Rhât. Métis français, Bou Derba était particulièrement apte à mener à bien la mission commerciale qui lui avait été confiée. Il entra en rapports avec le chef des Touaregs Ăjjer, Ikhenoukhen, qui l'accueillit aimablement et le protégea même contre les gens de Rhât qui témoignaient de sentiments hostiles contre sa personne. Son enquête fit ressortir que tout le commerce européen qui se faisait dans la région était entre les mains des maisons anglaises de Tripoli.

Il put ramener également de nombreux renseignements d'ordre géographique.

Puis, en 1859, ce fut le voyage de l'explorateur Henri Duveyrier à Rhât et au Tassili des Ăjjer d'où il rapporta des documents d'une grande valeur sur les Touaregs du Nord.

Le 8 mai, il se dirigeait de Biskra sur l'oasis El Goléa dont les habitants s'étaient soumis tout récemment à notre influence. Mais, malgré cela, ils firent un très mauvais accueil au jeune explorateur qui, devant les menaces de mort dont il était l'objet, jugea prudent de quitter la ville, gagna Ghardaïa, puis Laghouat, rejoignit Biskra et se dirigea sur Touggourt. De cette ville, il s'achemina à travers le Souf sur Rhâdamès, non sans avoir sillonné les itinéraires qui vont de Tripoli à Rhât et à Mourzouck. A Rhâdamès il entra en contact avec Ikhenoukhen, l'aménokal des Ăjjer et séjourna longtemps dans la ville pour étudier la langue tămâhak. Puis afin de s'assurer des recommandations nécessaires pour la poursuite de son voyage et prendre les instructions du Gouvernement Général de l'Algérie, il gagna Tripoli et revint quelques mois après à Rhâdamès où il rejoignit Ikhenoukhen. Avec ce chef il se dirigea sur Rhât mais il ne put pénétrer dans la ville dont les habitants étaient alors en mauvais termes avec les Touaregs d'Ikhenoukhen et ce dernier eut fort à faire pour protéger le jeune Français contre les fanatiques qui n'auraient pas hésité à aller jusqu'au crime. S'étant lié d'amitié avec Ikhenoukhen, il décida ce dernier à l'accompagner jusqu'à Mourzouck où tous deux furent reçus par un haut personnage turc. Puis il poussa jusqu'à Zouila et revint enfin à Tripoli, par la longue route de Sokna, après 28 mois d'absence.

Pendant tout son voyage au pays des Touaregs, Duveyrier

1: Lhote MS25 Tuareg

fut accompagné par Cheikh Othman dont le frère, El Hadj Ahmed, était alors l'aménokal de l'Ăhaggar et c'est à lui qu'il dut la réussite de son voyage. Très intelligent, Cheikh Othman fut un informateur précieux pour Duveyrier à qui il donna une foule de renseignements sur les Touaregs du Nord qui constituent encore aujourd'hui une documentation inestimable.

Pour des raisons d'insécurité, Duveyrier ne put visiter le massif d'Ăhaggar comme il l'aurait tant désiré, mais il en rapporta un aperçu très exact grâce à la perspicacité de ses différents informateurs. Possédant une forte préparation scientifique, le jeune voyageur put étudier en détail la géologie, la météorologie, la flore, la faune, et faire de nombreuses observations astronomiques qui provoquèrent la publication des *Touareg du Nord*, rédigée sous la direction du Docteur Warnier, protecteur et directeur scientifique de Duveyrier.

Ses relevés topographiques ne comprenaient pas moins de 74 feuilles qui permirent de construire la carte du Sahara central. Au point de vue politique, le voyage de Duveyrier n'était pas dénué d'intérêt : il était entré en rapport avec l'Aménokal Ikhenoukhen, ainsi qu'avec plusieurs chefs touaregs, avec les commerçants rhâdamésiens, ce qui laissait présager l'établissement de relations de bon voisinage avec les Touaregs du Tassili et de Rhât.

C'est ainsi que quelques années plus tard, en 1862, le cheikh Othman, sur les instances de Duveyrier, accepta de se rendre à Paris, où il fut présenté à Napoléon III et où il mena pendant plusieurs semaines une vie très mondaine qui fit une grosse impression sur lui. A son retour au Sahara, il accepta d'emmener avec lui l'explorateur Gerhard Rholfs et le conduisit ensuite d'In Salah à Rhâdamès.

Devant ces résultats heureux, dus en grande partie à Duveyrier, le Gouvernement Général de l'Algérie se décida à envoyer une mission à Rhâdamès pour conclure un traité commercial avec l'Aménokal des Ăjjer. La mission était composée du Commandant Mircher, du Capitaine de Polignac, de l'interprète Bou Derba, du Docteur Hoffmann et de l'ingénieur Vatonne. Le traité ne devait avoir qu'un caractère commercial celui « de faciliter et de protéger à travers leurs pays, jusqu'au Soudan, le passage de nos négociants et de nos marchandises ».

Le chef targui ne vint pas comme nous l'espérions. Le

1: Lhote MS25 Tuareg

traité fut tout de même conclu et le 26 novembre 1862, le Cheikh Othman et un délégué d'Ikhenoukhen signaient la convention dite de Rhâdamès et des tribus Ăjjer.

La période qui suivit fut marquée par une série d'événements fâcheux pour la pénétration européenne. C'est d'abord une exploratrice hollandaise, Mademoiselle Tinné, qui voulait se rendre à Mourzouck et qui était massacrée par ses guides à deux jours de la ville sur les instigations du Targui El Hadj Cheikh ag Abelnar, cousin d'Ikhenoukhen (1869). C'étaient ensuite en 1874, les Français Dourneaux-Duperré et Joubert qui, remontant les premiers l'oued Igharghar jusqu'à Bir el Achiya, puis se dirigeant sur Rhâdamès à travers l'erg, étaient assassinés sur les instigations des commerçants de Rhâdamès par des Arabes révoltés contre l'autorité française, alors qu'ils tentaient d'atteindre Rhât.

En 1875, le Français Victor Largeau partait de Touggourt dans le but de traverser le pays des Touaregs et pour cela il songea d'abord à aller s'assurer des amitiés à Rhâdamès et voir quelle était la position des commerçants de cette ville vis-à-vis du commerce français. Il remonta donc l'oued Igharghar, plus haut que ne l'avaient fait Dourneaux-Duperré et Joubert, jusqu'à Hassi Botthin, et coupa ensuite à travers l'Erg jusqu'à Rhâdamès. Il eut des entrevues avec les autorités turques de la ville, put s'entretenir longuement avec les commerçants rassemblés spécialement, traita avec eux et obtint l'attestation que les commerçants français ou sujets français pourraient venir librement à Rhâdamès et la promesse que de leur côté, les Rhâdamésiens viendraient sur nos marchés du Sud algérien.

Il retourna l'année suivante à Rhâdamès en compagnie de trois jeunes Français, Louis Say, Gaston Lemay et Faucheux. Ils furent très bien reçus, et des commerçants leur proposèrent de rentrer avec eux à Alger. Mais ils se dédirent au dernier moment, de peur de s'attirer des ennuis en mécontentant le pacha de Tripoli, lequel était influencé par le consul anglais de cette ville qui veillait aux intérêts des commerçants de son pays. Le hasard fit que la petite mission française rencontra les assassins de Dournaux-Duperré et de Joubert ; les Arabes de son escorte les prirent en chasse et purent tuer plusieurs d'entre eux.

Quelques mois plus tard, les RR. PP. Paulmier, Ménoret et Bouchard, de la Confrérie des Pères Blancs, faisaient le projet

1: Lhote MS25 Tuareg

de se rendre à Rhâdamès et ayant obtenu la grâce de trois pillards touaregs qui avaient été capturés et se trouvaient emprisonnés à Alger, ils les prirent comme guides, mais à peine avaient-ils quitté nos postes qu'ils étaient assassinés par eux.

En 1872, Louis Say, qui s'était déjà rendu à Rhâdamès avec Victor Largeau, s'enfonçait à nouveau dans le désert avec l'intention de pénétrer dans l'Ăhaggar. Il gagnait Témaçinine, mais il y rencontrait des Touaregs qui menacèrent de le tuer s'il essayait de descendre plus au sud. Force lui fut donc de rentrer.

La même année, le R. P. Richard se rendait seul à Rhâdamès, pouvait établir là-bas des relations en vue d'y fonder plus tard une mission et rentrer au Souf sans être inquiété.

En 1877, l'explorateur allemand Erwin von Bary atteignit Rhâdamès, puis Rhât sans encombre. De là il se rendit dans l'Aïr en passant par le puits d'In Ăzaoua et parvint jusqu'à proximité d'Agadez. Puis il rentra à Rhât, mais ayant été invité à déjeuner par le Gouverneur turc de cette ville, il mourait le lendemain, empoisonné par son hôte. Il avait pu pousser une reconnaissance dans le Tassili, pénétrer dans l'oued Emirhou, au delà de Tihoubar, et constater la présence de crocodiles dans certaines mares de cet oued.

Deux ans plus tard, le Cardinal Lavigerie, Supérieur des Pères Blancs, qui songeait à installer des missions dans tout le Sahara, envoyait le Père Richard chez les Ăjjer, en compagnie du Père Kermabon. Les deux missionnaires atteignirent Rhâdamès, puis gagnèrent Ohanet et l'oued Imoulay ech Chergui. Ils rencontrèrent le chef des Imanrasâten, Fenaït, chez lequel ils séjournèrent longtemps et établirent avec lui des liens de cordialité. Puis ils se rendirent à l'oued Tifachay, traversèrent le plateau de Tadjentourt et arrivèrent à l'oued Tikhammalt. Ils rejoignirent ensuite Fenaït dans l'oued Emirhou, gagnèrent Temaçinine, en passant par l'oued Tidjoudjelt et le lac Menghough et rentrèrent à Rhâdamès.

Il se produisit à cette époque des divergences de vues entre les derniers sultans Imanan des Ăjjer et la fraction noble des Oûraren. Les Ihăggaren, pour des intérêts particuliers, prirent fait et cause pour les premiers, et Ikhenoukhen se sentant menacé, conseillé par son cousin, Djebbour, demanda la protection des Turcs qui vinrent occuper Rhâdamès.

C'était le début d'une lutte entre Touaregs de l'Ăhaggar et

1: Lhote MS25 Tuareg

des Ăjjer qui devait durer plusieurs années. Mais du fait de l'occupation de Rhâdamès par les Turcs, les marchés de cette dernière ville nous furent fermés et les autorités algériennes songèrent à traiter avec les gens de l'Ăhaggar pour contrebalancer la soumission d'Ikhenoukhen aux Turcs. Ce fut l'origine de la mission du Lieutenant-Colonel Flatters.

A cette époque, il était déjà question d'un projet de chemin de fer transsaharien dont le Ministre des Travaux publics d'alors, M. de Freycinet, était un des partisans les plus enthousiastes. Une commission dite du Transsaharien avait été instituée et était chargée de l'étude des différents projets du tracé dont le but était de relier nos possessions de l'Afrique du Nord à notre jeune colonie de l'Afrique Occidentale. Le Colonel Flatters adjoignit donc aux Officiers qui devaient l'accompagner, plusieurs ingénieurs qui devaient étudier l'itinéraire du futur chemin de fer.

La mission quittait Ouargla le 5 mars 1880 et se composait de 25 Européens, de 30 indigènes d'escorte et de 50 chameliers. Le colonel avait donné à ses hommes une allure pacifique pour mettre les Touaregs en confiance. La mission traversa l'Erg Oriental sans difficulté et atteignit le centre de Temaçinine. De ce point, des émissaires furent envoyés aux chefs des Ăjjer et de l'Ăhaggar pour leur demander le passage sur leurs territoires afin de pouvoir se rendre au Soudan. Les réponses se firent attendre vainement et ne pouvant s'éterniser à Temaçinine, le Colonel Flatters décidait de se porter sur Rhât pour essayer de négocier directement avec Ikhenoukhen que l'on disait dans la région. Mais arrivée au lac Menghough, la mission trouvait la route barrée par les Touaregs de la tribu des Imanrassâten, qui tout en lui assurant que la route de Rhât lui serait ouverte, lui interdirent d'aller plus loin tant que la réponse d'Ikhenoukhen ne serait pas arrivée.

Du fait de ces arrêts forcés, les vivres s'épuisaient rapidement et la colonne n'avait pas la possibilité de refaire ses approvisionnements ; de plus, les Touaregs quémandaient sans vergogne, sous différents prétextes, se faisaient héberger et rendaient la situation encore plus précaire. Un malaise planait dans les rangs des Arabes de l'escorte qui, ne voyant pas venir les autorisations nécessaires ne voulaient pas s'engager plus au sud et se livraient à des actes d'indiscipline journaliers.

Voulant couper court à tout, le Colonel décidait alors de

1: Lhote MS25 Tuareg

poursuivre la route en avant et le 20 avril il donnait l'ordre du départ.

Mais à peine la colonne avait-elle parcouru 500 mètres qu'elle trouvait les Touaregs, au nombre d'une centaine, rangés en bataille et lance au poing, résolus à barrer le passage. Devant cette attitude menaçante, il fallut s'arrêter et l'un des membres de la mission, M. Le Chatelier, fut envoyé en parlementaire auprès des Ăjjer. Il rentrait bientôt au camp accompagné de plusieurs chefs qui déclaraient sans ambages qu'ils s'opposeraient au passage de la mission, tant qu'une réponse d'Ikhenoukhen ne l'autoriserait pas à marcher en avant.

Le Colonel n'eut plus d'autre ressource que d'ordonner la marche en arrière car il sentait les Touaregs décidés et de plus il n'était pas sûr de la fidélité de son escorte. La Mission était de retour à Ouargla le 17 mai 1880.

On sut plus tard ce qui s'était passé parmi les Touaregs, pourquoi la réponse du chef Ikhenoukhen ne nous était pas parvenue et pourquoi les Imanrasâten avaient agi ainsi à notre égard.

Les Imanrasâten étaient les ennemis d'Ikhenoukhen. Leur but fut donc de nuire à ce dernier en interceptant le courrier, ce qui eut pour conséquence de lui supprimer les profits que normalement il aurait dû tirer du droit de passage de la mission, et d'obtenir plus d'avantages pour eux en nous extorquant de l'argent !

Le Colonel Flatters s'était rendu compte, sans l'avouer, du danger qu'avait couru la mission et, de retour à Paris, il fit ressortir la nécessité d'une organisation plus militaire de l'escorte.

Entre-temps, trois Pères Blancs, les RR. PP. Morat, Richard et Pouplard, gagnaient Rhâdamès et essayaient d'atteindre Rhât pour remettre des cadeaux à Ikhenoukhen, mais avant d'arriver à cette dernière ville, ils furent massacrés, sur l'instigation des Imanrasâten. Le mot d'ordre de ces derniers était : « pas de koufar, pas d'infidèles dans notre pays. »

Le Colonel Flatters décida se renouveler sa tentative et il réorganisa une mission à Laghouat, constituant son escorte avec des volontaires tirés des régiments indigènes de la garnison. Mais dans l'ardent désir qu'il avait de repartir, il négligea de faire valoir certaines considérations et pris par ses propres déclarations optimistes, il se contenta de 80 tirailleurs au lieu de constituer l'escorte régulière de 200 hommes, que pendant son premier voyage il avait regretté de ne pas avoir.

1: Lhote MS25 Tuareg

Le personnel européen fut réduit de 25 à 11 membres dont 4 avaient participé à la première mission ; c'étaient MM. Béringer, Roche, Guiard et Masson. Mais il commit encore une grosse erreur, celle de ne pas donner un caractère nettement militaire à sa troupe en faisant quitter leur tenue à ses hommes, ce qui portait atteinte à l'esprit de corps, voire même à la discipline, si précieux dans de semblables expéditions.

Le 14 décembre 1880, la colonne quittait Ouargla forte de 98 personnes, dont 14 Européens montés à cheval. Elle reprit le chemin du Tassili, en traversant le Grand Erg, s'engagea dans la vallée de l'Igharghar, atteignit Ămegid, passa ensuite au puits d'In Zimane, puis à Thiksine, point d'où fut datée la dernière lettre que l'on devait recevoir d'elle. Quelques semaines plus tard, des indigènes apportaient la nouvelle à Ouargla que la mission avait été massacrée à l'oued Inouaouen, dans l'Ăhaggar.

On sut dans la suite, par quelques réchappés, ce qui s'était passé. Dès le départ un flottement s'était produit ; le Colonel hésitait sur la route à suivre et il se demandait s'il devait emprunter la route du Tassili et de l'oued Emirhou ou bien celle d'Ămegid et de l'Ămadror. Il finit par opter pour cette dernière.

Le sort de la mission était pourtant marqué, car sa réussite pouvait avoir des conséquences très grandes, en particulier celle d'asseoir définitivement notre influence sur le Sahara et l'Afrique Centrale. Elle aurait ouvert une route caravanière nouvelle qui aurait eu pour conséquence de menacer le commerce tripolitain organisé sur la route Rhâdamès, Rhât, Damergou. Des intérêts commerciaux et politiques étaient donc en jeu. Il fut facile de faire ressortir aux commerçants tripolitains et rhâdamésiens tout l'intérêt qu'ils avaient à faire échouer la mission Flatters et ces derniers s'employèrent de leur mieux auprès des chefs Touaregs de leur connaissance, attisèrent leur fanatisme, leur haine du chrétien déjà très développée, et désormais le drame allait s'accomplir.

Le 30 janvier, le courrier arrivait à Ămegid, en même temps qu'un courrier de l'Aménokal Ăïtarel. Celui-ci déconseillait presque ouvertement au Colonel d'aller plus avant, puis un deuxième courrier arrivait, lui demandant, s'il persistait dans son projet, de renvoyer les guides Ifôras et de prendre les guides Ihăggaren porteurs du message.

Flatters commit l'erreur d'accéder à cette demande et le

départ des Ifôras fit une mauvaise impression sur les Chaamba de l'escorte qui flairaient sous cette intervention un traquenard possible. Les nouveaux venus ne leur inspiraient pas confiance et ils étaient désormais à la merci de gens qui n'en feraient qu'à leur fantaisie. La mission s'enfonça enfin dans la plaine d'Ămadror. Les pâturages étaient secs et les chameaux trop chargés souffrirent de la route, si bien que six jours plus tard, en arrivant au puits de Sérouanout, elle avait perdu 40 montures !

C'est alors que le rôle douteux d'un guide de l'escorte, Ser'ir ben Cheikh, apparut. Ayant été envoyé à Tihohaït, il tarda à revenir, et ses allures indépendantes, sa façon de s'habiller en targui, de fréquenter assidûment les guides touaregs, déplaisaient profondément à l'escorte et à Flatters lui-même. Il rejoignit enfin la colonne, mais accompagné de plusieurs Touaregs que le Colonel n'avait pas sollicités, et ce dernier voyait avec méfiance ces hommes bleus s'incorporer à sa mission et se mêler à ses gens. A Temaçinine, arrivèrent un jour des émissaires d'Ăïtarel, parmi lesquels son neveu, Engadi, chef d'Idelès, qui offrit au Colonel de le conduire dans ce village, mais pour ne pas se détourner de la route du Soudan, Flatters refusa son offre, ce qui ne fut pas du goût des Touaregs. Dès lors, leurs frères, qui devaient guider la mission, prétendirent ne pas bien connaître la région et la firent marcher au petit bonheur. Le 16 février, au matin, l'un d'eux déclara soudain qu'il reconnaissait les lieux et qu'un puits ne devait pas être bien loin, mais comme il n'était pas très sûr du chemin, il proposa au colonel de faire camper la colonne et d'aller avec lui reconnaître le puits.

Sans méfiance, Flatters donna l'ordre de barraquer et partit à cheval, accompagné de MM. Roche, Guiard, Béringer et du Capitaine Masson. Deux heures plus tard, ils arrivaient au puits qui se trouve dans l'oued Inouaouen et allaient se reposer sous le feuillage de plusieurs arbres qui se trouvaient à proximité lorsqu'ils virent une nuée de Touaregs déboucher d'un ravin voisin et se précipiter sur eux, lance au poing, en hurlant comme des forcenés.

Le Colonel pensa, à ce moment, à rejoindre son cheval, mais il vit Ser'ir ben Cheikh l'enfourcher et se sauver avec, pendant que l'un des guides abattait M. Béringer d'un coup de sabre. Revolver au poing, Flatters et le Capitaine Masson firent face à la ruée, mais bientôt ils étaient transpercés de

1: Lhote MS25 Tuareg

coups de lances, alors que MM. Guiard et Roche étaient massacrés au milieu des arbres voisins. Après avoir dépouillé les morts de leurs vêtements, les Touaregs placèrent les corps au milieu des arbres et y mirent le feu. Un groupe de tirailleurs qui se trouvait en arrière fut surpris et massacré à son tour.

Au camp, le lieutenant de Dianous, chef de l'escorte, alerté par plusieurs tirailleurs qui avaient assisté de loin au massacre, s'organisa pour la résistance. Il fit l'appel et constata avec consternation que la mission avait perdu 32 hommes dont le Colonel et quatre Européens, ainsi que toutes les montures, les Touaregs s'en étant emparés entre temps alors qu'elles étaient au pâturage. On s'attendait d'une minute à l'autre à l'attaque du camp mais elle ne vint pas. Pour les Touaregs, le résultat était acquis et ils jugèrent raisonnable de ne pas s'exposer inutilement. En hommes du désert, ils avaient réalisé la situation : que pouvaient faire, en effet, les restes de la mission privés de leurs montures ?

Le lieutenant de Dianous n'eut bientôt plus qu'une perspective, celle de rentrer à pied à Ouargla avec les survivants ! Ils reprirent donc la route en sens inverse, marchant 12 et 14 heures par jour, pliant sous le fardeau des bagages. Ils firent eau à Témasint, puis s'engagèrent sur le reg brûlant d'Ămadror et parvinrent, épuisés, aux falaises d'Ămegid ; mais ils s'aperçurent alors que les Touaregs ne désarmaient pas et les suivaient à distance. Tels des rapaces, ils épiaient les rescapés, guettant le moment propice où ils pourraient fondre dessus.

La situation du lieutenant de Dianous et de ses hommes était critique car ils n'avaient plus à manger et déjà, malgré la défense qu'en avait faite l'officier, les Arabes avaient tué les quatre chiens de chasse de la mission et les avaient dévorés.

Avant Aïn Kerma, la découverte d'un vieux squelette de chameau mit la colonne en joie ; la peau parcheminée fut mise à tremper et assura la nourriture pour une journée. Une lueur d'espoir vint une fois ranimer le courage des pauvres diables ; une petite patrouille partie en flanc-garde avait découvert quatre chameaux qu'elle ramena au campement. Grâce à ces animaux, on put alléger les hommes fatigués et les charger des outres d'eau.

A Aïn Kerma, les Touaregs avaient devancé la colonne et occupaient déjà le puits. Il fallut parlementer longtemps avec eux, et la position n'étant pas avantageuse pour eux, ils cédèrent la place devant l'attitude résolue du Lieutenant de

Dianous, prêt à faire usage de ses armes, et finirent par lui envoyer un émissaire. Celui-ci prétendit que les gens qu'il représentait n'avaient rien de commun avec ceux qui avaient massacré le Colonel Flatters et ses compagnons et proposa d'apporter le lendemain des dattes et des moutons.

Conformément à leurs promesses, les Touaregs revinrent, apportèrent quatre moutons et la valeur de six kilogs de dattes pilées ; ils furent largement rétribués dans l'espoir qu'ils renouvelleraient leur envoi le lendemain, mais ils se contentèrent de rapporter encore quelques kilos de dattes, et ce fut tout. Ils s'éloignèrent ensuite pour devancer la colonne et aller s'installer à la source d'Ămegid afin de lui en interdire l'accès.

Quelques heures après leur départ, l'on vit les tirailleurs et les chameliers qui avaient mangé des dattes s'agiter dans le camp. Une espèce de folie furieuse s'était emparée d'eux et tous étaient pris d'un délire inexplicable. Ensuite, le lieutenant de Dianous et les Français subissaient le même phénomène : c'étaient les Touaregs qui avaient empoisonné les dattes en y mélangeant des graines d'*el bĕtina*, poison fameux des montagnes de l'Ăhaggar. Un chaambi qui n'avait pas été empoisonné, se rappela à ce moment là le remède applicable en la circonstance et fit boire de l'eau tiède aux malades pour les faire vomir. De Dianous revint à lui, se rendit compte de l'affreux état de ses hommes, et il songea, encore tout hébété, à gagner Ămegid. Au moment du départ, on s'aperçut que l'ingénieur Santin était mort. La marche épuisante reprit donc vers Ămegid où les Touaregs s'étaient retranchés. Dès les abords du puits, le combat s'engagea, mais les malheureux étaient tous encore sous l'effet de l'*el bĕtina*, et se lançaient sur les Touaregs sans même songer à se protéger. De Dianous commit lui-même cette imprudence et tomba, tué d'une balle à la tête. A la nuit, la tuerie cessa et le Maréchal des Logis Pobéguin, à qui revenait dès lors le commandement, put compter 13 cadavres parmi les nôtres. Les Touaregs ayant fait plusieurs prisonniers, les obligèrent à escalader la haute falaise qui domine la source, et de là, les précipitèrent dans le vide où ils vinrent s'écraser aux pieds de leurs camarades.

Pobéguin et les survivants gagnèrent à marche forcée le puits d'Es Sola avant que les Touaregs aient eu le temps de l'occuper. Les blessés souffraient mille morts et comme il n'y avait plus rien à manger, pas même des herbes, on tua l'un

1: Lhote MS25 Tuareg

des chameaux. Il s'agissait maintenant de gagner le puits d'El Hadjadj. La souffrance et l'épuisement des hommes étaient difficiles à imaginer. Pobéguin lui-même était à bout de forces, mais conscient de son rôle de chef il se raidissait contre la douleur ; il était le premier levé, veillant à tout et faisant l'admiration de ses hommes. Un matin, au départ, deux blessés d'Ămegid furent trouvés morts et le lendemain un coup terrible devait encore frapper la mission : quatre hommes, profitant de la nuit, s'étaient enfuis avec un chameau ; trois jours plus tard, deux autres tirailleurs en faisaient autant avec le dernier animal.

Chaque étape voyait la petite troupe s'éclaircir, laisser ses morts derrière elle. Un jour, plusieurs hommes partirent en arrière dans l'espoir de tuer une gazelle. On entendit plusieurs coups de feu et quelques instants plus tard, ils étaient de retour au campement présentant des morceaux de viande à Pobéguin, mais celui-ci s'aperçut bien vite qu'il s'agissait de chair humaine et il refusa d'en manger. Les tirailleurs avaient achevé les blessés restés en arrière et les avaient dépecés. Dès lors, des drames du même genre se répétèrent chaque jour. Le 29 mars, il ne restait plus que sept hommes avec Pobéguin exténué, à demi-mort. Un chaamba du nom de Belkacem, le voyant dans cet état, proposa à l'un de ses camarades de le tuer. Comme l'autre s'y opposait, il s'ensuivit entre eux un combat au cours duquel Belkacem lui tira un coup de revolver dans le dos ; il tua ensuite Pobéguin agonisant, le dépeça avec son poignard et partagea la chair avec les survivants ! Le Sahara venait de voir s'accomplir le plus horrible drame de son histoire.

La cruauté des Touaregs souleva une violente indignation chez les Arabes de Ouargla et le chef de cette région proposa de former aussitôt une méhalla pour aller les punir, mais les autorités françaises ne donnèrent pas suite à sa demande.

Les Touaregs, de leur côté, exultaient. Ils avaient vaincu les Chrétiens, et Ăitarel, dans une lettre au Kaïmakam de Rhâdamès, s'en glorifiait hautement.

« Au nom de Dieu Clément et Miséricordieux, écrivait-il, vous nous aviez recommandé de surveiller les routes et de les préserver contre les gens hostiles, c'est ce que nous avons fait. Aujourd'hui ne voilà-t-il pas que les Chrétiens veulent suivre nos routes ! Ils sont venus dans l'Ăhaggar, mais les gens de cette contrée les ont combattus pour la guerre sainte de la manière la plus énergique, les ont massacrés et c'est fini. Main-

1: Lhote MS25 Tuareg

tenant, il faut absolument, ô cher ami, que la nouvelle de nos hauts faits parvienne à Constantinople. On dit que les Chrétiens sont énergiques et batailleurs, donc, ô cher ami, faites parvenir mes paroles à Constantinople et dites en haut lieu que je demande à ce que les musulmans viennent à notre aide pour soutenir la guerre sainte [1]. »

La pénétration saharienne fut à la suite de ce terrible drame arrêtée pendant 20 ans. Aucun ministre ne voulait plus entendre parler du Sahara et encore moins prendre l'initiative d'une nouvelle mission. Ceci, bien entendu, ne put que fortifier les Touaregs dans leur idée d'invincibilité et dans leur volonté de résister à outrance contre toute tentative ultérieure de pénétration venant de notre part. Il y eut une recrudescence religieuse et l'on vit se développer chez eux un sentiment national qui ne semble pas avoir existé auparavant. « Le jour, a écrit le Général Meynier, où Flatters vint donner aux Touaregs le sentiment que leur chère indépendance, pour eux le plus précieux des biens, était menacée, il y eut dans tout le désert une réelle poussée de patriotisme instinctif, sinon raisonné, qui groupa toutes les tribus nobles [2]. »

Les Touaregs Ifôras étaient consternés de la marche des événements, car eux-mêmes ne demandaient que l'établissement de bons rapports avec nos postes du sud qu'ils fréquentaient régulièrement pour leur commerce.

Un peu plus tard, le chef de la Zaouia de Guémar, Si A'rounsi ben Si Mohamed Ser'ir, s'entremit pour essayer de renouer des relations avec les Touaregs Ăjjer et Ihăggaren. Appartenant à la confrérie religieuse des Tidjanyia, il s'était aperçu du coup porté au prestige de cette dernière par le massacre de la mission Flatters, laquelle était accompagnée pour sa sauvegarde par Si Abd el Kader ben Hamida, moqqadem des Tidjanyia. Il envoya donc aux Kel Ăhaggar un de ses gens pour les travailler et surtout leur faire comprendre qu'ils seraient un jour incapables de résister à notre poussée et que leur intérêt était de se rapprocher de nous. Les représentants de l'Ăhaggar et des Ăjjer se réunirent donc à Idelès, chez Ăïtarel, pour écouter l'envoyé de Si A'rounsi. Il y avait là Moulay ben Kheddach qui commandait les tribus aux environs de Rhâdamès et Mohamed ag Aklouf, représentant les tribus de la région de Rhât. Après avoir mûrement réfléchi,

1. Cit. Schirmer, *Le Sahara*, p. 393.
2. *Les Conquérants du Tchad*, p. 25.

1: Lhote MS25 Tuareg

ils décidèrent d'envoyer une délégation en Algérie. C'est ainsi que quatre Ifôras parmi lesquels Abd el Nebi, petit-fils de Cheikh Othman, Timiri et Issaka, familiers et hommes de confiance d'Ăïtarel, trois Issekkemâren et deux affranchis se rendaient au Souf, puis à Alger, où ils arrivaient le 16 novembre 1892. L'année suivante, le 16 novembre 1893, une délégation d'Ifôras des Ăjjer et de l'Ăhaggar venait à la Zaouia de Guémar sous un prétexte religieux et demandait notre secours contre les excès des Tripolitains, se plaçant ainsi sous notre protection. En 1894, le chef Kounssi ben Moussa, des Touaregs Ăjjer, présentait une réclamation du même genre contre les Arabes Chaamba qui lui avaient dérobé plusieurs chameaux au cours d'un rezzi.

Enfin, plusieurs familles touarègues Ifôras venaient s'installer sur le territoire d'El Oued.

Ces résultats politiques étaient dus à l'action intelligente de Si el A'rounsi et à ses serviteurs religieux, et s'ils n'eurent pas une portée immédiate, le grain semé devait germer plus tard avec Moussa ag Ămâstan, futur aménokal de l'Ăhaggar.

La période de 1890 à 1900 fut marquée de notre côté par les différentes explorations de Fernand Foureau. Installé comme colon dans l'oued Rhir', Foureau était un véritable apôtre de la pénétration saharienne et il entendit y participer directement. Déjà en 1882, il avait reçu une mission du Ministère de l'Instruction Publique et fait une grande reconnaissance dans l'Erg Oriental où, après avoir atteint Aïn Taïba, il avait poussé jusqu'à Hassi Oulad Aïch.

En 1890, il se lançait à nouveau à travers l'Erg et atteignit le plateau de Tadmaït. En 1892, il parvenait à la piste Rhâdamès-In Ṣalah, puis gagnait Temaçinine, s'engageait ensuite dans l'Erg, reconnaissait la dépression du Djoua, parvenait à El Abiodh et terminait son raid en allant reconnaître le puits de Messeguen. A son retour, il rencontrait à Aïn Taïba M. Méry, rentrant d'un voyage qui l'avait mené jusqu'à Tabelbalet. M. Méry avait tenté d'atteindre le pays des Ăjjer, mais avait dû renoncer à son projet sur le refus de son guide d'aller plus loin.

Ce voyageur renouvelait l'année suivante son exploit, en compagnie de M. Guilloux ; il remontait entièrement le cours de l'oued Igharghar, de là se rendait à Tabelbalet, puis à Aïn El Hadjadj et au lac Menghough, mais arrivé à ce point, ses guides chaamba refusaient d'aller plus loin, considérant comme dangereux de s'aventurer dans le pays des Touaregs. A proxi-

1: Lhote MS25 Tuareg

mité du lac Menghough. il rencontra In Gueddassen, neveu de l'Aménokal des Ăjjer avec lequel il eut les entretiens les plus cordiaux et les plus prometteurs pour nos relations à venir avec les Touaregs du Tassili. Ils échangèrent entre eux leurs armes en signe d'amitié et In Gueddassen l'engagea à revenir par la suite. Quelques jours plus tard, le chef Moulay, cousin et successeur désigné de l'Aménokal, venait le voir à son tour et confirmait entièrement ce qu'avait dit In Gueddassen.

En même temps que M. Méry, Foureau était reparti pour une quatrième mission. Il gagnait Temaçinine, puis traversait pour la première fois la dépression du Djoua, gagnait Hassi Imoulay sur les confins tripolitains, après une traversée très pénible de l'Erg, au cours de laquelle il était resté dix jours sans pouvoir se ravitailler en eau. D'Hassi Imoulay, il gagnait Rhâdamès et rentrait à Ouargla à travers le Grand Erg. Les renseignements politiques qu'il rapportait étaient en contradiction avec ceux de M. Méry. Pour lui, les Touaregs du Tassili n'avaient aucunement l'intention de donner suite au traité de Rhâdamès et ne nous faciliteraient jamais le passage au Soudan. Il en arrivait à conclure que seule la force nous permettrait d'atteindre le but que nous poursuivions, c'est-à-dire nous assurer la route Algérie-Tchad.

L'année suivante, sans se décourager, Foureau se lançait dans une nouvelle tentative, chargé de mission par les Ministères de l'Instruction Publique, des Affaires Étrangères et des Colonies. Il commençait d'abord par reconnaître la piste d'El Goléa à In Salah, en poussant jusqu'à El Moungar, petit village situé à une journée de chameau de la grande oasis. Pour avoir plus d'aisance dans sa marche, il n'avait emmené avec lui qu'une faible escorte de cinq hommes, puis ce raid accompli, il gagnait El Hadjadj Moussa où il retrouvait une escorte importante à qui il avait donné rendez-vous. Continuant sa reconnaissance sur El [illegible]iodh, Témaçinine, il traversait le plateau d'Eguélé et arrivait à l'oued Tikhammalt dans l'espoir d'y rencontrer les chefs Ăjjer auxquels il avait envoyé un messager pour annoncer son arrivée. In Gueddassen venait à lui quelques jours après et lui assurait que la route du Soudan lui serait ouverte. Laissant là son escorte il partait aussitôt plein d'espoir en compagnie du Targui Moulay, mis à sa disposition par In Gueddassen et qui devait lui servir de guide et de protecteur. Il s'engageait aussitôt dans l'oued Emirhou, dépassait le point d'eau d'Oursel, mais il était arrêté avant le

1: Lhote MS25 Tuareg

lac Emirhou par un nommé Cheikh ag Mohamed, qui, excité par un marabout fanatique des Kounta de Tombouctou, alors présent au campement, s'opposa à laisser passer un infidèle sur son territoire, malgré les efforts que fit Moulay pour le dissuader de son intransigeance, contraire aux ordres donnés par In Gueddassen. Rien n'y fit, et Foureau, désespéré de cet échec, dut renoncer à aller plus loin. Il rentra à la boussole à travers l'erg d'Issaouan qu'aucun de ses guides ne connaissait, et gagna le puits de Tabankort.

Dans le même temps M. Méry, auquel s'étaient joints MM. d'Attanoux, Bonnel de Mézières, les Pères Hacquart et Ménoret, gagnait Aïn Taïba, Témaçinine et le lac Menghough. Mais arrivés là, ils étaient arrêtés par un envoyé de la Djemaa des Ăjjer qui leur interdisait d'aller plus loin.

Ces multiples échecs de la pénétration saharienne vers la route du Soudan confirmèrent ce qu'avait déjà dit Foureau, à savoir que seule une force armée capable de résister aux Touaregs nous ouvrirait la route, qu'autrement les Touaregs nous feraient toujours des promesses qu'ils ne tiendraient jamais, car si certains chefs étaient assez bien disposés pour les Français, ils n'avaient pas une autorité suffisante pour faire respecter leurs ordres, comme cela s'était produit pour Foureau avec In Gueddassen.

Foureau, qui s'était entretenu de cet état de choses avec le Commandant Lamy, chef du Poste d'El Goléa, fit, avec cet officier, le projet d'obtenir la formation d'une colonne militaire qui descendrait jusqu'au Tchad. Le Commandant Lamy, qui était attaché quelques mois plus tard à la Présidence de la République, put profiter de sa position pour réaliser le projet qui fut d'autant mieux pris en considération qu'à la même époque nos troupes soudanaises d'une part, et nos troupes d'Afrique Équatoriale d'autre part, approchaient du Tchad, et qu'une liaison générale sur les bords du lac devenait possible, sinon nécessaire. Ce fut l'origine de la mission Foureau-Lamy.

On connaît la célèbre odyssée de cette mission. Partie de Ouargla le 23 octobre 1898, elle comprenait dix officiers, quatre membres civils, 286 militaires algériens montés à méhari, sauf les officiers, et 13 spahis montés à cheval. Après avoir gagné Aïn el Hadjadj elle s'engageait dans le Tassili, le traversait par l'oued Samen et débouchait dans l'Erg de Tihodaïne, puis après avoir coupé l'oued Taffassasset, elle gagnait l'Ănahef, poussait une pointe à l'oued Inouaouen pour recon-

1: Lhote MS25 Tuareg

naître l'endroit où étaient tombés Flatters et ses compagnons, et traversait le Ténéré pour aboutir au puits d'In Ăzaoua. Devant le déploiement d'une telle force, les Touaregs de l'Ăhaggar virent qu'il était impossible de s'attaquer à la mission. Ils suivirent sa marche, quelques-uns acceptèrent de lui vendre des animaux et finalement Ăïtarel, en réponse à une lettre que lui avait envoyée le Commandant Lamy, lui donnait l'autorisation de traverser l'Ăhaggar pour se rendre au Soudan.

La preuve était donc faite qu'une troupe suffisamment nombreuse et bien armée pouvait défier toute attaque des Touaregs et que la force de ces derniers avait été manifestement exagérée. Jusqu'alors ils n'avaient agi que sur des personnes isolées ou bien par traîtrise.

Il faut rendre hommage à Fernand Foureau pour sa persévérance, sa perspicacité, car c'est en fait à lui que fut dû le succès de la mission Foureau-Lamy. Par son entêtement à vouloir pénétrer au Soudan par-dessus le pays touareg, par sa connaissance profonde des gens et des choses du Sahara, il fut le pionnier et l'artisan le plus sûr du succès. Grâce à lui, des milliers de kilomètres nouveaux avaient été relevés à la boussole, un matériel scientifique considérable avait été accumulé, complétant la documentation rapportée par Duveyrier, et préparant le terrain à des recherches futures. Aucun Européen n'a circulé dans le Grand Erg Oriental comme il l'a fait, et enfin les quatre gros volumes qu'il publia au retour de la mission constituent un monument scientifique auquel géologues, géographes, archéologues, ethnographes, etc... aiment à se reporter.

Il faut associer à cet hommage le Commandant Lamy, chef militaire de la mission, qui paya de sa vie son succès, tué à Kousseri en donnant l'assaut à la forteresse du sultan nègre Rabah, le dernier potentat de l'Afrique centrale.

Au moment même où la mission Foureau-Lamy traversait l'Ăhaggar, une autre mission, celle de M. Flamand, auquel était adjoint le Capitaine Pein, se dirigeait vers le Tidikelt. Attaquée par les indigènes près des villages d'Igostène et d'In Rhar', elle se défendait énergiquement, battait les assaillants, ce qui lui permettait d'entrer quelques jours plus tard à In Salah et de prendre définitivement possession de l'oasis au nom de la France.

L'occupation définitive du Sahara entrait désormais dans une phase active.

# *LIVRE IX*

## *HISTOIRE DE L'OCCUPATION FRANÇAISE ET DE LA SOUMISSION DES TOUAREGS DE L'AHAGGAR*

(1900-1920)

---

En 1899, l'occupation de l'oasis d'In Salah et le succès de la mission Foureau-Lamy, marquaient une étape décisive pour la pacification du Sahara. Nous occupions l'un des principaux centres de ravitaillement des Kel Ăhaggar et nous étions amenés à entrer tôt ou tard en relations avec eux. Ceux-ci marquaient d'ailleurs leur dépit en lançant des rezzou contre les campements arabes soumis à leur autorité. Les Tăitok étaient les plus acharnés dans cette action et sous la direction de leur amar, Sidi ag Keradji, pillaient les campements sans défense en leur déclarant « vous êtes maintenant sujets des chrétiens, nous pillerons tous ceux qui les servent ».

L'Aménokal des Ihăggaren, Ăĭtarel, voyait d'ailleurs le danger de tels actes, en mesurait les conséquences et tout en se tenant vis-à-vis de nous sur la réserve, tentait de freiner l'ardeur des Tăitok. Il s'ensuivit des rapports très tendus entre eux et lui. Sidi ag Kéradji prétendait être poussé par ses gens et ne pas approuver leur conduite, redoutant comme Ăĭtarel les conséquences des actes de brigandage commis par les siens ; mais était-il sincère ou ne cherchait-il pas plutôt à créer des ennuis aux Kel Rela, fraction avec laquelle ses gens étaient en rivalité ?

Malgré cela, le 10 octobre 1900, 80 chameaux furent razziés par les gens de l'entourage d'Ăĭtarel jetant la confusion dans les tribus. Sur ces entrefaites, Ăĭtarel mourut.

Il avait, jusqu'au dernier moment, maintenu tant bien que mal l'autorité dans le pays et sa disparition devait être l'occasion d'une anarchie complète.

[p. 345]

1: Lhote MS25 Tuareg

Immédiatement l'Ăhaggar fut plongé dans le plus grand désordre, car si les coutumes touarègues règlent automatiquement la question successorale, il n'en reste pas moins vrai que le candidat doit posséder certaines qualités, entre autres celle d'en imposer aux ambitieux qui se présentent toujours dans de pareilles circonstances.

Le commandement devait revenir à un certain Mohamed ag Ourzig, mais ce dernier, déjà vieux, n'avait pas l'énergie nécessaire et ne put asseoir son autorité. Il y eut autant d'aménokal que de nobles et les vassaux furent pressurés outre mesure, ce qui ne contribuait pas à apaiser les esprits.

Attici ag Chikkat, dit ag Ămellal, percevait la *tioussé* d'aménokal au nom de Mohamed ag Oursig, mais il la conservait pour lui et le vieux Mohamed ne pouvait arriver à se faire rendre raison.

Attici, qui avait participé au massacre de la mission Flatters, ayant préparé de ses mains les dattes empoisonnées qui, à Ămegid, devaient être si fatales aux rescapés du massacre, avait sur les Touaregs un gros prestige dû à son courage. Son père avait été amar des Tégéhé Mellet et sa mère était la sœur d'Ăïtarel. Le rôle odieux qu'il avait joué contre nous, le fit le chef naturel du parti opposé à la paix. Mais un autre parti ne fut pas long à se constituer et à se grouper autour d'un jeune chef dont les idées pacifiques étaient bien connues : ce jeune chef était Moussa ag Ămâstan, homme estimé pour son courage, sa générosité, son esprit chevaleresque, et qui rallia ses partisans dans l'Ădrar des Ifôras. Par ailleurs, un autre prétendant, Mohamed ag Othman, petit-fils d'El Hadj Ahmed el Bekri, prédécesseur d'Ăïtarel, s'installait près du village de Tazerouk, et régentait tous les environs à son profit.

Par nos agents de renseignements, nous pûmes avoir connaissance de ce qui se passait dans l'Ăhaggar, de l'état d'esprit des Imrad et de l'influence grandissante de Moussa ag Ămâstan.

Pendant toute cette période, notre influence se trouva combattue par l'action d'un marabout fanatique ; c'était le cheikh Abidine qui devenait célèbre dans tout le Sahara. Il se trouvait alors dans l'Ăhaggar et voyant les conséquences funestes que pouvaient causer les divergences dans le choix d'un aménokal, il intervint, prêchant la concorde, et il réussit à faire nommer, contre toute règle, deux aménokal à la fois, c'est-à-dire les candidats connus pour leur esprit anti-français, alors

1: Lhote MS25 Tuareg

que Moussa ag Ămâstan était évincé. En même temps, il conseillait aux Kel Ăhaggar de s'opposer par la force au passage de toute caravane française ou composée de nos protégés à travers leurs montagnes, d'inquiéter nos lignes de ravitaillement et de cesser tout rapport avec le Touat et le Tidikelt ; quelques mois plus tard, il jetait même l'interdit sur les dattes venant du nord, pour accentuer la coupure entre les Touaregs et les Arabes soumis à notre obédience.

Abidine, qui était un dissident de la fraction arabe des Kounta, s'était, après la prise de Tombouctou, réfugié dans l'Ăhaggar, où il prit une femme dans la tribu des Kel Ăhnet, dont il eut un fils Sidi Aïb Allah. C'est tout à la fois son autorité de guerrier et de marabout qui lui permit de s'immiscer dans les affaires de l'Ăhaggar. Indiquons tout de suite quelle sera son action : En septembre 1902, il se rendra chez les Bérabers pour chercher des renforts, des fusils et de la poudre, passera à Reggan et à la Zaouia Kounta alors que ses tentes resteront avec celles de Mohamed ag Ourzig et de Baba ag Tamaklast près de T-i-m-missao. En 1905 le Colonel Laperrine, qui avait reçu le commandement des oasis sahariennes quelques années plus tôt, passera à une journée de ses campements, mais sur l'instance de son entourage qui lui promet de l'amener à composition, il ne l'inquiétera pas. Ce geste généreux sera malheureusemens sans résultat, car plus tard, en 1906, il prendra le large, annonçant le « Madhi » et opérera sur nos groupes méharistes et sur les indigènes de l'Ădrar des Ifôras et du Timétrine, pendant plus de vingt ans, finissant par se retirer chez les Bérabers du Rio de Oro.

En juin 1901, quelques fractions inféodées aux Tăitok, gênées par la rupture commerciale avec les oasis du Touat, font une demande d'aman à In Salah, et les Kel Ăhnet s'efforcent d'entretenir de bonnes relations avec nos administrés. C'est alors que se produisit un fait insignifiant au premier abord, mais qui devait bouleverser les affaires de l'Ăhaggar.

Au début de l'année 1902 le nommé Mohamed ben M'sis, de la petite oasis d'In Rhar' et sa sœur Fatma, qui revenaient de l'Immidir, sont attirés par les Touaregs dans l'oued Telzaghet et pillés par Baba ag Tamaklast, des Kel Rela, et ses gens. Cet acte créait un état d'hostilité déclarée vis-à-vis des Arabes du Tidikelt et des autorités françaises. Il aurait été fomenté par Mohamed ag Ourzig qui aurait conseillé à Baba de

1: Lhote MS25 Tuareg

marcher sur les Touatiens pour provoquer la venue des Français et créer des embarras à son usurpateur Attici.

Toujours est-il que le Capitaine Cauvet, qui commandait la compagnie saharienne du Tidikelt-Hoggar, ainsi que l'annexe d'In Salah, autorisait alors la fraction arabe des Ahel Azzi à porter secours à ses gens habitant l'Ăhaggar, et pour qu'ils ne pillent pas inconsciemment les fit escorter par le lieutenant Cottenest et quelques méharistes. Le goum ainsi constitué se montait à 130 indigènes, comprenant 40 Moghaznis chaamba, 30 Oulad Dahane, 20 Oulad Yaya, 10 Oulad Bahamou, 10 Ahel Azzi, 10 Ahel Moktar, un interprète et 4 cavaliers. La colonne, partie d'In Salah le 23 mars, arrivait à Idelès le 23 avril après avoir fouillé tous les massifs de l'Immidir et de la Tăfedest. L'amrar des Kel Immidir, fait prisonnier par une reconnaissance d'Ouled Dahane, avait été envoyé à l'Aménokal Attici pour lui faire part de nos intentions, mais ce dernier et ses gens, fuyant le danger, étaient remontés vers le Tassili. Le 28 avril, la colonne arrivait à Tazerouk dont les habitants s'étaient enfuis pour se cacher dans la montagne. En fouillant les habitations, le lieutenant Cottenest retrouvait quelques objets ayant appartenu à la mission Flatters.

Dans la nuit du 29 au 30 avril, des éclaireurs touaregs vinrent à proximité du camp et tirèrent quelques coups de feu qui ne firent heureusement aucun mal. Le 4 mai, le goum arrivait à Tărhaouhaout, n'ayant trouvé que le vide sur son passage. La veille, les fuyards avaient abandonné une tente qui fut identifiée comme ayant appartenu au Marquis de Morès.

Le 7 mai, le groupe avait quitté Tămanrasset à 5 heures du matin et à 15 heures et demie était en vue du petit village de Tit. Vers 16 heures, une patrouille de flanc-gardes revenait et annonçait qu'elle avait aperçu dans le lit de l'oued un groupe très important de Touaregs à pied dont les méhara étaient barraqués un peu plus loin ; en apercevant la patrouille, ils avaient rejoint les chameaux. Quelques minutes plus tard, on voyait les Touaregs sortir de l'oued Tit et le petit groupe du lieutenant Cottenest n'avait que le temps de se retrancher sur une petite montagne toute proche. Dès lors le contact était pris avec les Kel Ăhaggar. Parmi ces derniers, se trouvaient des gens de la tribu des Dăg Râli, des Ăgouh-n-Tĕhlé, des Iklân-en-Tăoussit, plusieurs Kel Rela, dont Sidi ag Chedab khalife actuel de l'Aménokal, et quelques Issekkemâren.

1: Lhote MS25 Tuareg

Le convoi du lieutenant Cottenest était barraqué et les méhara mis à l'abri derrière des rochers ; l'avant-garde et les flanc-gardes avaient disparu derrière les collines, et la proximité des Touaregs empêchait de les prévenir du danger ; de ce fait, le groupe était réduit à 70 fusils.

Au tout petit trot de leurs montures, les Touaregs avançaient en poussant des cris en tămâhak et en arabe, invitant les nôtres à se rallier à eux : « Lafia Dăg Râli, Tola Mérabtines, » « la paix aux Dăg Râli, grâce sera accordée aux Mérabtines. » Le groupe est alors à 600 mètres et le lieutenant Cottenest ne sait s'il a affaire à des amis ou à des ennemis.

Au signal d'un coup de feu, les Kel Ăhaggar se lancent sur les nôtres au galop de leurs méhara en poussant leurs cris de guerre, auxquels répondent les cris de rage de nos chaamba et les claquements des coups de feu. Des lances en fer tombent de tous côtés, puis, mettant pied à terre, les Touaregs s'avancent fusils et lances en main, sabre au côté. Se sentant débordé par ce flot humain, le lieutenant Cottenest a successivement son interprète et un oulad Moktar tués à ses côtés ; il reçoit à l'épaule une balle ayant précédemment blessé un Moghazni qui s'était courageusement jeté devant son chef.

Vers 17 heures, les petits groupes de reconnaissance, alertés par la fusillade, entraient en ligne ; un corps à corps terrible se produisit alors et le lieutenant Cottenest n'hésitait pas à passer à l'offensive.

« Nous nous précipitons sur eux, écrit-il dans son rapport, les chassons de notre convoi après un corps à corps des plus acharnés ; des armes se brisent sur les crânes, des crosses sont fendues par des coups de lance, des coups de feu à bout portant enflamment les vêtements. »

La poursuite dura jusqu'à 20 heures et le Kébir Douro, des Arabes Mérabtines, tua à lui seul 22 Touaregs. Le goum avait brûlé 14.000 cartouches et avait eu 3 morts et 10 blessés. 71 cadavres furent retrouvés sur le terrain, auxquels il faut ajouter les 22 tués dans la poursuite. Nos prises étaient de 91 méhara sellés, de 83 fusils, dont 11 Remington, 13 pistolets, 90 lances, 89 sabres, 49 poignards qui furent détruits le lendemain. Plusieurs familles appartenant aux tribus des Kel Rela et des Ihadanaren, qui s'étaient enfuies dans le Ténéré, y périrent de soif.

Que s'était-il passé chez les Touaregs pour qu'ils prissent l'initiative d'une attaque contre nous ? On se rappellera que

1: Lhote MS25 Tuareg

l'auteur de l'incident qui occasionna le contre-rezzi était un Kel Rela, qu'il n'engageait que sa responsabilité et que, d'autre part, les terrains de parcours sur lesquels nous portions notre action étaient ceux d'une autre fraction, les Dăg Râli, qui n'étaient nullement responsables de l'affaire de l'oued Telzaghet. La destruction, par nos gens, des greniers de I-n-Ămgel, de Idelès, de Tazerouk, frappait directement les Dăg Râli ; de plus, nous n'avions pas ménagé leurs troupeaux. Leur amrar, Mohamed ag Abessa, réunit la Djemaa et suscita l'envoi d'un message de paix au lieutenant Cottenest ; mais ce sage avis ne prévalut pas et entraînés par la jeunesse de la tribu, les Dăg Râli optèrent pour la guerre. C'est alors qu'ils se portèrent sur Tit pour barrer la route aux nôtres et tous y firent des prodiges de valeur ; Mohamed ag Abessa lui-même y fut tué.

Le combat de Tit fit grande impression. C'était la première rencontre de nos troupes avec les Kel Ăhaggar depuis le massacre de la mission Flatters ; en même temps qu'une magistrale démonstration de notre force, elle représentait la vengeance, trop longtemps retardée et la destruction des illusions que les Touaregs avaient de leur puissance militaire. Après la mission Foureau-Lamy, après le combat de Tit, preuve était faite qu'une petite colonne bien organisée pouvait s'aventurer sans grand danger au Sahara central. L'Ătakor était violé pour la première fois par les nôtres et en dehors de ce beau succès militaire, le lieutenant Cottenest rapportait d'importants renseignements d'ordre géographique. Un autre point était acquis : à savoir que les Touaregs de l'Ăhaggar ne pouvaient mettre guère plus de 300 guerriers sur pied.

Pendant que le lieutenant Cottenest effectuait son raid, les gens de l'Ăhnet venaient faire leur soumission à In Salah, et leur chef, Badjeloud, nous promettait un concours sans réserve ; après Tit, beaucoup de Kel Rela songeaient à se soumettre, mais Abidine les retenait et prêchait la résistance.

L'attitude des Dăg Râli se modifiait ; avant Tit, ils s'étaient empressés près de nous à In Salah pour que nous laissions passer tranquillement leurs caravanes, mais pendant le même temps, ils envoyaient des émissaires chez les Ifôras du Nord pour les inviter à se joindre à eux.

L'année suivante, dans le but de reprendre quelques chameaux razziés et rapatrier un certain nombre d'harratines, le lieutenant Guilho-Lohan partait d'In Salah le 1er octobre, traversait l'Immîdir, le massif de la Tăfedest, la Koudia, en

1: Lhote MS25 Tuareg

passant au pied de l'Ilâman, et rentrait par l'oued Tit et Ăbalessa. Le vide se fit partout devant lui sans qu'il lui ait été possible à aucun moment de rejoindre les Touaregs.

Le résultat politique n'en fut pas moins important, il montra une fois de plus aux Kel Ăhaggar que l'Ătakor n'était pas inviolable [1] et que nous étions en mesure de les inquiéter quand nous voudrions.

Le lieutenant Guilho-Lohan rapportait en même temps d'importants renseignements géographiques et les premiers clichés photographiques de ces régions ; en dehors de l'ascension du pic Ilâman, il avait relevé le parcours d'I-n-Ămegel à Idelès, il augmentait notablement nos connaissances sur la Koudia et confirmait les renseignements précédemment recueillis.

Les bruits de paix se répandirent aussitôt et le parti de Moussa ag Ămâstan qui attendait le ralliement de ses gens pour entamer les conversations, se renforçait de jour en jour.

Sidi ag Keradji, qui ne sait à quel saint se vouer, est évincé par ses gens et remplacé par Azioual ag Serada comme « amrar » des Tăitok. Ces derniers viennent bientôt faire leur soumission ; Sidi ag Keradji demande à son tour l'aman pour lui-même et Moussa ag Ămâstan se décide à entrer en relations avec le Capitaine Cauvet, par l'intermédiaire du Caïd d'Akabli, Moulay Omar. C'est alors que le Commandant Laperrine partit en tournée. Auparavant, Moussa ag Ămâstan avait demandé qu'on lui envoyât comme agent politique El Hadj Ahmed ben Mohamed Bilou, qui devait devenir plus tard le Caïd des Ahl Azzi, car il n'avait plus confiance en l'agent que nous avions mis à côté de lui, Mouley Omar, qu'il supposait être inféodé aux Tăitok. Ce fut son nègre Chernach qui vint faire cette demande à In Salah : il expliqua que Bilou pourrait certainement seconder Moussa pour le ralliement qui n'était pas encore complètement fait. La demande de Moussa fut agréée et Bilou partit le rejoindre.

La soumission des Kel Ăhnet et des Tăitok fut suivie par celle des Touaregs Ifôras qui vinrent à In Salah sur le conseil du marabout Kounta, Bay el Bekkay, qui jouissait dans l'Ădrar d'une grande réputation et qui, tout en s'abstenant d'entrer en rapport avec nous, préconisait la soumission, car

1. En 1875, pendant la guerre contre les Ajjer, elle avait été razziée par les Ouled Boussif, fraction arabe du Fezzan.

1: Lhote MS25 Tuareg

il avait une juste appréciation de notre force et se rendait compte que la résistance des Touaregs était parfaitement inutile.

Avant de venir à In Salah, Moussa ag Ămâstan avait voulu avoir une entrevue avec l'Aménokal des Ăjjer, In Gueddassen, pour essayer de l'associer à son projet et il partit pour Rhât. Entre temps, il avait envoyé l'un des siens à son campement pour lui rapporter ses vêtements d'apparât afin de se présenter décemment devant les autorités françaises, mais l'homme fut dévalisé intentionnellement en route par un nommé Amma ag Doua, ce qui retarda l'arrivée de Moussa à In Salah jusqu'au 21 janvier 1904. Moussa avait, d'autre part, échoué auprès de In Gueddassen.

Le vol d'Amma ag Doua n'avait d'autre but que de nuire à Moussa et de l'empêcher d'aller à In Salah, car il est de coutume, chez les Touaregs, qu'un chef de grande tente se présente toujours recouvert de ses plus beaux accoutrements. Amma ag Doua était le soupirant évincé d'une des plus jolies filles de l'Ăhaggar, Dassine oult Yema, cousine de Moussa, et il avait agi par vengeance, car il n'avait pas trouvé auprès de ce dernier l'aide qu'il en espérait pour obtenir la main de la jeune femme.

Le 2 mai 1904, le Commandant Laperrine rencontrait à Tin Zaouaten le chef des Tăitok, Sidi ag Keradji, à qui l'on avait remis son commandement ; à son passage à Ăbalessa, Baba ag Tamaklast, l'auteur de l'affaire de l'oued Telaghet, était allé le voir, et le Commandant, très paternellement, l'avait plaisanté amicalement, lui faisant ressortir que sans lui l'Ăhaggar n'aurait peut-être pas été placé si tôt sous le contrôle des Français.

Le Bordj de Témaçinine était alors créé ; on lui donnait le nom de Fort-Flatters.

L'Ăhaggar s'ouvrait de plus en plus à notre activité.

En 1905, le lieutenant Clor y séjourna du 3 septembre au 26 novembre. Le Professeur Gautier, partant d'In Salah, peut atteindre le Niger en toute sécurité ; l'officier-interprète Benhazéra accompagne le lieutenant Clor, étudie les mœurs et la langue des Touaregs, pendant que le Père de Foucauld vient s'installer au cœur du pays. La même année, le capitaine Dinaux poussait une reconnaissance sur Iferouane, y conduisant le géologue Chudeau qui, seul, gagnait sans encombre, Agadez.

1: Lhote MS25 Tuareg

1906 fut marqué par le voyage de M. l'interprète de Motylinski ; il fut attaqué à Tămanrasset par quelques Ăjjer, et un de ses goumiers fut transpercé par un coup de lance. Le lieutenant Clor renouvelait la liaison avec Iférouane et donnait la main aux méharistes soudanais.

La situation n'était pas encore très nette. L'agitateur Abidine, sans se départir de son attitude, menait toujours une campagne anti-française. Le frère de l'ancien aménokal Attici, Ănaba, qui avait participé également au massacre de la colonne Flatters, nous donnait quelques inquiétudes par son attitude douteuse. Moussa ag Ămâstan restait deux mois sans nous donner de ses nouvelles, ce qui n'était pas sans nous impressionner fâcheusement. La soumission des Touaregs était-elle sincère ? Il était permis d'en douter.

Moussa revint enfin et organisa un rezzi contre les Ăjjer pour punir le meurtre de notre méhariste et venger les coups de main lancés contre les campements des Kel Ăhaggar par un nommé Reskou, chef de bande de la tribu des Ouraren. Ce dernier est tué le 23 décembre et 26 chamelles, 70 chameaux, 600 moutons sont ramenés dans l'Ăhaggar.

En 1907, Moussa ag Ămâstan reçut la Légion d'Honneur en remerciement de l'aide qu'il nous avait apportée dans la soumission des Kel Ăhaggar et de son attitude correcte avec nous ; il éprouvait de grosses difficultés avec ses gens, car les Tăitok étaient travaillés par Abidine, alors que les Kel I-n-Tounin se laissaient influencer par les Ăjjer, eux-mêmes soutenus par les Turcs. Notre passivité devant les Ăjjer, des bruits de révolte plus ou moins tendancieux qui circulaient en Aïr, n'étaient pas sans l'inquiéter. Une tournée du Capitaine Dinaux dans l'Ădrar des Ifôras permit de vérifier l'état d'esprit des Tăitok et des Kel Ăhnet en même temps que nous faisions notre jonction avec les troupes soudanaises du cercle de Tombouctou.

L'année suivante vit se construire le Bordj de Tărahouahout et de Fort-Polignac, l'un dans l'Ăhaggar, l'autre aux Ăjjer.

Sur les conseils appréciés de Moussa, qui nous aide en même temps contre les Ăjjer, l'Ăhaggar s'organise, la politique très éclairée de Laperrine facilite les choses, politique d'autant plus éclairée que cet officier connaît bien les mœurs et l'organisation touarègue [1].

1. Laperrine, alors qu'il était capitaine aux Spahis Soudanais, avait fait connaissance avec les Ihaggaren en 1896. C'est en effet en mars de

1: Lhote MS25 Tuareg

Les Tăitok furent réorganisés et les Kel Ăhnet leur furent rattachés comme auparavant.

Aux Ăjjer, nous avions à lutter contre les empiétements très hardis des Turcs, auxquels les Kel Ăjjer avaient fait appel, et qui auraient bien voulu s'installer à Djanet. Le Kaïmakan de Rhât, Djani Bey, soutenu par les Senoussistes, membres d'une confrérie religieuse très importante dont nous aurons à nous occuper plus tard, travaillait nos gens qui émigraient vers le Tassili tout en affirmant leur loyalisme à notre cause.

Les Turcs, poursuivant leur politique envahissante, s'avançaient jusqu'à la plaine d'Admer où ils se heurtaient à un de nos détachements, et étaient obligés de rétrograder sur Djanet. En 1903, une reconnaissance, conduite par le capitaine Touchard, avait visité Djanet. Le 18 juin 1907 nous y entrions à nouveau pour nous y installer.

Notre politique pouvait se résumer en ceci : alors que dans l'Ăhaggar nous nous efforcions de renforcer l'autorité de l'Aménokal, dans l'Ăjjer nous essayions de vaincre l'influence des Imochar sur les Imrad.

Beaucoup de Touaregs ne voulaient pas encore croire à leur défaite et comme nous ne pouvions être partout à la fois, des éléments turbulents entretenaient toujours une certaine agitation. Quelques-uns tenaient encore le maquis, avaient refusé de se soumettre, et une petite rencontre avait eu lieu le 28 mars 1909 à Titersine, contre ces irréductibles.

Dans le but de renforcer l'autorité de Moussa ag Ămâstan en même temps que pour lui faire voir notre force, le général Laperrine l'envoyait faire un voyage en France. Il visita les usines du Creusot, il participa à la vie mondaine de Paris, et il rentra dans ses campements très fortement impressionné.

Mais pendant ce temps, ses gens qui nomadisaient sur le territoire de l'A. O. F., manquant de direction morale, faisaient preuve d'indiscipline et malgré l'ordre qui leur avait été donné, ne rentraient que six mois plus tard dans l'Ăhaggar ; encore fallut-il une intervention énergique du lieutenant Clerget de Saint-Léger ; cela ne les empêcha pas l'année sui-

cette année même qu'un de leurs rezzou était venu razzier nos protégés Bérabich, au nord-est de Tombouctou. Laperrine les avait rejoints à Akenken et les avait mis en déroute.

L'année suivante, en juin, les Ihaggaren revinrent sur le fleuve et surprirent les lieutenants de Chevigné et de la Tour à Séréré, petit village entre Bamba et Koriomé ; il les massacrèrent avec leur escorte.

1: Lhote MS25 Tuareg

vante de récidiver, et obligea le lieutenant Sigonney à les ramener par la force.

Pendant la même période, le Groupe Mobile de l'Ăhaggar ne restait pas inactif et s'efforçait de protéger les campements soumis contre les incursions des Bérabers et des gens d'Abidine, qui, après chacun de leurs coups, se réfugiaient au Tafilalet. Ils avaient, au cours de raids audacieux, tué le chef Safikroun, Aménokal de l'Ădrar, et massacré le goum Kounta avec leur chef Hamoadi, ainsi que le détachement français du lieutenant Lelorain.

Le 4 novembre 1912, l'adjudant Gautier, avec 30 hommes, rencontrait 75 pillards marocains dans l'erg d'In Guiern, leur causait 10 morts, faisait deux prisonniers, leur reprenait 16 nègres razziés au Soudan et 317 chameaux. Le reste du Groupe mobile, commandé par le Capitaine Charlet qui avait été alerté, rejoignait quelques jours après l'adjudant Gautier et, de concert, ils poursuivaient le rezzi qu'ils atteignaient le 29 à Bir Zmila après une course de dix jours au cours desquels ils avaient franchi 800 kilomètres. Le rezzi, campé à 20 km. du puits, était brusquement surpris et, avant d'avoir eu le temps de se défendre, voyait toutes ses prises enlevées. L'attaque de nos méharistes composés essentiellement de Chaamba, avait couché 19 Bérabers à terre et de l'important groupe qui depuis des mois ravageait la région nord de Tombouctou, il ne restait qu'une vingtaine d'hommes qui ne purent s'échapper qu'avec de grandes difficultés. De retour au puits de Zmila, le Capitaine Charlet pouvait inventorier ses prises : près de 300 chameaux, 52 fusils ; de plus 8 nègres, 13 négresses, 8 négrillons, qui avaient été enlevés sur les bords du Niger, étaient rendus à leurs villages. La petite troupe ramena son butin à Tombouctou où la population lui fit un chaleureux accueil. En passant à Aïn Guettara, le Capitaine Charlet avait ramené les restes du lieutenant Lelorain et du commis des Affaires Civiles Rossi, qui avaient dû être inhumés sur place. Après quoi, le Capitaine Charlet rentrait sur l'Ăhaggar, mais repartait aussitôt pour le Tassili où l'appelaient de nouveaux événements.

Dans le but d'établir une liaison avec le groupe de Bilma, le lieutenant Gardel avait été chargé de pousser une reconnaissance sur In Ezzan, accompagné d'un groupe de 40 méharistes. En cours de route, il apprenait la formation d'une forte harka à Rhât et il se portait rapidement en avant pour couvrir le

1: Lhote MS25 Tuareg

poste de Djanet. Le 10 avril 1913, il rencontrait la harka à Esseyen-n-Afella et, vers 15 heures, il était brusquement attaqué par 350 hommes touaregs et arabes. Cernée, la patrouille devait lutter toute la soirée et toute la nuit, et au petit jour, serrée à 30 mètres par les détachements ennemis, qui se montraient de plus en plus audacieux, elle était forcée de se dégager par une charge à la baïonnette qui couchait 23 hommes à terre et obligeait l'ennemi à abandonner la lutte.

Ce combat épique est un des plus beaux faits de guerre de la pénétration saharienne, et le récit du lieutenant Gardel vaut d'être cité en entier [1] :

« Vers 15 heures, la sentinelle devant les armes signale, en même temps que les sentinelles de la dune se replient et que les sentinelles montées de garde au pâturage vont au grand galop vers les animaux. Signal d'alerte. Les méhara sont poussés vers le camp. Je crie d'économiser les munitions. A ce moment le brigadier Ahmed ben Amar se retire sur la ligne de feu, il se traîne entre deux chameaux morts, il est blessé, son visage exprime la pire souffrance. Un doigt sur la bouche, je lui fais signe de se taire. Il lance ses cartouches vers les combattants et crie : O mes amis, doucement les cartouches, doucement, et ce sera sa recommandation jusqu'à la nuit. Il est superbe. Deux balles l'ont atteint coup sur coup ; une a traversé la cuisse gauche, dans les chairs, en séton, l'autre est entrée par le mollet droit et ressortie à la cheville, fracassant le péroné.

» Au nord, sur la dune, une sorte d'état-major est en vue ; deux cavaliers caracolent ; le Saharien Ahmed ben Abdela, excellent tireur, en prend un pour cible à 600 mètres. Après deux ou trois coups, on voit le cavalier s'affaisser et tomber de cheval ; on se précipite sur lui, on l'emporte. Ce doit être un personnage. Un instant après c'est le tour de l'autre cavalier dont le cheval s'abat.

» Sur notre droite, l'ennemi avance vers le sud ; le brigadier Deconclois et six hommes sont envoyés sur un monticule au sud de notre réduit. Les adversaires se rapprochent de nous. Le ravage du plomb sur nos animaux est effrayant. Deux chameaux atteints, fous de douleur, fuient ; vingt autres à leur suite prennent au trot le large vers le sud. Nous ouvrons le feu sur nos montures pour qu'au moins elles ne soient d'aucun profit à l'ennemi. Les deux antennes adverses se sont rejointes vers le sud. A la faveur de petites dunes que nous n'avons pas eu le temps d'organiser, les guerriers de la harka viennent se grouper au point que le brigadier Deconclois et ses hommes viennent d'évacuer par ordre. Il y a là 60 à 80 adversaires poussant de grands cris sauvages ; cependant qu'au nord-est derrière une ligne de tamarix, au nord dans un repli de terrain, à l'ouest occupant une petite dune, d'autres ennemis nous fusillent. Nous sommes encerclés. La baïonnette est mise au bout des mousquetons. La face sud de notre réduit a été renforcée par des hommes prélevés

1. Le Lt Gardel comme le Lt Cottenest, comme le Cne Charlet, comme tant d'autres héros de la pénétration saharienne, devait trouver plus tard une mort glorieuse sur les champs de bataille de France.

sur les autres faces moins immédiatement menacées. Le Saharien Lakdar ben Boudjema qui reçoit l'ordre de changer de place déclare que depuis plus d'une demi-heure il est blessé au pied gauche et ne peut pas bouger. Il s'est pansé lui-même avec son chèche et a prié ses camarades de n'avertir personne de sa blessure. Il n'a cessé de faire le coup de feu. Il est 18 heures. A ce moment au signal d'une fusée, le groupe ennemi du sud qui est le plus dense et le plus proche de nous, après un feu très nourri, s'élance avec des clameurs épouvantables. L'instant est critique, l'ennemi se précipite. Il est reçu par un feu à bout portant. Quatre guerriers tombent sur place, d'autres fuient laissant des traînées de sang. Mais les adversaires sont arrivés jusqu'au milieu de nos bagages. L'idée du pillage est la plus forte chez eux ; ils s'emparent de nos ralha [1], de nos sacs, se chargent du butin que beaucoup teignent de leur sang. Nous n'avons même pas la ressource d'une contre-attaque. La crainte que notre carré ne soit envahi si nous sommes repoussés nous l'enlève. Le brigadier Ali ben Larbi est atteint d'une charge de chevrotines dans le bras gauche ; il continue de tirer ; une autre balle traverse en séton sa cuisse gauche ; il ne quitte pas sa place de combat. La nuit vient. Après son effort, l'ennemi se calme. La consommation de munitions chez l'ennemi a été énorme. Nous pensons qu'il n'a peut-être plus beaucoup de projectiles. La nuit s'est faite. Le premier quartier de la lune apparaît. L'ennemi entretient un feu lent et lance trois fusées incendiaires qui ne causent aucun dégât. Toutes les indications, tous les commandements faits à haute voix par les Français, sont ponctués de coups de fusils de l'ennemi. Il en sera ainsi toute la nuit. On s'insulte de part et d'autre ; le Saharien Mohamed ben Taïeb hausse le ton et sert les injures par bordées. Par ses saillies il parvient à faire rire ses camarades. En arabe et en tamachek, les adversaires crient entre autres choses : « Abandonnez les infidèles, ô Musulmans, venez à nous, nous n'en voulons qu'aux Chrétiens. Lâchez ! lâchez ! les koufars » ; puis : « C'est vous que nous voulons ô Biska ag Sidi, ô Chebeki ag Hemma, Bellay ag Younès (ce sont nos goumiers et guides touaregs). » Le Saharien Aflan ag Salem, un Targui noble du Hoggar. répond : « « Les Français sont nos frères, nous n'avons que le bien de leur part, nous ne les abandonnerons pas jusqu'à la mort. » On lui crie : « O toi, le raisonneur, demain matin nous serons trois cents de plus et tu ne parleras plus. » Aflan ag Salem lance : « Demain au jour vous fuirez devant nous, chiens, fils de chiens ! » J'ordonne le silence. Plus un mot, plus une détonation. L'ennemi tiraille toujours. Le Saharien Brahim ag Bocca, un Targui Ahaggar, s'étend à terre sans un cri. On le croit mort et on le dépouille de ses cartouches. Il n'est que blessé, mais fort sérieusement. Une balle a labouré son front. Le feu de l'ennemi devient plus vif. Le Saharien Sliman ag Abdennebig est tué d'une balle dans la tête. Un moment avant, il criait à l'ennemi : « O fils de prostituées, nous souillerons vos mères ; ô filles de gazelles vous prendrez la fuite devant nous, » et comme je le faisais taire : « sois sans crainte, mon lieutenant, de cette affaire, il ne sortira que de l'honneur pour nous. » Le brigadier Ali ben Larbi, déjà blessé deux fois, est atteint par une balle qui heureusement se plaque contre un des chargeurs du montant gauche de son baudrier à cartouches ; une deuxième balle viendra encore mourir au même point.

1. Selle de méhari.

» A 21 heures le feu de l'ennemi est très dense, c'est une reprise du combat. Du milieu de la fusillade on entend monter les cris d'un chant de guerre, accompagnés de hurlements de loups ; ce sont les Toubou qui sont là. Les chanteurs martellent du pied le sol de sable pour scander le chant en même temps qu'ils entrechoquent leurs larges sabres. Le Saharien Mohamed ben Messaoud est atteint légèrement d'une balle en séton, à la cuisse droite. Ce soldat, durant deux heures, cheveux au vent, a paru comme un véritable démon. Il est resté debout dans un coin, fouillant la pente devant lui. On ne saura qu'il est blessé que le lendemain après le combat. Après cette alerte une accalmie se produit. Dans la nuit, on aperçoit au loin des feux ; l'ennemi par séries se réconforte avec nos vivres pillés. Vers 23 heures, le feu adverse reprend ; le Saharien Abidine ben Sidi Mohamed est tué d'une balle qui brise sa baïonnette et pénètre par le front dans la tête. Ce tout jeune homme avait fait preuve du plus grand sang-froid, bravant l'ennemi en langue tamâhak, traduisant à son lieutenant les imprécations de la horde adverse. Il est mort en brave. Je le fais enterrer ainsi que Sliman ag Abdennebig pour éviter au jour un triste spectacle aux survivants. Le Saharien Ali ben Ali est atteint d'une balle à la tête, elle lui sillonne profondément le cuir chevelu sur une dizaine de centimètres. La commotion lui paralyse le bras gauche. Une petite accalmie a lieu. Je juge notre position critique et demande au Saharien Korben ag Chemmet, Targui ajjer des Idjerad Jiriouen, ex-pâtre du Tassili, de se dévouer pour traverser la ligne ennémie et aller presser l'arrivée du secours que j'attends de Djanet. Korben acccepte sans hésiter et part dans la nuit. Ce vaillant aura la chance d'échapper à nos assaillants, de gagner Djanet, de remplir sa mission le lendemain à 22 heures après avoir parcouru plus de 30 kilomètres au travers du plateau montagneux. Dans la tranchée, malgré eux, nos hommes ne peuvent résister au sommeil. Je permets de tirer de temps en temps pour se tenir éveillé. Jusqu'au matin, ce sera la même tirerie dans la nuit. Elle n'est pas sans danger. Le Saharien Mohamed ben Abdel Kader, jeune soldat, appelle ses camarades, les maintient éveillés, s'informe des uns et des autres, échange des souhaits avec ses voisins ; il soutient l'ardeur du petit groupe dans lequel il est. Le Saharien Chérif ben el Hadj Ali reçoit une balle qui lui fait une forte éraflure à la tête, il dit : « il faut que je leur renvoie ça » ; il ajuste lentement et tire. Vers le matin, le brigadier Messaoud ben Ali est atteint en séton léger au muscle des gouttières droit. Au petit jour le brigadier Kaddour ben Mohamed et six hommes se portent sur une petite dune évacuée par l'ennemi à l'ouest de notre réduit. Il a ordre de tirer sur le groupe adverse qui nous inquiète au sud. Un adversaire pieux fait appel à la prière musulmane de l'aube. Peu après une fusée part. A l'est on aperçoit une troupe ennemie à 300 mètres. Le feu reprend intense. Le Saharien Mohamed ben Abderhaman de l'escorte du brigadier Kaddour ben Mohamed est blessé d'une balle qui traverse la cuisse gauche près du genou. Le Saharien Bouaf ben Khaled est atteint très légèrement au mollet droit. Il importe de se dégager avant l'arrivée des renforts. La face sud de notre retranchement est encore renforcée par prélèvements faits sur les autres faces. Il faut faire appel au courage des hommes. Nous allons charger à la baïonnette. Ils sont prêts. Le brigadier Deconclois est laissé à la garde de notre position avec quelques hommes. Il veillera sur les blessés. Un feu d'un chargeur est exécuté au

1: Lhote MS25 Tuareg

cri de « En avant ! » Le maréchal des logis Bagnères et moi sortons de la tranchée la baïonnette haute ; il y a un instant d'hésitation chez nos hommes ; nous crions toujours : « en avant ! » en courant. L'ennemi est à 30 mètres, têtes baissées par notre feu derrière une petite dune. Les Sahariens se précipitent. En un clin d'œil nous sommes sur les adversaires. Ils font une décharge qui n'atteint personne et plient. C'est la victoire ! Les baïonnettes se plantent dans les dos, dans les poitrines, dans les ventres. Toubou, Kel Tin-Alkoum, Ajjer, tombent, pantelants. 23 d'entre eux râlent à terre, les autres fuient. La charge partie vers le sud remonte vers le nord à la poursuite des fuyards. Une vingtaine d'hommes décidés vient d'en faire fuir plus de 50 en face d'eux et de 20 à 30 indirectement. Je fais arrêter la poursuite. Nos hommes sont harassés ; ils n'ont rien bu ni mangé depuis la veille 11 heures. 47 morts dans un rayon de 200 mètres. Les blessés ont été relevés pendant la nuit. Parmi les morts, El Madani, demi-frère du sultan Ahmoud, et l'un des cavaliers abattus ne serait autre qu'In Gueddassen, l'Aménokal des Ajjer. »

L'ennemi avait eu en tout 70 tués. De notre côté, nous n'avions eu que 2 morts et 11 blessés. Nous avions brûlé 4.843 cartouches. La mort de nos méhara tués au début du combat avait forcé le petit groupe à rentrer à Djanet à pied, emmenant tous les blessés. Le capitaine Charlet accourut de Djanet pour protéger la retraite de ces braves.

Quelques jours plus tard, nous occupions la petite oasis d'El Barka.

Après les multiples succès de nos armes, nous pouvions penser que la conviction des Touaregs en notre force était définitivement acquise et que nous n'avions plus rien à redouter d'eux.

C'est maintenant qu'il nous faut dire deux mots du Senoussisme dont l'action devait avoir ultérieurement des répercussions considérables.

Dans la deuxième partie du XIXe siècle, un mouvement de réforme religieuse se produisit dans tout le monde musulman. Il était causé, d'une part, par le réveil de la foi et, d'autre part, par le désir de réunir toutes les sectes au nom de l'établissement d'une doctrine unique.

On assistait alors à l'action des nations européennes qui pour faire diversion à leurs préoccupations intérieures et extérieures s'attaquaient de part et d'autre aux pays musulmans. L'Autriche, poursuivant un vieux rêve, s'efforçait de rejeter les Turcs hors d'Europe, et la France s'installait dans les pays barbaresques, pendant que l'Angleterre établissait sa

1: Lhote MS25 Tuareg

domination dans l'Inde et en Égypte. Comme corollaire, le commerce européen s'introduisait partout, apportant avec lui les « mœurs évolutives » des Chrétiens abhorrés. En pays d'Islam, une réaction s'opère à tous les échelons de la société et se traduit en premier lieu par une recrudescence d'esprit religieux. Les succès des Français en Algérie épouvantaient bon nombre de musulmans qui finirent par douter de la puissance de leurs prêtres et de leurs thaumaturges ; leur confiance en eux s'était fortement ébranlée, et les confréries soufites firent des adeptes de tous les désillusionnés, préparés par leur défaite à se réfugier en Dieu.

L'une des plus importantes écoles de rénovation, qui naquit de ce mouvement, fut celle des Kadryia, fondée vers 1820 par le Cheikh Si Ahmed ben Idriss el Fassi qui, lorsqu'il mourut, laissa deux disciples dont l'un était Mohamed ben Ali ben es Senoussi. Ce dernier, qui devait devenir le grand chef de la future confrérie des Senoussistes, était né à Torch, dans l'arrondissement de Mostaganem en 1791. Il avait quitté son pays à 30 ans à la suite de querelles familiales et après de longues pérégrinations à travers l'Afrique du Nord et la Tripolitaine, il se rendit au Caire. Mais son action dans le milieu des tolba le fit bientôt désigner comme un novateur et un réformateur dangereux, si bien qu'il dut quitter la ville et se réfugier à La Mecque. Il retrouva à Sobia son maître spirituel Si Ahmed ben Idriss qui, comme Senoussi au Caire, avait été obligé de s'exiler pour les mêmes raisons.

A la mort de Si Ahmed, la secte s'était scindée en deux branches rivales et, en 1843, Cheikh Senoussi, ce sera désormais son nom, de nouveau en butte à l'hostilité des détenteurs du pouvoir politique, quitta La Mecque, laissant à un moquaddem la direction de sa zaouia [1] d'Abou Gobaïr, et se rendit dans le Djebel Lakdar, en Tripolitaine, où il construisit à Beida une nouvelle zaouia. D'autres zaouia se fondèrent en Égypte, à Rhât, à Rhâdamès et en Arabie. En 1855, Es Senoussi s'installa à Djerboub où il mourut en 1859.

Le fils d'Es Senoussi, Sidi el Madhi, qui succéda à son père, étendit son autorité spirituelle sur toute la Tripolitaine, le Sahara, le Soudan, le Tibesti et le Ouaddaï, et la suprématie de la doctrine senoussiste fut reconnue effectivement par les Touaregs Ăjjer et nominalement par les Ihăggaren (Imanat de Djerboub).

1. Centre religieux.

1: Lhote MS25 Tuareg

En 1895, le siège de la confrérie fut transporté de Djerboub à Koufra pour des raisons d'isolement et peut-être pour se trouver plus au centre de son aire d'activité.

Le rôle intérieur de la confrérie était de s'efforcer d'activer la renaissance de la foi, de restaurer l'ancienne loi islamique, et de rétablir l'autorité canonique : sur le plan extérieur, une formule de Cheikh es Senoussi résumait ses espérances, et indiquait le but poursuivi : « Turcs et Chrétiens, je les briserai d'un seul coup », ce qui ne l'empêchait pas d'entretenir des relations très cordiales avec la Porte dont il s'efforçait de tirer avantage. En ce qui concerne les contrées soi-disant « infidèles », soumises de fait à la domination chrétienne, Senoussi se contentait d'entretenir chez elles des agents de renseignements.

En 1848, la Révolution avait eu son contre-coup en Algérie ; profitant de la désorganisation de notre jeune colonie, les Senoussistes, aidés par la tribu des Derkaoua, essayèrent de nous créer des embarras en annonçant notre future expulsion de l'Algérie et fomentèrent des troubles chez les Oulad Sidi Cheikh, les Zibans, les Zaoua, les Guechtoula. Après ce premier insuccès, ils s'abstinrent de toute propagande, de toute intervention qui fut de nature à provoquer un conflit entre eux et quelques nations européennes ; ne pouvant songer à une lutte inégale, ils se bornèrent à prêcher l'exode des vrais croyants hors des contrées infidèles. Il semble même que les Senoussistes ne se soient pas plus mal comportés que d'autres avec les Européens ; l'on ne peut faire retomber sur eux seuls les massacres des voyageurs et, en 1897, le Capitaine Monteil put traverser leur pays sans être inquiété.

C'était une action plus profonde et plus générale qu'ils cherchaient en mettant dans le cœur de chaque musulman la haine de tout ce qui était chrétien.

« Véritable ciment de son ouvrage, cette haine s'est infiltrée dans les âmes et le degré de développement religieux une fois atteint, tout progrès moral arrêté, le Senoussiste fervent s'est donné lui-même des chaînes qu'il ne peut rompre sans offenser Dieu. Alors, plongé dans l'immobilité, cette essence même de l'Islam, il garde et gardera jalousement sa position jusqu'au jour où le terrible choc de l'Europe retentira au désert [1]. »

Les événements devaient confirmer entièrement cette terrible prophétie.

1. Depont et Coppolani, *Les Confréries religieuses*, p. 557.

1: Lhote MS25 Tuareg

La guerre de 1914, en effet, devait remettre en cause tous les résultats acquis. Les bruits de nos défaites du début se répercutèrent fâcheusement au Sahara tandis que l'annonce de notre évacuation prochaine était colportée dans les campements.

Immédiatement la propagande senoussiste se réveillait et annonçait l'arrivée du Madhi.

Le moment était très propice. En pays targui sévissait une crise économique peu commune qui ne contribuait pas à apaiser les esprits ; les centres de culture de l'Ăhaggar et des Ăjjer étaient ravagés à plusieurs reprises par les sauterelles, et les indigènes étaient obligés de réensemencer jusqu'à trois fois. Une sécheresse prolongée entraînait une situation proche de la famine et les campements devaient fuir au Soudan, par des exodes en masse qui occasionnaient de gros déchets dans le bétail. Tous ces faits qui, dans une période normale, n'auraient eu qu'une importance secondaire, prenaient là une allure catastrophique car, profitant de cette ambiance déficiente, les marabouts rappelaient toutes les prédications au sujet de l'arrivée du Madhi qui devait être précédée par des calamités sans pareilles pour le monde musulman.

Heureusement nos postes veillaient, tout resta calme sur notre territoire.

Mais en Tripolitaine les Senoussistes avaient fomenté la révolte, avaient assiégé les postes italiens et s'efforçaient de rejeter ceux-ci à la mer. La ville de Mourzouk voyait ses communications coupées d'avec Tripoli et bientôt les postes de Rhât et de Rhâdamès étaient abandonnés par les Italiens, obligés de venir se réfugier dans nos postes, abandonnant un important matériel aux rebelles. Ceux-ci étaient commandés par Si Labed, oncle et Khalife du grand Senoussi, auquel s'était joint Boubékeur, le chef targui de Rhât. Si Labed, qui avait exigé des Touaregs le versement du matériel de guerre pris aux Italiens, essayait de nous endormir par des protestations d'amitié, prétendant qu'il menait la bataille contre nos ennemis communs, lesquels étaient, d'après lui, le sultan Ahmoud, l'ancien chef de Djanet, et In Gueddassen l'aménokal des Ăjjer. Mais, en même temps, il préparait l'attaque de Djanet en sous-main, et envoyait dans le Tassili deux étendards destinés à déclencher le signal de la révolte.

Les Tăitok, jamais en retard pour se mêler à tout ce qui peut toucher à de l'agitation, manifestaient alors quelques

mouvements d'indiscipline, mais Moussa ag Ămâstan, qui nous était complètement rallié, s'efforçait de combattre toutes les mauvaises influences.

Au Soudan, la situation était également trouble. La soumission des Touaregs Ioullimmiden du secteur de Gao n'avait jamais été effective, et les tribus maures de l'ouest saharien, travaillées par des agitateurs venus du Rio de Oro, étaient en effervescence marquée. La tribu des Oulad Djerid se signalait par son activité peu commune et par des rezzou continuels.

En décembre 1915, les tribus touarègues de la région de Dori, travaillées par le marabout Mohamed Ahmet, s'étaient révoltées et n'étaient rentrées dans l'ordre qu'après plusieurs expéditions punitives.

Chez les Ioullimmiden, l'arrivée d'un marabout suspect, du nom de Mohamed Alamine, avait suffi à créer un mauvais état d'esprit et leur aménokal, Firhoun, contre toute attente, se proclamait le chef de tous les Touaregs, laissant entendre que si les Français ne partaient pas il faudrait les mettre à la porte des postes. Ce furent alors des alternatives très embrouillées où Firhoun fut arrêté plusieurs fois pour sa mauvaise volonté à se plier à nos ordres. Évadé de Tombouctou où il avait été mis en résidence forcée, il put rejoindre ses campements et aller porter le siège devant notre poste de Ménéka.

Le 19 mars 1916, la nouvelle de la révolte arrivait à Kidal et le groupe méhariste du Capitaine de la Roche, qui nomadisait dans les environs, se portait aussitôt au secours de Ménéka assiégé. Le 9 avril, le détachement qui se composait de 35 Chaamba arrivait devant le poste et le 17, 200 Ihăggaren, qui avaient été demandés à Moussa ag Ămâstan, venaient les rejoindre, ce qui obligeait les Ioullimmiden à lever le siège et à se réfugier près de la mare d'Andéramboukane. Cernés par les différentes colonnes qui avaient convergé vers Andéramboukane, les Ioullimmiden ne purent éviter le combat et le 9 mai 1916 ils subissaient une lourde défaite qui mettait fin à la révolte. Les Chaamba, comme les Ihăggaren s'étaient battus bravement et ces derniers avaient ainsi trouvé une occasion de piller leurs frères Ioullimmiden, ce qui leur était autrefois coutumier et qu'ils n'avaient pu faire depuis l'occupation française. Le 11 mai, la colonne de la Roche, son rôle terminé, remontait sur Ménéka convoyant un officier blessé très grièvement et, le 20, elle arrivait à Ansongo, après être

1: Lhote MS25 Tuareg

passée à Kidal pendant que le groupe des Ihăggaren était rassemblé à Elioug. Quelques-uns d'entre eux en profitèrent pour aller piller les vaincus et c'est au cours de l'attaque d'un campement que l'un d'eux tua l'Aménokal Firhoun, que d'ailleurs il ne connaissait pas (25 juin 1916).

Tous ces événements eurent une répercussion morale sur les Touaregs, y compris les gens de l'Ahaggar, malgré le fait qu'ils nous avaient apporté leur aide pour réduire les Ioullimmiden ; la propagande senoussiste en tirait parti, gagnait en influence au point que les Harratines des centres de culture ne faisaient plus la prière que suivant le nouveau rite. Le pouvoir de la « baraka » (bénédiction) de Sidi Labed se répandait partout et à Djanet, les gens encore plus influencés que les autres par la proximité des troupes senoussistes, commençaient à croire que la puissance française pourrait bien décliner devant la volonté de Dieu au profit de l'Islam.

C'est alors que les Senoussistes jugèrent opportun d'agir. Le 27 février 1916, ils lançaient sur Djanet une méhalla commandée par Abd el Selem, Kaïmakan de Rhât, et le sultan Ahmoud, où elle arrivait le 5 mars, accueillie à bras ouverts par les gens des villages. Les membres purent coucher dans les ksours sans que personne ne vînt prévenir les Français, et le 6 mars, le poste fut assiégé, canonné, pendant que toutes les fractions du Tassili prévenues par des émissaires rejoignaient les révoltés.

La colonne senoussiste était composée de 400 hommes armés de fusils italiens à tir rapide, pourvus abondamment de munitions, alors que la garnison ne comprenait qu'une quarantaine de Sahariens commandés par le Maréchal des logis Lapierre. Pourtant le détachement français tint dix-huit jours dans le petit poste, puis, éprouvant des difficultés pour se ravitailler en eau, sur le point de manquer de munitions, coupé de toutes communications, il décidait de tenter de gagner Fort-Polignac. Trompant la vigilance de l'adversaire, il exécutait une sortie de nuit qui réussit et s'enfonçait dans la montagne.

Pendant que la garnison se dirigeait à pied vers Fort-Polignac, à 300 km. de Djanet, une colonne de 120 fusils venait à son secours, constatait la prise de Djanet dont elle croyait la garnison prisonnière, et était obligée de se dégager rapidement, assaillie de tous côtés.

La garnison, de son côté, recoupait le 25 mars les traces

fraîches de la colonne, et sans hésiter, le Maréchal des logis Lapierre décidait de suivre ses traces pour la rejoindre, et revenait sur Djanet où il se heurtait de nouveau à la méhalla sans pouvoir atteindre la colonne qui avait battu en retraite par une autre route. Ce dramatique chassé-croisé devait entraîner sa perte. Elle était poursuivie et après une cruelle odyssée de 150 km. elle était capturée le 27 mars entre la plaine d'Admer et Djanet.

Devant ces événements, le commandant militaire décidait de reprendre Djanet et une colonne, commandée par le Commandant Meynier et pourvue de deux canons et de deux sections de mitrailleuses, arrivait devant Djanet le 12 mai. Le sultan Ahmoud avait organisé le fortin et toutes les crêtes environnantes étaient couvertes de tireurs abrités dans les rochers ; il fallut faire un véritable siège et, après quatre jours de combats opiniâtres, l'ennemi abandonnait la place, faute de munitions.

Au point de vue militaire, la chute de Djanet, était sans aucune importance, mais il n'en était pas de même au point de vue politique. Notre prestige avait été fortement atteint et des éléments qui jusqu'alors étaient restés tranquilles rejoignaient les troupes senoussistes.

Les difficultés de la défense du fort de Djanet, à l'intérieur duquel il n'y avait pas de puits, pour le ravitailler en vivres et en munitions, nous obligeaient à l'abandonner définitivement le 4 juillet.

Les actes de guerre allaient maintenant se succéder et il nous sera difficile d'y répondre en attendant notre réorganisation militaire. Le 20 septembre, un détachement commandé par le Capitaine Duclos, se rendant de Fort-Flatters à Fort-Polignac, est attaqué au passage de l'oued Ehan, par 300 Senoussistes, Kel Ouhet, et Kel I-n-Foûnin rassemblés. Devant la disproportion des effectifs, le combat prend immédiatement un caractère épique. L'adjudant Lenoir s'y signale tout particulièrement en enflammant ses hommes par son courage et en se jetant sur les assaillants. Tirant debout, sans se soucier des balles, il reçoit l'une d'elles au front et tombe raide mort en même temps que son adversaire qu'il avait lui-même ajusté. Devant cette résistance opiniâtre, l'ennemi arrête le combat.

Le 27 novembre, un convoi était assailli à Aïn Zabebalt où six goumiers et l'adjudant François étaient tués ; le 4 décembre, un détachement de 25 tirailleurs commandés par le

1: Lhote MS25 Tuareg

sergent Bonain était enlevé. A Fort-Polignac, la garnison était décimée par le scorbut et devant les difficultés de son ravitaillement qui imposait des servitudes trop dangereuses, nous décidions de l'évacuer, d'autant plus que la garnison ne pouvant rayonner, était impuissante contre les nomades qui attaquaient les colonnes en des points et à des moments choisis par eux.

Dès ce moment se détache la figure d'un chef de bande targui du nom de Kaocen, originaire de la tribu des Ikaskazan, des environs d'Agadez, qui s'était réfugié au Fezzan après l'occupation de l'Aïr par nos troupes (1907). Plusieurs rezzou heureux où il s'était montré d'un courage féroce avaient suffi pour imposer son autorité à ses coreligionnaires.

Bientôt des chefs influents de l'Ăhaggar le rejoignaient : Ănaba et Attici ag Ămellal, Ăflan ag Doua, le mari de Dassine, la cousine de l'Aménokal, et d'autres encore de moindre importance. Kaocen renvoyait Ăflan avec un détachement de 50 fusils vers les Tăitok pour décider ces dernier à partir en dissidence. Moussa ag Ămâstan, dès lors, se sentait débordé ; il se rendait compte du terrain que gagnaient tous les jours les Senoussistes, demandait l'autorisation d'aller disperser les bandes ennemies, appuyé en cela par son khalife, Souri ag Chikat, l'un des guerriers les plus renommés de l'Ăhaggar.

Son attitude pleine de loyauté lui faisait écrire la lettre suivante :

« Kaocen a quitté Rhât à la tête d'une forte méhalla armée d'un canon et de deux mitrailleuses ; arrivé à quelques jours d'In Ăzaoua, il a fait demi-tour sur un ordre de Sidi Labed. 60 fusils seulement ont continué sur l'Aïr pour renforcer les 40 qui s'y trouvent depuis un certain temps et dont Amri a le commandement temporaire. Je suis certain que ce renfort est envoyé dans le seul but de m'attaquer. Je demande avec insistance — mes connaissances des choses sahariennes me le permettant — à l'autorité de bien vouloir faire occuper un puits que j'ai indiqué au Lieutenant Constant (à deux jours à l'est d'In Ăzaoua et point de passage toujours emprunté par les rebelles), par 50 fusils. Prévenu de cette opération, je me porterai avec tout mon monde pour refouler l'ennemi vers l'est ; ainsi ceux dont je n'aurais pu avoir raison seront cueillis au passage à In Ăzaoua. J'affirme de toutes mes forces que cette opération aura un grand retentissement dans le Sahara. Les autorités ne doivent pas ignorer que si la guerre

1: Lhote MS25 Tuareg

dure encore, c'est tout simplement parce que l'Aïr approvisionne nos ennemis en méhara et en mil ; coupés de leur base de ravitaillement, ils seront bien obligés de se rendre. Je réponds du succès complet des idées que je suggère. »

Quelques temps avant, Moussa ag Ămâstan avait reçu une lettre du sultan Ahmoud qui l'invitait à entrer en dissidence, mais au lieu de suivre ces mauvais conseils, il la communiqua lui-même à l'officier de Fort-Motylinski. Les Senoussistes avaient également voulu se servir de lui pour transmettre une lettre à Abidine, dans le but de réaliser l'unité contre nous, mais Moussa nous avait également remis cette lettre.

Le Capitaine de la Roche était en Ădrar pour combattre dans les campements la propagande des Bérabers menés par Abidine. Aussi, le sultan Ahmoud annonçait-il une harka prochaine sur l'Ăhaggar, qui eut pour premier effet d'entraîner les Aït Loaien en dissidence et d'amener un état d'effervescence dans toutes les tribus de la Koudia, qui attendaient l'arrivée de Kaocen, toujours campé vers Rhât avec canons et mitrailleuses.

Enfin, coup terrible, on apprend que le 2 décembre, le Père de Foucauld a été assassiné à Tămanrasset.

Nous ne rappellerons que brièvement les détails de ce meurtre qui est maintenant entré dans l'histoire. Kaocen avait l'intention de mener une harka sur Agadez ; pour donner une diversion, il avait envoyé un rezzi dans la Koudia qui poussa jusqu'à Tămanrasset où le Père de Foucauld résidait seul comme Français. Ce rezzi avait pour chef un nommé Abeuh ag Khabelli, de Djanet, et se composait de 15 Aït Loaien, d'un Djaneti et d'un Irréguénaten. Avait-il eu pour mission de tuer le Père de Foucauld ? Il est impossible de l'affirmer et les gens qui l'ont assassiné connaissaient le bien qu'il avait fait à tous les Touaregs, de quel respect il était entouré par tous dans l'Ăhaggar. Le rôle d'Abeuh, il est vrai a pu être capital, et peut-être avait-il reçu des instructions en conséquence, car les Senoussistes n'ignoraient pas la grosse influence que le Père avait sur Moussa ag Ămâstan et sur les gens de la Koudia.

Ce fut un hartani de Tămanrasset, un de ceux que le Père avait le plus secouru, qui fut l'instrument de la trahison.

Le Père ayant été mis sous la garde d'un jeune Targui du nom de Serni ag Thora, il fallut l'arrivée de deux méharistes se rendant à Fort-Motylinski pour précipiter le drame ; alors

1: Lhote MS25 Tuareg

qu'il était agenouillé et qu'il priait pendant que les Touaregs l'exhortaient à prononcer la profession de foi musulmane, des coups de feu éclatèrent à l'entrée du village. Serni ag Thora apeuré, croyant à l'arrivée d'un groupe de méharistes, perdit tout sang-froid, plaça le canon de son fusil contre la tempe du Père de Foucauld, sans que celui-ci fît le moindre mouvement de résistance, et pressa sur la détente. Le drame était consommé.

Cette mort tragique fut considérée comme une calamité par les Imrad de l'Ăhaggar restés dans la montagne, et qui prévoyaient les suites fâcheuses qu'entraînerait cette lâcheté.

Le Docteur Richer, dans un remarquable ouvrage sur les Ioullimmiden, avait cru pouvoir disculper les Ihăggaren du meurtre du Père de Foucauld. Des renseignements complémentaires obtenus par la suite, de même que la composition exacte du rezzi, suffisent à démontrer la culpabilité des Ihăggaren.

Le 17 décembre, le sergent Rémiot réussissait à rejoindre les assassins vers l'oued Tin Tarabine, mais après 5 heures de combat au cours duquel il leur tua 12 hommes et 20 chameaux, il fut obligé de battre en retraite devant un ennemi supérieur en nombre, bien retranché dans les rochers.

Le 1er janvier 1917, quatre Harratines d'Amsel, Akhamouk ag Chaouch, Amrar, Kechkrech, Kebdou, étaient passés par les armes sur l'ordre du Capitaine de la Roche qui, après l'assassinat, avait eu connaissance du complot fomenté contre le Père. Vers le 22 septembre, ils s'étaient rendus de nuit à Tămanrasset et ils n'avaient renoncé à leur projet qu'en voyant le Père bien gardé. On retrouva à ce sujet une note dans les papiers de l'ermite de Tămanrasset, qui avait eu vent de la chose, n'en avait rien dit et s'était contenté de prendre quelques précautions.

A la date du 13 décembre 1916, tous les Ăjjer étaient dans un état d'insurrection déclarée. Des émissaires du sultan Ahmoud avaient été vus chez les Aït Loaien, où ils avaient été bien reçus, et le Capitaine de la Roche, qui commandait à Fort-Motylinski, s'attendait, en cas de venue du sultan Ahmoud devant le poste, à une insurrection générale. Les Français avaient songé un moment à évacuer Fort-Motylinski pour se reporter sur une position plus défendable, mais le Capitaine de la Roche y renonça et démentit ces bruits qui auraient pu avoir une influence morale néfaste et il s'employa à fortifier les abords du fort.

1: Lhote MS25 Tuareg

Pour punir les dissidents, la razzia des centres de culture du bas Ăhaggar, et en particulier d'Ăbalessa, fut décidée. Cette mission fut confiée au Lieutenant Lehuraux qui s'empara de 4.600 litres de blé, et de 3.700 litres d'orge. C'était par là qu'il aurait fallu commencer.

Le 28 décembre, le courrier d'Agadez arrivait apportant la nouvelle de l'investissement prochain du poste.

Le 13 février de l'année suivante, le poste d'Aïn el Hadjadj était attaqué de nuit. Les assaillants qui avaient réussi à s'approcher du poste, débordaient nos lignes de résistance et au début de l'action le Docteur Vermale était tué d'une balle au cou, alors qu'il se défendait à coups de revolver. Pour nous, la surprise avait été complète et l'ennemi très mordant bondissait par-dessus les murs, commençait à envahir le fortin et n'était arrêté qu'à coups de grenades par la section du sous-lieutenant Gélass. Le poste de T.S.F., situé à quelque distance du poste principal, était également attaqué, mais grâce à l'énergie du caporal qui le commandait, la petite garnison résistait courageusement dans son blockhaus. C'est alors que le Capitaine Levasseur donnait l'ordre au Sous-Lieutenant Gélass de contre-attaquer et d'opérer un mouvement tournant vers le sud-ouest ; l'ennemi, décontenancé par les grenades, était obligé de battre en retraite après deux heures de combat, laissant 20 tués sur le terrain. L'affaire nous coûtait la vie d'un officier (Dr Vermale), de deux sous-officiers et de plusieurs Sahariens.

Le 20 mars, les Ăgouh-n-Tèhlé, aidés par leurs femmes, enlevaient les 29 chameaux du poste. Le Sergent Vella les poursuivait, leur reprenait les chameaux razziés et s'emparait à son tour de 500 chèvres.

De faux bruits circulaient partout, de fausses nouvelles savamment répandues disaient qu'Agadez était pris, que Moussa avait rejoint Kaocen devant cette ville, qu'il marchait avec lui et qu'il était en route pour l'Ăhaggar dans l'intention d'assiéger Fort-Motylinski. Des émissaires nous rapportaient que les Dăg-Râli, apprenant ces bruits avaient décidé d'agir sans tarder, d'attaquer nos détachements au pâturage et d'investir le poste en attendant Moussa. La nouvelle de l'investissement de Fort-Motylinski parvint même au commandement supérieur.

Il est certain que la situation devenait critique pour les Touaregs de l'Ăhaggar. L'état d'insurrection générale avait

1: Lhote MS25 Tuareg

arrêté toute transaction commerciale. De son côté, Kaocen avait retenu en Aïr les chameaux appartenant à Moussa, et d'autre part, les autorités soudanaises de Tahoua avaient réquisitionné 400 chameaux portant du mil destiné au ravitaillement des tribus de l'Ăhaggar. La razzia d'Ăbalessa les avait privés de 60 charges de céréales, les marchés du Tidikelt leur étaient fermés, si bien que pour les Ihăggaren, piller n'était plus le fait d'un état de guerre, mais celui du besoin de se nourrir.

Les Dăg Râli, les Ăgouh-n-Tĕhlé, les Tegéhé-n-Ĕfis, les Relaiddin, s'étaient rassemblés vers l'Asekrem. On disait qu'un rassemblement général se faisait vers Tazerouk et Idelès. Aussi pour faire cesser toute incertitude sur l'attitude réelle des Touaregs de la Koudia, une colonne, dirigée par le Capitaine Masson, quittait Fort-Motylinski le 20 mars, accompagnée par le Capitaine Depommier. Mais devant les nouvelles contradictoires que cet officier recevait sur les agissements de Moussa, il décidait de se replier immédiatement sur Fort-Motylinski pour le protéger en cas de besoin et de ramener les troupeaux sous la surveillance du poste.

Le 5 mai, au petit jour, la colonne du Capitaine Masson reprenait sa marche dans l'oued Ilâman, lorsqu'à un endroit très encaissé et dominé par des crêtes garnies de rochers, la patrouille d'éclaireurs qui la précédait était accueillie par une vive fusillade tirée presque à bout portant, alors qu'un Targui, brandissant une lance, plantait en terre un fanion qu'il tenait dans l'autre main, tout en poussant des cris de guerre. La colonne était entourée de tous côtés et les assaillants s'excitaient de la voix en tirant dessus. Surpris et dominés de partout, nos hommes étaient ralliés sur la rive droite de l'oued, mais le Capitaine Masson, blessé par une balle au côté droit, devait passer le commandement au Sous-Lieutenant Constant. Un combat terrible s'engageait qui durait jusqu'au soir, faisant de nombreuses victimes des deux côtés. Pendant la nuit, chacun resta sur ses positions. Tous les chameaux du convoi avaient été tués et nous avions perdu 21 hommes, dont 11 tués et 10 disparus. Étant donné la nature du terrain où nous avions le désavantage, il était impossible de déloger les Touaregs de leur position et le lendemain la colonne se repliait à pied sur Tămanrasset, en emmenant ses blessés.

C'étaient les Dăg Râli, qui jusqu'à ce moment nous étaient demeurés fidèles, qui avaient été les principaux acteurs de ce

1: Lhote MS25 Tuareg

guet-apens, appuyés par des dissidents Ăjjer, commandés par Abeuh ; tous étaient abondamment pourvus de fusils et de cartouches, en majeure partie du modèle italien [1].

Quelle était alors la situation de Moussa ag Ămâstan ? Il se trouvait vers Tin Zaouaten lorsqu'il avait reçu la nouvelle de l'évacuation de Fort-Polignac, suivie de celle du siège d'Agadez et de l'enlèvement du convoi Français. La réquisition de 400 chameaux par les autorités de Tahoua lui avait causé du souci et les Imrad qui n'espéraient pas les récupérer, faisaient pression sur lui pour qu'il se rendit à Agadez, ce à quoi il se décida lorsqu'il apprit que Kaocen lui avait enlevé 600 bêtes et qu'une harka se dirigeait vers lui.

Kaocen savait pourtant ne pas pouvoir compter beaucoup sur lui, car Ănaba, qui s'était rencontré avec lui et s'était déclaré son partisan, lui avait dit que Moussa ag Ămâstan était l'homme des Français.

Le chef des Ihăggaren, arrivé à Agadez, Kaocen le tint en suspicion, le mit à l'écart et le fit surveiller par ses gens, au point de le considérer comme un véritable prisonnier.

Le Capitaine Depommier, qui avait donné rendez-vous à Moussa à Tin Zaouaten, ne l'y avait pas trouvé et les nouvelles alarmantes qu'il recevait de toutes parts lui laissaient supposer que Moussa avait rejoint les dissidents. Pourtant il ne voulait pas désespérer de lui ; « a-t-il cru, lui aussi, que les Français étaient à bout et l'abandonnaient ? écrivit-il dans un rapport. On peut l'admettre sans qu'il soit équitable de lui en faire grief ». Il lui envoya un message lui donnant l'ordre de venir le rejoindre, faute de quoi, il serait traité de rebelle.

Kaocen finit par rendre les chameaux à Moussa et ayant eu à s'absenter, il lui remit le commandement de la méhalla pour finir de le compromettre à nos yeux.

Pendant ce temps, le Capitaine Depommier se dirigeait vers l'Aïr lorsque le 13 mars, Litni, khalife de Moussa, se présentait à lui, protestait du loyalisme de son chef et le suppliait d'aller tirer Moussa de la mauvaise situation où il se trouvait et d'où il ne pourrait sortir seul.

En apprenant la venue du détachement, Moussa, qui était campé à l'oued Tanesfert avec cinq ou six cents de ses gens, désormais sûr de notre protection, lançait un rezzi sur les der-

1. Les Dag Râli se glorifient aujourd'hui de cette affaire disant qu'ils ont pris là leur revanche de leur défaite de Tit.

1: Lhote MS25 Tuareg

rières de Kaocen, puis il vint rejoindre le Capitaine Depommier.

De retour sur l'Ăhaggar, il apprit en cours de route, l'affaire de l'oued Ilâman et en fut vivement affecté. Il s'efforça aussitôt de rassembler les dissidents et Ouksem ag Ourar, l'amrar des Dăg Râli, qui avait accompagné Moussa en Aïr, vint au poste pour demander l'aman de sa tribu. Mais les Ăjjer s'efforçaient de les maintenir en dissidence, lançaient des rezzou sur nous dans la région de Fort-Flatters (3 et 10 mai) et quelques jours plus tard ils réussissaient à enlever un convoi de 100 chameaux. Abeuh ag Khabelli talonnait toujours les campements de la Koudia et les Imrad, qui pensaient être trahis par Moussa, ne venaient toujours pas au poste comme ils l'avaient promis. Le mouvement de soumission que l'on escomptait ne se produisait pas et Moussa ag Ămâstan semblait être atteint dans son autorité ; chacun pillait pour son compte, poussé par la nécessité de se nourrir.

Le Général Laperrine, mobilisé au début de la guerre sur le front de France, avait été rappelé au Sahara comme Commandant supérieur ; son retour ramena immédiatement la confiance dans les troupes de même que chez les Touarégs fidèles, et le Gouverneur Bonnamy pouvait aller sans encombre d'In Salah à Tombouctou pour régler les affaires entre les autorités algériennes et soudanaises et établir une cohésion dans l'action des deux gouvernements.

Kaocen subissait alors de graves revers en Aïr. Obligé d'abord de lever le siège d'Agadez, qui avait duré près de trois mois, il était rejoint près des Monts Baghezan par nos tirailleurs sénégalais et le Lieutenant Bourgès lui reprenait un des trois canons avec lesquels il avait bombardé le poste, heureusement sans grand succès.

Dans l'Ăhaggar, situation inchangée malgré la nouvelle de ces événements. Le 15 juin, une patrouille commandée par le Maréchal des Logis Pietri était attaquée à In Eker. Cette patrouille avait pour mission de joindre le courrier venant d'In Salah et de le détourner sur Tin Felki où se trouvait le Lieutenant Lehuraux. Elle retrouvait le chameau du courrier dans des conditions très bizarres sans pouvoir trouver trace du postier dont le fusil et les cartouches étaient encore accrochées à la selle ; le sac postal avait disparu. Ne comprenant rien à cette affaire, le groupe s'était arrêté pour camper, lorsque les sentinelles placées en avant du campement prévinrent qu'un important groupe de méharistes de deux à trois

cents combattants avait l'air de suivre les traces de la patrouille. S'étant retiré sur le sommet d'une petite montagne avec ses gens, le Maréchal des Logis Pietri organisait rapidement la défense pendant que les assaillants l'entouraient et engageaient le combat, envoyant une grêle de balles qui blessaient plusieurs Sahariens et Pietri lui-même l'atteignant au bras et au poignet. Dès le début, la bataille prenait une tournure violente et des deux côtés, suivant l'habitude saharienne, les deux camps s'invectivaient, ponctuant chaque coup de fusil d'une injure à l'adresse de l'adversaire « Ouenni [1], viens, approche, sors des rochers, crient les Touaregs, et vous autres, vous mangerez chez nous ce soir, vous êtes nos invités ; pour le sultan Ahmoud, pour le drapeau du sultan Ahmoud ! »

Se voyant serré et près d'être débordé, le Maréchal des Logis Pietri décidait de charger à l'arme blanche et, après avoir rassemblé ses hommes, il s'élançait le premier au cri de : « En avant ! à la baïonnette ! en avant et mourons s'il le faut ! » Sous la pluie de balles qui les accueillait, beaucoup de militaires tombaient et après avoir dévalé la montagne, la petite troupe cherchait un refuge vers le massif d'In Eke. Un groupe ennemi qui les croise demande qui ils sont. « Nous sommes des gens fatigués et qui ont soif, répond le méharistes Cheikh ben Hamida, qui soutenait le Maréchal des Logis exténué et assoiffé... » et la patrouille passa sans insister.

A ce moment, le Maréchal des Logis s'aperçut de l'absence de deux militaires tués pendant la charge, dont il ignorait la mort ; il ne voulut pas les abandonner malgré le conseil de ses gens et les appela dans la nuit. Accroché aussitôt par un détachement ennemi qui les cherchait, le Maréchal des Logis, se sentant épuisé et voyant la résistance impossible, donna l'ordre à ses gens de fuir chacun de son côté et resta sur place avec trois militaires grièvement blessés. L'un d'eux put s'échapper pendant la nuit ; un autre, le méharistes Cheikh ben Hamida, opposa aux assaillants une défense héroïque, jusqu'à l'épuisement complet de ses munitions et fut tué à bout portant dans l'abri rudimentaire qu'il avait eu la présence d'esprit d'aménager. Le Maréchal des Logis Pietri fait prisonnier, fut mis en demeure de confesser l'islamisme ; sur son refus, il fut lâchement assassiné. La méhalla possédait deux étendards

1. Ouenni était un maréchal des logis de la compagnie saharienne renommé pour sa grande bravoure et qui était d'origine ouarègue. Il devint plus tard Caïd d'Aoulef.

1: Lhote MS25 Tuareg

rouge et jaune, et l'on sut par la suite que plusieurs Dăg Râli en faisaient partie, dont leur amrar, Ouksem ag Ourar, qui, malgré ses efforts, ne put empêcher le meurtre du sous-officier français.

Le 20 juin, Moussa ag Ămâstan voyant son impuissance à ramener ses gens par la parole, nous signalait les tribus dissidentes, les Dăg Râli, les Ăgouh-n-Tĕhlé, les Aït Loaien, les Relaiddîn, les Kel Tăzôulet, les Issekkemâren, et demandait aux autorités d'In Salah de lui fournir les moyens de les combattre. Mais nos effectifs réduits ne nous permettaient pas d'envisager des opérations de grande envergure dans une région si propice à la guerilla. D'autant plus que les Bérabers qui connaissaient nos difficultés, croyant le terrain libre en Ădrar, en profitaient pour razzier les Touaregs Ifôras qui jusqu'alors nous étaient restés fidèles ; avec une poignée de méharistes, le Lieutenant Lemaire les repoussa bravement et put protéger la région de Kidal dont la garnison avait, elle aussi, été réduite.

Une escarmouche se produisait encore le 2 juillet à Tagemout où le convoi de l'Adjudant Croq était accroché par la bande de Felka, dissident des Ăjjer, qui fut vertement repoussé par les gardiens du convoi.

A ce moment, un revirement se produisit dans les tribus harcelées par la faim. Abeuh quittait l'Ăhaggar pour se rendre aux Ăjjer, sans que l'on puisse savoir les raisons de son déplacement, puis on apprenait qu'Ănaba et Souri ag Chikkat, deux des principaux chefs rebelles des Kel Rela, demandaient l'aman, tandis qu'Aflan ag Doua tenait toujours la campagne et razziait au petit bonheur dans les environs de l'Immidir et de l'Ifettessen.

Les Compagnies sahariennes se réorganisaient progressivement, étaient dotées d'un armement moderne, mitrailleuses, grenades V. B. et l'on annonçait la venue de plusieurs avions.

On apprenait pourtant qu'un nombre important de dissidents était assemblé dans la région de Tehi-n-Akli. Aussitôt le lieutenant Lehuraux se portait à leur rencontre, mais devant sa fougue, ils préféraient fuir plutôt que d'accepter le combat. Le raid du lieutenant Lehuraux, quoique sans effets militaires immédiats, eut une grande portée morale, car il prouvait que nous changions de tactique, et que, de la défensive où nous avions été obligés de nous confiner jusqu'alors, nous passions à l'offensive.

1: Lhote MS25 Tuareg

Dès lors, tout changea : les Touaregs comprenaient que nous étions désormais capables de répondre à leurs attaques. C'est à ce moment que l'on apprit les motifs du départ d'Abeuh qui, abandonné par les Imrad et ne voyant pas venir la harka annoncée, commençait à être las de n'être pas aidé efficacement par les Senoussistes et avait pris la décision de rentrer dans ses campements.

Au mois d'août, le mouvement de soumission se déclenchait. Ouksem ag Ourar amenait ses gens à Fort-Motylinski suivi des représentants des Ăgouh-n-Tĕhlé et des Issekkemâren. Les Aït Loaien, beaucoup plus coupables que les autres, avaient peur de notre répression et préféraient se tenir encore sur la réserve. Enfin, en septembre, Moussa ag Ămâstan pouvait se rendre à In Salah avec un grand nombre de chefs et de nobles pour discuter les conditions d'aman pour ses tribus dont le mouvement de soumission était maintenant général. L'aman fut accordé par le Gouverneur de l'Algérie, sauf pour les assassins du Père de Foucauld dont le Général Laperrine avait établi une « liste noire ».

Les conditions d'aman n'étaient d'ailleurs pas trop dures et les Touaregs eux-mêmes s'étonnèrent de notre générosité. Les différentes clauses prévoyaient la restitution des armes et des animaux enlevés et le retour des tribus sur leurs terrains de parcours habituels. Les prises que de notre côté nous avions faites pendant les opérations nous restaient acquises et les Touaregs étaient tenus, pour la forme, de transporter gratuitement 200 charges de chameaux de Fort-Motylinski à In Salah.

Pour nous montrer leur retour dans la bonne voie, un groupe de partisans Ihăggaren sous les ordres de Bou Khelil attaquait des dissidents Ăjjer sur la route de Djanet et ramenait les prises à Fort-Motylinski. La révolte de l'Ăhaggar était donc terminée et seuls les gens qui avaient de trop gros crimes sur la conscience restèrent à l'écart de nos postes. Les Tăitok, réfugiés en Air, ne rentrèrent qu'en juin 1918 et acceptèrent à leur tour les conditions d'aman. Leur chef Amri fut destitué et le tobol des Tăitok fut rattaché à celui de Moussa ag Ămâstan.

En novembre 1918, la méhella de Moussa ag Ămâstan, appuyée par un goum régulier, réoccupait Djanet. Boubékeur, le Caïd de Rhât, venait s'entretenir avec Moussa et de son côté le Sultan Ahmoud tâtait le terrain, pendant que Kaocen et Tegama, le sultan d'Agadez, se réfugiaient au Tibesti.

1: Lhote MS25 Tuareg

Ainsi se terminait une période troublée qui avait duré près de deux ans et nous avait créé de sérieux ennuis. Le Senoussisme était vaincu, mais il faut avouer que ce mouvement religieux avait été bien près d'atteindre son but.

Que s'était-il passé depuis le début de la guerre, quels étaient les facteurs qui avaient fait évoluer la situation ? Les Turcs qui ne désespéraient pas de reprendre la Tripolitaine aux Italiens avaient profité de la situation créée par la guerre et par l'agitation religieuse qui suivit. Ils encouragèrent donc les Senoussistes dans la révolte et, avec cette idée, ils avaient à plusieurs reprises débarqué sur la côte tripolitaine, au moyen de sous-marins, des officiers, des armes et des munitions. Ces débarquements auraient, paraît-il, été très fréquents en mars et avril 1917 et se seraient faits à Mesrata [1]. Le propre frère d'Enver-Pacha, Nouri-Pacha, avait été nommé Gouverneur de la Tripolitaine.

Au début, les Turcs trouvèrent des alliés dans les Senoussistes et Ahmed Chérif, Cheikh des Senoussistes, après avoir gagné Pola en sous-marin, s'était rendu à Vienne, puis à Constantinople, dans le but de renforcer les liens religieux et politiques, unissant l'Islam à la Turquie et au Khalifat. En septembre 1918, ils avaient essayé d'attirer Moussa ag Ămâstan à eux et lui avaient fait des propositions fermes pour l'amener à se révolter.

La défaite d'Agadez et la soumission des Kel-Ăhaggar qui suivit, ruinait les projets turcs en même temps que la tentative des Senoussistes de créer un empire religieux. Deux clans s'étaient formés : celui des Senoussistes auquel s'était rallié le sultan Ahmoud et dont les relations avec les Turcs n'étaient pas toutes de sympathie et celui des Turcs auquel s'était joint Boubékeur ag Alegoui, le caïd de Rhât. Aussi, après les revers successifs, les inimitiés anciennes reprirent le dessus et la force qui résultait de leur union se dissolvait d'elle-même. Le

1. Jaafar Pacha, officier de l'armée turque, originaire de Bagdad, avait été choisi par Enver Pacha pour organiser les troupes du cheikh el Senoussi. Il gagna la Tripolitaine en sous-marin, réussit à faire de ces hommes sauvages des combattants présentables. Fait prisonnier par les Britanniques lors d'un engagement avec eux, il fut interné dans la citadelle du Caire en compagnie d'autres officiers capturés avec lui. S'étant rallié au parti nationaliste du roi Hussein et de l'Émir Faiçal, les Britanniques le mirent à la disposition de l'émir qui lui confia la direction de son armée. (Colonel T. E. Lawrence, de l'Intelligence Service, dans « La Révolte dans le désert », 1914-1918. *Histoire de l'Indépendance de l'Arabie et la formation du Royaume du Hedjaz.*)

1: Lhote MS25 Tuareg

caïd Brahim ag Abakada, qui était alors le chef le plus représentatif du Tassili, se décidait à son tour à demander l'aman et apportait la soumission des Touaregs Ăjjer (août 1919).

Le 15 juillet 1920, Moussa ag Ămâstan était nommé suzerain de Djanet au détriment du sultan Ahmoud et nous l'aidions à prendre possession de son fief. C'est alors qu'eut lieu le dernier combat de cette période troublée. L'adjudant-chef Vella, qui rentrait de surveillance, était attaqué au col d'Assakao ; après un combat des plus violents qui jetait 15 hommes sur le terrain, notre groupe méhariste rentrait à Djanet, ramenant 1.000 chèvres, 65 chamelles, 70 ânes et 15 fusils.

Dès lors, la France allait pouvoir continuer en tout quiétude son œuvre saharienne à laquelle les noms de Laperrine, de De Foucauld, de Charlet, de Cottenest, de Gardel, de Duclos, de Niéger, de Sigonney, de Meynier et de tant d'autres resteront attachés.

Depuis, les Touaregs de l'Ăhaggar ne nous ont donné que des témoignages de loyalisme et de fidélité.

## TABLE DES PLANCHES HORS TEXTE

Imrad du Ahaggar ..... *Couverture*

I. Type de paysage dans le Haut Ahaggar ..... 32
Aguelmame d'Issekkerasen après une coulée récente de l'oued ..... 32

II. L'oued Imirhou ..... 33
Régions démantelées du Tassili ..... 33

III. L'oued Taffassasset à 25 km. de ses sources ..... 48
Arbres mutilés par les bergers touaregs ..... 48

IV. Type de tumulus à grande soutache (Région tassilienne) ..... 49
Tumulus en margelle de puits avec soubassement (Haute Koudia) ..... 49

V. Cercle de pierres d'origine très ancienne que l'on suppose se rapporter à un culte solaire ..... 96
Tumuli de forme tronconique ..... 96

VI. Types touaregs ..... 97

VII. Targui des Kel Rela ..... 112
Jeune femme des Kel Ahnet portant la coiffure à tresses multiples ..... 112

VIII. Jeune enfant touareg ..... 113
Jeune fille touarègue jouant sur le sable avec des petites poupées en étoffe habillées en guerriers ..... 113

IX. Jeune femme touarègue de classe noble se brossant les dents avec une tige d'irak ..... 192
Jeune ménage touareg assis à l'abri de l'asaber ..... 192

X. Tente de l'Aménokal des Kel Ahaggar ..... 193
Montage de la tente par les femmes ..... 193

XI. L'intérieur d'une tente ..... 208
Femmes des Kel Ahaggar voyageant à âne ..... 208

XII. Chasseur touareg avec ses chiens slougis ..... 209
Pose d'un piège à pointes radiaires ..... 209

XIII. Chèvre de l'Ahaggar à longs poils ..... 288
Mouton daman ou mouton targui ..... 288

XIV. Types de coiffures portées par les hommes ..... 289

XV. Vieille femme noble de la tribu des Kel Rela tissant un sac avec des fils en poils de chèvre ..... 304
Sac en peau de chèvre servant aux femmes pour le transport de leurs vêtements personnels ..... 304

XVI. Forgerons travaillant en plein air ..... 305
Femmes des imrads faisant paître et abreuver les troupeaux. 305

[p. 376]

1: Lhote MS25 Tuareg

## TABLE DES FIGURES DANS LE TEXTE

1. — Coupe schématique nord-sud de l'Ahaggar ..... 15
2. — Panorama des environs de l'Ilâman, vu du pic Tahat ..... 18
3. — Paysage du Haut Ahaggar (Région du Tazoli) vu du pic Serkout ..... 19
4. — Profil en long de l'oued Tāmanrasset ..... 30
5. — Coupe transversale de l'oued Djorat ..... 31
6. — Gravure d'époque préhistorique représentant la capture d'un buffle antique (oued Djorat, Tassili-n-Ajjer) ..... 59
7. — Gravure d'époque préhistorique représentant un groupe de bovidés (oued Tadjerdjert, Tassili-n-Ajjer) ..... 61
8. — Différents types de peintures rupestres de l'oued Djorat .. 62
9. — Peinture rupestre de la grotte de Tamajert (Tassili-n-Ajjer) 63
10. — Peinture à l'ocre de l'abri de Tiror (Tassili-n-Ajjer) représentant un char de guerre attelé de trois chevaux ..... 63
11. — Peinture à l'ocre de l'abri de Tadjerdjert (Tassili-n-Ajjer) 64
12. — Peinture à l'ocre de Mertoutek (Ahaggar) ..... 65
13. — Différents types des tumuli du Sahara Central ..... 67
14. — Cercle de pierres à double rangée ..... 72
15. — Alphabet tifinagh et ses affinités avec le libyque ..... 144
16. — Le Tobol, insigne de commandement de l'aménokal et son « imitkar » ..... 157
17. — Davier à extraire les dents et appareil utilisé pour les déchausser ..... 175
18. — Pendeloque pectorale en argent portée par les femmes de l'Ahaggar ..... 176
19. — Amulettes en argent, portées par les hommes sur le cimier de la coiffure ..... 177
20. — Cadenas touareg et sa clé ..... 178
21. — Mors et bride de chameau ..... 215
22. — Mors de chameau (détail) ..... 218
23. — Dispositif de fixation de la bride du chameau ..... 218
24. — Sandale « irratimen » ..... 219
25. — Tente utilisée par les Kel Rela ..... 224
26. — Tente utilisée par les Agouh-n-Tēhlé ..... 225
27. — Plat des Touaregs de l'Ahaggar ..... 228
28. — Pelle de tente ..... 229
29. — Mortier des caravaniers et son pilon ..... 231
30. — Corne de mouflon servant de récipient à beurre ..... 232
31. — Petite gourde de peau servant de récipient à beurre ..... 233
32. — Réservoir à beurre fait d'une peau du cou de chameau ... 234
33. — Piège à pointes radiaires utilisé pour la capture des gazelles ..... 241

[p. 397]

1: Lhote MS25 Tuareg

34. — Hache à fer triangulaire ..... 251
35. — Brosse à dents en bois d'Irak et son étui en peau ..... 258
36. — Couteau à coiffure ..... 259
37. — Bock à injection touareg ..... 263
38. — Habillement des hommes de l'Ahaggar ..... 265
39. — L'imerkéden, sandales faites de peaux cousues les unes sur les autres et portées par les montagnards de l'Ahaggar 268
40. — L'habillement des femmes touarègues ..... 269
41. — Types de bracelets portés au-dessus du coude par les Touaregs ..... 271
42. — Porte-aiguilles en peau travaillée ..... 272
43. — Bagues des femmes de l'Ahaggar ..... 273
44. — Bracelet en argent porté au poignet par les femmes ..... 274
45. — Anneau d'oreille des femmes de l'Ahaggar ..... 275
46. — Entonnoir en bois ..... 276
47. — L'amoula, petit biberon en bois pour faire boire les jeunes enfants ..... 277
48. — Louche en bois de tabarekkat, servant également de vase à boire ..... 278
49. — Soufflet de forge double ..... 279
50. — Marteau ..... 280
51. — Pince de forgeron ..... 280
52. — Pince à sucre ..... 281
53. — Amzad ou violon monocorde des femmes touarègues de l'Ahaggar ..... 287
54. — Selle de chameau dite tamzack ..... 319
55. — Lance touarègue ..... 323
56. — La tacouba ou épée des Touaregs ..... 324
